**HOP FIELDS.**—N. Y. telegram to S. F. *Call*, Oct. 18: Governor Squire, of Washington Territory, in talking with a reporter, said: "Washington Territory is the finest hop-raising country in the world. We will raise this year about 30,000 tons. The growth per acre is simply enormous. We have buyers out there from every part of the country. Men from Utica, Richmond Springs, Oswego and other hop-raising counties in New York State, are buying their hops from us this year, as the New York crop has proved a failure. Transportation is cheap to New York, and under such circumstances it would be useless to compete with us, as we produce more than double the quantity per acre that you do here. One hop farm in Washington Territory is the largest in the world, being over 300 acres in extent."

**HOPS.**—*W. Washington Farmer*: While on our trip to the eastern part of the county our attention was called to some fine hops. Upon examination we found them to be the finest hops we ever saw, and we have seen many fields in the East. At one farm we saw a cluster of vines from one root, planted three years ago; from this bunch one bushel of hops had been picked the day before we saw it, and yet it held a fair yield. There is a belt of land lying along the Cowlitz river about Mill creek and above, that seems to be naturally adapted to hops, for wild hops grow to the height of over 20 feet, while cultivated (English cluster) grow much higher and very large. We were talking with a party who intends putting in seven or eight acres on Klickitat prairie, and another who thinks he will put out 40 acres next season near Klickitat. These parties have grown a few vines for the past few years and are confident that the soil up there will produce equally as good yields and as good hops as the Puyallup valley. The idea that hops will not grow as well in other localities as in the Puyallup valley we think is all a humbug, and if the price should remain high for a few years, we expect to see many bales of No. 1 hops grown in Lewis county. There are many gardens in this county that grow fine hops every year without manure or other fertilizers; then why can they not be grown in quantities as well?

## Vacaville Notes.

**EDITORS PRESS:**—The nights have been very cold for a week past. There has been frost enough to kill tomato and melon vines, and grapevines in many places. The fruit season is about at an end for this year. Some few grapes and peaches are still being picked. Messrs. Thurber and McKevitt have some peaches that seldom get ripe but freeze on the trees.

Farmers in Suisun valley and on the plains adjacent to Vacaville have got their summer-fallow in generally. We have had about half an inch of rain, but not enough to start the grass much, although it shows green in many places. I saw some grain last week that was quite green.

The fruit crop has been very good here this season and prices have been fair, but money is scarce and times are hard, so business men in town say. I can see but one cause for this state of affairs, and that is the Chinamen do the most of the work in the orchard and carry the most of the money paid for labor out of the country. There are two sides to the labor question, as there are to every other. The fruit-growers say that they could not get white help enough. This may be true in some cases, but I know that there were many good, industrious men and boys in this neighborhood that could not get work a large part of the fruit season, and while some prefer white help, there are many that will not hire a white person if they can get Chinamen.

There are many ranches around here for sale, but not many sales are made, although those that are sold bring good prices.

The election passed off very quietly. The Prohibition ticket was talked up very earnestly by quite a number, but seems to have been pretty near a failure, judging by the number of votes it received.

Vacaville.

## The Fruit-Growers' Convention.

The official program for the fruit-growers, who are to meet in the Assembly Chamber at Sacramento next Monday, had not been made public on the 10th. It appears probable, however, that the first day will be consumed in opening the convention and perfecting the order of exercises for the rest of the week. Tuesday is likely to be devoted to insect pests and the care of trees, and Wednesday to questions of picking, packing and marketing. By Thursday morning it may be time to ask what kinds of stock newcomers should be most encouraged in planting; while Congressional care for horticultural interests would be a fitting subject for Friday's deliberation.

This forecast, though not authorized officially, will, we believe, prove a tolerably safe pointer for those who cannot attend the meetings throughout, but are obliged to exercise some choice as to the days on which they will be present. As to Saturday's probabilities we are still in the dark.

The Board of Horticulture has obtained a reduction of fare on all railroad lines in this State to Sacramento during the convention. The following instructions have been issued by A. H. Webb, Secretary of the State Board of Horticulture:

The Southern Pacific Company on their lines will sell tickets directly to Sacramento—all other lines to connecting points on the lines of the Southern Pacific.

On purchasing ticket, take receipt from ticket agent, showing that you have paid full fare to Sacramento. In addition to this, during convention, obtain from the undersigned a certificate to the effect that you have attended the convention, and on presenting this to the ticket agent at Sacramento, together with the ticket agent's receipt at place of starting, return tickets may be had for one-third rates. These return tickets will be good until the 1st day of December.

Persons neglecting to obtain receipts from ticket agents at starting points will not be entitled to reduced rates.

## Ventura Fair.

The Ventura County Agricultural Association held its first annual fair, Oct. 21st to 23d. Union hall received the vegetables, fruits and flowers, with the usual accompaniments in the line of mechanical, domestic and artistic production. The room being well lighted, the evening display was exceeding brilliant, and W. E. Shepherd's address was highly commended.

The horticultural output—apples, pears and quinces, peaches, Japanese persimmons, strawberries and citrus fruits—was excellent. Cyrus Kenney's exhibit of grapes won special praise. Black and English walnuts and chestnuts were shown; also very fine raisins from Nordhoff. The list of awards for best corn, white and yellow; for squashes and melons, cabbages, beans, onions, potatoes, etc., is quite lengthy. L. E. Mercer showed portions of swarms of bees, and received premiums for comb and extracted honey.

Mrs. J. Y. Saviers was adjudged to have the best flowering plants in pots—among them African marigolds—and Mrs. Theo. Shepherd's exhibit of palms and cut flowers was trebly honored.

A trio each of Langshans, Houdans, Buff Cochins, B. B. R. game fowl and Pekin ducks made up the poultry show.

H. P. Flint showed half a dozen fleeces ranging from 16 to 20 pounds; Leach & Hunt, agricultural implements. Dr. C. L. Bard's Humane safety check-rein, Western whip-socket and safety coupler for whiffletrees, invented and patented by himself, and L. C. Gridley's railroad gate, were favorably noticed by the judges.

The equine stock on exhibition included thoroughbreds, roadsters in goodly number, draft horses and horses of all work, J. G. Hill, Chrisman & Willoughby and Hill & Gries, H. W. Conner, Rob't Ayers, H. L. Bush and H. Holzhausen being the most successful exhibitors. Among the prize cattle were J. R. Willoughby's roan Durham bull, Thos. Barrows' herd of Jerseys, and W. L. Hardison's Holsteins.

The attendance at the grounds on Friday was reckoned at from 1000 to 1500. Besides the races there was a ladies' tournament, where in seven young horsewomen competed, Miss Addie Holden, of Santa Paula, winning the highest honors.

MRS. TRESCOTT and her sons, George and Edward, have recently removed from Oakland, and purchased the homestead on the Camron place, one mile from Tulare City. They have fine stock on the place and will increase the alfalfa pastures the coming season. Their barn and dairy apartments are among the best-built improvements in the county. They have a seven or eight-inch artesian well bored over 600 feet in depth. Their neighbors, or the town's people, we think ought to co-operate with them in boring further for a flowing well, and not stop short of 1500 or 2000 feet if a good flow should not be reached sooner.

It is stated that the shipments from Shelter Cove this year of the spring wool clip aggregated nearly 300,000 pounds.

### A Birthday Tribute.

[Written for the RURAL PRESS by ORPHEA DE STRANG.]

A garland I fain would weave for thy brow,  
O tutor and friend of mine,  
Of the fairest flowers that are blooming now  
In this vale of transcendent sunshine.

But the blossoms would fade ere the day declined,  
And their perfume be blown away  
To mingle its breath with the passing wind,  
As it sighs at the close of day.

What, then, can I bring from memory's store  
To gladden the morn of thy mortal birth?  
A gift, perchance, that thou mayst ignore,  
As it holds no wealth save friendship's worth.

A home thou hast in a glorious land  
Where God's best gifts blend with each bud and tree;  
Where hills of rich verdure rise stately and grand  
By the picturesque shore of the sounding sea.

Thy years are crowned with affection's bond—  
Each tie claims its own hallowed trust,  
From a husband's fund of affection fond,  
With a child in thy glad arms hushed.

What more can be gleaned from the flight of time?  
What more can the round earth bring  
Than a peaceful home in a sunny clime,  
Refreshed by love's perennial spring?

Take the wings of the lark at morning,  
And go with him in his flight,  
Till the silvery stars are adorning  
The sable curtain of night.

Stop not in thy restless meandering  
Until thou hast reached each high  
To which mortals aspire in their rambling  
For that delusion called human delight.

At last, when thy hopes are all banished,  
When dreams bring but bitter unrest,  
When each alluring picture has vanished  
Which fancy with loveliness dressed,

Then thy home in the heart of the mountains,  
O'ershadowed by exquisite skies,  
Will be—as to me—rich in fountains  
Of peace, where true happiness lies.

The treasure thy friend would be bringing  
Thou hast already received,  
In the contentment that sits ever singing  
On thy threshold from shadows relieved.

May the light on thy fireside continue to shine!  
May the love of thy heart remain loyal and true!  
May all thy days be serene and benign,  
And may each coming year thy blessings renew!

At length, when thy work is here finished,  
When the tale of this life is all told,  
In those regions where joy is undiminished,  
May we meet in the "Good Shepherd's" fold.

Duncan's Mills, Cal., Oct., 1886.

### The Arrival of Aunt Miriam.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

"Aunt Miriam's coming!"

It was the voice of a young girl which rang out in clear soprano tones, as she stepped inside the garden gate from her mile and a half walk from the postoffice. Her face was flushed and there was an unusual brilliancy in her eyes and an unusual haste in her steps as she tripped lightly up the garden walk to where I stood on the porch, surprised and almost afraid to believe the intelligence correct.

"Yes, it's true," she continued, "She's coming and will be here day after to-morrow. See! here is the postal—in fact two postals."

Before she could say more I had eagerly seized the postals, one of which informed me she would leave her home in the East on the 6th of October by the Denver & Rio Grande Railroad. The other was dated October 9th, and was in substance as follows:

DEAR SISTER:—I am now on my way to San Francisco, and will doubtless be with you by the 14th. In great haste, lovingly,  
MIRIAM S.  
Kansas City, October 9th.

"And, mamma," continued Ora, as I ceased reading, "to-day is the 12th, and we haven't been to the office for a week, or we would have received those postals sooner. There's only one day between now and then, and I'm afraid we won't have things done up in 'apple-pie order.'"

The sudden news had set my own brain in a whirl, and I was thinking of the long years since this sister and I had parted—of the bright October morning, just 16 years ago, when, after a pleasant visit to me, I kissed her lips and clasped her in a close embrace for the last time before she took passage on one of those "floating palaces" of the western rivers, bound for her home in a distant State. It was the time of year when in that northwestern clime the old year seems to throw out its grandest glories in its dying agonies. The hills and woods were fluttering their gay ensigns of crimson and scarlet and gold. The sumac, the maple, the

wild grape and many other lovely trees and vines were glorified by the varied touches of early autumn. The picture all came back to me, the central object being a diminutive figure draped in gray standing on the hurricane deck of the steamer and waving a last farewell.

Long years ago when autumn winds  
Blew low and soft through woodland ways,  
I parted from one, well beloved,  
I seem to see her fair young face,  
As, standing on the steamer's deck,  
Her gentle figure draped in mist,  
She echoed back my sad "good-by"  
From those sweet lips I late had kissed.

But my reverie could not long continue, for I heard Ora speaking to her brother as he came in the room.

"O Ed! who do you think is coming?" and before he had time to answer—"Aunt Miriam; it's a fact. She'll be here day after to-morrow."

"How—did you get a letter?"

"Yes, I went to the postoffice and received two postals from her, and one says she expects to be here by the 14th."

"The 14th! why, little one, it's the 12th now."

"Yes, and she might come to-morrow."

Aunt Miriam was my next oldest sister and consequently the playmate of my childhood, besides which there was between us a strong kinship of sentiment and taste, which made the relationship doubly dear. She had resided for more than half her life-time in an Eastern city, and though widowed several years before and childless, she could not be induced to leave her home and reside near any of her relatives, there being too many ties, too many tender associations, besides hosts of old friends, that strongly bound her to the spot that had witnessed at once her happiest as well as her most desolate years. It had now been 16 long and eventful years since we had parted—parted in the glow of youth and the prime of womanhood, before the silver threads had crept "among the gold," and at last

"We were to meet  
After long years,  
Once more to greet  
With kisses and tears."

With both, time had wrought rude changes which had cast their shadows on the brow, and sorrows that had left their scars on the heart. One may be sure that I went about my evening tasks with my thoughts far away, and hours passed after retiring before I could close my eyes in sleep. The next day was one of stir and preparation for the expected guest; there were so many little things to be thought of and so many things to be done, and withal the day seemed long; but when the evening shadows slowly vanished over the rim of mountains that sentinelled our western landscape, and the little family gathered at the tea-table, the subject was more fully discussed, and it was decided that Ed should walk down to the station that evening, for it might be possible she would arrive one day earlier than she anticipated.

"Do you think you would recognize your auntie, Ed?" said I. "Remember it has been 16 years since you saw her, and you were only a small boy then."

"Oh, yes!" were the confident tones. "Recognize Aunt Miriam Stanley! Certainly—small woman, dressed in black, round face, fair complexion, blue eyes, curly brown hair, nose slightly re—what is that French word?"

"Retrousee," supplemented Ora.  
"Nose slightly retrousee, dimpled cheeks, valise in hand, shawls on arm, big trunks, baskets, parasol, inquiring air, looking for somebody. I'll know her and take her in tow right away."

"Now, Ed," said the deprecating and kindly tones of Ora, "don't be funny; that is a genuine picture of an emigrant."

"Well, isn't she an emigrant, and ours at that? Good-by, I'm off for my emigrant," and with a few rapid steps his figure disappeared down the mountain road.

I knew it would not take long for this young and sturdy mountaineer to accomplish the distance of three miles, and as there was little to do but wait till his return, we prepared to wait with what grace we could, but even the minutes seemed long. A half hour passed, then an hour, and soon after we heard the dogs bark; then Ed's cheery whistle echoing up the mountain road. The moon was up and flooding with its electric-like light the vineyard, the garden walk and the open spaces in the forest. He soon appeared at the gate, and anticipating the question he knew we were ready to ask, remarked: "Yes, she's at the station sure enough."

"Is it possible?" "Well, I declare!" "She's come, has she?" "Really, then!" chorused three or four voices in a breath, in fact, all the voices there were in the house.

"You knew her, did you, Ed?" said I.

"Why, yes, I told you I should. Some little woman, same curly hair, same independent nose, valises, big trunks, basket, emigrant air, looking for somebody."

"Then," said I, "did she know you?"

"Well—no—scarcely, till I walked up to her and said, 'Are you Mrs. Stanley?'"

"Yes," she said, quickly; "you are not Ed, are you?"

"That's just who I am, at your service, Aunt Miriam," and I doffed my hat and we shook hands. She looked much relieved and said she had "been wondering how she would get to us from there, for she knew we would not

be expecting her till to-morrow evening," but I could see she was greatly disappointed when I told her I had not brought any conveyance, and she could not walk so far, but she really wanted to walk up with me, saying she would prefer to, rather than stay at the hotel till morning, but I wouldn't hear to it, so got her a room and made her comfortable and told her I'd be down for her early in the morning.

"Not till morning?" said I, dolefully.

"She shall not wait till morning," said papa.

"It would be too bad, after her long journey, and she so near to us, too; and your mother wouldn't sleep a wink to-night. Get the wagon ready, Ed, and we'll drive down for her. It is a beautiful moonlight night—warm and pleasant."

I drew on my wraps and we were soon carefully going down the winding mountain road. Picturesque and charming it always was, and the October moonlight only heightened its beauty. There were perfect arches of the lovely madrona, which stretched their lovely boughs above the road, interlacing and forming a canopy so thick the moonbeams scarcely penetrated; and by the road were groups of the rare and grand sequoia—the wonderful redwood, whose black shadows danced among the moonbeams and cast long, spiral shapes adown the mountain-side; and mingled with them were the graceful maple, the wide-spreading black oak with its luxuriant foliage, the moaning pine, which brought to memory "Sierra's sighing pines" that breathed their "sad, sweet music of the winds," the hazel, the manzanita; but before I have time to recognize and note the variety of forest growth that cast their thick shadows over our downward road, we have reached the foot of the grade, and the valley stretches away before us aglow in moonlight splendor.

A smooth road, and a drive of over a mile, with the now and then halt to open a gate, and a few moments bring us to the rural village and hotel. There are lights still gleaming from windows and door, for 'tis early evening as yet. I alight, and on inquiring ascertain the number of my sister's room. As I stepped into the hall I had time to think of the wavering mutations of fortune, and that we who had been severed for so many long years, who were bred in the same home nest and sheltered under the same roof-tree, were to meet at last, in a different clime and under far different circumstances.

Country hotels, as a rule, are not many storied nor remarkably commodious, and I had no difficulty in finding her room. I knocked at the door and a voice, whose intonation I well know, but which is at the same time strangely unfamiliar, bids me enter. One second and we are clasped in a close embrace. We both were changed. "Time, the truest builder," had left his trace on brow and cheek and hair. I found there was a changed look about her features—some shadow that the years had wrought—and the once golden curls now rippled in soft silver waves over a brow that had too early been crowned with sorrow.

It must have given her as much pleasure as it did us that we had come for her that night, for on learning this there was the same sparkle of the eye and the same brisk activity of old as she made her hasty preparations to accompany us. We assigned her the middle position on the seat and started for home, and, well, those who have had a like experience (and we pity those who have not) will agree with us that it would confuse a San Francisco lawyer to keep abreast of such a running fusillade of questions, such random answers, such spontaneous remarks. "Did you have a pleasant trip?" "Is your baggage all safe?" "How did you happen to take such a sudden determination to come?" "O! is that your place?" indicating a farm near. "Are you much crowded?" "What a lovely night!" "What magnificent trees!" "What do you think of California?" "O, it's delightful; there was a man on the stage that told me." "The dogs are barking; we'll soon be home now!" and to my surprise, for I had not noted time or distance, there we were at the big gate, which Ed had opened for us, while Ora and the wee one were standing in the moonlight waiting to welcome Aunt Miriam.

There was a repetition of kisses and laughter through tears, more questions with and without answers. A broad line of light streamed through windows and doors, and there was the warm and comforting fragrance of hot supper from the dining-room. Despite my sister's evident weariness, she as well as ourselves was loth to retire that night, there were so many, many memories struggling for speech. Since last I saw her she had visited two sisters, whom I had not met for many years, and it was next to meeting them face to face to hear her speak of them, describe their homes, etc. There was so much to be said, so much to be talked over; so the next day I locked and covered up the sewing machine, put out of sight writing materials, ignored darning and mending, and we made a holiday of Aunt Miriam's visit. We left off talking late at night, when we retired, and commenced early in the morning. We chatted over our morning work. We went to the spring together and lingered under the fig tree and chatted. We chatted over the preparation of our noonday meal. What if we put sugar into the chicken stew instead of salt, and pepper into the pudding sauce instead of spice? No matter. We chatted. Our chatting lasted like a steady downpour for three weeks; after that it "let up" slightly, and continued at intervals, like intermittent showers, but continued. In due time the baskets and valises

were opened, and the big trunks were unpacked. They contained many interesting family relics, which she had lovingly preserved, and which were dear to both of us from the association and memories with which they were invested. There were also old pictures of dear friends.

Ah, there were faces whose glance was cast  
Far from my longing gaze,  
Whose bright eyes shone with language their own,  
With love in their tender rays.

There, too, were old volumes, familiar in childhood—pictures, music, keepsakes.

There were snatches of songs that coral lips sung,  
Attuned in life's morning-lit air;  
Sweet notes that so rudely by fate were unstrung,  
And dreams from a land we remembered as young.  
"There were ringlets and tresses of hair,"  
Old volumes that wakened an echo of years  
Entombed 'neath the shadows of time;  
And memories recalled by the lovelight of tears,  
Replete with the sorrows, the hopes and the fears,  
That were launched on youth's ocean sublime.

And from the depths of those capacious trunks she brought forth rare volumes of romance and delightful poetry—for she loved true poetry, this sister of mine—and at times her soul touched a harp of sweet and tender melody. When the long winter evenings came, the hours were whiled away listening to her read in her clear, distinct voice from Longfellow, Jean Ingelow, Mrs. Hemans, Browning, Whittier, etc. It was not long before the weariness of travel wore away, and after I became accustomed to the changes time had made, I often have almost fancied as we strolled gaily through the deep woods surrounding "The Heights" that she is the same dimpled, curly-haired maiden with whom I trotted to school—the same fearless, venturesome little spirit that led me into many a mischievous prank.

One day, while overhauling a large trunk, she handed to me a much-worn, thick and faded volume, with the remark:

"That is my old red scrap-book! Don't you remember it? I have had it ever since I first commenced keeping house."

I thought there was something about it that had ever so little the ghost of familiarity—just as sometimes in viewing a scene for the first time we vaguely have the impression we have seen it or dreamed of seeing that same scene before, like as though we had had a pre-existence, ages before, and in our wanderings had beheld it with mortal eyes; knowing all the time we have not, but puzzled at the vague remembrance, and striving to catch the invisible link that ought to connect us with this mysterious previous life. Well, I couldn't for the life of me remember whether I had ever seen the old red scrap-book or not, but there was certainly a familiar look about it. As I opened it, she said:

"I have some of the first articles you ever wrote in that book—some that you haven't yourself, perhaps—for I suppose they were all destroyed by fire when you were burned out in '73. I have carefully preserved all you ever sent me."

As I turned the leaves of the quaint old volume, I recognized many of my girlish fancies in prose and poetry, not a few of which I had forgotten entirely, but the name and the date were there, and quick as a flash it all came back to me—when they were written—what prompted them, etc. It was like confronting my dead and forgotten self. Here was one written in time of the civil war. I was then a resident on the remote frontier, among the Rockies, at a time, too, when the Indian war on the plains was raging at its stormiest; in the darkest history of the civil war, when every available company of soldiers was called from the plains and sent East. All travel for a time was stopped, and, in consequence, there was soon felt a deplorable scarcity of supplies. Paper for the issue of the *Central City Journal* ran short, and for weeks that paper presented a many-colored appearance, sometimes pink, sometimes brown, stone-color, etc. This poem was printed on tan-colored paper, and it at once recalled a very interesting stage of our country's history.

Another newspaper article neatly folded and not fastened to the book attracted my attention from its evident age. It was worn and thin and yellow. On opening it, to my surprise I recognized my first story effort. It was published something like 32 years ago in the *Nevada Transcript*, I think, though I have nearly forgotten. The writer was then a raw recruit, fresh from "Ameriky," to use a current expression of the time, and having a "penchant" for scribbling, and just out of school, I set afloat my first venture on the sea of literature in a California newspaper. I need scarcely add it was a "love story." Remembering myself, "which the same," to use a Bret Harteism, was a different being from now, and looking at that youthful effort after all these years critically and "through these specs," I am amused. However, it possesses one attraction for me—age—but is not like wine in that respect.

Between the lids of the old volume were countless gems from obscure as well as famous authors, selected by one of fine poetical appreciation and interspersed with these were numerous poetical gems from her own pen—the creation of her imaginative and romantic fancy.

The weeks that followed seemed shod with muffled sandals, for they glided heedlessly. Winter deepened—spring with its world of flowers was renewed; summer came with its crown of roses, which has imperceptibly merged into autumn with roses still, and again gay October

flaunts her crimson colors among the purple hills. A year has passed and Aunt Miriam is still with us. She has taken kindly to our genial clime, and sometimes when I look at her fair, bright face, I think she has found the fabled stream that Ponce de Leon sought in vain. A blessing as she is to all, I know her Christian heart has found at least the fountain of immortal youth.

*Arcadian Hights, Napa Co.*

### The Woman Question.

The eighteenth annual meeting of the American Woman Suffrage Association was held in the hall of the House of Representatives, at the capitol in Topeka, Kansas, commencing on Tuesday, October 26th, and lasting three days. Distinguished delegates were present from nearly every State and Territory of the Union. The fact that the greedy news-gatherers of the Associated Press scarcely deigned to notice it shows that there is still a lingering prejudice against such discussions. And this is not strange. The world over defects are always more noticed than excellences, and we are apt to be swayed more easily toward carping and fault-finding than praise and justice. It is difficult to listen patiently to a dozen wise men talk if there is one fool present. His insipid chatter will so worry the mind and divert the attention of the hearer that he will fancy for the moment that the whole universe is overflowing with nonsense. A crying child or a barking dog may break up a play or spoil a sermon. How often a session of Congress is brought into bad repute because two or three babbling fellows were always haranguing the house. A score or two of women who worship the toilet and the tinsel of shallow accomplishments, who pore over cheap novels and fashion-plates and toy with poodles and general folly, may make the idea current in a club of bald-pated bachelors that woman is a silly creature, unable to become an associate and helpmeet in that development of life that requires energy, endurance, a level brain and self-reliance.

In like manner, it is undoubtedly true that much prejudice has been engendered against these suffrage meetings. Because a few women who have sored on the men in consequence of their neglect or have been unhappily married and persist in judging all men by the one faulty husband put themselves forward as leaders, and thrust their stale budget of grievances upon the public every chance they got, the public came to look askance at the movement. One Mary Walker, in breeches, with a rowdy hat, rattan cane, and aping mannish airs, will do more to bring reproach upon the cause than Mrs. Cady Stanton or Livermore could remove in a year. It is a matter of congratulation and argues well for the future that this class of bores and shrews are quietly being put on a back seat, and women who are ornaments to home and society are coming to the front at these annual meetings.

The progress of our century has involved all the interests of woman. She has been borne along upon the great stream; she has reached a personal worth and power never reached by her before. There have been times when there were great stirrings and throbs of new life and only a few persons were benefited. The poor were left to glean in the corners of the field and the prayer of the slave was not answered. Times that invented the printing press but had no ideas to feed it; that invented the telescope and went into raptures over the rings of Saturn and the belts of Jupiter, but failed to see the want, ignorance and misery near by. At last an era has come that seems to overlook nothing, when science, politics, arts, literature, education and religion all seem to share in the common thrill. Woman has the good fortune to find her condition greatly changed for the better. To her the world has been almost completely transformed. The question whether woman should vote, or in other ways take part in making the laws, time will soon answer, and from present appearances seems likely to answer in the affirmative. But when she comes to her crown let her not forget her kingdom. Twenty years ago one of our greatest statesmen said: "We want the excellence of man and woman united, we want intellectual power, knowledge, great ideas in literature, philosophy, theology and ethics; but we also want something better—the moral, affectional, religious intuition of woman to put justice into ethics, love into theology, piety into science and letters."

**SUBTERRANEAN ART.**—Art is subterranean in some parts of Europe. Of the enormous brazen and marble population of Rome, only three statues or groups, the two horses of the Quirinal Hill and the Marcus Aurelius of the Capitol, have always been above ground. Nearly all that now exists in Italy of ancient sculpture has been the produce of excavation, and the process still goes on.

**"INVISIBLE SEAM UMBRELLAS"** are advertised. A great many of the old-style umbrellas invisible seem, when you come to look for them.

**CHINA** and Japan buy our dried apples freely. Thus does American industry help to swell the population of the Orient.

## YOUNG FOLKS' COLUMN.

### In Fairyland.

[Written for the RURAL PRESS by M. B. D.]

Mabel sits in the window ledge  
Of the summer-house, happy and quiet—  
A most rare mood for this sprightly girl,  
And none of us can deny it.

Her thick, long hair, that is brown and gold,  
In a raveled braid is falling;  
While her dark eyes bend o'er a lettered page  
That seems her mind entrancing.

For she visits a wonderful fairyland,  
Peopled with fays and graces;  
And she dimples with mirth as she follows them there,  
Playing their parts in their places.

The roses bloom and the wild birds sing,  
And around her the sunshine lingers;  
While the fairy tale makes her pulses leap  
Till she thrills to the tips of her fingers.

Is there any joy which the world can give  
More pure, more sweet and tender,  
Than these simple wonder realms of thought  
In her young mind's dawning splendor?

Though wealth and fame and wisdom's might  
To noble heights allure us,  
Our memories hold no sweeter joys  
Than childhood's days secure us.

### Cigarettes.

[Written for the RURAL PRESS by MORE ANON.]

Will the editor of the PRESS please retire to his editorial sanctum while I arise and take up his text upon "Boys and Cigarettes."

When an able agricultural journalist essays to speak in behalf of weak, silly and erring youth, it is time that more fall into line to do what they can toward arresting the growth of this evil.

How, do you ask, shall we begin this reform? By a united effort to show the youth the evil or danger of this pernicious habit. Don't laugh and say "how cunning!" when the little tots roll and puff their first rank, deadly cigarette. No doubt this poison is the cause of violent and dreaded diseases, and when the system is contaminated with this nicotine poison it defies medical treatment, and thus brings reproach upon the science of *materia medica*.

As an illustration of my claim, I will refer you to a bright and handsome youth of 16, who suffers from the evil practice of early and stealthy cigarette smoking. Poor Willie is a cripple, and what's the cause? When he was first attacked his parents consulted an able physician, told his symptoms, of his inability to help himself, and the location of his pain. His disease was spinal paralysis, and now, after 11 months of suffering, he is enabled, by the aid of a rolling chair and crutches, to get about the house and yard. He cannot get to school, although he resides within sight of the school-house; but by this lesson he has bought his freedom from this vile smoking habit and the use of this rank compound of villainous weeds forever.

I write this for the benefit of the young boys who read and write for the RURAL PRESS, and who, I hope, will be found some day with all of their ability to formulate such laws as the City Council of Oakland have been doing, and let all other cities, villages, towns and hamlets emulate this example and make far more stringent laws, until the evils of all kinds of intemperance have been consigned to the dark ages from whence they originated. They are relics of barbarism.

*Temperance, Fresno Co.*

### A Singing Mouse.

An animal such as is described in the two words of the above caption belongs to the family of rodents, but unlike them is endowed with the power of song. There are very few of these little animals, in fact they are so scarce that they are regarded in the light of curious phenomena. One of these little natural curiosities, says the Santa Rosa Democrat, has taken up its abode in Dr. Caldwell's dentistry. Some five months ago the doctor's attention was attracted by what seemed to be the singing of a canary in the near neighborhood, and at the same time he noticed a little mouse that was in the habit of scampering across and around the office at all times of the day. The mouse did not annoy him in the least, but for the sake of ladies who came to the office, he thought he would trap the inoffensive little thing. Accordingly he set a trap for it—one of those kind that is easy enough to get in, but hard to get out of. On coming to the office one morning, he forgot to look at the mouse trap, as usual, but soon his attention was called to it by the peculiar sounds that were issuing therefrom. At first he thought it was the canary bird he had been attracted by for some months past, but on going to the mouse trap he saw therein the author of the music. The trap contained a singing mouse, the only one known of on this coast. It took the doctor some time to make sure that the little creature was the vocal artist, but he soon became convinced by the actions of the little animal while sending forth its notes. It would

stand upon its hind legs and act otherwise like a canary. The little fellow was kept in the trap for over a month, during which time he entertained his captor with his songs. At the end of this time the care of him became too much for the doctor, so one morning he turned him loose. But great indeed was his surprise when on entering the office the next morning to find the trap occupied by the singer. He was turned loose again, but the next morning was back again, and so it continued. The little fellow goes to his trap every night and is let out in the morning. The song of the mouse differs somewhat from that of the feathery songsters, but in its difference is its beauty.

## GOOD HEALTH.

### Mileage of the Blood Circulation.

In preparing lectures on vital or animal mechanics for a Cantor course at the Society of Arts, several practical points of new or renewed study have come before me, some of which are, I think, deserving of brief notice. One of these is the question of the mileage of the blood current of a healthy adult man, in whom the circulation under the direction of 69 strokes of the heart per minute, at the assumed propulsion of nine feet at each left ventricular pressure.

The distance traversed would, I estimate, be at the rate of 207 yards per minute, or seven miles per hour, or 168 miles per day, or 61,320 miles per year. Supposing, therefore, that a man who has lived 84 years could have one blood corpuscle floating all that time round his circulating channels—as a planet circulates round a sun—that corpuscle would have performed at the close of the time named the grand tour of 5,150,808 miles. The heat generated by friction in this motion of the blood we may take as included in the normal constant of 98.45° Fah. What the excess would be when, as in fever, the rate of passage may extend to over double the normal, or 14 miles an hour, at full tension, can only at present be estimated on data which have to be formulated, and are, therefore, inexact. But here a most important field is open for inquiry, and includes the questions: 1. Is the excess of febrile heat in pyrexia due to increased pulsation at full tension? 2. Is the increased motion due to the high temperature? 3. Are both dependent on one common cause? We really know nothing about pyrexia until these questions are determined. A pigeon lives always at what in the human subject would be the highest pyrexia. Its temperature is 108° Fah.; its arterial pulsations are 140 beats per minute; and it has a surface of body presenting the fullest resistance to conduction. Does this truly pyrexial animal owe its normal high temperature to its rapid circulation? Does its high temperature give rise to its rapid circulation? Or, are the heat and motion dependent on one common undiscovered cause?—*The Asclepiad*.

**THE STATE BOARD OF HEALTH.**—We acknowledge the reception of the ninth biennial report of the State Board of Health for the fiscal years from June 30, 1884, to June 30, 1886. It has been printed at the State printing office in Sacramento, and comprises a volume of 282 pages. California was one of the first States in the Union to recognize the need of organizing a State Board of Health, and the work which that Board has done has fully proved its value, although its opportunities for usefulness have been largely curtailed by reason of insufficient appropriations for such work. The table of contents of this report, which occupies 10 full pages of small type, shows that the work of the board has comprised a wide range of subjects, all of which are valuable for the information and instruction of the people at large. It deals sparingly in statistics, and none but those absolutely essential to a publication of this kind have been admitted. The report deals largely in general sanitary information and instruction, and will, no doubt, do much to encourage more general attention in regard to public sanitary needs and to domestic hygiene among the more intelligent portion of our people. It is gratifying to observe that in many ways the public is gradually becoming better informed in regard to these important matters. The publications of the board, through its monthly and annual reports, and the encouragement which it gives to the newspaper press to take a more active interest in health matters, if properly seconded by needed legislation, will soon place California in an advanced position, not only in the conservation of life but in the repelling of disease as well, by means of all the knowledge and appliances which modern sanitary science has devised for the benefit of the human family. We shall take an opportunity from time to time to transfer to our Health Column some of the many valuable hints which a more careful examination of the report will doubtless bring to our notice.

**TROUBLE IN THE HEAD.**—Roaring sounds and whistling in the ears and deafness. I had been much troubled by roaring and singing in my ears and at times a whistling sound, especially when lying down, writes a correspondent of the Boston Transcript. An old and experienced

physician whom I consulted told me to gargle my throat night and morning with hot and cold water. Have one tumbler of hot water, taking the water hot enough to scald the mouth, and one tumbler of cold water. Gargle first three times with the hot, then three times with the cold water. Do this three times, making nine times with each. In a short time I was cured by this very simple remedy. Many times I have wished it were better understood how often deafness is caused by the hardening wax in the ear. A great number of people doubtless suffer from what they believe is incurable deafness, old persons in particular supposing it to be caused by old age, when if they would consult any good aurist they would find it was merely hardening of the secretion of wax in the ears. This can generally be removed by a very simple and painless operation and hearing restored.

**WHAT IS HUNGER?**—The cause of the intense pangs experienced by a starving man is little understood, but it may be safely said that the pain is not produced, as has been popularly explained, by the grinding together of the walls of the empty stomach. Dr. Robert Wilson remarks that the theory of hunger may be thus formulated: Fasting produces a general change in the organism as a whole. This again brings about a specific change in a particular part of the organism—the stomach—of which the pain of hunger is the local symptom. Direct applications, such as a bolus of food, or even of clay, temporarily relieve the local feeling of a pain, by neutralizing the specific local changes to which that feeling owes its origin. Indirect applications, again, such as the injection of milk into the blood, correct the general alteration of the system produced by want of food. By doing so, they correct those local gastric changes produced by the general effect of fasting in the system—changes which render the local manifestations of hunger possible.

## DOMESTIC ECONOMY.

**PEACH MERINGUE.**—Put a quart of milk, reserving half a teacupful, in a saucepan, and when it boils add the reserve milk, in which two tablespoonfuls of corn starch are dissolved, stirring constantly. When it thickens, remove from the fire and add one tablespoonful of butter and let the mixture cool. When cold, beat in the yolks of three eggs until the custard is light and add half a cupful of granulated sugar. Cover the bottom of a buttered earthenware baking-pan with three layers of ripe peaches, peeled, stoned and quartered, sprinkling two tablespoonfuls of sugar over them. Pour the custard gently over the fruit and bake in a quick oven for 20 minutes. When done, cover the top with the whites of the eggs beaten to a stiff froth, sprinkling a little sugar over the whites. Brown delicately in the oven and serve cold with cream.

**ROULADES OF VEAL.**—Strips of veal are cut from the leg and nicely trimmed, so that each measures seven inches in length, five inches in width and half an inch thick. Each strip is larded on the outside with fat salt pork, and the inside is covered with beaten egg and a layer of forcemeat one-quarter of an inch in thickness. Each strip is rolled together, bound with string and baked in butter in a covered pan for one hour. Before serving, mix a little sour cream with the gravy and serve hot. For the forcemeat the trimmings of the veal may be used. Mince half a pound of veal and one ounce of suet very fine. Mix well with two ounces of melted butter, two ounces of bread crumbs that have been soaked in water and then pressed dry, the yolks of two eggs and the whites of two, beaten to a stiff froth.

**PARSNIP BALLS.**—Parsnip balls are excellent for an entree. Parboil six large parsnips and let them get quite cold, then peel them and grate them; beat two eggs till very light and mix with the grated parsnip, adding enough flour to give coherence to the mixture; flour your hands and make small flat balls. Have hot lard in a shallow kettle and drop the balls gently into it; fry them until they are well browned on both sides. Send to the table very hot.

**RICE OR HOMINY CROQUETS.**—Boil the rice or hominy till well done, then allow to become perfectly cold. To 1½ pints add a good pinch of salt, three well-beaten eggs, one spoonful of milk, flour enough to roll out in the hands into forms and one teaspoonful Royal baking powder. Have ready a deep frying-pan half full of boiling-hot fat, drop the croquets carefully in, fry till a rich brown, serve hot.

**THICKENED MILK.**—Two quarts of milk, three eggs, one and a half cupfuls of flour, one cupful of sugar, a little salt and flavoring to taste. Mix the flour smooth in a little cold milk. Beat the eggs and mix them with the sugar and flour, beating all well. Set the milk on the range in a saucepan, and as soon as it boils pour in the mixture, stirring until it thickens.

**OKRA SOUP.**—Make the stock for the soup from a skin of beef the day before it is to be used. While boiling, put in an onion, half a green pepper, and a small piece of boiled ham. Strain the soup and set it in a cool place. The next day set the stock on the fire and add 36 okra pods in thin slices and six tomatoes. Let all simmer for three hours, and serve.

## The Week.

As we anticipated last week, the public mind has been chiefly occupied since then in the effort to ascertain who was chosen to serve the State at the election of Nov. 21. Returns are not yet in from many counties. The election of Washington Bartlett seems decided, and as we write his apparent plurality is about 700. The results for the other State officers is more uncertain because many counties have reported their vote on the Governorship but not on the minor offices. For this reason the future occupants cannot be decided upon. Twenty-five counties which have reported up to this Wednesday afternoon give an apparent plurality to the Republican ticket, but this is only half the counties and the San Francisco vote is not fully canvassed yet. Therefore the expectant must possess their souls in patience for the present.

The days are drifting fast into the region of

short light and long darkness, though the November moon is doing bravely to help out the drooping sun. The daylight hours are so delightful that one longs for more of them. The hills are becoming verdant in the regions which have had most rain. The air is cool and clear. The new blooms on autumn-blooming plants are richly colored, fragrant and dustless. Chrysanthemums are in their glory. The garden has a wintry aspect, it is true, but it is only a little resting season from which it will soon awake with freshened beauty.

## Gone to the Bad.

Scarcely had the alarm among the merchants caused by the defalcation of Cashier Bates subsided, than comes the report that a long trusted employe of Wells, Fargo & Co. was on his way to the haven of defaulters. What does it all mean? When we hear of the fall of such men as Mr. W. E. Gould, of Portland, Me., and Mr. Bartholomew, of Hartford, Conn., and Charles W. Banks, of San Francisco, it gives one an impression akin to that of the people of Charleston during the earthquake when their houses were tumbling down all around them. That is, it causes one to feel as if the foundation of all public confidence was shaky and liable at any moment to give way. Such disasters overwhelm the individual with unspeakable shame and mortification, and the agony of grief and disgrace that tortures the family cannot be told in words. But the evil does not stop there, it tends to destroy confidence of one man in another, the center of power and driving wheel of all business enterprises. Few men enjoyed more thoroughly the confidence of his employers than C. W. Banks. He had been long in their service, had a good salary, and was otherwise above all financial contingency. He was a member of the Union club and took a lively interest in the Microscopical Society. When such a man falls he casts a gloom and suspicion over all trust and fiducial relations.

We allude to this case, as it is fresh in the public mind, but they are happening every day in some part of the country. Were all the scamps and scoundrels to get their just deserts, the jail accommodations would have to be increased, and were they all to start for Canada, standing room might be at a premium. But the most of them are not inclined to emigrate. Some are suspected, but their faces are hardened against suspicion; others try to hide the perilous secret of dishonesty in some lonely corner of their hearts and go on masquerading as honorable and trustworthy men. They only scamper when the shadow of the Nemesis is upon their track.

But why is it that men will do such things? We can understand how a man in want will steal before starving or a frail nature go down before the dazzle and lure of a great temptation, but how is it that men who are independently situated, so far as temporalities are concerned, and occupy high social positions, can peril it all on a rascally venture? Is it true, as the old preachers used to say, that human nature is as prone to evil as the sparks to fly upward? Is there a pestilence of dishonesty in the air? Do the gaudy splendors and luxury of the newly rich goad men to destruction by blinding them to all moral distinctions? Whatever may be the cause, these lapses of character that often startle a community by their suddenness are not always as sudden as they seem. Men do not, as a rule, go down to hell at one jump; they go down steadily, step by step. Such terrible collapses of character as that of Bates and Banks may be of some value to the community as red signal lights warning others that the way of the transgressor is hard and the only safety is in shunning the very appearance of evil.

RECIPROCITY NEEDED.—Now that cash returns from the crops are coming in, we hope our readers, who have found the RURAL PRESS a valued teacher and helper, during the year, will make our Thanksgiving and their own more glad some by sending in renewed subscriptions.

IMMIGRANTS are now pouring into the State at the rate of 700 or 800 a week; nor does it seem likely that the stream will slacken much during the current month. A goodly and growing proportion of the newcomers are turning northward from San Francisco bay.

## Tulare Lake.

This is by far the largest lake in California, measuring about 35 miles in width by 50 miles in length. Within a few years since its length was over 60 miles. Its western border is said to be a comparatively trackless desert, a few isolated ranches comprising all the settlements. The traveler who passes along that way must provide himself with water and food for himself and animals over long stretches of hot, dry and dusty country. And yet, when water is provided for irrigation, no doubt the land can be made a garden spot. It is not far from the northern border of this immense lake that we find the rich agricultural lands of Mussel slough, embracing Hanford and other enterprising settlements. The name Mussel slough is derived from a stream that empties into Tulare lake containing great quantities of fresh-water mussels.

The north, east and south shores of the lake recede very gradually to the lake, and for miles out a boat can be propelled by pushing with poles touching the bottom. On the west side the shore is more abrupt.

Abundant flowing artesian wells are obtained at a depth of about 400 feet on the eastern and northeastern and southeastern borders.

At the mouth of Tulare river, 13 miles west from Tipton (on the S. P. R. R.), is kept a small steamer capable of conveying about a dozen individuals. It is used by hunters who have a camp at that point. Trips are made once a week or so across the lake. At some seasons of the year large quantities of game are secured for the S. F. market—principally ducks, geese and terrapin. A handsome species of large white swan inhabit the lake winters, going north summers. Big pelicans are often seen. Grebe, a smart and quaint-looking diving bird, larger than ordinary ducks, are increasing in numbers. The fine, soft and pure-white down of their breasts and bodies, except the upper portions, makes their skins highly prized by many ladies for warm capes and ornamental dress trimmings. Snipe, as well as some other varieties of game, are found in greater or less quantities.

One of the most perfect of alfalfa fields is to be seen at Mr. McFadden's ranch, near the lake-shore, just south of the mouth of Tulare river. The surface of the ground is very smooth, and the alfalfa fairly and evenly covers the surface. Natural moisture pervades the rich and easily-worked soil to within about six inches of the top, rendering irrigation entirely unnecessary. The surface well water at this point is palatable, although at some other points it is unfit for domestic use.

Probably no other one place in the United States affords as many rare and easily-obtained luxuries for four-footed swine as the borders of Tulare lake.

In the spring of the year good-sized fish—locally called mullet—force their way in among the tule reeds in immense quantities. Like catfish, they have large heads. This makes locomotion difficult in the tules, and they fall in legions an easy prey to the swine.

The aboriginal tule hog is pictured in the minds of the oldest inhabitants as being from 6 to 10 feet long and 4 feet or more in height, with legs slim and fleet enough to create a desire on the part of ordinary two-legged animals to give them plenty of distance. By cross-breeding with modern breeds of swine, the wild hogs have become improved and less ferocious. They have also imparted their fishing proclivities to the domestic animal, and he can now swim for fish, and dive and dig for mussels along the shores of Tulare lake, as expertly as his ancient porcine predecessors. Thus, with fishing, fresh clam excavating and digging a very nutritious species of nuts which grow on the roots of a peculiar species of reedy-like grass, which grows abundantly in places along the shore, the Tulare lake porker easily gathers unto himself a daily feast unequalled by his swinely brethren of any other hunting ground.

It is said to be in contemplation to put on a steam ferry-boat next summer to make regular trips across the lake.

Notwithstanding its alkaline qualities, this is a beautiful and grand body of water. From the fact that a few hunters and cattlemen are the only human beings who have occasion to sail upon its immense bosom, or even look upon its great and usually placid face (except from long distances), but little is said about it

in public print or otherwise. At this season of the year, at least, the water is not so unpalatable as the writer had supposed it to be from hearsay.

During the past 20 years the borders of the lake have greatly receded, leaving a large amount of the richest tillage land to be found in our State. Yet there was a time, since 1849, when Tulare lake contained much less water than at present. This is evidenced by old barns and corrals now standing in shallow water a long distance from the water's edge.

The slope on the east side to the lake is not much, if any, greater than one foot per mile, so that its tule border prevents those living near from viewing its surface without rising to an elevation or visiting its very shore. Probably not one citizen in twenty, of Tulare county, has ever visited or enjoyed a near view of this remarkable inland body of American waters.

It seems to us that Tulare lake merits more attention than it receives. It lies quite near Tulare City, which promises to be a metropolis of the upper San Joaquin, and in a county which this year is the banner grain county of the State. It should receive the attention of the scientific explorer, for it must contain a wealth of animal and vegetable life which is new to science, and perchance minerals of great interest and importance. Navigation of the waters of the lake may add much to the information we have about the west shore, and it is not unlikely that there may be found many places worthy of settlement in this comparatively unknown land, which includes both the immediate borders of the lake and the foothills of the Coast Range beyond. We predict that an exploration of this region may disclose such resources in soil and mineral that the wonder will be that they could have remained unknown so long.

## Falsifying Pedigrees a Crime.

There have been trouble and loss through unscrupulous falsifiers of pedigrees ever since improved cattle have gained prominence. False pedigrees have crept into the herdbooks and have been with much trouble weeded out. Besides this there is the much coarser fraud of making up pedigrees out of whole cloth for the sake of selling some animal which is placed in the hands of some unscrupulous cattle jobber. Breeders of pure-bred animals have always had to contend with this sort of rascality, and innocent purchasers have been heartlessly victimized, times without number. The Jersey breeders who are members of the American Jersey Cattle Club are trying to place this kind of a fraud where it belongs and are invoking the aid of breeders' associations and individual breeders of all kinds of pure-bred animals to secure the enactment of the following law in every State in the Union:

## AN ACT

TO PUNISH FALSE PRETENSES IN OBTAINING CERTIFICATES OF REGISTRATION OF CATTLE AND OTHER ANIMALS.

The People of the State of \_\_\_\_\_, represented in Senate and Assembly, do enact as follows:

SECTION 1. Every person who by any false pretense shall obtain from any club, association, society, or company for improving the breed of cattle, horses, sheep, swine, or other domestic animals, a certificate of registration of any animal in the herd register or other register of any such club, association, society, or company, or a transfer of any such registration, upon conviction thereof shall be punished by imprisonment in a State prison for a term not exceeding three years, or in a county jail for a term not exceeding one year, or by a fine not exceeding one thousand dollars, or by both such fine and imprisonment.

SEC. 2. This act shall take effect immediately.

SECTION 3. This matter should receive the attention of California and this or some similar act brought before our Legislature this winter.

RAISIN PRICES.—There has been much said about low raisin prices, and that it would not be possible to get so much for California fruit this year, because the cholera scare would not affect the Spanish raisins. Under these claims and low bids, the early sales were made as low as 3½¢@4¢ in the sweat boxes; but now, according to the Riverside Press, some buyers are bidding 5½¢@6¢, and seem disposed to push the price up. Other dealers say such rates cannot be afforded for the naked fruit. It looks very much as though there was something more than straight trade in the situation. It has the appearance of a gamble in which certain ones have filled their hands and are now booming prices. This is the usual course with produce speculators. Buy low and sell high—out the producer on the draw and the consumer on the thrust.

### Humane Societies.

The American Humane Association will hold its tenth annual convention at the Grand hotel, Cincinnati, Ohio, convening November 17th and continuing in session the rest of the week. Through the courtesy of the secretary, Thos. E. Hill, we have received a program of the subjects that will be considered. The feeling that dumb brutes have rights which should be respected and protected by law seems to be on the increase, and there can be little doubt that our humanity will be better, sweeter and more lovely as the result.

The first society for the protection of animals was founded in London about 60 years ago, and is now the most powerful organization of the kind in the world. The Queen is its patron. The Earl of Harrowby has been its president, and on its board of officers are princes, dukes, earls, bishops, and many of the most eminent men of England. The Baroness Burdett-Coutts was for some time at the head of one of its committees. In one year nearly 600 English clergymen preached in its behalf. At one annual meeting the Princess Louise, in the presence of an immense audience, distributed 190 prizes for the best composition on kindness to animals among successful competitors in 190 London schools. It is 21 years since the organization of the first humane society in New York. Boston followed soon after, and Philadelphia, Buffalo and Chicago, and now there are societies in nearly every considerable town and city in the Union.

Would not these people be more wisely engaged in forming societies for the protection of men than animals, is a question that may occur to some. Ever since the dawn of civilization the chief study of mankind has been how to protect men. To this end the whole machinery of the church and State has converged. Around the mass of humanity for ages has been thrown laws, courts, police, magistrates and a dazzling zodiac of public and private charities, while for the millions of animal population there has not been, till within a few years, a single effective law enacted. And then it is part of the work of the humane societies to prevent cruelty to children by drunken, indigent, vicious or insane parents.

It has been often intimated that men employed like Mr. Henry Bergh, in New York, are officious nuisances; that the enforcement of the laws protecting animals should be left to the ordinary police. To this it may be replied that when a man strikes his fellow-man he expects to be arrested, and regards the officer as doing his duty, but when he strikes his own property he considers it impertinent for any one to interfere and would gladly do the meddler an injury. Hence it has been found that such laws without societies are a dead letter. The policemen turn their blind eye upon them. Then, were it not for these societies there would be no effective laws to enforce, for it is only in States and municipalities where such societies exist that such laws are enacted. Again, while laws for the protection of men have been so well defined that policemen know where their duties begin and end, the laws for the protection of animals are so poorly defined that the average policeman may, and often does, hesitate how much a man may whip, starve or overload an animal before the cruelty will justify an arrest. It is to be expected, however, that with the general advance of the humane idea, needed changes in this respect will be secured.

But all other matters aside, we should cultivate sympathy toward dumb animals as a duty to ourselves. The adept in occult science knows there is a high and holy meaning enshrined in every shape of life, and many, for that reason, will not eat flesh; but this idea may be too deep and abstruse for practical use. Still we are all aware that the sentiment of kindness is developed just so far as we show mercy and gentleness toward these poor, dumb friends of our race. If we would have a home odorous with love, tenderness and all the humane virtues, let the children be early taught the sensibility that avoids giving unnecessary pain and torture. We shall never

have a redeemed world till the whole animal kingdom will join with man in one anthem of praise to the Infinite Life-giver.

"He prayeth well who loveth well—  
Both man and bird and beast;  
He prayeth best who loveth best  
All things both great and small;  
For the dear God who loveth us,  
He made and loveth all."

### Our Next Governor.

A likeness of the man who now seems destined to succeed Gen. Stoneman as Governor of California will be of interest to our readers throughout the State. Washington Bartlett, whose portrait we herewith present, was born at Savannah, in 1824. Having been well educated in Georgia, he early removed to Florida, and engaged in journalism at Tallahassee.

In '49 he caught the gold fever, and the following year found him in California. He did

HON. WASHINGTON BARTLETT, GOVERNOR-ELECT.

not, however, betake himself to the mining regions, but went to work in his profession with promptness and energy, and published the first daily paper in San Francisco. After winning success in business and recognition as one who can safely be depended on, he was in 1859 elected clerk of the city and county, and so acquitted himself in office that he was twice re-elected.

In 1870 Gov. Irwin appointed him one of the Harbor Commissioners. Next he was chosen State Senator. In 1882 the Democratic party, needing a candidate of integrity unquestioned to run against honest Maurice Blake, selected Mr. Bartlett and made him Mayor of San Francisco by a majority of 2326 votes, which was increased to 2834 at his re-election two years ago.

In his long public service, Washington Bartlett has proved himself a man, upright and capable, and has gained credit as a sturdy guardian of the people's trust, and the stern foe of jobbery and corruption. His well-established character leads those who know him best to speak confidently that as Chief Executive of this State his administration will be wise, honest and efficient.

### The Postal Telegraph.

The Knights of Labor, in the General Assembly recently in session at Richmond, Va., passed the following resolution:

*Resolved*, That the organized power of the Order of Knights of Labor be directed in demanding at the hands of Congress the passage of a measure recommending the purchase, under the right of eminent domain, of the telegraph system of the country; that it is the duty of all to assist in nominating and supporting with their votes only such candidates as will pledge their support to such measure, and that special instructions be issued to the Legislative Committee at Washington to agitate there for such ownership, and make governmental telegraphy one of the burning questions of the day.

The Farmers' Convention in this State a few weeks ago gave its adhesion to this measure as follows:

We view with alarm the fact that railroad, telegraph and other monopolies are corrupting and controlling our Government. We, therefore, are in favor of our Government owning

tion in America; but the silu.

with their opposition. The schem.

long fight, prevailed, and postage went from 25 cents to 5 cents, then to 3 cents, and finally to 2, and instead of destroying the revenues, as predicted, the transmission of letters was increased more than 20-fold the first year. The plan succeeded beyond the most sanguine expectations.

The marvelous discoveries of science have wrought out new means of transmitting intelligence, and placed another responsibility upon law-makers to secure the advantages for the people. Here again Great Britain took the lead, and by an Act of Parliament purchased the telegraph lines throughout the whole Kingdom and made them an adjunct of the postal system. The benefit of telegraphic communication was thus placed within reach of the poorest. But this blessing was not attained without a

struggle. The corporation lawyers and the keepers of the legal sepulchers talked long and loud about the stability of contracts, the sacredness of vested rights, paternalism in government, and all that sort of thing. The example of England has been followed by France, Prussia, Switzerland, Sweden, Belgium and Canada, and everywhere the Government control of telegraph has proved cheap, efficient, practicable and a blessing to everybody.

Though the inventor of the electric telegraph was an American, though the people of the United States were the first to adopt this method of conveying intelligence, it seems that we are destined to be the last enlightened country to enjoy its full fruition. This matter has been brought before Congress, at intervals, for the past 18 years, and yet nothing has been done. Bill after bill has been smothered in the committee-room. Perhaps others are destined to experience a like fate. A monopoly that yields more than \$50,000,000, that has an army of employees scattered all over the country with which it can communicate in a moment; a monopoly that owns most of the great metropolitan journals and subsidizes or intimidates the press; a monopoly whose frown from the lobbies of Congress frightens most of the members out of their wits, and, like some huge octopus, has fastened upon a continent by millions of tentacles—is not likely to release its grasp without a tremendous effort.

We hope the Knights of Labor, the farmers and other labor interests, will succeed in making "governmental telegraphy one of the burning questions of the day." Time, persistence and unity of action will ultimately succeed. There is no excuse on the part of Congress in delaying this measure. It is no experiment. The plan has been tried by other countries and proved a success. If a postal telegraph is a good thing in Europe, is found to save time and expense where railroads can carry the mail in a few hours from one border to another, how much more beneficent it

must prove in a country so vast as ours, where the best locomotives in the world could not pass from one extreme to the other in less than a week.

**CITRUS TREES FROM CUTTINGS.**—Mrs. S. S. Pence, of Butte county, writes to the Oroville Register about growing the orange and lemon from cuttings. She has in her orchard 11-year-old trees from cuttings that have borne fruit for two seasons. They are very thrifty and bid fair to become as large as the seedling trees from which they were taken. Cuttings should be taken from good seedling trees, the wood to be of about two years' growth; place them in a nursery by themselves where water is plenty; in two years they can be set out where they are to remain.

**A CONCRETE DAIRY-HOUSE.**—We read that J. R. Garner, of Long Valley, Mendocino county, is building one of the nicest, coolest and best-arranged dairy-houses in the county. It is of cement, gravel and sand, with a 12-inch wall.

**A FINANCIAL SUCCESS.**—The receipts at the late Mechanics' Institute Fair, in San Francisco, exceeded the expenditures by \$21,500.

and operating all railway, telegraph and telephone lines in the United States.

The importance and practicability of this movement is so apparent that one can hardly debate it with patience. But every great reform has had a hard road to travel. As Sydney Smith once said, there is always a kind of men into whose heads it seems impossible to introduce a new idea without a surgical operation. When Sir Rowland Hill proposed to reform the postal system of England, by the establishment of a uniform postage rate of one penny, a noble lord, who was then Postmaster-General of Great Britain, exclaimed: "Of all the wild and visionary schemes I ever heard of, this is the most extravagant." All the silurians came to his aid, and said: "Let well enough alone. Let us have no such cranky tinkering with our postal system. Where will the Government revenues come from?" The projector and his friends were pelted with jeers and ridicule, and it was not till several years had passed that Parliament was forced to give the matter a patient and impartial investigation. The measure was adopted and immediately proved a triumphant success. The happy results in Great Britain awakened public atten-

## THE VINEYARD.

## Sunstroke of the Vine.

C. A. Wetmore, of the Viticultural Commission, has been visiting Anaheim and other places for the purpose of examining vines which have been suddenly dying, and has presented to the Anaheim people the following paper. He says:

During the last few months numerous complaints have been received at the office of the State Viticultural Commission of serious damages to certain vines or varieties of the same, the trouble being mainly a sudden cessation in the growth of the same, loss of foliage and apparent dying condition, without previous indication of such weakening. This affection has been chiefly noticed in Mission vines, in the vicinity of Anaheim, but it is a mistake to assume that it is confined to that district, although it is there most prominently noticed. I have had an opportunity during the last two months to inspect vines similarly affected in other places, and in some parts of the northern counties I have observed indications of the same trouble, but only partially affecting portions of the vines affected.

I have hesitated to give an opinion on the subject, because from the first I have assumed that this affection is the same as that which is called in France the "coup de soleil," which means in English "sunstroke," also known as apoplexy or folletage (craziness). This in France is nothing new or modern. It was first noticed in the Rustican by Pierre Crescenzi, in the year 1300. For many generations the peasants in the south of France have called those vines which have been attacked by it "foulletadas," or "brazed." In studying the characteristics of different varieties of vines known to Europe, we frequently find reference to this or that one which is said to be subject, under certain conditions, to this coup de soleil, among such vines being mentioned the Mataro, by Pellicot, in his work entitled "The Vigneron Provençal." The cause of my hesitation has arisen from the fact that all authorities on this subject refer to this affection as incurable, and I have not desired to be hasty in declaring that the same would prove true in California. It is not, however, properly speaking, a disease, nor is it contagious.

## The Symptoms of Sunstroke.

Prof. Foex, Director of Viticulture at the National Agricultural School of Montpellier, France, in his work on viticulture, published during the present year, refers to this affection of the vine as follows:

They call *apoplexie* or *folletage* of the vine, an accident which happens generally in July or August to vines which have been up to that time in good health and vigorous. Without any previous symptoms that should cause it to be foreseen, there is observed all at once, on certain vines isolated one from the other, a sudden loss of brilliancy of foliage; vigor which they habitually possess disappears, they become wilted and perish; the canes become dried from the top toward the bottom, and very soon the entire plant dies. At other times these phenomena are not produced with sufficient intensity to bring about this result; a portion only of the plant is affected, and the remainder continues to live, but the whole receives a severe shock, the effects of which are generally irremediable.

It is especially in rich and deep soils, and those which are moist, with little depth to permanent water; in those which, by their nature, are very little permeable, and after a very rainy year this apoplexie is particularly to be feared, according to M. Mares; it is manifested also in Algiers under the action of the sirocco.

Among the varieties of Languedoc, the Aramon and the Terret, the Furmint of Tokai, the Grollet of Fournaine, and the Catawba of America, are those which are most subject to it; but no vine escapes it altogether.

The foregoing description is in my opinion sufficient to identify the trouble which has affected vines in this State, and which is now under consideration. Before concluding this notice, further mention will be made of the circumstances that have been especially observed as accompanying the phenomena here.

In all discussions relating to diseases affecting vegetation, great care should be exercised not to be misled by theory. The salient facts are the important ones to be first considered. Here is an affection of the vine, which appears to be the same as is known in Europe, the effects of which are generally considered irremediable, although in a slight degree the causes of the same might be prevented. Various European authors have undertaken to explain the phenomena, and for our present purpose it is sufficient to quote a brief summary of what they have had to say on the subject.

## Some European Observations.

M. Leclerc, after the almost instantaneous death, in 1868, of a great number of very vigorous vines in France, undertook at the Agricultural Station, of Metray, some researches concerning the facts which were observed. The explanation which he gives of them is as follows:

A great quantity of rain has fallen this year, which, to a certain extent, prevents the rapid warming of the soil, and also tends to saturate the atmosphere with moisture; also, the sky of Touraine has been almost constantly clouded. The vegetation of the vines has taken place, so to speak, in the shade, and under these conditions the tissues of the plant have not acquired the resistance which they would

have had if the sun had shone often. The tissues are gorged with water. The atmosphere having been also relatively humid, the evaporation of the plant—that is to say, the water which escapes from its leaves and stems—has of necessity been feeble, since the plant evaporates less in humid than in dry air. The experiments of the celebrated physiologist, M. Sachs, have proved also that the transpiration increases as the temperature of the soil is elevated. Consequently, the circulation of water through the roots and the wood has necessarily been very slow, just as the evaporation has been the same. A relation in accordance with the activity of the transpiration and the circulation of water in the roots has been therefore established and regulated. Let us suppose, now, at a given time, that the sun strikes with its burning rays the rapidly-developed foliage of the vine. The atmosphere becomes hot, becomes less humid, becomes dry, in a word, and from this fact causes an increase in the transpiration as much more energetic as the temperature is more elevated, as the atmosphere is less saturated with moisture. And as the quantity of water lost by the leaves cannot be immediately replaced in whole by that which the roots absorb (by reason of the regularity of the circulation established), the leaves and the young stems give up the liquids of their tissues, fade and perish, if the loss of water attains a certain limit. It must be then an excess of evaporation, caused by a sunstroke and the sudden variation of the hygrometric condition of the atmosphere, which is the consequence of it which causes the destruction observed; and it is for this reason that I consider this phenomenon as a physiological accident and not a disease.

M. Saint Andre, formerly Chief of Chemical Studies at the Agricultural School of Montpellier, who undertook at about the same time researches on this subject, comes to about the same conclusion as M. Leclerc. According to him, "the folletage of the vine is produced by the transpiration of the plant, which evaporates more water through its leaves than comes up from the root." He has recognized that the

Slow and progressive elevation of the temperature of the atmosphere and of the soil activates both the transpiration of the leaves and the absorption of the water by the roots. When the wood does not conduct sufficient water to replace that which is evaporated in consequence of the warmth of the surrounding atmosphere, the first-mentioned phenomenon is more intense than the second, the evaporation increases more rapidly than the absorption, and the features of the folletage are not slow in manifesting themselves on the plant. And if, as happens sometimes in southern districts, the elevation of the temperature of the air is rapid, it provokes the evaporation of a much greater quantity of water through the foliage and a diminution of the growth of the roots—that is to say, the evaporation and absorption proceed in inverse ratio, and if the temperature continues to augment, there comes a time when the roots cease to maintain at the surface of the organs of transpiration the water indispensable to their functions. At this moment the quantity of water evaporated by the vine is notably less than that which it is capable of giving off under other conditions. If the temperature does not remain stationary, the tissue of the leaves loses its water and the plant presents the indications of the folletage.

Professor Foex, as a resume on this subject, says: "As has been seen by what precedes, the apoplexy appears to be the result of the rupture of equilibrium which should exist between the absorption of water by the roots and that of the transpiration of the leaves. This accident should be determined by exceptional changes in the temperature of the atmosphere, and in its hygrometric condition, or indeed by the effect of a very intense luminous action, which develops to an extraordinary degree the transpiration."

Up to this time there is no known remedy for this apoplexy; the vines which are attacked by it should be torn up and replaced, even when they are only partially dried, because they become restored very rarely afterward, even with great care. Drainage only can diminish under certain circumstances the chances of folletage by regulating the conditions of the humidity of the soil.

## Another Disease of the Vine.

There is another disease or affection of the vine caused, in some respects, similarly as is the preceding. This is known in France by the name of *Rougeot*. This latter affection, according to Professor Foex, attacks the vine when it is in full vegetation as soon as the first severe heat is experienced, and it is noticed more particularly on deep and moist soils. Thiebaut de Berneaud says that it is produced during the summer, after a cold rain—a storm—which causes the temperature to be suddenly lower, or even fog, and to which succeed warm winds from the south. [N. B.—The warm wind of the south of France, coming from the south, is similar in character to the north wind of Central California and the desert winds of the southern counties; the foregoing are in effect the circumstances under which, as we have seen, apoplexy is caused.] M. Mares describes as follows this affection called *rougeot*:

The leaves commence to wither, they become burned and lose their suppleness; the parenchyma becomes red, while the veins remain still green, which gives them a peculiar appearance; the berries shrink, the cane becomes yellow. If the malady becomes more aggravated, the leaves dry entirely and the cane partially dies from the extremity toward the base. It is sometimes attacked only on one side, which becomes brown, while the rest is still green. Frequently at the latter part of the season, the vines so attacked by *rougeot* push out new shoots from the cane. The vines attacked by *rougeot* do not die, as in the case of apoplexy, but they suffer badly and their natural fertility is considerably diminished. They do not recover except after several years.

Drainage appears to be, as in the case of apoplexy, the best means of diminishing the

chances of this accident. When it has attacked the vines, if the canes have not perished, we should limit ourselves to short pruning; if the plant has suffered much, it would be better to cut the vine down close to the roots and graft it; in such manner a fertile and vigorous plant may be reconstituted. It is useful in all cases to repeat frequently summer cultivation and to sulphur energetically in order to give all possible activity to the vegetation.

## Similar Affections in this State.

The foregoing discussion of two well-known affections of the vine applies, in my opinion, to the similar affections noticed in this State, viz.: to perishing of certain vines in the vicinity of Anaheim and elsewhere, and to the so-called red leaf and more or less burnt conditions observed, from time to time, on certain varieties of vines, in certain places in Northern counties. The conditions favorable to the development of the disease known by the French as *apoplexie*, prevailed most notably in the southern counties during the spring season of this and of the last two years. It is said that the Mission variety has been most affected, yet, within a few miles from Anaheim, even on the bottom lands near Los Angeles, where the surface soil is similar to that of Anaheim, the result is different. Possibly in the vicinity of Los Angeles the intensity of dry summer heat was modified. In northern counties I have observed the *rougeot*, more particularly on vines in small patches in vineyards where the undulations of the surface have prevented thorough drainage; also with respect to certain varieties such as the Charbone and Crab's Black Burgundy, on rolling land, where the surface soil is shallow, overlying cold, damp clay. Dr. Stillman, of Lugonia, has forwarded to our office samples of leaves and fruit affected as described above, in the case of *rougeot*. At first it was suspected that the affection of the vines referred to by Dr. Stillman was of a fungoid character, the specimens sent for examination being in poor condition for study after a long journey by express. I am now of the opinion that the trouble with the vines affected in his district was this *rougeot*, more or less of the same nature as the affection complained of at Anaheim, caused by similar conditions.

Where the sunstroke vines are not very seriously damaged, it would be well to prune very early—even before the leaves fall, so as to prevent the communication of morbid conditions from the dying parts toward the roots. Possibly a benefit might have been realized by pruning promptly in summer as soon as the injury was noticed; but this is conjectured.

Fruit and nut trees were in many cases affected in like manner, after the heavy wet season two years ago.

I should not forget to remark that those vines which showed feeble growth early in the spring were probably those affected by *apoplexie* or *rougeot* the year before, when the conditions were similar, and indicate what will be the fate of those first attacked severely this year.

## The Vine Trouble at Anaheim.

Mr. F. W. Morse, assistant in the Agricultural Department of the University, visited Anaheim last August under instructions from Prof. Hilgard, at the request of the Anaheim vine-growers, to investigate the nature and causes of the vine trouble in that locality. The following is an abstract of Mr. Morse's report, which will appear in full in the forthcoming viticultural report of the Department:

In the neighborhood of Anaheim considerable alarm has been occasioned by the general appearance of many of the vines during the early spring and summer, and by the sudden drying of the foliage up to the time of the ripening of the fruit.

No particular date can be given as the time of its first appearance; for, although the failure of the vines to start had caused some uneasiness, yet it was not until the foliage began to show weakness that special attention was given to the subject. The chief center of trouble is in the immediate neighborhood of Anaheim, where the old Mission vines were first planted, and from this point the damage gradually diminished toward the vineyards of later planting. The same trouble is found more or less in other localities of the State.

It has been stated that a single day will at times suffice to change an apparently healthy vine to one of a wilted, sickly growth, which cannot mature its fruit; but personal observation has not shown me any instances of rapid change—more than that of other years.

The leaves in general have the appearance of sunburn, and the foliage, as a whole, looks withered, dried and wrinkled; portions of the leaves sometimes become red. Upright canes are most affected, and those less exposed are less troubled. In the later stages of disease the leaves fall off. Three different stages of burning may be found upon a single leaf where true sun-scald is quite decided, and similar examples are found in the open vineyard where the trouble is greatest.

The trunk and old spurs show that the trouble dates further back than this summer's growth. The south and southeast sides of old vines, which are most troubled, showed dead spurs and a streak of dead wood running from the head, and in decreasing extent, toward the roots. Usually no shoots have started from these sides,

while suckering has often occurred from the north side. Scattering dead vines, which made good growth last year, still have roots in good condition.

A decided backwardness of starting was noticed this season with many varieties, often six weeks later than their usual time. In many cases small shoots appeared in the early part of the year, but soon became dry and the fruit which set afterward blasted; the shoots and fruit still remain hanging to the vine. Bushy growths have formed about some of the affected spurs.

The old Mission vines are the worst affected and are the oldest stocks. Ago, however, is not the only cause, as the same varieties only three years old are similarly troubled. The Borbaro, although found in small numbers only, showed marked signs of trouble, and in every case the foliage was badly burned upon the south side. Other varieties, such as the Golden Chasselas, Sultan, Semillon and Sauvignon are affected to a greater or less extent and in about the order named.

The soil in the district is very variable and light, and in many places its appearance shows it to be a sandy wash from some river course. As an example of this irregularity may be cited some specimens which were taken successively from the same hole at varying depths. To a depth of 24 inches a fine sandy soil prevailed, then a stratum of six inches in thickness of pure yellow to white sand, underlain by a soil similar to that of the first 24 inches, except that it is a little heavier. On the whole the soil is one that would be easily drained, and there could be no fears of stagnant water to interfere with the root growth. If any trouble of this kind existed it would be only in small spots, or in places where excessive irrigation was practiced.

In order to show the presence or absence of a fungus, specimens of all parts of the vines were collected and examined under the microscope, but in no case was there any fungus or insects to be found.

In casting about for a probable cause for the trouble we were led to believe, from the general evidence given in answer to questions, that the season has been an extraordinary one, and the supposition was confirmed by meteorological data obtained later from different sources. The temperatures given in the following record were taken at 7 A. M., 2 P. M. and 9 P. M., and therefore do not represent the minimum temperature reached during the night, the time when the damage from cold is probably done; but the maximum high temperature is doubtless correct.

Beginning the record late last fall, for the late warm weather, with other causes, kept the wood green until far into the winter, there is recorded in September a maximum temperature of 106° (F.) with a minimum on the same day of 64°. Moderate to hot weather prevailed during the remainder of the month, and into October. November, on the whole, was a cool month, but the first week in December shows a high temperature; for four successive days above 80° and from 60° to 70° early in the morning. During November 2.93 inches of rain fell, and later in December, 1.16 inches. In the middle of winter there are two conditions, moisture and temperature, favorable to the starting of the sap afresh in the vines. That such a starting of sap at this time of the year does take place in fruit trees as well as vines, is instanced in several cases.

The temperature for the remainder of December ranges at about 70° at 2 P. M. The temperature for January was not remarkable, for the first seven days ranging at 7 A. M. from 30° to 40°, several times approaching near the frost point and undoubtedly passing below it earlier in the morning. From the 22d to the end of the month 70° to 74° is the range for day temperature and 50° to 60° for morning temperatures—a season again when vine-rest might be disturbed. February is not remarkable for variations in temperatures; near the first of the month for four consecutive mornings the thermometer stood at 42° and 44°. March and April are marked as having uncommonly low temperatures, accompanied by cold rains, the first part of the former month being colder than the last week of January. The warm weather did not begin until June, when it reached 89° and remained high during the last part of the month. The minimum temperature reached was 60°.

From a table (arranged so as to show the monthly record of the maximum, minimum and mean temperature for five years) we see that an uncommonly high temperature prevailed during last fall and far into the winter, being higher than the record of any previous year; the minimum also remained high. This period was marked by a heavy warm rain. This warm period was followed by a remarkably low temperature for the months of February, March and April, accompanied by heavy cold rains. May and June also fell below the average, while July alone exceeds all others in high maximum temperatures, and likewise had the lowest minimum. These high temperatures, affecting the roots through the unusual rains, started the sap, which has undoubtedly been injured during the winter before its flow ceased for the previous season.

Accompanying the table above mentioned is one of the rainfall for the same period. A great deficiency was noted for 1885, with only a moderate amount for this year, but distributed in an unusual manner, and not so as injuriously affect the roots of the vines. There has been a very considerable irregularity in

supply of water in the soil, as shown by varying depth in wells and other sources, which may seriously affect the supply for the vines, especially in a soil so porous as the one in which these vineyards are located.

There are indications in the general appearance of the affected vines which point clearly to some disturbance in the sap circulation. The line of dead wood and bark upon one side of the vine, with the healthy condition of the opposite side, has been noticed, together with the gradual diminishing of the injury in the parts which are more protected from weather changes. A further instance, in the summer-pruning of the vines, bears out the probability that sap obstruction is concerned in the trouble. Canes upon a Semillon graft, three years old, had received two summer-prunings at widely different times, and were then tied close to a stake. Many of the canes which were late pruned were covered with dead leaves, while the early-pruned canes, which had recovered from the shock, passed the season without trouble. The most vigorous of the later-pruned canes have dry, red and dead leaves throughout their entire length, and the canes themselves were burned and had the appearance of ripened wood, especially upon the parts most exposed. Near the variety of vine just referred to are Golden Chasselas vines upon which summer-pruning has also been practiced, and with similar results. The smaller vines are usually the most troubled, and from the appearance of the fruit upon them would indicate a very early disturbance. Some of the smallest of the Semillon grafts have also suffered most, and had scarcely put out shoots before they became dwarfed and dried.

Near these varieties is a block of old Mission vines, many of which are apparently dead, but the older wood and roots still appear green, although quite dry. Some are producing large canes, but near the head will be found dead wood and spurs.

There are peculiar coincidences which argue in favor of some climatic condition as the cause of the trouble. For instance, in a certain vineyard are large Lenoir vines with small Sauvignon vines alternating. Extending through the plot is an avenue bordered by two rows of peach trees. Upon one end of the avenue the whole head of the trees have suffered a loss of from one to three feet of their projecting limbs. The trouble diminishes as we approach the other end of the row, where the trees are in good condition. The Sauvignon vines, weakened somewhat on account of being among large, vigorous vines, are affected in exactly the same proportion as the trees, showing a similar cause for both troubles. Similar disturbances among the fruit trees throughout the section are common, and a condition of irregular growth during the winter was noticeable in many of the cases, and even a fresh growth of new twigs in the middle of summer has been observed.

From the above observations, it would appear that there is no cause for alarm for the future prosperity of the vineyards. There was nothing found to indicate a true disease which might increase and spread to other vineyards. But, on the contrary, all the peculiar appearance and trouble could be traced to natural causes due to more or less accidental peculiarities of weather, soil and moisture, conditions which may not recur for many years.

An examination of some of the old vines which have been failing for some time, reveals the cause of their extraordinary mortality this year. Some have been decaying for so long a time that they could easily be pushed over.

There can then be little doubt that the younger vines, in time, will return to their usual condition when the effect of the causes above described shall have passed; and the old vines which have been failing, previous to this year, from old age, and exhaustion, will doubtless continue to decay, although under more favorable circumstances some may revive for a short time.

#### \$1000 Reward

For your labor, and more, can be earned in a short time if you at once write to Hallett & Co., Portland, Maine, for information about work which you can do and live at home, whatever your locality, at a profit of from \$5 to \$25 and upwards daily. Some have made over \$60 in a day. All is new. Hallett & Co. will start you. Capital not required. All ages. Both sexes. All particulars free. Those who are wise will write at once and learn for themselves. Snug little fortunes await every worker.

#### Beautiful Ever-Blooming Roses.

All lovers of choice flowers should send to the Dingee & Conard Co., West Grove, Pa., for some of their lovely roses. These roses are certain to bloom, and are the finest in the world. They are sent safely by mail, post paid, to all post offices in the United States. This company is perfectly reliable, and noted for liberal dealing. They give away in premiums and extras more roses than most establishments grow. Send for their New Guide, a complete treatise on the Rose (78 pages, elegantly illustrated) free. See advertisement in this paper.

#### Japan Clover Seed.

(L. spedegea Striata.)

Clean seed of this valuable pasture plant. Unequaled in dry sections. Bears heavy grazing. \$2.00 per pound, prepaid. W. STITH, COLLIERVILLE, TENNESSEE

#### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

#### Farmers and Travelers

C. H. PHILLIPS,  
Secretary and Manager.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions. This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

16-ft. "A" Mills,	-	90	20-foot "A" "	150

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## GRANGERS' CO-OPERATIVE STORE,

TENTH AND K STREETS, SACRAMENTO.

DEALERS IN

General Merchandise, Groceries, Agricultural Implements, Wagons, CARRIAGES AND BUGGIES.

### A New Deal.

We buy for cash and sell for cash. The old credit system has been abandoned. We will not be undersold. We guarantee all goods as represented. We will give good value for your money. Our motto is quick sales and small profits and speedy returns.

Farmers and consumers will find it to their interest to call and see us and be convinced.

E GREER, Manager.

The Rural's Salmagundi.

THE eighteenth volume of the last census containing social statistics of cities has just been issued.

EGGS deserve attention. According to the Bureau of Statistics there were imported in 1876, 4,903,771 dozen, and in 1885 the number had increased to 16,098,450 dozen.

PROF. BEAL, of the Michigan Agricultural College, has exploded the old theory that posts set little end down outlast those set the way the tree grew. After a long experiment he says it makes no difference which end is placed in the ground.

AN Illinois farmer sent a quantity of honey to a Chicago commission merchant, and in order to test the latter's honesty visited the city and bought his own honey, paying 14 cents a pound for it. When the returns from the consignment came back it was represented that the honey had been sold for 12 cents a pound.

A GENTLEMAN, when asked the other day what he thought of the campaign in this State, replied that it reminded him of Artemus Ward's answer to the question how he stood during the war. Everybody was expected to define his position and declare his principles. "Principles!" said Artemus, "principles! Why, I haven't any. I am in the show business."

THE Florida Agriculturist says that Com. A. Hart Norris, of that State, offers to give to any good, sober, industrious family that will engage in silk culture, a lot to build a house on, two and one-half acres for planting trees, 50 mulberry trees and 500 silk-worm eggs, with the privilege of gathering leaves from his orchard to feed them on. All this is given free, with titles perfect, to those who wish to start in the business.

THE Germantown Telegraph says: It is a fact well worthy of note that no matter how poor may be the season for some one fruit or other, in Pennsylvania, at least, if not other States, the pear tree always has fruit. There are, of course, some years when there are more than others, but it is the rarest of all events in this part of the world for a pear tree, after it gets to a fair, mature bearing age, not to have on all the pears it is fit for to bear.

A LONDON journal places the probable wheat crop of the United Kingdom at 57,000,000 bushels, or 25,000,000 bushels less than in 1885. Although prospects have improved in Russia, they are behind the yield of a year ago. Serious damage has been done to wheat in South Russia by heavy rains. French stocks of wheat are small. India has a smaller crop than last year, all of which looks favorable for American wheat-growers.

THE secretary of the Relief Committee, Hulltown, Texas, S. L. Barker, in an appeal for help, gives a very gloomy picture of the cloud that now hangs over the farming horizon in northern and western Texas. The famine-stricken district is not less than 400 miles wide and over 600 miles long, and more than 100,000 people are inside the limits. "For more than 15 months the earth has not been wet to a depth sufficient to plow without turning up dry dirt, and, as a consequence, there has not been a bushel of corn, oats, wheat or potatoes per capita raised this year."

Fruit-Growing at Oroville.

G. W. Harney, secretary of the Oroville Citrus Association, informs us that they now have some 3400 trees growing on 29 acres. The trees have been placed about 20 feet apart, and number 120 to the acre. They include 246 seedlings, 2080 Washington Navel, 25 Malta Blood, 25 St. Michael and 25 Mediterranean Sweets, all Riverside stock. Forty of their Washington Navel trees were budded from the original tree that was sent out by the Government. The association also has 2300 seedlings about two years old, which will be ready to set in the grove season after next, and expects shortly to be able to supply the neighborhood with good stock.

MR. Wilcox, agent of the Cal. Northern R. R. at the same point, has fruited apples, pears, quinces, peaches, plums, apricots, nectarines, cherries, grapes, gooseberries, currants, blackberries, strawberries, raspberries, figs, pomegranates, persimmons, loquats, guavas, oranges, lemons, limes, almonds, chestnuts and walnuts, and has growing young plants of the banana, cherimoya, Alligator pear, sapodilla and paw-paw.

SNELL SEMINARY.—Readers will find in our advertising columns the announcement of the opening of the next half year at Snell's Seminary, Oakland, on January 3. This institution occupies an honorable place in the front line of institutions for the education of young ladies. It has grown as its merit has become more widely recognized, both in its corps of instructors and in its accommodations for pupils, until its position among our private schools is a commanding one. The situation in Oakland has many advantages. Readers who contemplate placing their daughters or wards in school during the winter should write to the principals for their catalogue, which gives full information about the institution.

The Fair at Santa Maria.

THE Agricultural and Stock Association, lately organized in the Santa Maria valley, held their first fair from the 27th to the 30th ult. The address of the president, G. W. Lewis, opened a conference in which a number of Santa Barbara county horticulturists told somewhat of their experiences and conclusions.

The live-stock included about 30 horses and a single entry of "three-fourths blooded heifers." There was racing every day, but the rules of the association forbade all gambling or games of chance upon the fair grounds, and likewise the sale of intoxicating liquors. Five ladies took part in an equestrian contest, and all proved themselves graceful riders; but Misses Julia Merritt and Ada Stephens won the prizes.

At the pavilion, the displays of grain, vegetables and fruits were many and various. Lompoc apples were presented in wonderful variety. Flowers and plants, dairy products and poultry, all were represented; nor were the products of the useful and fine arts lacking.

The baby-show on Friday drew a tremendous crowd. Fourteen babies were exhibited, and divers cups or napkin-rings were awarded to the prettiest and biggest, within the age-limit decided upon.

We are obliged to make our notice brief, and

The Peerless Incubator.

A number of readers of the RURAL have written for more information about the Peerless Incubator, which has been favorably mentioned in our reports of the Stockton Fair. As the machine includes novel features of considerable promise, we give on this page an outline en-

THE PEERLESS SELF-REGULATING INCUBATOR.

omit premium-lists, but are pleased to take the Times' word that there was a magnificent display, large attendance and financial success.

Mr. Gallatin's Herefords.

The fact that California is rapidly increasing her supply of thoroughbred horn stock and is securing excellent blood of all the popular breeds has often been commented upon in our columns. One of the latest acquisitions is mentioned by the Red Bluff Sentinel as follows: B. A. Bell, superintendent of the Gallatin ranch in this county, brought to this place August 20, 1886, five bulls of the Hereford stock, bred by T. L. Miller, of Beecher, Ill., the pioneer Hereford cattle breeder of America, and also editor of the Breeders' Journal and president of the Hereford Association of the United States. These bulls are respectively one 2 years old, one 18 months and three 8 months old. They are thoroughbreds from the premium bulls Success, Winter, De Cote and Fortune. In addition to the above there are on the Gallatin ranch three imported Herefords, bred by the New Zealand Stock Company, and sold to Mr. Gallatin Sept. 23, 1884. They are four years old this fall. Mr. Gallatin has also another bull, Senal Glenn, 18 months old, sired by Bollingbroke, now owned by Pete French. He has also 35 head of half-breed yearlings from Durham cows, by the Earl of March. Also 136 head of half breeds from Durham cows sired by Horace 9th and Horace 22d, full-blood Herefords. Mr. Gallatin is now negotiating for a carload of thoroughbred cows from Indiana, Illinois and Missouri, for the purpose of breeding thoroughbred bulls for the market. Mr. Gallatin has one four-year-old cow, Nell the Third, sired by the English show bull, Horace the Third, also a yearling heifer sired by the Earl of March.

graving of it, and such information as we have at hand. The device was patented through Dewey & Co.'s Agency by Frederick Biven, who now resides near Stockton. The incubator is being manufactured by the Peerless Incubator Company, of Stockton, of which Chas. C. Moore, son of the well-known H. H. Moore, is manager.

The engraving shows the general appearance of the incubator. The point of special importance in it is the regulator, which those who have seen its operation assure us is a wonder in its reliability and accuracy, and increases or diminishes the heat as needed. The arrangement is simple and effective, consisting of an air-tight box connected with a vessel inverted in glycerine. As the heat increases, the air in the box expands and causes the inverted vessel to rise, thereby lifting a string attached to it and to the heating-lamp, and reducing the flame. When the air grows cooler the vessel falls and the flame is turned up. The engraving shows the regulator with its attachment to the apparatus for raising or lowering the flame of the lamp.

Another important feature of the machine is the arrangement for furnishing moist, heated air. The supply of pure warm is drawn over a "moisture pan" suitably arranged, and is then admitted to contact with the eggs. The arrangement for ventilation is also said to be very satisfactory. We understand that a number of the machines have been sold, and it bids fair to become speedily and widely known in the poultry world.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

LARGE GALLOWAY SALE.—We learn from the Denver News that Messrs. Bush, Morse & Co., of the Windsor hotel and Windsor Farm (Denver, Colorado), purchased a few days since the entire herd of Galloway cattle of the Leonard Brothers, of Mount Leonard, Missouri, numbering 98 head, and costing the round sum of \$25,000. During the last four years the Leonard Brothers have imported from Scotland some 1600 head of this breed, reserving for breeding on their own farm a few of the finest of each importation. It is these cattle that the Windsor farm proprietors have bought, and the purchase therefore gives them the largest imported thoroughbred herd of Galloways in the United States. The herd will arrive at the farm about December 1, and it will doubtless receive the attention from stockmen which its high standing and high breeding will deserve. Bush, Morse & Co. are the owners of the fine Galloway bull "Borderer of Drumlanrig," which appeared on the first page of the RURAL Press of Sept. 18, 1886.

THE RAYMOND.—Readers probably noticed in Mrs. Carr's excellent article about Pasadena an allusion to the Raymond—the great hotel which will attract guests from all parts of the world. We have received a handsomely engraved invitation to attend the Grand Dedication Ball which will be held on Wednesday evening, Nov. 17. The "opening of the Raymond" will be the event of the year at the South. A large number of Eastern people will be present, and the management are desirous of showing something of the floral productions of Southern California. It is intended to make the hotel literally a bower of flowers, so that Eastern visitors may have a realizing sense of what this favored region can bring forth in a season when their own gardens are mantled in ice and snow. An invitation has been issued to all to send flowers for the garlanding of the spacious rooms and hallways.

SEÑOR MAXIMO JERIA, of Santiago, who has been in Europe some four years, collecting information for the Chilean Government as to the methods of farming, fruit growing, etc., in different countries, favored us with a call last week. He is a very intelligent and courteous gentleman, speaking quite good English, and showed his appreciation of the RURAL by subscribing for it—to be sent to him in South America, whither he is about to return.

THE CANADIAN PACIFIC.—One of the promises made by Mr. Gladstone was that the Canadian Pacific Railway was soon to pay the Government \$20,000,000. It is to do this by a loan from Baring Brothers, the proposals for which have just been published. This mortgaging of the future may help the ministry out of one of its most serious difficulties. It is one of those moves in finance for which Mr. Gladstone has always been famous.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0 25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates.
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.).....25
- 15.—European Vines Described, 63 pages.....05
- 19.—Webster's Dictionary, 834 pages, with 1500 illustrations; very handy and reliable.....50

**MANUFACTORY AT LINCOLN CAL.**

**California Inventors** Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS for obtaining Patents and Caveats. Established in 1860. Their long experience as Journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS No. 252 Market St., San Francisco. Elevator, 12 Front St.

## S. H. MARKET REPORT

NOTE. Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 10, 1886.

The past week has shown more general business, which increased as the election news grew older. Farmers, in several sections, are reported to be busily engaged in out-door work, which keeps them from out of the market as sellers of their surplus. The English wheat market has, for the past few days, been gaining strength, closing firm at to-day's market. The following is to-day's cable:

LONDON, Nov. 10.—Cargoes off coast, firmer. Cargoes on passage and for shipment, firmer; held higher. California wheat, off coast, 34s 6d. California wheat, just shipped, 34s 6d. California wheat, nearly due, 34s. English country market, steady. French country market, steady. Liverpool wheat, spot, firmly held. Liverpool wheat, Cal. 6s 7½d to 6s 10½d. Weather in England, heavy rain.

## Foreign Review.

LONDON, Nov. 8.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: Deliveries of wheat are restricted. The provincial markets are very sparingly supplied. Quotations are firm. Sales of English wheat during the week were 49,325 quarters at 30s 8d, against 60,431 quarters at 31s 1d during the corresponding period of last year. The wheat trade is slow and values are unchanged. Supplies of American wheat have largely increased, exceeding all precedent. Stocks of flour are heavy. Corn is scarce and 3½d higher. Four cargoes of wheat arrived; two were sold, two withdrawn and one remained. At to-day's market wheat was very firm, with limited dealings. Flour was steady. Corn was scarce and 3d dearer. Barley and oats were steady. Beans and peas were 6d dearer. Linseed was firm.

## Eastern Wool Markets.

NEW YORK, Nov. 7.—There has been little change in the market. The demand has been less general and the comparatively dull tone has had the natural effect to create more or less complaint, though there is not sufficient weakness among holders to afford buyers any practical advantage. Last week was the duller of the year in the Philadelphia market, but the depression in trade has no appreciative effect on values, which are generally well maintained. The dullness is regarded by most dealers as a natural pause after a season of activity in the market. Holders show no anxiety to force sales by concessions. Among the sales were 11,000 pounds of California grease at 19 cents; 30,000 pounds of California grease at 20½ cents; 20,000 pounds of California grease at 22 cents; 1000 pounds of Territory bucks at 14 cents; and 40,000 Oregon at 24 cents.

BOSTON, Nov. 6.—The market for wool has been quiet the past week, there being no material change in prices. Election week is generally a quiet one, and the present year has been no exception. Sales for the week have been 3,145,800 pounds, but includes considerable carpet wool. There is no apparent weakness on the part of holders of wools, and manufacturers are obliged to pay full current prices whenever they wish to obtain supplies. There is always a lull in the demand at this time, but when the labor troubles are adjusted and the season for heavy transactions opens, manufacturers will again be large purchasers of wool, and we look for a renewal of the upward tendency of prices, which has been checked for the moment. Business in woolen goods is fairly satisfactory. Colder weather is needed to effect the improvement on the demand for flannel blankets and other branches of the trade. The opening of the next London sales is looked forward to with considerable interest. It is asserted in some quarters that the sales will open at easier prices. Territory wools are weak, but do not show any marked decline, and at the prices now ruling they are considered a good property and will meet with a better demand later on, when the stocks of washed fleeces are more reduced than now. There has been a moderate demand for California wool. The stocks of Spring are small, and there is very little Fall wool here as yet. Sales include 22,000 pounds Spring at 22½c; 40,000 pounds Spring at 21c; 21,000 pounds Fall at 14½c; 25,000 Fall at 19c; 143,000 pounds Spring and 50,000 pounds of Fall on private terms. It is, however, reported here that the San Francisco clip is sold up much closer than it was a year ago. Receipts for the week have been 13,104 bales domestic and 1824 bales foreign, against 2952 bales domestic and 931 bales foreign for the corresponding week in 1885.

NEW YORK, November 9.—Wool is quiet and very steady. Domestic fleeces, 30c at 38c; 1½ lb; pulled, 14c at 35c; Texas, 9c at 25c.

## New York Wheat Market.

NEW YORK, Nov. 7.—In wheat the business of the past week was much larger than for the preceding week, and the figures of the market have plainly indicated confidence in better prices in the early future. The good export demand, especially for the continent, and the disposition on the part of the principal holders to meet that demand at fair prices, show a healthy condition of things, and with more available tonnage the output undoubtedly will be considerably increased. Spot closed dull—½c lower—and futures dull and steady. November, 83½; December, 85½; January, 87; February, 88½; April, 91½; May, 92½ cents.

## New York Hop Market.

NEW YORK, Nov. 7.—The business in the general market was confined to small parcels, and the market showed no features of interest. Holders make little effort to dispose of stock, and brewers make very moderate purchases for immediate use. Pacific Coast crop, 1886, prime to choice, 29c at 30c; 1886, fair to good, 25c at 26c; crop 1885, good to choice, 13c at 16c.

NEW YORK, November 9.—In the hop market new Pacifics are showing marked firmness. Brewers are in many instances giving those goods the preference over foreign hops. For the first-class

article 30c cash is the inside rate, and sales to brewers at 32c at 33c are noted. For less than 28c only an inferior article can be secured. State hops are dull and wholly nominal. Foreign move only in a moderate way, and prices show no improvement, although cable advices are still very firm.

## California Fruit at the East.

NEW YORK, Nov. 7.—California plums, \$1.50@2.50 per box; pears, \$3.50@3.75; quinces, \$1.50; grapes, \$2.25 per 40-lb case.

(Telegram to the Fruit Union).

CHICAGO, Nov. 9.—Supply reduced so that offerings now consist entirely of grapes. Choice 40-lb crates, Muscat, \$3 to \$3.25; Tokay, \$3 to \$3.25; Emperor, \$3.50 to \$4.

## Fruits in Philadelphia.

PHILADELPHIA, Nov. 6.—The *Times*, in its market article, says: Excellent Concord and Catawba grapes are still offered at 10 cents per pound, but they are being crowded to one side by Spanish and California grapes. Sweet and juicy Almeria grapes from Spain bring from \$4 to \$6 per barrel, and retail at from 20 to 30 cents per pound. California grapes are considered by many to be quite equal to the Spanish, and the best varieties bring about the same prices.

## California Products at the East.

NEW YORK, Nov. 7.—Dried Fruit—Raisins, first of new crop, California, can be bought in jobbing way at \$2 for loose and \$2.25 for London; car lots, 15c less. Malagas, owing to free offerings, show an easier tendency.

The canned goods demand is improving somewhat and a better feeling prevails. Gallon tomatoes are strong. Peaches are quiet, but steady. Salmon is offered more freely and \$1.57½ will now buy Columbia river. California canned peaches, \$2.25@2.50; pears, \$2.50; plums, \$1.75@1.85; grapes, \$1.75@2.25; apricots, \$2.10@2.25; quinces, \$2.50.

Seeds—California yellow mustard seed is selling in a small way at 4½c@4¼c; but carload lots are offered at 3½c@4c.

## London Agricultural Seed Trade.

LONDON, Oct. 20.—Messrs. John Shaw & Sons, seed merchants of 37 Mark Lane, London, E. C., wrote that there was a poor attendance on the seed market to-day, with but little business doing. The new American cloverseed, just arrived, shows fair quality, and offers on most moderate terms. French samples also appear to be cheap. There is no change in the value of winter tares; prices continue exceedingly low. Blue peas are rather easier. The new Haricots are good and reasonable. Feeding linseed remains steady. There is but a limited inquiry for mustard and rapeseed. In hemp and canaryseed there is no change on the week.

## Local Markets.

BARLEY—The market has continued to advance throughout the week, with a strong closing to-day. The demand is chiefly export by rail to the East, and also by sail to Europe and South America. On Call options have been gradually creeping up, with higher prices to-day. To-day's transactions were as follows: Morning Session: Buyer season—700 tons, \$1.10; 300, \$1.10½; 100, \$1.10½; 100, \$1.10½; 100, \$1.10½; 100, \$1.09½; 100, \$1.09½. Buyer 1886—100 tons, \$1.06; 300, \$1.05½; Seller season—100 tons, \$1.01½; 200, \$1.00½; Seller 1886—100 tons, \$1.04½; 400, \$1.04½; 100, \$1.04½; 100, \$1.05; 100, \$1.05½. Afternoon Session: Buyer season—100 tons, \$1.09½; 300, \$1.09½; Seller 1886—200 tons, \$1.04½; 100, \$1.04½. Buyer 1886—200 tons, \$1.04½; 100, \$1.04½.

BEANS—The market is dull but steady, particularly for the more choice grades. The stock here is not over large, while the demand is steady. BUTTER—The market is weak for all kinds, with sellers pressing the market owing to heavy supplies and reported improving pastures. CHEESE—Stocks and supplies are very light, causing buyers to pay an advance so as to have their wants met.

DRIED FRUITS—See "Market Information," where a fuller report is given on dried fruits and raisins.

EGGS—The market is exceedingly strong for choice ranch; and as the supply of Eastern and Utah is lighter, an improvement is noted in them.

WHEAT—Buyers have tried in all conceivable ways to break prices for sample parcels, but without avail, as farmers believe in better prices later on. On November 1st, full and complete returns were received from all agricultural districts and from every warehouse in this city and State, giving the stock of wheat on hand. These returns give an aggregate of about 550,000 short tons. As this included the grain in vessels loading here and at Port Costa, it will be seen that the supply is quite short, for, provided they be correct, from them must be taken seed and food from November 1st to July 1, 1887, which is no small quantity. To-day's Call Board transactions were as follows: Morning Session: Buyer Season—400 tons, \$1.44½; 900, \$1.44½; 300, \$1.44½. Buyer 1886—100 tons, \$1.35½; 100, \$1.39½. Afternoon Session: Buyer season—400 tons, \$1.44½; 1300, \$1.44½. Buyer 1886—200 tons, \$1.39½. Buyer 1886—200 tons, \$1.39½.

[COMMUNICATED.]

## Market Information.

## Cereals.

Barley is stronger and higher, under smaller supplies of bright and a continued good export demand. The exports so far this season are all of five times larger than the like time any former season. The consumption in this State of feed is fully up to last month, which was in excess of October, 1885. The demand for dark coast for seed is fair.

Oats have a stronger tone under moderate receipts and a steady demand. The bulk of receipts continue medium. It is claimed that farmers in Oregon and Washington are holding supplies back. Black oats are in increased demand for seed, with a higher range of values asked and received. Some small parcels sold at over \$1.42½ for seed, but to place any quantity at even \$1.40 would be impossible. Buckwheat continues low at unchanged quotations.

Rye is stronger, with the supply lighter under freer buying. Corn continues weak at the low quotations, owing to free supplies of western. Californian is said to show

to better advantage than last year, consequently buyers take it in preference at a higher range of values than rule for western.

From July 1, 1886, to November 7, the exports of wheat from this port, with flour reduced to wheat, aggregated 326,815 short tons. On November 7, the tonnage in port loading and to load (wheat and flour) had a carrying capacity of 145,293 short tons, which, added to that already shipped, makes a grand total of this season's crop already provided for, of 472,108 tons. The Agricultural Department at Washington estimated this year's wheat crop in California at 34,248,000 bushels, equal to 1,027,440 short tons; so that deducting that shipped and the amount to be taken in by the engaged vessels in port, and there is left 555,332 tons; from this must be taken the consumption for food and seed, estimated at 350,000 tons, leaving on November 7 only 205,332 tons of this season's crop for export. But to this amount must be added last season's carry-over (visible and invisible) of 90,000 tons, which makes a total exportable surplus of 295,332 tons, after the present engaged tonnage is loaded. From this estimate a carry-over stock of not less than 40,000 tons, including flour, must be taken, which leaves an exportable surplus up to July 1, 1887, of 255,332 tons, not provided for. Of this quantity, China, Japan, Hawaiian Islands, Central America, etc., will take in flour all of 60,000 tons, which leaves 195,332 tons available for shipping to Europe. This estimate is based on the Agricultural Department's estimate of California's crop, but taking the estimate of this State's crop as compiled by the RURAL PRESS, there ought to be 100,000 tons more available for export to Europe. Accepting the RURAL PRESS' estimate as nearer correct than the Agricultural Department's, even then the position is in favor of farmers, as the following shows: Surplus available for export to Europe on November 7, 295,332 short tons; tonnage in port and to arrive, suitable for wheat cargoes, 505,000 short tons (carrying capacity), which gives 210,000 tons in excess of the available supply of wheat. To the tonnage on the way, other vessels will be added from time to time, which will swell the carrying capacity to quite a high figure before July 1, 1887.

The local wheat market has ruled very strong throughout the week at from \$1.36½ to \$1.40 for fair to choice shipping grades. Export buyers beat down prices for options on Call Board, expecting to secure large parcels of actual wheat at lower prices, but in this they counted without their host, for farmers sold sparingly at the lower bids, \$1.35 to \$1.36½, and \$1.37½ to \$1.40 had to be paid, and even these prices did not tempt many large holders, who claim that \$1.50 is apt to rule before three months pass by, let the English market be what it may.

## Dried Fruits.

The market shows considerable strength, with an advance in some lines. The demand appears to be chiefly from the East. Referring to dried fruits, the *Chicago Grocer* says: "A sharp advance is noted in California pitted plums; and an extensive demand exists. This market seems to be supplying the East as well as the West, and as stocks are rapidly diminishing, it begins to look as if there was not enough to go around—certainly not if the demand continues. Choice grades of California peaches that went into cold storage at about six cents last spring, are now worth about 10 cents, and stocks are inadequate to meet the demand even at this large advance." The *Chicago Trade* confirms the above and also reports higher advancing prices for dried apples, under a strong export and home demand.

## Feedstuffs.

Ground barley is higher and stronger, with a good demand ruling at the advance.

Bran and middlings have a strong tone, with no abatement in the demand.

Hay is higher, owing to lighter receipts and a good demand. The stock in this city is small for the season of the year, and if a cold winter is experienced, it is claimed that the consumption will be quite large, which will probably advance prices.

Carrots are more inquired for, but as the supply is large, higher prices do not rule.

## Fruits.

Heavy receipts of apples from Oregon and the East have lowered, very considerably, all varieties. Only choice Spitzenberg fetch \$1.25 per box.

Grapes, if choice and in good condition, move steadily, but poor are hard to sell. Isabella and one or two other choice and scarce varieties fetch \$1 per box.

Strawberries are weaker under freer receipts.

Pears, under freer receipts and a light demand, are weak and lower.

Figs, plums and prunes are out of the market.

Oranges are coming in more freely and sell for less money; but limes fetch an advance.

Quinces are steady, at unchanged figures.

## Hops.

The market begins to show more strength, with buyers disposed to bid up on choice parcels, but holders do not appear disposed to make concessions on their asking prices, believing that the foreign and Eastern markets justify the belief in better prices.

## Live-stock.

The cooler weather has stimulated consumption in both beef and mutton, and as receipts are only fair, prices for beef cattle and mutton sheep are higher and strong at the advance. Small calves are also doing better. Hogs continue weak, with a further shading in prices. As the weather is growing cooler, packers will soon be in the market, when a more general cleaning up is apt to obtain. It is claimed that there is a larger increase in the number of work horses offering on the market, which causes low prices. If reports now current of large railway construction next year be correct, then we may reasonably look for a better demand for work horses. For roadsters, general utility horses, and matched team the demand is good. Milch cows are slow at the low prices heretofore ruling. It takes a very choice milker to fetch over \$40. Hogs choose stronger, with an advancing tendency.

## Raisins.

The market is stronger for good to choice, but is unchanged for poor to fair. In referring to this year's California raisins the *Chicago Grocer*, of Oct. 30th, says: "The California raisins that are coming into this market are the finest ever received from

that locality. They are conceded to be vastly superior to the imported ones, which appear badly. This is a critical year for California, and she has come nobly to the front, and we believe another year will show California raisins fully as high in price as the imported."

## Nuts.

The market shows an improvement for both walnuts and soft-shell almonds. The demand is chiefly from the East, where a strong and higher market rules. The crop of walnuts both here and abroad is reported light, which is apt to create still better prices later on.

## Vegetables.

Potatoes have weakened off to so low a range of values as to draw in more buyers, who are cleaning up the market. If receipts continue as light as now reported, it is claimed that an improvement in prices will soon obtain. The lower prices shut off receipts from both Oregon and Utah.

Sweet potatoes have a steadier tone, with receipts falling off and consumption good.

Choice hard onions are strong, with a good demand ruling, and only moderate receipts. Soft or sprouted onions are hard to sell at any price.

Cucumbers are out of market, as are summer squash. Tomatoes continue in liberal supply, but the quality, as a rule, is only fair. Canners continue to buy, owing to the higher prices of canned tomatoes inducing them to put up all they can.

Egg plants, string beans and Lima beans are in moderate receipt, but green peppers come in freely.

## Wool.

The stock is closer cleaned up than for many years, making it difficult to place consignments unless the clip is desirable and wanted by several buyers. Medium to fine crossbred continues to command high figures. It now looks as if next year's clip will command quite an advance on this year's prices.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	215,279	190,950
In port, disengaged.....	74,268	113,543
In port, engaged.....	81,542	24,052

Totals.....371,089 333,545

The above gives a carrying capacity as follows: 1886, 593,742 short tons; 1885, 533,624 short tons; increase over last year, 60,118.

Poultry, after a severe depression, has a steadier tone, with buyers more anxious for choice large and fat, which will fetch all of 10 to 50 per cent above our quotations for hens and young roosters.

Beans are very dull, but not quotable lower.

San Francisco, Nov. 10, 1886.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

VALUE OF WOODLANDS AS RESERVOIRS.—We  
have received a copy of "The Forest Waters  
of the Farm; or, Value of Woodlands as Reser-  
voirs." It is a translation by Rev. S. W.  
Howell of the famous brochure by Antonia  
Dusset, discussing the value of forests as con-  
servators of moisture, etc. It is published by  
Forest and Stream Publishing Co., 39 Park  
Row, New York City.

the Best Alfalfa Land in Tulare  
County for Sale.

Dr. W. McFadden, whose postoffice address is Tipton,  
Tulare Co., offers for sale, at the low price of TEN DOL-  
LARS PER ACRE, 320 acres of land on the east side  
of Tulare lake, just south of the mouth of Tule river,  
about 12 miles nearly due west of Tipton, on the S. P.  
R. He has 30 acres of alfalfa stand of alfalfa as can be  
seen growing in the county. It grows green and thrifty  
all year round, without any irrigation whatever. The  
greater portion of this land is also equally good for stock,  
alfalfa, grain or vegetable growing. It affords rare  
opportunities for hunting and fishing. The proprietor is called  
and will sell at a sacrifice. Write as above, or  
call on W. McFadden, on the premises.

THE GREAT REGULATOR!

No medicine is so uni-  
versally used as Simmons Liver  
Regulator. It won its way  
into every home by pure,  
sterling merit. It takes the  
place of a doctor and costly  
prescriptions. It is a family  
medicine containing no dan-  
gerous qualities, but purely  
vegetable; gentle in its ac-  
tion and can be safely given  
to any person, no matter  
what age.

**WORKING PEOPLE**  
Can take Simmons Liver Regulator without loss of time  
or danger from exposure, and the system will be built up  
and invigorated by it. It promotes digestion, dissipates  
sick headache, and gives a strong, full tone to the sys-  
tem. It has no equal as a **preparatory medicine**,  
and can be safely used in any sickness. It acts gently  
on the Bowels and Kidneys and corrects the action of  
the Liver. Indorsed by persons of the highest character  
and eminence as

**The BEST Family Medicine.**  
If a child has the colic it is a sure and safe remedy.  
It will restore strength to the over-worked father and  
relieve the wife from low spirits, headache, dyspepsia,  
constipation and like ills. Genuine has our Z stamp in  
red on front of wrapper, prepared only by

J. H. ZEILIN & CO., Philadelphia, Pa.

**ON 30 DAYS' TRIAL.**  
**THIS NEW ELASTIC TRUSS**  
Has a pad different from all  
others, is cup shape, with self-  
adjusting Ball in center, adapts  
itself to all positions of the  
body while the Ball in the cup  
presses back the intestines  
just as a person  
does with the finger. With light pressure the Hernia  
is held securely day and night, and a radical cure  
certain. It is easy, durable and cheap. Sent by mail, Cir-  
culars free. EGGLESTON TRUSS CO., Chicago, Ill.

**Overland for One Dollar.**  
Shows at 1/2 a cent a ton per mile and 2 1/2 cents per passen-  
ger per 100 miles (San Francisco to New York for 75 cents),  
the National Government can employ 3 to 9 million men, 8  
hours daily, at \$3 or more each, according to ability. Pay  
for all railways the first, pay off the National debt the  
second, and at way with National Taxation the third year.  
PROMPTLY. Price per annum in advance, 25 cents. Ad-  
dress, WILL D. SOUTHWORTH, Room 5, No. 224 Mont-  
gomery Street, San Francisco, California.

**SNELL SEMINARY FOR YOUNG LADIES,**  
**568 TWELFTH ST. OAKLAND, CAL.**

"STANDARD" CHAMBERLIN

**Dewey & Co.'s Scientific Press  
Patent Agency.**

OUR U. S. AND FOREIGN PATENT AGENCY  
presents many and important advantages as a  
Home Agency over all others, by reason of long  
establishment, great experience, thorough sys-  
tem, intimate acquaintance with the subjects of  
inventions in our own community, and our  
most extensive law and reference library, con-  
taining official American and foreign reports,  
files of scientific and mechanical publications,  
etc. All worthy inventions patented through  
our Agency will have the benefit of an illustra-  
tion or a description in the MINING AND SCIEN-  
TIFIC PRESS. We transact every branch of  
Patent business, and obtain Patents in all coun-  
tries which grant protection to inventors. The  
large majority of U. S. and Foreign Patents  
issued to inventors on the Pacific Coast have  
been obtained through our Agency. We can  
give the best and most reliable advice as to the  
patentability of new inventions. Our prices  
are as low as any first-class agencies in the  
Eastern States, while our advantages for Pacific  
Coast inventors are far superior. Advice and  
Circulars free.

FOR  
MAN  
OR  
BEAST.  
D.D.T.  
1866

THE H. H. H. Horse Liniment puts  
new life into the Antiquated Horse!  
For the last 14 years the H. H. H. Horse  
Liniment has been the leading remedy  
among Farmers and Stockmen for the  
cure of Sprains, Bruises, Stiff Joints,  
Spavins, Windfalls, Sore Shoulders, etc.,  
and for Family Use is without an equal  
for Rheumatism, Neuralgia, Aches, Pains,  
Bruises, Cuts and Sprains of all characters.  
The H. H. H. Liniment has many imita-  
tions, and we caution the Public to see  
that the Trade Mark "H. H. H." is on  
every Bottle before purchasing. For sale  
everywhere for 50 cents and \$1.00 per  
Bottle.

For Sale by all Druggists.

YEAR.

## WHITE ADRIATIC,

## SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Praparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

## TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST,  
Stockton, Cal., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no scale or indication of scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District,  
JOS. HALE, County Commissioner of Horticulture.

**LIGHTNING HAY KNIVES**  
WEYMOUTH'S PATENT.  
This Knife is the BEST IN USE for cutting down hay and straw in mow and stack, cutting fine feed from bale, corn stalks for feed, cutting peat and ditching marshes. The blade is Best Cast Steel, spring temper, easily sharpened, and is giving UNIVERSAL SATISFACTION. A few moments' trial will show its merits, and parties once using it are unwilling to do without it. Its sales are fast increasing for export as well as home trade; and it seems destined to take the place of all other Hay Knives. They are nicely packed in boxes, 1 dozen each of 60 pounds weight, suitable for shipping to any part of the world. Manufactured only by  
**HIRAM HOLT & CO.**  
EAST WILTON, MAINE.  
For sale by the Hardware trade generally.  
We are informed that various parties are infringing upon the widely-known Letters Patent granted originally to GEORGE F. WEYMOUTH for an improved Hay Knife. The invention patented by him is a sword-shaped blade provided with operating handles, the edge of the sword-blade being furnished with knife-edged serrations or teeth. It is our purpose to PROSECUTE ALL INFRINGEMENTS, and to hold responsible to the full extent of our ability and of the law, all parties who manufacture any knife infringing upon the patent, or who deal in the same. Several suits are now pending in the U. S. Courts. All manufacturers and dealers are hereby warned of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture.

PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-fed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.  
JACOB PRICE, San Leandro, Cal.

Pacific Barley Crushing Roller Mill

WITH SHAKING SCREEN.  
These Mills are constructed in the least complicated and most substantial manner possible, with rigid iron frame, long bearings, adjustable boxes, with coil springs to allow any chance obstruction, such as nails, screws, etc., to pass through without injury to the rolls. This feature is found on no other roll made on this Coast. Send for prices to

**MISSOURI STEAM WASHER**  
Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]  
MART J. TAPPAN, Reynolds, Nev.: They excel all other washers I ever saw. JOHN R. DODGE, JR., Norwalk, Ill.: The best machine ever invented by man. H. H. DURANT, Cottageville, S. C.: Everybody likes them and everybody wants them.  
S. B. ADAMS, Astoria, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.  
MRS. JOSEPH SWIFT, Neva, Oregon, Iowa: The most useful article about the kitchen. ANNA RANSNEY, Milroy, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction.  
ST. CLAIR INKSTER, JR., Fort, Washington, Tex.: Sells itself and can not be spoken of too highly. JOHN DETTON, Brigham City, Utah: Have given it several severe tests and it came out triumphant every time.  
JNO. B. WHEELER, Kansas City, Mo.: They have proved treasures to the families who owned them. A. P. MINNIELEY, Dawson, Nev.: Gives entire satisfaction. Rather handle the Washer than anything I have seen.  
E. M. MASSEY, Lookport, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Springfield, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house.  
MRS. N. C. DOUBINS, Canton, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to wish hired help. MRS. M. MOORE, Newburg, Va.: Will do more than it says, especially washing flannels.  
MRS. E. G. STODEN, Sycamore, N. Y.: Would not take \$5 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED H. HARRIS, Bismarck, Mo.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. PIERCE, Northfield, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, Patoka, Ill.: Saved me \$50.00 per year for 18 months I've had it.  
MRS. C. W. TALCOTT, Northfield, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stanton, Mich.: I had rather give up my Jersey cow than part with my Washer.  
I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

## HARDWARE and AGRICULTURAL IMPLEMENTS. THE CELEBRATED GALE CHILLED PLOWS.

CUT OF No. 32 GALE PLOW WITH SLOPING LANDSIDES.

### WITH STRAIGHT LANDSIDES.

With Handles underneath the Mold and attached to the Landside, and wooded same as all other common plows

No. 26.	Two-horse general purpose plow, cuts furrow 7x13 inches, weighs 120 pounds.....	\$16 00
No. 27a.	Two-horse stubble plow, cuts furrow 7x15 inches, weighs 120 pounds.....	16 50
No. 28.	Three-horse stubble plow, cuts furrow 8x16 inches, weighs 135 pounds.....	16 50
No. 31.	Two-horse light general plow, cuts furrow 6x12 inches, weighs 113 pounds.....	15 00

The above prices do not include Wheel or Joiner.

### WITH SLOPING LANDSIDES.

No. 32.	Two-horse light general plow, cuts furrow 6x12 inches, weighs 94 pounds.....	\$15 00
No. 34.	Three-horse stubble plow, cuts furrow 8x16 inches, weighs 129 pounds.....	16 50
No. 35.	One-horse garden plow, cuts furrow 4x8 inches, weighs 51 pounds.....	7 50
No. 36.	One-horse garden plow, cuts furrow 5x11 inches, weighs 71 pounds.....	12 00
No. 37.	Two-horse general plow, cuts furrow 6x13 inches, weighs 108 pounds.....	15 50
No. 38.	One-horse vineyard plow, cuts furrow 5x11 inches, 66 pounds.....	12 00

The No. 38 Vineyard Plow is made especially for our California Vineyards

### THE GALE CHILLED PLOWS

Are the Hardest Chilled Iron Plows Manufactured, and the Lightest Draft Plows ever used. Will Scour in any kind of Soil.

### GALE'S CHILLED METAL

Presents itself as the important feature, being HARDER THAN ANY OTHER PLOW METAL, and so fine in fiber that it will receive a polish almost equal to a mirror. Its fiber does not run parallel with the surface of the casting, as with cast iron and steel; but its direction is through the mold-board, thus bringing the friction of the soil on the end of fiber or grain. This feature avoids all reasonable possibility of imperfections being hidden below the surface.

The Wood-work of the Gale's is made from the best quality of White Oak timber, carefully selected with reference to the use intended. The beam is placed in the center of its work, thus securing a center draft under all circumstances. It is secured to the plow by two bolts—one through the slotted standard head in the center of the beam, and the other through the handle brace at its rear end.

### LANDSIDES.

Until last year the Landsides on our Gale Plows were *straight*. Without a straight landside a plow will not turn all the ground it plows. The *sloping* landside leaves a ridge of unplowed earth at the bottom at each furrow, leaving space for weeds, etc., to spring up; and the farmers who have used the plows with the *sloping* landsides are readily seeing how they have been humbugged. CALIFORNIA IS THE ONLY STATE NOW USING SLOPING LANDSIDES. THEY HAVE BEEN ALMOST WHOLLY DISCARDED EAST. But as many farmers prefer a *sloping* Landside, we have had a special pattern of this kind made for us, which is *far superior to any sloping Landside Plows yet introduced in California*. We solicit a thorough inspection of them by parties preferring this style of Landside, before making purchases.

### JACKSON'S IMPROVED IRON

#### HARROW.

Cheapest and Best.

60 1/2 Steel Teeth.

PRICE, - - \$32.50

This Harrow was introduced to the farmers of the Pacific Coast, during the season of 1881. Since then, hundreds have been sold, giving entire satisfaction. I have made the malleable iron clamps heavier, and strengthened them, making this the **Best Iron Harrow**. The frame is indestructible, made entirely of iron and locked firmly together by the teeth passing through malleable iron clamps, and having screw-threaded shanks on their upper ends, which bolt the frame-work securely together. This mode of constructing a harrow frame dispenses with drilling or punching holes, thereby securing much greater strength and durability. **It is indestructible.** No shrinking, swelling and rotting of frame-work. It is constructed in narrow sections, each acting independently; will adapt itself to any uneven surface of the ground, and will cut the soil better and more evenly than any other Harrow. Constructed on correct mechanical principles; each section has a center draft, and each tooth cuts a separate track. No one tooth in line with another. The safety-hook prevents unhooking when turning round. Four different sizes to suit customers. **STRONGEST AND BEST HARROW MADE!**

#### PRICE LIST.

	PRICE.
No. 1 has three sections, 45 1/2 steel teeth; cuts 9 feet wide. This is a light size for two horses. Weight, 168 pounds.....	\$25 00
No. 2 (represented in the cut) has four sections, 60 1/2 steel teeth; cuts 12 feet wide. This is my standard style for two horses (generally used). Weight, 230 pounds.....	32 50
No. 3 has five sections, 75 1/2 steel teeth; cuts 15 feet wide. This is my 3-horse harrow; can leave off one section and use two horses with the same draft-bar. Weight, 291 pounds.....	37 50
No. 4 has six sections, 90 1/2 steel teeth; cuts 18 feet. For this size I use four horses abreast, with two draft-bars coupled together at the ends; adapted for large farms. Weight, 336 pounds.....	48 00

"Your harrow is a good one."—M. MADDEN.  
 "They gave perfect satisfaction."—JAS. CARR & CO.  
 "Your Iron Harrow is a good one and fully met my expectations."—DR. L. F. MOULTON.  
 "I like your Iron Harrow very well."—MILTON CARPENTER.  
 "I tried your Iron Harrow the other day, and it beats them all. My manager says 'it is the boss.'"—D. FREEMAN.  
 "We like your Iron Harrow very much."—STEELE BROS.

## LANSING SPRING-TOOTH SEEDER.

Sows the Grain Evenly and Covers it Thoroughly.

Patented August 31, 1880, and June 20, 1882.

IT POSSESSES MORE POINTS OF EXCELLENCE THAN ANY OTHER SEEDER MADE.

Sows Perfectly all Grains and Seeds from the Largest Kernel to the Smallest Alfalfa Seed.

It is the **STRONGEST, MOST DURABLE** and **EASIEST MANAGED**. By means of the lock lever the teeth can be placed in the ground to any desired depth and held there, thus avoiding all bobbing and shaking of the frames so common to other seeders. It is light and compact. **EASY OF DRAFT.** The draft all being from the gang—the center of resistance—it is easier on the team than any other seeder. Any boy that can handle a team can handle it with ease. The frames holding the teeth are made in two sections, which are easily managed by the driver, who is able to regulate the depth of either section without getting off the seat.

Prices Greatly Reduced and Time Given on Good Paper.

**WE GUARANTEE THE SPRING TOOTH FOR ONE YEAR AGAINST BREAKAGE FROM DEFECTS.**

## November 27th on Yerba Buena.

We notice that our interior exchanges are inveighing against November 27th as an Arbor Day for California. They are quite right in claiming that the day is altogether too early for tree-planting, and it is not unnatural, perhaps, that they should make merry at the lack of practical experience and knowledge which led some of our literary friends to fix the day for it. It should conciliate all to be assured that the fixing of the date is now acknowledged by all to be a mistake. Those who gave the first push to the present movement were all right on the sentimental and the general theoretical considerations involved, but they did not think of times and seasons. The idea of covering our barren areas with trees filled them with enthusiasm, and then they wanted to do it "right away off," as the boys say. They know better now, and when the proposition comes up before the Legislature for formal appointing of an Arbor Day for California it will have a date that can be approved; or, if not, the Legislature may be trusted to have enough practical tree-planters from the different parts of the State to decide upon a proper day.

As for the planting on November 27th, it has narrowed itself down to planting trees on Yerba Buena, or Goat Island, and perhaps in the parks of San Francisco, on that day. If there comes a fair supply of rain in December, probably a fair percentage of those trees will live. In the immediate neighborhood of the bay, of course, planting can be done at an earlier date than in the interior. We see, therefore, in the present shape of the proposition, no reason why our interior friends should object. We know that unless it rains more before Nov. 27th, it will be pretty hard work to make a hole in the crest of Goat Island, and we know that if we have such a drouth as we sometimes have from thence to the middle of January, there will not be any very thick forest from the little eucalyptus and cypress which will be set on the 27th. But what if they all die? The loss will not be great, and the purpose served in awakening interest in the subject will be worth the cost. The failure will be seen to be through no fault in the sentiment, but because the sentiment flowed at the wrong time.

We had the pleasure of attending the meeting called to consider the Arbor Day proposition, at the Palace hotel, on the evening of November 12th, and can assure all who may have found their common sense offended by the proposal to plant trees at a date so closely subsequent to Thanksgiving Day that those in San Francisco who are advocating tree-planting are earnest and enthusiastic and quite willing to take advice about the practical features of the movement. The State Forestry Commission has a bill prepared, and which the coming Legislature will be asked to enact, which will name a day in February. After the affair in November is properly disposed of, the Arbor Day proposition will appear upon a practicable basis.

A GREAT DROUTH AT THE EAST.—A prolonged drouth is one of the worst afflictions which can come upon our eastern friends, who count upon frequent showers during the summer and fall. In California our conditions and

dry, and great difficulty is experienced in getting water for the stock. In the vicinity of Wareham, Massachusetts, families can with difficulty secure water enough for domestic uses. The various ponds and small lakes are very low.

## Are They Coming?

Thanksgiving is eminently the day for family and friendly reunions. In another column we have pointed this out as one of the features of the day. On this page the artist has embodied the expectancy which awaits the coming of the guests. Their arrival is one of the events of the day. It has been preceded by the advent of the big turkey, and by the various culinary sensations which always mark the approach of kitchen crises and their fortunate transits. The dining-room events, too, are successfully passed and the doors are closed upon the tasteful decorations and the glittering silver and glass which has not had such a rubbing and polishing since last Christmas. All the members of the household, save the mother, were long ago ordered to their rooms for holiday attiring—poor mother's work is never quite done, and she still bustles and broils in the hot kitchen, and will have but a moment to don her best gown while the dinner bell is ringing through the house. The young lady of the house has emerged from the chrysalis of her morning gown, and appears upon the upper balcony in the beautiful summer garb which the California climate smiles upon during the Thanksgiving season. In her hair are the marguerites, freshly plucked in the garden below, and around her are the clinging vines which show the balminess of the season by their abundant blooms. She sits in repose, conscious of her treasures of youth and beauty, looking and listening for the carriage wheels, far down amid the trees which shade the winding roadway. Soon the guests must come. The precious grandparents, the beloved uncles, aunts and cousins, will soon be welcomed by a wave of the hand and by a hurried rustle of the robe, as the daughter of the household speeds to the doorway to add her joyous greeting to the shouts of the younger members of the family, who have been running alongside the carriage wheels and shouting their welcome over the last quarter mile of the road. This is a scene fit to thrill the heart and bring new light to the eye—the coming of the guests on Thanksgiving Day.

Does the reader mistrust that all the expectancy of this sweet young face and all the loveliness of the simple toilette are not for the family guests alone? It would be but natural if they should take a wider range and center finally to the stalwart young form which approaches in the saddle, and excites even the youngsters as he draws in his fine animal beside the merry group. But it is not our right to compass degrees of affection and thanksgiving. It is the right of each heart to seek its own, and even the grandparents, looking far away through the vistas of their own lives, are disposed to rejoice anew at each recurrence of love's young dream among their offspring.

THE name of the temporary terminus of the S. P. Co.'s extension in San Luis Obispo county has been changed from Crocker to Templeton.

WAITING FOR THE THANKSGIVING GUESTS.

calculations are different and summer showers are unwelcome. The area east of the Rocky mountains which has suffered this season is very large. It covered the great country from Texas to Wisconsin and seriously affected grazing and dairy interests. We have not followed the subject closely and cannot say how far eastward of the prairie States the drouth extended, but present reports are of severe lack of water in New England. It is said that springs and wells in some of the southern counties of Vermont, that were never known to fail before, are now

A trench has been dug to connect the Little Quittams' pond with Acushnet river in order to increase the water supply for the town of New Bedford. Throughout the States mentioned the drouth is widespread.

THE Los Angeles Times has knocked all the poetry out of orange groves. It says there is more money to be made in growing cabbages than oranges, and gives the figure to prove it. An acre of good ground will yield 25 tons of cabbage.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## California.

(Written for the RURAL PRESS by I. C. HATCH.)

I realize the impossibility of pleasing both or either of two large classes of people in writing of California. One class will revolt at any due enthusiasm. They care not how much praise one bestows on animals, but flowers and fruit must pass with frigid mention. The other class will insist that you paint California in "the light that never was on land or sea;" that every prospect pleases and each day is a bridal of the earth and sky. Now this latter class err on the side of beauty, an exalted enthusiasm, and in the direction of right and truth. It will not do to sneer at this and call it overdone, the hysterics of æstheticism, sublimated affectation, etc.

The love of mountains and flowers, of balmy climes, is as practical, as true, as love of *belles lettres*, of the fair humanities, of painting, of sculpture, or even of animals. One cannot write soberly of some, and, I think, the best, aspects of California. The pulses refuse to be equable and the pen self-contained. The name is like an elixir, and the imagination is at once plumed with it. Nor is this responsiveness without its uses, aside from its delights. It is a sort of Arethusa, or a spring of Nepenthe, where the wounded sensibilities may find a lenitive; where the "fitful fever" of life may be soothed; where the bondage of routine may be broken; where the dull heart may be gladdened; where a refuge may be found from weary, carping care; where we may enjoy the divine, enchanting ravishment of nature, and the soft witchery of her lofty spell. And why should not California be painted in brilliant hues? If, in describing the polar regions, one should have no glow of language, no hint of flower nor fragrance, because it is fitless, why should not one speak of orange groves, of a "land of delicious lights and floating shades," as a fact? Ought an Italian sunset to be limned in the cold, somber, cheerless tints of an Arctic one? We should be ashamed to talk about vegetables and animals in anything but plain language; but should we rob flowers of their hues because some reader is color-blind? or of their fragrance because another has no sense of smell?

The flowers and fruits have their rights as well as corn and potatoes, and dollars figure just as high and swell a bank account as well from oranges, apricots, lemons, etc., as from the latter.

And yet, even from the standpoint of utilitarianism, into the "horn of plenty," along with the oranges and lemons which Pomona pours, Flora will put her flowers. It does not detract from the sweetness of perfumes because one puts them in the marts for sale. Mere money-getting in California has a halo, a fragrance, an atmosphere about it that it has not elsewhere. This exaltation, this almost glorification of industry, this aureola about the brow of thrift, is one of the unique phases of California life.

Nowhere else does money-making seem so much a pastime and labor a holiday. The sweat of the brow is transmitted to perfume; dry statistics become blooming and odorous; utilitarianism is idealized, thrift is glorified, and the duty and dignity of labor are veiled by its beauty as by a rosy cloud. The clink of the guinea finds an endearing and excellent accord in the melodies of bird-songs. Embellishment is not only the embodiment of the soul's aspirations after the beautiful, not only the pledge and promise of remuneration, but remuneration itself. Industry does not savor in the sweat of toil, but is bathed in the elixir of delight. It brings not only money, but the blissful remuneration of flowers and beautiful fruits. Indeed, labor is not only the handmaid of thrift but her enchanting mistress.

The name of California is certainly a spell. It is not only suggestive of fragrance, but almost redolent. It acts like an incantation upon the imagination. Her clime is at once bounty and beauty. She seems the theater of the selected influences of nature in her softer moods, the haunt of the muses, the land of soft and fragrant airs, perpetual flowers and unfailing bird-songs. It is the Mecca of the cultured voluptuary and the asylum of the invalid; and not only is her spell upon the imagination, but upon the memory. The pages of history and poetry revive—pages where genius has recorded her highest triumphs of description.

Arcadia and the vales of Cashmere bloom afresh; Cathay and Candahar revive; the Tuscan fields, the famous Arno and starbright Italy are constantly in mind. Why should California not become the future nursery of poets, a precious repository of the beautiful, at once a glorious picture-gallery and nursery of genius, where may be stored the ripe fruits of genius and where genius may find her highest aspirations and most rapturous solaces? Why should not there be a civilization of as high a type and more romantic than marked the old world, where poetry and art and song can grow side by side with a seemly utilitarianism not hard and cold and all engrossed in money-making, but where time and opportunity are given for a sumptuous taste and a munificent, superb

æstheticism to revel in, where the triumphs shall be of the poet's page, the painter's canvas, the sculptor's marble?

California will be studied in this aspect by him who seeks a refuge from the irritation of business, who recognizes the music of the "inner voice" in the river, who feels

"A distant dearness in the hill,  
A secret sweetness in the stream."

To such, even the most rapturous rhapsody would need no apology, for there is a time for rhapsodies as well as for plodding gain-getting. Suppose California were, in fact, only some "delicious land," where the

"Graces, knit with the hours in rosy dance,  
Lead on perpetual spring."

Even then it would have its uses; the overworked scholar, the professional man worn with a long life of toil; the tradesman—all who seek to get out of the hurly-burly, the dust and jostle of this feverish, work-a-day world, and find a respite from it, and who seek rest to the overstrung nerves and the faded powers, will find a spell, a harmless but

"Pleasing sorcery that charms the sense,  
And laps it in Elysium."

As did the song of the lady in *Comus*.

Therefore if California were an Arcadia, that were enough. But it is not a fancy, but a fact. You see it, not in the frenzy of a dreamer's eye, but as a sober certainty of waking bliss.

These indescribable lakes, these orange groves, sweet olive, roses, these bowers of live-oak, magnolia, all this wilderness of sweets, this wealth of shade and color and fragrance, are all real. Fancy lags behind fact, the imagination becomes barren and uninventive, when one attempts the theme of description.

And, while there is no glory of time, no halo of history about California; none of that halting effect that endears decayed splendor and bathes it in the purple light of bygone centuries; while there is none of this prestige of age, this consecration of decadence, I cannot see why California should not prove a resuscitation of Spain in her palmy days, her "golden prime," when the latter furnished olives and olive oils, raisins, oranges and other choice fruits, and the wondrous fabrics of her looms to commerce. She may prove a repetition of these. Her silk and woolen and canning factories will spring up, and the wealth, splendors and sumptuous magnificence of her products will vie with those times, without their ignorance and superstition. She will prove of joy the squire; of sickness the asylum; of richest and most beautiful commerce the mart—the home of art. It surely ought to be a pride of patriotism, a solace to national pride, that if other lands have had their vales and mountains embalmed in song, we have our California, where one can revel in the rich bounties of nature, unpersuaded, and where immense rewards of beautiful luxuriance await those who will woo her tender responsiveness with apposite cultivation. And, while we exult in our magnificent vastness of areas, our great rivers and lofty mountains and fertile valleys, why may we not cherish the land of orange bowers, where the landscape is perpetually a flower, and ever redolent with myriad fragrances?

The imagination will not be cheated of its enchantments and the exalted sensibility of its opportunities. If the nightingale will sing on the heath, her temptation to sing will be none the less in a bower.

If the lower slopes of Parnassus yield such inspiration, what will its heaven-kissing heights afford? Up there are the finer vistas, the brighter ether, more purpureal gleams.

And then I think one of the sweetest beauties of California is a subtle power of rejuvenation, that springs from some mystic source, we know not where or how—when the feelings of early youth revive—and of the days when we used to pluck the daisies, chase the butterflies, wade in the brook; when our tears were only of the eye and not of the heart; when sorrow was as evanescent as an April shadow upon a gladsome bird, the days of the "sunshine of the breast," when the spirits flew in feathers; when we were as lightsome as the swallow, chasing itself at its own wild will over the glassy lake or flowing mead; the days ere care came or poverty (or, if the latter, heeded not, in blissful compensations); the days ere the vanishment of loved ones, or even the golden chalice of hope was broken, that used to be "brimmed with such delicious draughts of richest joy." Thankful are we for any joy font, whence we can quaff our fill of rapture from life's embittered cup—and that fountain from the mystic somewhere springs in California.

Santa Cruz.

## The Ventura County Fair.

EDITORS PRESS:—Our first fair for ten years opened at San Buena Ventura, Thursday, October 21st. All exhibits except live-stock were placed in Union hall; cattle, horses, etc., had booths at the race-track.

Persons who visited the Santa Barbara County Fair pronounce the display of fruit and flowers to be much finer at San Buena Ventura. Merchants, hardware and furniture dealers, druggists, etc., placed their goods to show to great advantage. The fancy needlework department exhibited much skill and taste in that line among the ladies of the county.

As the notice given of the fair was short, and

the entry fees for exhibits were two dollars, and the premiums in the art culinary and farm produce departments were only from one to five dollars, there was not as great a variety of samples as there should have been.

The prime object of the fair seemed to be horse-racing.

In the live-stock department the premiums ranged as high as \$20, with purse of \$350 for best racing.

How moral people who decry liquor saloons, billiard halls, gambling dens, etc., can sit for hours and witness pool-selling, jockeying, etc., at the race-track, is one of the "marvelous things in our eyes." But then, many "eminently proper" things always were a puzzle to us—a sort of compromise with Satan.

Santa Paula.

MRS. M. E. DUDLEY.

## THE IRRIGATOR.

## A Decision on Riparian Rights.

The following decision in the case of Stanford vs. Felt was rendered by the Supreme Court of California on Oct. 30, 1886: By the common law of England the right of the riparian proprietor to the flow of a stream is inseparably annexed to the soil and passes with it, not as an easement or appurtenance, but as part and parcel of it. Use does not create the right and disuse cannot destroy or suspend it. The right of such proprietor extends to the natural and usual flow of all the water of the stream, unless when the quantity has been diminished as a consequence of the reasonable use or appropriation of it by other riparian owners for proper and legitimate purposes. (*Ferreira vs. Knipe*, 28 Cal. 340; *Lux vs. Haggin*, 10 Pac. Rep. 674.) The use by the riparian owner of the water for domestic purposes, for irrigation and for the propulsion of machinery, are recognized as proper and legitimate purposes. This we regard as the law of this State. (*See Ferreira vs. Knipe* and *Lux vs. Haggin*, supra.) It appears to be law that where all the water of a stream is needed for domestic purposes and for watering cattle, and is thus consumed by one proprietor, the law allows such use.

But in making such reasonable use of water such proprietor must return surplus which remains after such use to the natural channel of the stream (*Dilling vs. Murray*, 6 Ind. 324; 3 Kent's Com. 439; *Miller vs. Miller*, 9 Penn. St. 74; *Gould on Waters*, 213; and if this is not done the diversion will be restrained at the suit of a riparian owner below. Nor is the owner lower down the stream required to show, in order to procure an injunction, any actual present damage. The diversion by lapse of time may grow into a right. (*Crandall vs. Woods*, 8 Cal. 136; *American Co. vs. Bradford*, 27 Id. 360; *Gould on Waters*, section 214; *Moore vs. Clear Lake W. Co.*, 8 W. C. R. 332; *L. R.*, 19 Ch. 451; *L. R.*, 7 H. L. 697.) To prevent such result an injunction will be awarded. (*Parker vs. Griawold*, 17 Conn. 287, affirming 13 Conn. 279.)

It appears from the findings in this case that water has been diverted from the stream on which both plaintiff and defendants are riparian proprietors, but as to the fact whether it has been returned or not, the finding is as follows:

"That except by natural gravitation, and in the summer-time over dry lands, no means of returning water diverted from the said Trancos creek to its bed have ever existed, and none are provided by defendant Felt.

"That no return of any water so diverted as aforesaid is, or ever has been, usually made, and from personal inspection of the premises I am satisfied that in the dry season of the year no such return of said waters has ever been made, and that none can be made under existing circumstances, except by opening the defendant Felt's reservoir, or the short six-inch pipe which passes through the head thereof and above mentioned, so as to rapidly exhaust its contents and render it practically of no use, and a source of inconvenience, if not injury, to the use of his property; at all events, from my inspection of the premises, it is evident that while the outer end of the discharge pipe from said reservoir was open on the day when I visited the premises, and was then discharging a torrent of water through the defendant Felt's lands, in the direction of Trancos creek, which plowed the ground and made traveling uncomfortable, there had been no such previous customary discharge, and there was no visible indication of any connection or habitual flow between the waters of the reservoir and the bed of the creek ever having been maintained at any time; and I find as a fact that no return of discharged water or any portion of it has been usually made to the bed of the creek by the defendant Felt."

From the language employed here, it is left in doubt whether the finding "that no return of any water so diverted as aforesaid is or ever has been usually made" is based on the testimony given in the case or on facts ascertained by the personal inspection of the premises by the learned Judge who made the finding. In such a state of the case, ought a judgment based on a diversion and no return of the water diverted (for such is the character of the judgment here) to be rendered?

In *Wright vs. Carpenter* (49 Cal. 609) it was held that an instruction which authorized the jury to take into consideration the result of their own examination of the land in contro-

versy, which they were sent by the Court to inspect, in determining its character as swamp and overflowed or otherwise, was erroneous. The Court made the following observations in regard to the instruction:

"In authorizing the Court to send the jury to view the premises in litigation, it was not the purpose of the statute to convert the jurors into silent witnesses, acting on their own inspection of the land, but only to enable them the more clearly to understand and apply the evidence. If the rule were otherwise, the jury might base its verdict wholly on its own inspection of the premises, regardless of an overwhelming weight of evidence to the contrary, and the losing party would be without a remedy by motion for a new trial. It would be impossible to determine how much weight was due to the inspection by the jury as contrasted with the opposing evidence, or (treating the inspection as in the nature of evidence) whether it was sufficient to raise a substantial conflict in the evidence. The cause would be determined not upon evidence given in court, to be discussed by counsel and considered by the Court in deciding a motion for a new trial, but upon the opinions of the jurors founded on a personal inspection the value or the accuracy of which there would be no method of ascertaining." (*See also Wright vs. Carpenter*, 50 Cal. 556.)

The reasons above given which render it error for a jury to base its verdict on evidence derived from a personal inspection of the land involved in the action tried before them, are equally cogent when applied to a Judge making such inspection. The findings of fact made should be upon the oral and documentary testimony introduced at the trial, and not on any fact ascertained by the Judge of the court on an examination of the premises involved in the controversy. As the finding above quoted may and appears to have been on the testimony in the cause and on facts discovered by the Judge on the inspection above referred to, we cannot regard it as a finding that the water diverted has not been returned as the law requires. In such a state of the case, a judgment which is manifestly based on the fact that the water has been diverted and not returned, cannot be regarded as proper.

It may be contended from some of the other findings that the water has been detained for some space of time, but as the defendant Felt is a riparian proprietor he has a right to such a reasonable detention of the water in the use of it. The reasonableness of the detention is involved in the question of reasonable use. Whether the use of water is reasonable or not, is always a question of fact to be ascertained by the Court below. Whether then the water is reasonably or unreasonably detained must be a question of fact, and all such questions are to be determined by the tribunal above mentioned. Whether Felt, in using the water, has made an unreasonable detention of it has not been clearly and distinctly found, and in this state of the case this Court cannot act upon it as a fact in the cause.

It must be remembered that no injunction can be awarded which can deprive the defendant of the reasonable use of the water for domestic purposes and for the support of life.

For the reasons given above the judgment and order must be reversed and the cause remanded for a new trial.

Ordered accordingly.

THORNTON, J.

We concur in the judgment. In our opinion the findings are too uncertain and indefinite to sustain the judgment of the Court below.

MCKINSTRY, J.

MYRICK, J.

McKEE, J.

SHARPSTEIN, J.

## SHEEP AND WOOL.

## Early Lambs for Market.

EDITORS PRESS:—Paul Bradley, of Bradley's Canyon, 10 miles southeast of Santa Maria, has for several years been engaged in wool-growing, but says he feels much discouraged because of the non-protection by Congress of that which might easily be made an important industry of our country; that there is no longer any profit in keeping sheep for wool alone in California, so he has recently turned his attention to raising lambs for the San Francisco market.

He has near 2000 head of sheep. His bucks are Shropshire-down and his ewes Spanish merino. The ewes breed twice a year. Food for sheep is abundant here and his flock is kept in the best of order. He ships his lambs by the Pacific Coast Railway to Port Harford, by way of San Luis Obispo, thence by boat to San Francisco. On the 16th of March last he sold in San Francisco 311 lambs, 90 to 120 days old, at \$2.75 per head. Early in April he made a second shipment of 300, and only sold for \$1 per head. Of course he will not again repeat this costly experiment of shipping at a venture, but will hereafter before shipping ascertain the state of the market, and, if practicable, the probabilities of the near future. Although the business is sometimes attended with losses, he is not discouraged but continues in the business with the hope of at least more than covering expenses in future. His ewes are likely to turn out about 1000 lambs this fall, and if conditions of weather and other contingencies remain favorable he expects to have them ready

for market by Christmas. As Mr. Bradley's sheep are kept in the best condition, his ewes after having had their lambs and passed over the suckling period recuperate very speedily.

The Shropshiredowns are peculiar for their quick growth and early maturity. A Shropshire wether at one year old is better matured than a Spanish merino wether at two and one-half years old.

All lambs are sold, both male and female; and when necessary to add young ewes to the herd in order to keep up the number desired for breeding purposes, the ewes are bred to Spanish merino bucks and thus the ewe lambs saved to resupply the herd are full-blood Spanish merino.

Mr. B. recently purchased five yearling Southdown bucks, which are very thrifty and handsome. He expects to try the introduction of Southdown blood into his herd. Of the results we may learn further on. McD.

## POULTRY YARD.

### A Veteran Talks.

"Robin Railroad" gives his experience in the Los Angeles Times in this entertaining fashion: In the year 1824, I remember as well as I remember anything that ever took place, hunting hens' nests in the barn loft for my mother to set under her hens, and ever since then I have taken a pretty active hand in raising chickens, ducks and turkeys. Some years we raised as many as 300 chickens, ducks, turkeys and geese. After I was married my wife and I went to live by ourselves. I thought I could do better than to cultivate the dunghill, so I went to Louisville, Ky., and bought me a pair of Black Polands, with a tremendous big white topknot and crest. I had a nice lot for them in an orchard, where they had plenty of room and plenty of bugs. "For where de hen scratch dar am de bug." My! my! what layers they are when cared for. I had a hen that laid 300 and over eggs in one year. But laying is all they are fit for. They are very poor setters and poor mothers and not very good eating, but we made lots of money by selling the eggs at 50 cents per dozen, when I could buy common eggs for 3½ cents. I built a nice house to keep them dry and warm in winter.

In 1850, I think it was, I sent to Geo. P. Burnham, of Boston, for a pair of Brown Shanghais, as he was then importing direct from China. He sent me a splendid pair by express to Louisville, Ky., which cost me \$18.25. My neighbors laughed at me for being a fool to give that price for two chickens. "All right," said I; "while you laugh I'll make \$100, and have lots of chickens for market left." What fine chicks did come from that pair! Many of the hens weighed six and eight pounds, and the roosters were bigger than hen turkeys. Everybody that made any pretense to raise poultry wanted to buy. "All right," said I; "just as soon as my pullets begin to lay you can have eggs at \$3 per dozen." I made lots of money out of my venture, and had the best fowls to eat we ever had in our lives. When I left that part of the footstool in 1856 for Minneapolis, Minn., I took a coop of these big chickens with me. The rooster was a boomer—just three feet from the end of his toe-nail to the end of his bill.

In order to feed them well and be as little trouble as possible, I made a box the shape of a mill hopper that would hold 100 pounds of oats, 150 pounds of corn or wheat, and nearly as much barley, and made a frame for it to set in. Then underneath it I put a shallow box, say two inches deep and one foot square, close under the mouth of the big box, and fastened it there and put slats so the chickens could poke their heads through and pick grain out of the shallow box. One week I gave them corn, next wheat, next oats or rye, keeping plenty of grain in the box, which ran down and out just as fast as they ate and no faster. The grain was always clean because the fowls could not get their feet into it.

There is a peculiarity about a fowl. Feed him or them three times a day and they will stuff their crop about as tight as a drum, but put the feed in a box where they can get it whenever they go after it and they won't eat two tablespoonfuls at a time except at night, when they will fill up a little more. My wife boiled potato peelings, apple peelings, turnips, cabbage and "sich," and stuck in bran or meal and gave them a mash. Besides, she used to give them sour milk and all scraps from our meals.

To water fowls and keep their water pure and fresh is very essential to their health. I got the biggest jug I could find and drove four posts into the ground, nailed a board on top of them with a hole cut in the board big enough almost to let the jug go through, turned the jug mouth down and put a block under and a tin plate on top of that, which came within half an inch of the mouth of the jug; filled the jug with pure, clear water and turned it upside down. The water will run into the tin plate just as fast as the fowls drink it out and no faster. Then I fixed a barricade to keep them from putting their feet in the plate. Once a day I gave them water, and once a week I gave them grain which lasted all week. They were healthy and nice.

Eleven years ago I came to Los Angeles, and

our chicken and barn yard was about 150x75 feet. If the offal from horses and cattle is thrown into such a yard it is plenty big for fifty or sixty hens and eight or ten roosters, but if it is simply a fowl yard it is not large enough for so many unless they can be allowed to run abroad fall, winter and spring on eight or ten acres. You may turn on as many more and they will do well.

We tried black Spanish and white Leghorn and Brahms and Dominique. We took care of them and did well till the vermin got on to them. I supposed that I had to have warm, dry houses for them as I did in Minnesota and Indiana. But just here was where I went astray badly. I spent \$150 in gold, building houses for them, and they had not been in them six months before they were full of vermin and began to die. I was showing a friend of mine my chickens and my buildings.

"Ah! Robin," he said, "your hen-houses in this county are worthless. Turn out those chickens and shut the door, and don't open it again. Make your hens roost in those willows, and in six weeks you won't have a sore-headed hen on this land."

"Why," said I, "they will catch their death of cold when it rains, and all die with roop."

"Not a bit of it. The rain all through winter won't hurt them the tenth part as bad as those chiggers and lice."

I did that same thing, and it turned out just as he said it would. I tore the house down and made a crib for corn, and we never had healthier chickens in our lives. I set out three pepper trees for the chickens to roost in. We make them roost in the trees yet, or on the ground, just as may suit. The rain and wet kill all the chiggers and lice, but don't hurt the fowls a bit.

## THE FIELD.

### Steam Plowing in Tulare County.

Our Tulare county exchanges bring fuller accounts of the steam plowing now being done by G. S. Berry on his ranch, east of Visalia, using a part of the apparatus which he devised for combined harvesting and which was fully described in the RURAL two or three months ago. The Delta says: The header was detached from the front of the harvester, and the separator from the side—a very easy matter, as both were fastened to the main body of the harvester by hinges. The small engine used to operate the separator was also taken off, and a water-tank for supplying the boiler was mounted on the framework of the machine. When used as a harvester the tank was mounted on wheels and was detachable. These are the principal changes that have been made, except that that which was formerly the rear end of the machine is now the front, and the steering gear has been altered so as to allow the steersman to sit facing the direction in which the machine moves. The greatest part of the weight rests directly upon the wide traction wheels, there being just enough over the steering wheels to facilitate the guiding of the machine.

The steam traction plow, as the harvester is named, after having undergone the metamorphoses described, works as satisfactorily in its new role as it did in the harvest field. Five four-gang ten-inch plows are attached to the rear of the machine, with rods and chains, in such a way that the draught comes in the proper place in each gang and so arranged that the five follow each other in regular order, throwing into furrows a strip of land 16½ feet wide. It can be made to plow any depth desired, and moves along steadily and evenly, doing its work well and thoroughly.

We find in the Tulare Times a letter from Mr. Berry, from which we take the following: "I have been running ten days, and have averaged 35 acres per day. The land where I am plowing now is red, clayey land and is very knolly. The unevenness of the land doesn't seem to have any effect on the running of the machine, whatever. The plows do better work than could possibly be done with them were they drawn by horses; for they are all fastened together, so that they have to keep the furrow—which is not the case when horses are used. I am burning straw which I gather from the field where the harvester left it. It takes five men in all to operate the machine and plow, at a daily cost as follows: Engineer, \$2; man to guide, \$1; hand to fire, \$1; man to haul water, \$1; man to gather straw, \$1; four horses for teams, \$2; oil, 75 cents, and board of men, \$2.50. Total, \$11.25. This makes my plowing cost me, aside from plow-shares and interest on the capital invested, 32 cents an acre. I save by this method \$15 a day on the feed of stock required to do the like work, and, besides that, the stock must be fed, work or no work. The engine, on the other hand, eats nothing of value. There is a stage running to my place thrice a week from Visalia, and persons who want to see my method of plowing will be welcomed."

The Times adds: Parties from San Joaquin, Merced and Fresno counties have visited Mr. Berry's ranch to witness the operation of the steam-plowing machine, as have also several of Tulare's large farmers, and all pronounce it a complete success—one that will revolutionize farming in the great valleys of the San Joaquin and Sacramento.

## THE APIARY.

### Bees on the Santa Lucia Mountains.

EDITORS PRESS:—Among the substantial men of the country around Jolon, we find J. S. Perkins, living some three miles north, engaged in farming, and much of his time in paying particular attention to the bee business. He has about 200 colonies, all of the black variety. He commenced business in November, 1883, and had at the commencement of this year about 110 colonies to start in with, and hived about 90 swarms during the season.

He uses the Langstroth hive, painted all over with two coats of paint. His hives are set on the ground, the bottom board, he thinks, sufficiently protecting from the earth. In this connection, bear in mind that the soil here is sandy and loose. He uses no section-boxes, but extracts all the honey taken from the hives for market. He uses the best of hives, because it pays to be thorough. The honey produced here is of very fine quality, and in color varies from fair to white. Bee forage in great variety, and extending over a long period, abounds in the hills and along the slopes around in great abundance. This remark holds good with reference to about all the country we have visited in the Santa Lucia range of mountains and its extensive system of foothills.

Mr. Perkins puts up his honey in small, neatly-painted tin cans, branded with his name and residence, and usually ships East. He enjoys the best of reputation in the markets where known for furnishing a first-class article of honey.

We were much pleased with the cordial reception given us by Mr. Perkins and his estimable wife and daughter, and will long remember the few very pleasant hours spent by us at their comfortable home. McD.

Monterey Co.

### Californian Honey in London.

EDITORS PRESS:—Some weeks ago a letter appeared in the London Times, signed by Jabez Hogg, the well-known microscopist, stating that the article sold in England as "Californian honey" was badly adulterated. A reply from your subscriber, defending our product, in due course appeared in same columns. I took the ground that if Californian honey was adulterated, the Englishmen did it themselves, as honey was too cheap here to make it possible to debase it profitably—at least, that the honey producers could get the honey cheaper than they could get the adulterant, etc. The reply was thence transferred to the London Grocer. Consequent thereon I am receiving letters from England from parties who mistake me for a honey merchant. I send one for you to publish, as I think some apiarist may seize the opportunity for a deal direct with the English importer. EDWARD BERWICK.

Carmel Valley, Nov. 4, 1886.

No doubt if honest English merchants or consumers would arrange to buy the honey direct from our bee-keepers they could get it pure and cheap, but we cannot answer for its purity after it passes into the hands of those who bottle or can it for the retail trade. As Mr. Berwick intimates, the letter which we publish below may lead to correspondence of importance if there are honey-producers who would like to deal direct with English purchasers:

#### The Letter.

E. BERWICK, Esq.—Dear Sir:—Seeing your letter in Grocer of Oct. 2d respecting adulteration of Californian honey, our experience in purchasing same is that we cannot get two parcels alike. What could you supply the genuine article in bulk for? Also glassed up with the comb, free on board, for cash, we paying freight to London? We could sell a very great deal more if we could obtain genuine honey. We are also wax-melters. Perhaps you could supply the beeswax with advantage to us both. JOHN GIBBS, 124 High St., Wandsworth, London, Eng., Oct. 15, 1886.

NEVADA HONEY.—The improvement that has taken place in the appearance of the honey made by bees in Nevada since 1860, says the Dayton News-Reporter, is wonderful. In the early days the bees were obliged to forage on wildflowers. Most of these yielded very little honey, and that little was of the poorest quality. All the skill of the bees was thrown away upon it. Both comb and honey were brown in color, and the latter had a strong flavor of turpentine which was supposed to come from the wild sunflower. Now that there are large fields of alfalfa and clover, the honey produced in Nevada is as fine in appearance and flavor as any on the coast. It is said by apiarists that the flowers indigenous to the country are almost destitute of honey and also of scent. Not a few trees have also been introduced from which the bees are able to collect honey. Thus far these are principally fruit trees. The basswood or linden might easily be introduced from the West by bee-keepers, half a dozen trees of which are equal to a whole field of clover for bee pasture. The linden is also a beautiful shade tree, with no objectionable qualities, as it is neither a worm breeder nor a cotton producer.

## HORTICULTURE.

### Orange-Growers' Protective Union.

Our Southern friends who were in the Orange-growers' Protective Union last year seem to be so well pleased with their past experience that they have set the organization in motion again to handle this year's crop, and are taking active measures to extend its field. There was a meeting in Los Angeles on Thursday, Nov. 11th. We take a report from the Times:

Fifty-five orange-growers were present. The meeting was called to order by President L. J. Rose, who stated the object of the meeting was to discuss the advisability of perpetuating the organization.

Mr. McKinley formally put the motion that the incorporation of the Orange-growers' Protective Union be continued. Several members spoke in favor of the motion, and it was carried.

The following was then introduced and passed:

Resolved, That the manager of the Union be instructed to appoint canvassing agents for the various orange-growing centers, and that he be authorized to pay them for their work, to secure signatures to a contract to be prepared by a committee of three appointed by the chair.

J. De Barth Shorb offered a resolution that a committee of three be appointed to confer with the railroad companies and see what rebate can be secured for the coming season. Action was postponed.

A committee of seven, to issue a circular setting forth the principles on which the Union will work for the coming season, was appointed as follows: Messrs. Kinney, Bettner, Wall, Sheats, Loop, Chapman and Rose.

The meeting then took a recess till 2 p. m. On reassembling, the following report was read:

#### The Orange-Growers' Protective Union.

The object of this Union is to make orange-growing more profitable, by securing higher prices for the fruit to the grower.

The means by which we expect to attain this is by combination and union.

The Union of last year secured the following results:

1. A better distribution of the fruit than had ever before been attained.
2. A rebate of \$25 per car freight, which could not have been obtained from the railroads without the Union.
3. Higher prices from buyers here on the ground.
4. Better returns and more honorable treatment from commission men.
5. It controlled in shipments over half of last year's crop of oranges.

Our eventual aim is to sell all the oranges of Southern California for cash f. o. b. here.

We feel assured that the dividend declared by the Union of last year will be increased this year. We feel confident that we will obtain special rates of freight, much less than any outsider can secure. The rates of freight obtained by the Union last year were, it is true, eventually shared by outsiders, but the great controllers of rebates in freight is quantity shipped. If we have again, as we have every reason to expect, more than 1000 cars to ship, which we can send over any line of railroad we favor, we have a hold that nothing else will give.

The principles in fixing freights have always been with the railroads, the quantity of freight and the competition.

In union there is strength. By union we can obtain every advantage that is to be obtained in rebates as in all other matters, and we believe that outsiders will not again share the best of these advantages.

Every person joining this Union will have full liberty to sell his fruit or to dispose of it as he pleases. We believe that every orange-grower who is a member of this Union will be able from the strength and information obtained through the Union to increase the price paid for his fruit however disposed of.

The expense of this advantage is only 1½ cents per box. It is more than probable that even this insignificant sum will be returned with a dividend.

The Union has stood and will stand as a sentinel over the whole business. If the buyers on the ground will not pay a fair price, the Union is and will be ready to ship the fruit to the East and open an outlet for it. The Orange-growers' Protective Union has a fixed and good standing in all Eastern markets. It stands prepared to sell your oranges f. o. b. at shipping points at an expense to you of 1½ cents per box. Dealers buying from you here expect to make a profit of from 25 cents to \$1 per box, and even more.

ABBOT KINNEY,

Chairman Committee.

Dr. Chubb moved to adopt the report. Carried. The Chair appointed the following to canvass their respective places for membership:

Lugonia, D. A. Shaw; Old San Bernardino, Frank A. Hinkley; Los Angeles, W. H. Workman, M. W. Geichell, Samuel McKinley; Anaheim, F. H. Keith; San Diego, Frank Kimball; Alhambra, A. C. Weeks; Duarte, E. Watson; Azusa, —Baldridge; Sepulveda, —Mitchell; Sierra Madre, Percy R. Wilson; Pasadena, Byron O. Clark; San Gabriel, J. R. Dobbins; Pomona, C. F. Loop; Tustin, Dr. Wall; Orange, Dr. O. T. Chubb; Riverside, James Bettner, E. W. Holmes, A. J. Twogood.

L. J. Rose was re-elected president. A vote of thanks was returned to the officers for their past services. Canvassers were instructed to report Nov. 30. The Union then adjourned till Dec. 1st.

STRENGTH OF ICE.—It has been found that a sheet of ice three inches thick affords a perfectly safe passage for infantry or horses marching in single file, and for light carriages; with a thickness of six inches it will bear all sorts of wagons and cannon.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## State Grange—Session of 1886.

The following written reports from Subordinate Granges were presented to the Secretary: Danville Grange.

Danville Grange, No. 85, located in the southwestern part of Contra Costa county, in the valley of the San Ramon, was organized in 1873. We have now about 90 members, good and true, and are adding to our membership from time to time, gaining more than we lose by death, change of residence, etc., and we may say that we are in a fairly prosperous condition. Our meetings are well attended. We discuss current events—farming, horticulture, markets, etc., and think our time well and profitably spent while in the Grange. Our members believe in our paper, the *Patron*, and will never be behindhand or lukewarm in sustaining it. D. N. SHERBURNE, Master.

## Eden Grange.

Eden Grange would report about 25 working members. It is out of debt and has a little money in the treasury. The Grange has been alive to the issues of the day, among which is the irrigation question, taking a firm stand against monopoly in every form. Meets the second and fourth Saturdays in each month, and it may be said, although not increasing in numbers, the Grange is alive and active in every good work. O. DENNIS, Alternate.

## Enterprise Grange.

I have the pleasure to announce that Enterprise Grange is in a prosperous condition, and we have enjoyed a pleasant year in our work. We have made our meetings both interesting and social during the past years. We have endeavored to bring out the diffident through the system of a question-box, which is placed on the secretary's desk. The secretary is clothed with authority to select such member as she thinks in most need of being brought out. It has worked wonders with some of our young members. We at present number on our roll, in good standing, 50 brothers and 44 sisters—total, 94. We initiated two brothers and six sisters during the present year; one was admitted from Cosumnes dormant Grange; four have withdrawn from the Order and 12 were suspended for non-payment of dues. We held 25 meetings during the past year and always had a quorum. Harmony and fraternal feelings have characterized all of our meetings. A. A. KRULL, Master.

## Florin Grange.

When installed Master of Florin Grange, No. 130, I promised to attend every meeting of the Grange unless sickness or important business prevented. I have done so to the present time. We have missed having but two meetings up to this time, which was owing to such very bad weather it was next to impossible for members to attend. Our meetings are not always well attended, but we never lack a quorum. We have literary exercises and one-half of the members are called upon by the Worthy Lecturer to respond, and the other half at the next meeting. None have been admitted by initiation or card during the year, have lost none by death, have demitted one, and have expelled eight for non-payment of dues. At the beginning of the year our Grange numbered 73; at this time we have 64 members, with some prospect of making up our losses. C. TOWLE, Master.

## Grand Island Grange.

Grand Island Grange is located at Sycamore, six miles south of Colusa. We have a membership of 16 in good standing; have gained but one new member the past year. This was a very flourishing Grange in the early history of the Order, numbering over 90 members. We meet twice a month, on the second and fourth Saturdays. During the harvest season it is difficult to get a quorum, most of the members being busy in the harvest-field.

We cordially invite the Worthy State Lecturer to remember us in his rounds; much good might be accomplished by a few weeks' labor in this vicinity. J. R. TOTMAN, Master.

## Grass Valley Grange.

Grass Valley Grange commenced the present term with 39 members. Three have withdrawn and two have been suspended for non-payment of dues, leaving 34 names still on the roll. There has been no addition to membership by initiation since May 2, 1885, except one who was initiated at a special meeting held on last Saturday, the 2d instant.

A majority of the members take but little interest in the Grange meetings; but there are a few who are determined that the Grange shall still survive, and are opposed to surrendering their charter. From present appearances there is more hope in the Grange reviving in the future, as prejudice subsides that was caused by the difficulties between the miners and the farmers. J. W. DEGOLIA.

## Lodi Grange.

Our Grange is in a flourishing condition. We have had four additions in the last year and have lost two by withdrawal card. Our Grange is 65 strong. We have missed holding

two or three meetings on account of bad weather and the State Fair during the year.

I say our Grange is in a flourishing condition. We have about \$75 in the treasury and our members are prompt in paying their dues. Our average attendance is very good, and we always have a good time. Our members always welcome the *Patron*, and their prayer is: "Long may it live."

I will say for the benefit of State officers that Lodi Grange is on the C. P. R. R., and our Grangers will be there to meet them at any time. A. J. WOODS, Master.

## Magnolia Grange.

As Master and Representative of Magnolia Grange it becomes my duty to make the first report that ever has been made since our existence, through our representative, in person, before this body, although Magnolia Grange was founded over 11 years ago. This was on account of its dormant condition, brought on by lukewarmness of some of its members. And the hall we met in for ten long years would make you smile, could you see it, and you would say that no Grange could exist in such a tenement. But it did exist and could not build up. A little over one year ago the question of building a hall came up before our Grange; the same subject had often been discussed before, but it had always been dropped and nothing came of it. By this time we could see that our charter had to be given up, or something done to build up our Grange. So as usual in such cases, there were some brothers and sisters who would not suffer anything of the kind to happen. They were true to the Order of Patrons of Husbandry, and by putting their little sums together, they have erected a hall which will answer our purpose in the country. It is 20x40, two stories high, which, I think, will accommodate all the members we may expect to get for some time to come. Our Grange now numbers about 48, most of whom take an interest in the Order. This I think is an increase of about one-third in little over a year, and these are scattered over a territory about 16 miles long by 10 miles wide. We are situated in the extreme northern part of Nevada county, nine miles from Auburn, which is in Placer county; so if any of the members of the Grange in any other portion of the State wish to visit us at any time they will know the exact locality, and will be welcome among us. We are to have a union of Granges on the 15th of this month; the State Master and Lecturer have promised to meet with us, and I hope it will cause a revival in the Order. I think we have expelled five for non-payment of dues. Of the members admitted the present year I cannot rightly inform you, for my secretary lives eight miles from me and I did not have the time necessary to consult with her. We have a lively attendance of from 25 to 30, but some of my officers trouble me by non-attendance and I would advise every Grange in electing officers to consider the question as to whether they think they will attend regularly or not, and try and elect those Patrons who attend their duties in this respect. We have literary exercises for the purpose of instructing the members. Our finances are short, having reduced our dues for the purpose of drawing members. W. CUNNINGHAM.

## Pescadero Grange.

Pescadero Grange meets in Good Templars' hall in Pescadero, San Mateo county, on the first and third Saturdays of each month, at 2 P. M.; membership, 45.

The meetings are usually interesting. The exercises consist of discussions of subjects of general interest, reading selections, with occasional essays, music, and a good social time. Our meetings are always harmonious. There are but few young people in Pescadero Grange. We hope to have more soon. The brothers do not find time to attend the meetings as often as they should; but the sisters take time, and what Pescadero Grange knows of prosperity is largely due to their fidelity to the Order.

For the last two years I have been most of the time away from home, and have not been able to give the Grange the attention it should have from its Master. To be prosperous, an attentive, efficient Master is important. Pescadero Grange has neither lost nor gained a member within the year. While there are little surplus funds in the treasury, we are able to meet all demands promptly. There is no other Grange in San Mateo county, and we seldom have a visiting member from any other Grange.

On behalf of the Pescadero Grange I extend a cordial invitation to all Patrons in good standing to visit us, and promise a cordial welcome. I. C. STEELE, Master.

## Placerville Grange.

Placerville Grange, No. 242, is situated in El Dorado county, in that old historical town formerly known as Hang Town, but now known as Placerville, about 55 miles east of the city of Sacramento, and about nine miles southeast of Colusa, which place is famous almost the world over as the place of the first discovery of gold in California. Ours is a live Grange with no drones; the members are all wide-awake, and take a lively interest in all questions pertaining to the good of the Order, and of mankind generally. Grange meetings are held regularly every two weeks, with a good attendance of members. We have had three harvest feasts since the last meeting of the State Grange.

Conferred the fourth degree on 29 new members—12 brothers and 17 sisters, and have another class started. Placerville Grange now numbers 141 members in good standing, and it

is prosperous in every way, owing no man anything, with some money in its treasury, and the quarterly dues to the State Grange regularly paid. But here it becomes my sad duty to record the death of Brother Sanborn, a young man of much promise, in the prime of life, a scholar of more than ordinary intellect, a brother of whom our Grange had expected much. Brother Sanborn had belonged to our Grange but a short time when he was called by the hand of Death to lay down his implements on earth to receive his reward in the golden hereafter.

The district of El Dorado county is without a district lecturer, except in name, and I think it would be to the benefit of the Granges in the county, as well as to the Order in general, if the Worthy Master of the State Grange were to appoint some brother or sister, who would take a lively interest in Grange work, to that position. J. C. MARSH, Master.

## Plumas Grange.

Plumas Grange is situated in the northern part of Plumas county, containing 39 members—19 sisters and 20 brothers—a gain of ten members in the year. Other Granges have been organized in these mountain valleys, but have only lived a short time; but Plumas Grange, far removed from any other, deprived of the encouragement of a sister Grange, with unpropitious circumstances, has, for all that, grown and is doing good in the community, and we still hold the fort.

## R. G. HAMLIN, Master.

## Roseville Grange.

In accordance with a well-established custom, I here submit my annual report to the State Grange of California. Roseville Grange, No. 161, is located in Roseville, Placer county, at the junction of the Central and Oregon railroads. The Grange was organized March 6, 1874, with a charter membership of 26. It had its ups and downs like the most of the Granges, but is at the present time in a healthy, sound and prosperous condition, with a membership of 70. We have everything the Grange needs in abundance, and sufficient in our banquet hall to set a table for 100 people, and have several hundred dollars on interest. We meet the first and third Saturdays in every month. We have, in addition to the regular program, recitations, declamations, reading, poetry and the question-box, which latter is indispensable, and is a regular school of education for the older as well as for the younger members. We had the prospect of building a hall several times, and no doubt, had the present season proved to be a successful one, the hall would be finished by this time. Our meetings are generally fairly represented, and at such times when members become a little dormant we get something up to enliven them, such as a harvest feast, ice-cream or some important question for debate, and we have never failed to bring out a large meeting, and I sincerely hope that we will keep up with the age of progress, and that our improvements are such that we can be proud to pass them over to our posterity. All of which is most respectfully submitted.

## N. MERTES, Master.

## Sacramento Grange.

I have the honor to report Sacramento Grange 144 members strong—70 brothers and 74 sisters; number of members gained during the past year, 15; males 7, females 8; number of members lost, 8; males 6, females 2; net gain, 7; number of meetings held, 18; average attendance, 30. We never failed to have a quorum but once, and then it rained too hard to be out of doors. Sacramento Grange has no hall of her own, but meets on the second and fourth Saturdays of each month at 1000 K street, in a hall belonging to the Grangers' Co-operative Business Association of Sacramento Valley. We own three shares of stock of said association of the par value of \$50 each. We also own five shares in the *California Patron* Publishing Co., and, as you are aware, I have, as Master of Sacramento Grange, subscribed for five shares, which will make us own 10 shares in the *Patron*.

Sacramento Grange is composed of Matrons and Patrons who desire to advance to the uppermost round of the ladder, intellectually, socially and financially. Every fourth meeting is devoted wholly to literary exercises for entertaining and interesting our members. To prove our interest in our Grange and its principles, after passing through two years of financial depression, none of our members making any money, but some of them sustaining serious losses, we are represented in this State Grange by 19 members. We believe that our members have put more money into business enterprises connected with our Order than any other Grange in the State. The social features of our Order are highly appreciated and enjoyed by all, and the intellectual benefits conferred by participating in the deliberations of the Grange are beyond computation. We realize the fact that the Grange is the farmer's school that gives him a chance to make himself proficient in debate; to examine and discuss for him or herself those questions of political economy which will enable us to appreciate and hold in a higher and more exalted estimation our privileges under this great and glorious Government, and that we are the peers of any in the land.

Brothers and sisters imbued by faith in the righteousness of our cause, Sacramento Grange extends to you the right hand of fellowship in fraternal greeting, and, inspired with the hope that we in our united efforts may be able to do

much to advance the objects and interests necessary to the well-being of our Order, renew to you our pledge to guard with fidelity every trust committed to our care.

GEO. W. HACK, Master.

[TO BE CONTINUED.]

## Proceedings at Philadelphia.

The telegraph has briefly advised us, from day to day, of doings in the National Grange at Philadelphia.

On the 11th a resolution was submitted by a delegate from Illinois, favoring the election of senators directly by the people.

On the 12th, Coles, of New Jersey, offered a resolution calling upon Congress to enact laws for the welfare of the farmers, which was referred and finally defeated. At the afternoon and evening sessions the sixth degree was conferred upon husbandmen from all parts of the country, in all, nearly 2000.

On Saturday, J. B. Clardy, of Kentucky, spoke of the defects of the U. S. signal service system. The Committee on Agriculture was instructed to investigate the matter, and report. J. H. Bingham, of Ohio, was elected a member of the Executive Board. It was resolved to commend to the earnest support of every farmer the centennial anniversary of the framing of the Constitution of the United States, and to urge the Governors of the several States and Territories to send delegates to the convention, to be held Dec. 2d. It was also resolved to request the President to encourage the celebration. Darden, of Miss., and Rhone, of Penn., were appointed a committee to see that the intention of the resolution was complied with.

On Monday, 15th, a resolution was submitted and referred to the Committee on "Good of the Order," providing for holding all future annual sessions of the Grange in Washington. Resolutions were passed providing for holding the next annual session at Lansing, Mich.

We hope to present in our next issue full reports of this interesting and important session.

## A Hearty Response.

In the *Sutter Farmer* of the 12th instant, Bro. George Ohleyer, Assemblyman-elect, responds to the voice of his constituency at the polls in a card, at once feeling and manly, addressed to the people of Yuba and Sutter counties:

I deem it incumbent to make a public acknowledgment of my gratitude to the people of these two counties, for the very flattering indorsement received at their hands on election day. It was no reflection against me to vote for my honorable opponent; neither is it against him to have supported me. If elected, Mr. Hutchins must have been as true to all our interests as it is possible to be. The issue tendered by the hydraulickers was not who would make the best representative, but it was to strike down to death all our efforts at self-preservation, and thus to convince the public that there were reasons for distrusting those who had been placed in the front of the battle. A life spent in the two counties, and more than 30 years continuously, and 10 years of that time devoted to public welfare, and measurably successful, was not sufficient to silence the tongue of slander, but it was sufficient to draw the fire of our enemies with a vengeance unparalleled. Let it be known now and forever that during all these years of our unhappy controversy my resignation was ever at the disposal of friends of right and law, but to have been driven off by our enemies seemed too cowardly to be entertained. I know and feel my lack of the ability which is implied in your kind indorsement, but such as I have is wholly at your service. Thanking you for the confidence reposed, and trusting that every expectation may be realized, I remain your obedient servant.

GEORGE OHLEYER.

## Grange Items.

[Condensed from the *Patron*.]

SEBASTOPOL GRANGE, after scantily attended summer meetings, started up as good as new on the 5th inst., and welcomed its guests to a merry Harvest Feast.

ST. HELENA conferred the third and fourth degrees on two sisters Nov. 6th, enjoyed a Harvest Feast and listened with interest to Bro. Flint and others.

PESCADERO GRANGE has passed resolutions of esteem and fraternal affection for the late E. C. Burch, and of sympathy with his family in their bereavement.

GRANGE DISPLAY AT SANTA ROSA. — We mentioned a fortnight ago that the Sonoma Pomona Grange was to have a permanent exhibition of county products at Santa Rosa. The *Democrat* of last week says that members were busy all Monday arranging their exhibit at the Central market. The shelves are taken up with samples of canned goods, seeds, cereals, and every variety of vine known to the agricultural fraternity. Above the shelves are arranged sheaves of the different grains—barley, wheat, oats, etc. The counter-room is taken up with large squashes, pumpkins, etc. There are also samples of Sonoma's famous wines, petrified wood, charcoal, etc. The curious may pass a pleasant half hour in inspecting this tastefully arranged display.

YUBA CITY GRANGE had an interesting session on the 6th. The *Farmer* states that the usual Thanksgiving feast by the Grange will

be omitted this year, and instead a reunion, dinner and Grange anniversary is to be celebrated on December 4th—that being the next regular meeting. The fourth degree will be conferred and other interesting exercises will be had. At a special meeting to be held Nov. 20th, the third degree will be conferred.

### Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

Grape-growing is an uppermost interest since wheat rules so low, and young vineyards are coming into bearing, bringing for Mission grapes \$10 and \$12 per ton, and for choice foreign varieties from \$30 to \$60. Ten miles out, good vineyard lands were sold last week for \$50 per acre—lands that before the stress of low wheat prices ranged at \$80 and \$100 per acre. Near Farmington, 20 miles out, good grape land sold for \$37 and \$40 per acre.

This great, dry valley with its months of sunshine (even November is usually sunny) and desiccating winds, with but six weeks of winter fogs, is fast becoming recognized for the yield, flavor and coloring of its raisin, wine and table grapes, either on adobe, sandy black loam or gravelly redlands. The berries are firm and ship admirably. Even Mission grapes ship finely to Texas and the Southern States.

The Natoma vineyard, at Folsom, this summer employed girls instead of Chinamen to pick and pack for shipment, and intend to have accommodations for more next year, so well do they work. Our girls with thick shoes, gloves and hats can, in the fall at least, in time to come, earn what every girl loves, her own money, and defy general prostration and debility with all the ailments that housing-up entails. Two cultured ladies in our Grange pick and box the grapes of a small vineyard and prune the vines also.

Election returns from the six tickets in the field have been the absorbing theme, but the winning parties are now mostly known and accepted till another effort can be made; but the buying and selling of votes that sullied the sacred ballot and degraded manhood, by both great parties, cannot be forgotten—so shameless and open was it!

Street improvement goes on with unusual spirit; 10 blocks of Main street are to be paved with basalt. Grading and graveling are going forward on the water front at the Crown Mills.

The superintendent of the State Asylum is very popular there, and the 1502 inmates are cared for in the best possible way; 1091 males and 411 women (a village of poor distraught beings) have homes in its pleasant grounds. Twenty-five per cent are there from intemperance.

The weather is so warm that fires are quite unnecessary in the middle of the day. Flowers are unhurt by frost. Up the Calaveras and at Clements grain is up, and it is feared that the dry weather will kill the sprouted summer-fallow.

### Stockton Grange

Held a good meeting Saturday, and set for discussion: "The best seed to use in the near seeding time, number of bushels to the acre and the best way of preparing the soil so as to get the best yield."

It is to be hoped that all subordinate Granges will get up petitions to send to Congress at its opening, that the bill on the House record, introduced by Hon. W. W. Hatch, of Missouri, "to establish agricultural experiment stations in connection with colleges," be taken up for discussion and passed.

The National and State Granges have urged these for years as needed aids to tillers of the soil and consumers of its products.

Stockton, Nov. 14, 1886.

### Don't You Sign It!

Sign what? Any paper, certificate, contract or other document offered by an oily-tongued stranger who wants you to take an agency or sign an order for something or other.

We have information as to traveling swindlers in this State who have been doing farmers out of signatures which subsequently turn up at the bottom of promissory notes in neighboring banks. We have cautioned our rural readers heretofore and we have fresh reason to caution them again and right earnestly against being cajoled into putting their names to any papers brought to them by plausible agents on whatever pretext.

**BOGUS WINE.**—The New York Board of Health lately condemned over 5000 gallons of "wine" seized in that city, which had been made from the following formula: Dried fruits, such as currants, raisins and peaches of low grade, macerated with sweetened water and fermented. The fermentation is checked by salicylic acid. The product is then clarified, flavored and colored to resemble port, claret or any other kind of wine desired.

**LOS ANGELES ORANGES.**—We quoted a paragraph in the *Record-Union* in the last RURAL relating to the fruit sent for exhibition at the National Grange. It was said incidentally that "Los Angeles will have no oranges to market until next spring." This is, of course, a great mistake. Los Angeles oranges begin to come into the San Francisco market in December, and continue all winter. We did not notice the statement as we made the clipping, or we should have corrected it.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Alameda.

**TO SAVE THE ASHES.**—*Livermore Herald*, Nov. 4: N. B. Holmes is manufacturing, for one of our grape-growers, a new and ingenious device for the destruction of the trimmings of the vines. In appearance it resembles a snow-sled, but it is made of iron. On the bottom a furnace is placed, over which is a large sheet-iron hopper, into which the vines are thrown and immediately burned, leaving the fertilizing powder on the ground from which it is removed. The furnace can be easily drawn by one horse, and will pass through any of the rows. If this invention works as is expected, it will prove a great saving of time and labor.

#### Kern.

**PEACHES SEVEN MONTHS.**—*Kern Co. Californian*, Nov. 13: Those who have given attention to peach culture in this vicinity say that they can supply the market continuously from May 15th until Christmas. A fine variety has been perfected here that does not commence to ripen until the middle of November and does not disappear from the trees until Christmas. The cultivation of such fruit ought to be profitable. Peaches are now quoted in the San Francisco market at 15 to 20 cents per pound.

#### Lassen.

**COUNTY CHARACTERISTICS.**—*Genoa Courier*: The ranches of Long valley are remarkable for their excellence. The land being rich and fertile and well supplied with water, an abundant harvest is realized every year. Reno affords a good market, and the farmers having grown rich, now lead a happy life in a country that is a perfect paradise when compared to many places on the Pacific Coast where there is no market for produce or a scarcity of water for irrigation. There are also many fine farms in Honey Lake valley, well stocked and yielding abundantly each season. The grain crop for 1886 was scarcely up to the average, but the hay crop was excellent and the fruit crop better than ever before. Large herds of cattle are kept in the valley and on adjacent ranges. Nearly every farmer has a dairy, and large quantities of butter are shipped to San Francisco. Susanville is the county seat, and quite a lively place, affording a market for nearly every kind of produce raised in the valley.

#### Los Angeles.

**GRINDING CANE.**—*Westminster Cor. Times*, Nov. 12: Anderson's cane mill is running with a 12-horse power Ames engine, and will soon finish the stock of cane on hand. His peat land will average 300 gallons of syrup to the acre, and he has 4 acres. At the selling price of 50 cents a gallon, the return is \$150 per acre. (There is more land like it in the market at \$85.) The syrup from the cane grown on peat is of excellent quality, almost entirely free from any cane taste, and far superior to the adulterated syrups usually sold in the stores.

**WALNUTS.**—*Anaheim Gazette*, Nov. 13: The walnut crop did not turn out as poorly as was at first expected. Though the trees were rather late in sending forth shoots, they made an average growth this year, as can be evidenced by the groves in this vicinity. One noticeable feature was that the leaves were yellow and somewhat shriveled. The crop is now being gathered, with a fair prospect of obtaining an average yield. Mr. Stone, of Orange-thorpe, is said to have gathered over two tons from 150 trees.

**GLANDERS.**—*Telegram*, Nov. 16: Glanders has been quite prevalent in this county for some time past. At least 100 horses have been condemned. From a veterinary surgeon it is learned that by the energetic action of the Supervisors, and the willingness of the owners to kill their horses, the disease is under control.

#### Napa.

**CANNING.**—*Reporter*, Nov. 12: The managers of the cannery finished putting up the last assortment of fruits some days ago, and will be engaged for the next two or three weeks in casing and labeling their goods. They have on hand about 54 tons of canned fruits. Some days ago they filled an order for a Liverpool house for 32 tons of second-grade fruit for which they will receive over \$3000. Next year they expect to put up a much larger amount of fruit than they did the past season. This year's pack proved to be of first-class quality in every respect.

**FRUITFUL ZINFANDELS.**—*Bee*: From 40 acres, in H. M. LaRue's Napa vineyard, the yield this season was eight tons to the acre, while from 20 acres of older vines the yield was 11 tons to the acre. And from 40 acres he has just completed the packing of a second crop amounting to 140 tons. The vines are of the Zinfandel variety, and varying in age from five to seven years.

**THE WINE PRODUCT.**—*St. Helena Star*, Nov. 12: The season of 1886 has been a busy one for our winemakers, and one most favorable for successful work. A tour of some of the principal cellars shows us that while, perhaps, the majority have finished winemaking, and are engaged in cleaning up and laying aside the vintage machinery, there are a number of large cellars still busily engaged with a prospect of concluding their labors about the first of next week. The grape yield in this county has been large—much larger than any one calculated on,

and the quality of wine made has been good, and taken as a whole, will compare favorably with last year. In some sections there has been some complaint about color, but this has been but a minor difficulty and is not at all general. Our wine men unite in saying that the results of the vintage have been quite satisfactory, and if reasonable prices can be obtained for the wine, all will be well. The season's work has been long and wearisome, dragging out from early in September to the middle of the present month. The *Call's* estimate of 5,000,000 gallons for Napa county is probably approximately correct, though considerably high if only sound marketable wine be taken into account.

#### Placer.

**ORANGES.**—*Bee*, Nov. 12: A. Moger, fruit receiver for the Newcastle Fruit Co., says that the orange crop in that vicinity is looking splendidly, the fruit already being of fine color. On the Rice place are trees 18 years of age, from which one of the best displays of the last citrus fair was made. Placer will make an effort to capture the prize for the best county exhibit, and will put the other counties to their best efforts. The Newcastle Fruit Co. will begin shipping oranges next week. The fruit commands a fancy price—\$4.50 per hundred, or \$9 per box—because of its early ripening.

#### San Diego.

**FLORICULTURE ENCOURAGED.**—*Union*: Yesterday a dozen miniature hyacinth bulbs were distributed to each teacher of the five lower rooms of the Russ school. The bulbs are to be given to as many pupils of each of these rooms for raising. As the bulbs send up their blossom-stalks and mature their colors, they are to be brought to the school for general exhibition, and to determine which room has had the best success. General directions for tending the bulbs are given. All the plants distributed are numbered, the names and numbers corresponding to each number being retained by the teachers. In the course of two or three months, when all the hyacinths are in bloom, it is reasonable to believe there will be quite a pleasant exhibition at the school.

#### San Joaquin.

**MISSION GRAPES FOR TEXAS.**—*Stockton Independent*: Until recently it has been the opinion of vineyardists that Mission grapes would not stand shipment to any distant point, but experiments recently made here show that this California grape can be shipped to Texas at a profit. For more than a month past Robert Aiken has been shipping three carloads every week. He has bought a large quantity of Mission grapes, and finds that they can be shipped to distant points at less loss than is shown in the shipment of fancy varieties. Mr. Aiken paid \$40 per ton for Black Prince grapes and \$50 per ton for the Emperor and Flaming Tokay varieties. His shipments have been made from the Sacramento-street depot. He has also shipped pears, quinces and other fruit to Texas, and in every case has found the venture very profitable.

#### Santa Barbara.

**BIG THINGS.**—The *Lompoc Record's* reporter at the late Santa Maria Fair tells of a squash weighing 227 lbs., raised by A. Stubblefield, at Pine Grove, and of a beet weighing 53 lbs., raised by Adam Smith on Oso Flaco.

#### Santa Cruz.

**A SAVAGE BOAR.**—*Soquel Journal*: About six years ago a band of hogs left Spanish Ranch and took refuge in the mountains above Sulphur Spring. Nathan Hart and his sons and E. Merrill, while out on a hunt, lately, with Winchester rifles, came across one of these wild hogs. He had grown to be a tremendous animal, measuring eight feet in length and weighing nearly 500 lbs. He at once showed fight, and the party, to avoid his immense tusks and ferocious charges, scrambled up trees for shelter, and some of them met with narrow escapes. The wild monster was finally shot and killed by George Hart, after a terrific struggle with men and dogs, two of the latter being killed outright.

#### Shasta.

**COUNTY EXHIBIT.**—*Democrat*, Nov. 10: The first Shasta county exhibit was opened to the public last Thursday, at the land office of D. N. Honn, in Redding. The large hall was completely filled with Shasta county products, manufactures and fancy-work. On entering, the eye was greeted by the immense plank donated by the Redding sawmill and ornamented by a tomato in full bearing and a beautiful amaranthus in bloom. Then came the shelves, in themselves a thing of beauty, manufactured by the Redding planing mill, and loaded with jellies, preserves, canned fruits, raisins, figs, grapes, black walnuts, paper soft and hard-shell almonds, hops, barley, minerals from a number of the leading mines of the county, coal from the Clover Creek mines, and samples of the different woods that grow so abundantly with us. Next was a table loaded with almost every known variety of apples, and a wall decoration of field corn in the ear, yellow and white corn, huge bunches of grapes, clusters of pears, Japanese persimmons, olive branches, tree growths, sheaf rye, wheat and oats, the whole presenting a handsome wall-picture. On the opposite side was a long table loaded with apples and pears, large, firm, bright and beautiful. Around the tables and on low stands are arranged mammoth squashes weighing from 100 to 180 pounds each, Irish potatoes of many varieties, and all of large size, sweet potatoes or yams weighing from 2½ to 7 pounds each, tur-

nips, rutabagas, radishes, cucumbers, cabbage, beets, etc. The cotton plants attract universal attention. They are about 30 inches in height and bear each a boll in full bloom showing the cotton and the seed; by its side stands a glass vase filled with cleaned cotton, showing fiber almost as fine as silk.

#### Stanislaus.

**ORANGES.**—*Modesto Herald*, Nov. 11: The orange trees in this vicinity are loaded with fruit, and so far no damage has been done to them. The fruit here matures earlier than in Southern California, and being free from too much moisture is sweeter and has a finer flavor. The orchards here are mostly seedlings. The oranges produced at Knight's Ferry are especially fine and well flavored. They are produced without irrigation, and have only been properly cultivated during the past two or three years. Our farmers and orchardists have been turning their attention to this fruit more freely during the past two years, and will have all they want for home use in a few years more.

**OLIVES.**—*Modesto News*, Nov. 12: We were shown to-day some fine looking olives, grown on the Buchanan place, about two miles from Modesto. They were on a branch from a tree eight years old, and have had neither water nor care this season.

#### Sonoma.

**HORSE DISTEMPER.**—*Sonoma Democrat*, Nov. 13: Many horses in the neighborhood of Valley Ford are suffering from a disease of the throat, which has grown to be an epizootic and is proving fatal in a few cases. The throat of the animals affected seems to fill up and they refuse to eat. The disease is said to be spreading.

**SHEEP-KILLING DOGS.**—There is considerable complaint in the immediate neighborhood of Santa Rosa, about dogs killing sheep.

#### Sutter.

**JAPANESE PERSIMMONS.**—The *Record-Union* speaks of a fine sample of Japanese persimmons received from T. A. McFarland, of Live Oak. The fruit is finely formed, rich in color and of good size. This kind of tree is made highly ornamental during the late season by its bright-colored fruit, and is becoming quite popular. There are many good-sized trees in this part of the State, and they are grown without much difficulty. The fruit is highly prized in its native country.

#### Tulare.

**NUTS.**—*Times*, Nov. 11: Nanscawen has placed in his show-window a small lot of walnuts and pecans, raised in the yard of Zane Steuben, Visalia. The walnuts are not a fair sample of those we have seen in this section, but the product was a partial failure this year. The pecans are larger than those generally sent here from the S. F. market, and the sample indicates that they would prove productive here.

**HOGS** command only two cents per pound in the Tulare county market, with little prospect of an increase in price. Many hog-raisers think of driving their hogs to the mountains and there butchering and manufacturing them into bacon. With hogs at two cents and bacon at 14 cents it looks as if the project would pay.

**PORCINE PICKERS.**—L. A. Johnson has about 10 acres of wine grapes on his place just north of town. Not meeting with a ready sale for them this season, he turned his hogs into the vineyard and let them eat the grapes. L. A. had too much business on hand to manufacture them into wine.

### NEVADA.

**BURNING OFF TULE.**—*Reno Gazette*, Nov. 8: The margin of Humboldt lake is covered for miles with a dense growth of tules, which often reach the height of 15 feet. The settlers are now burning this off so that the ground can be surveyed, and it makes a vast fire. Black smoke rises in almost solid pillars, and with only wind enough to lean them slightly toward the south. They look strange and picturesque. As the train runs on, it is seen that the fire extends for miles along the lake and the cleanup will be immense.

### Thanksgiving Proclamation.

STATE OF CALIFORNIA,  
EXECUTIVE DEPARTMENT.

In accordance with the custom and in conformity to the proclamation of the President of the United States, I, George Stoneman, Governor of the State of California, do hereby designate and set apart Thursday, the 25th day of November, as a day of thanksgiving and prayer. I invite the people of the State to forego their usual business employment and assemble in their places of worship to give thanks to the Supreme Ruler of the universe for the continued enjoyment of the blessings of free government, for the renewal of business prosperity throughout the land, for the return which has rewarded the labor of those who till the soil, and for our progress as a people in all that makes a nation great. Let us, in the midst of thanksgiving, remember to dispense charity liberally to the poor and needy, so that our services may, by such acts, be made acceptable to God.

In testimony whereof I have hereunto set my hand and caused the great seal of this State to be affixed, at the State Capitol, on this 10th day of November, A. D. 1886.

GEORGE STONEMAN, Governor.

Attest: THOMAS L. THOMPSON,  
Secretary of State.

**THE El Paso de Robles Leader** is a bright and promising journalistic baby, born in San Luis Obispo county, November 13.

November.

The year is waning! Solemn sounds are heard  
Among the branches of each wind-toss'd tree;  
Brown looks the grass; no floral gems we see;  
Forsaken nests by winds alone are stirr'd,  
And not by wing of bird.

The skies look cold—wind-driven clouds scud by,  
While fitful gales whirl sere, dry leaves away—  
Fair once, like friends who come to us one day,  
Creep to the heart, bring love-light to the eye,  
Then droop and fade and die.

Yet, while winds chill and summer joys depart,  
A host of other pleasures now doth come,  
Brothers and sisters scattered, all come home,  
Thanksgiving cheer abounds, while fond smiles start.  
As heart responds to heart.

Then, curtains down, around the fire we press,  
To sing and jest, to romp and laugh and play;  
But, while the fun goes round, each heart can say,  
"November brings Thanksgiving. Lord, we bless  
Thee for our happiness!"

—Sophie L. Schenck, in Brooklyn Magazine.

## The Dawsons' Thanksgiving.

(Written for the RURAL PRESS by FANNIE ISABEL SHERRICK.)

"Hannah! you jest go directly and hunt up that air brother of yours. I never seed sech a boy since I was born. He's never round when he's wanted. Likely as not he's hangin' round that barn awaitin' for a chance to sneak out Whitefoot. It's curious how that boy does like to ride that air horse!"

Hannah went dutifully in search of her brother, but her mother's surmises must have been correct, for James was nowhere to be seen and the horse was gone.

A few moments later, however, she saw him cantering up the lane back of the barn.

"You'll be sorry," she cried, warningly. "Ma has been wanting you fur an hour. She wants you to kill that big turkey gobbler—the very biggest one—fur to-morrow's dinner. You know all the folks, grandpap and all, are comin' here to Thanksgiving dinner, and ma's been bakin' and fussin' all afternoon for them. If you care for your skin now you'll jest hurry, for I tell you Ma Dawson's cap frill stands awry, and you know what that means, I suppose."

James grinned and dismounted with alacrity. He knew, in common with the rest of the family, that when that starched white frill, which was the pride of Ma Dawson's heart, stood awry, trouble was brewing for some one. It was a sure index of the old lady's feelings.

"No back talkin' now," she cried to James, as he appeared meekly on the scene of her pie-making and cake-baking. "Jest you git to work and kill that gobbler. Here it's most sundown and no turkey ready fur to-morrow. An' it'll take a good four hours to bake it if it takes a minute. It's ridiculous you a lazin' round in this fashion. Clear out now!"

James waited for no second invitation, dodging the rolling-pin as he made his exit. It was hard to tell which worked the fastest, his mother's tongue or her fingers. It seemed to his benighted fancy that she could do 20 things at once.

He inveigled Hannah into the turkey hunt, and such a scampering as they did have.

"I think it's likely he's hern of Thanksgiving dinners," said Hannah, as she sat exhausted and breathless on the woodpile, while James tried his softest blandishments on the lordly ruler of the barnyard. "He haint got the least idee of bein' dished up with cranberry sass and mince pies. You could fool the young ones a heap quicker. Law sakes, it wouldn't s'prise me if he could tell what day of the month it is."

"Will you keep that darned old clapper of yours still?" cried James, who was getting as red in the face as the turkey gobbler himself.

"What's the matter with girls, anyhow, that they can't keep still? Your tongue's as bad as mother's, hung in the middle and waggin' at both ends; if you had any sense you'd git some corn and come and help me."

Hannah was divided between her inclination to go into convulsions over her brother's frantic efforts to outwit the arrogant, wily biped and her sense of injured dignity, but she finally consented to go to the rescue.

There was no living creature on the place that did not love Hannah, and usually she was accompanied in her wanderings through the farmyard by a whole train of attendants, beginning with the chickens and ending with Gus, the family dog, and Dick, the family horse; even Shorty, the brown cow, was not averse to bringing up the rear.

So that now, when she brought her corn, she

was soon surrounded by her feathered pets; the little new turkeys were so tame they would come and eat from her hand and even hop on her shoulder. She was much attached to them, but the big gobbler was such a greedy, self-important old fellow that she was willing to immolate him on the Thanksgiving altar.

After much maneuvering on her part and a good deal of shooting on James' side, they succeeded in imprisoning some of the turkeys, among them the desired prey, in the woodshed. After this his capture was an easy matter.

When it came to the killing, however, Hannah disappeared. She left that to James and her elder brother who had just come from town.

"Just like a girl!" cried James derisively; "they're allers afraid of their own shadow. I suppose she'd think she'd see ghosts for a month if she ever killed anything. Girls haint got the backbone of a cricket."

A few moments afterward he was carrying the limp, headless carcass to the house when old Abe, a darkey living in the vicinity, hailed him from the fence.

"I say, chile, dat's a hefty lookin' bird you done got dar. He wouldn't weigh nuffin, would he? Now at a clean chance, how much do you reckon he'd fetch in town? Likely ways more'n foah dollars, hey?"

"Four dollars!" James opened his eyes in astonishment. Four dollars was a magnificent sum in his eyes.

"Turkeys am deah dis yeah. He'd fetch a heap of money shuah, now. What's your ma tinkin' of, to kill birds fur her table 'most worth dere weight in gold? An' you ain't rich folks, nuther."

"Well, you see," explained James, resting the turkey on the fence while he talked, "grandpap and the rest of the Dawsons be invited here to dinner to-morrow, and ma, she wants to make a grand splurge, cause Aunt Sallie is a comin' from town, and she married a rich widower and lives in awful style. Why, do you know," here James lowered his voice to a dramatic whisper, "she has a peer glass, I think that's what they call it, in her parlor worth \$200. Why, you ken see your whole self in it, yes, you ken, and by golly, she wears a silk dress that makes a feller's heart thump, it creaks so when she walks. No wonder ma's settin' out her best china and gettin' the parlor ready for the party. She jest intends to paralyze 'em all with her style. She's baked enuff good things to feed the whole of Griggsville. 'Mighty fine old feller, warn't he?" This last remark alluding to the turkey, which Abe was examining with the air of a connoisseur.

A further parley followed which seemed of a mysterious confidential nature, and then Abe went away and James shouldered the turkey and carried it to the house, where it was soon deftly dressed by Mrs. Dawson and hung on the nail just outside the kitchen door for the night.

About ten o'clock that night Hannah was awakened from her slumber by the creaking of a window, as though it were softly opened and shut. She listened for further sounds, but, hearing none, went to sleep again.

In the morning, great was the consternation of the family to find their fine turkey gone.

"Disappeared just as if it had legs," said Sue, the eldest girl.

"Well, didn't it have, Miss Smarty?" asked James sarcastically. "I don't think we chopped its legs off as well as its head. What a goose you are! Legs don't make no difference after you're dead. But my sakes, what a dream I did have—all for killing that blamed gobbler. I dreamt that he came and set on my chest and cried out in a holler voice, like that woman we was areadin' about onct: 'I want my heart! I want my heart!' It made the cold sweat stand out all over me. I never seed sech a terrible ghost as that thing was. Seemed like he weighed a hundred tons. It was all I could do to fetch a breath when I woke up. My chest seemed 'most caved in."

"Next time you'll leave mince pies alone before goin' to bed," retorted Sue contemptuously. She had no sympathy for James, though he did look a trifle pale after his severe nightmare.

"Law sakes!" exclaimed Mrs. Dawson, as they sat down to breakfast. "I never was so kerfummured in my life. I jest believe it's those pesky darkeys that live in the hollow that stole my turkey. They never was no account nohow. Our chickens have been disappearin' for the last fortnit, and I'll venture to say it's them as took 'em. It's a livin' shame to hev sech a lyin', thievin', shiftless set round decent white folks! An' ef James Dawson don't stop foolin' round old Abe and quit a diggin' pertatoes fur him while he's a lazin' in town I'll break every bone in his body."

James trembled at this threat, for the cap frill was certainly awe-inspiring; but after breakfast he took Hannah into his confidence and showed her two bright silver dollars he had hidden away in a small box.

"This is what I git fur diggin' pertatoes," he said, with a knowing wink. "Aint it wuth while? We'll have a sled for Christmas. It's a fine hill we have fur coasting down in the pig pasture. My sakes, but we'll have fun!"

Hannah was a little skeptical in regard to his methods of money-making. "Workin' fur niggers" wasn't quite up to her ideas of aristocracy, but she rather enjoyed the prospect of future coasting.

Mrs. Dawson and the elder girls were in a flutter because of the loss of the turkey, but it was not long ere another was slaughtered, and

in due course of time browning in the oven. Then, and not until then, was Mrs. Dawson at ease.

By noon the girls were arrayed in their best "bib and tucker," and Ma Dawson sitting in state in the parlor in all the glory of her best gown receiving the guests as they arrived.

Aunt Sallie in a brand new brocaded satin and Uncle Matthew in his "store clothes" were the envy and admiration of James and Hannah. Never was anything quite so gorgeous and dazling to childish eyes.

"No wonder ma looks as if she could most bust with pride!" exclaimed James; "'pears to me Aunt Sallie must have jest stepped out of one of those books that Sue's allus a porin' over when she makes a new dress—you know 'em, the ladies are allus painted red and green and sech like."

"Oh, you mean fashun books!" said Hannah, with superiority. "The ladies are not painted, only the dresses."

"Well, what's the difference? I've allus hern that ladies do paint, anyhow. But jest listen to ma, if she haint rehersein' that blamed turkey-story for the forty-fifth time. What's the use of makin' sech an everlastin' fuss about nothin'? One turkey haint a sarcumstance when we've got a whole yart full, and ma's the most fidgety woman—she allus flies around like a hen with her head out off, and jest listen to that whooper! She adds a pound to the old gobbler every time she tells the yarn. By the time the schoolmaster comes he'll weigh 100 pounds—"

With which remark, James escaped from the house, darning one of his consins on the way out to ride Whitefoot over the farm, a dare which was soon taken up, for Hannah watched their circus performance from the window, expecting every moment one of their necks would be broken.

But boys are watched over by a special Providence, and they came back safely, just in time to hear the turkey-story rehearsed to the schoolmaster.

James fairly groaned. "The turkey agin! It's all 'cause I murdered him I s'pose, an' he set on my chest all night like a thousand of brick!"

"Well, if I looked as queer as you do every time that turkey is talked of, I'd never chop off the head of another as long as I lived," said Hannah, who was mixing the sauce for the plum pudding, in the big, sunny kitchen. "Don't you go way no more now. Dinner's all ready to set down to."

A right merry party it was who sat down to that big table in the pleasant sitting-room, with the three south windows where the sunlight came pouring in, and the huge open fireplace making the room as warm as summer. In all the country there could not have been a happier family group—there was merriment all around, and their voices rose to a higher pitch as the dinner progressed.

But in the very height of their hilarity, a loud knock resounded on the front door.

Rat-tat-tat!

"I'll just warrant you now it's those Casey young ones, come to beg a pie or some doughnuts," said Mrs. Dawson. "Those niggers do beat anything; allus beggin'." But go ahead, Hannah, and let 'em in; the good Lord'll provide, I s'pose. He allus does for the lame and the lazy. Be spy, now; tell 'em to go to the back door. Law sakes, the impudence of these niggers a comin' to the front door that's allus used for company."

But the newcomer proved more important than the Casey children. When the door opened in walked the constable of Griggsville, dragging Abe with him.

The Thanksgiving party dropped their knives and forks in open-mouthed amazement.

"Did you lose a turkey last night, Mrs. Dawson?" inquired the constable.

"Law, yes," replied that lady, "an' I knowed it was that good-for-nuthin' Abe that stole it. I'm glad you ketchin' him. But, law, Mr. Sanders, how you do fluster a person awalkin' in on 'em in this air way."

"Well," continued Mr. Sanders, "I found this fellow tryin' to dispose of a fine turkey in town this morning, and arrested him on suspicion. When he got to the lock-up he confessed that the turkey belonged to you, but that James had sold it to him last night for \$2. He says he's often bought chickens of him and sold them again in town. Here, you rascal, none of that."

The last sentence was addressed to the young culprit, who had been trying to sneak out under the table while the attention of all had been turned on the constable.

Mr. Sanders seized the boy by the coat collar and dragged him forth. He looked like a piece of limp cotton and his teeth chattered in his head.

Ma Dawson raised her hands in holy horror. "James Dawson, could you be so mean as to do this thing agin your poor old mother—a stealin' of my chickens and a sellin' 'em to niggers, an' a gettin' out of your bed nights to do it? An' a takin' of my best gobbler that we all sot sech store by for Thanksgiving! Lord, Lord, what kind of children hev I been bringin' up?"

James could not deny his sins. He felt it was no use, every circumstance pointed to his guilt. The tears rolled down his cheeks, and he wished that the earth might open and swallow him.

Hannah atood by, silently crying. She wished that she might defend him; but she remembered the opening and shutting of that

window, a fact which had not occurred to her before—and then the two silver dollars—all the evidence was against him.

"No wonder that turkey set agin your chest all night," exclaimed Mrs. Dawson. "I should think it would, you miserable, deceivin' wretch. Jest take him along, Mr. Constable, and lock him up along with the rest of the criminals. I don't want no sech lyin', contemptible child round me. Take him along, I say!"

With a gesture of resignation, as though she had washed her hands of the whole affair, Mrs. Dawson sank down in her chair, the white frill flapping disconsolately over her face.

In vain James pleaded and implored forgiveness. The old lady was inexorable. The girls all interceded, but Uncle Matthew came forward, saying:

"No, James must go. He has been guilty of a terrible offense. Let the law punish him."

At the same time he winked at the constable. Mr. Sanders understood, and without further ado marched James to his wagon and took him and Abe to town, the former blubbering all the way and frightened nearly to death.

"I didn't think it was any harm to take those chickens," he kept saying, "cause they was mother's anyhow."

But the constable hushed him up with severity; he was determined that the boy's punishment should cure him effectually.

The dinner party ended rather tamely, all the guests, in deference to Mrs. Dawson's feelings, going home early.

"Law me, if it don't seem as if there'd been a funeral in the house," she exclaimed as they closed the house for the night, "I never was so tuckered out! To think of that boy a bringin' my gray hairs to the grave like this. Dear me, dear me!" and Ma Dawson fell to weeping and would not be comforted. Her mother heart was really sore over the conduct of her wayward son.

The next morning Uncle Matthew went to the lock-up and released James. He was very contrite after his night of captivity, and his eyes were swollen with weeping—it had been a sorry Thanksgiving for him.

"Do you think you can behave yourself now?" asked Uncle Matthew, eyeing the boy severely.

"Yes, sir, sure," James answered humbly, and he kept his promise. The lesson had been a severe one, but it was lasting in its effects. Never again was he guilty of a like offense, and he avoided Abe and the Casey party as though they had had a pestilence.

"Goodness gracious!" exclaimed Hannah a few days after, "I really believe if James had wings, he'd be an angel. The Dawsons will be proud of him yet."

THE SALOON.—The Northwestern Christian Advocate, of Chicago, says: "This 'saloon,' that 'saloon,' the other 'saloon'—saloons, saloons, saloons figure constantly and universally in this anarchist trial. Conspirators met in saloons, dynamite was discussed in saloons, bombs were distributed over saloons; armed revolutionists were drilled above, under, or in rear of saloons; treason made assignment in saloons; and time and time again witnesses say 'we went to' such and such a saloon 'for wine or beer.' There is not a country under the sun in which lurks so much treason, revolution, and murderous threat as in our 'saloons' of the United States, and notably in all large cities.

These saloon pests harbor thieves, thugs, house-breakers, anarchists, robbers and murderers. Nine-tenths of law-breaking in America is hatched in saloons, and the admitted fact is palliated by the axiom that saloons are headquarters for town, city, and even national election gerrymandering. The liquor counter is the scaffold on which a half-hundred beautiful, vital American things are assassinated, and on which scores of horrid public plagues are glorified. If our German-adopted citizens are bound to drink their beer, we wish they would use it at home, and join all classes of citizens to banish the public saloon. This very trial will help to hasten that day." The saloon must go!

HUSKING BEE.—A genuine, old-fashioned corn husking is a rare thing in California, but Daniel Emerson, having raised a good crop of corn this season, determined to give his friends and neighbors an idea of the fun to be had at a down-East husking bee and invited them to meet at his residence Wednesday. When the guests arrived, some 35 in number, they were ushered into the large barn, the gloom of which was relieved by lanterns and "tallow dips." Upon the floor was a huge pile of corn still in the "shuck," and around this the company, old and young, big and little, seated themselves as comfortably as circumstances would permit, and entered with great spirit into the new amusement, called by Southern darkeys "de shuckin' ob de corn." A good deal of dexterity was developed, one old lady of 70 making the best record of all. Red ears were plenty, and each one discovered was the occasion of an oscillatory diversion which created much merriment. After the work was accomplished the company adjourned to the house, where a supper of Boston brown-bread, baked beans, Indian pudding, pumpkin pies and other New England dainties was served. Songs were sung, stories told, and Santa Cruz's first husking voted a great success. Courier-Item.

## YOUNG FOLKS' COLUMN.

## Janet's Thanksgiving.

(Written for the RURAL PRESS by BECCA M. SAMSON.)

It was Thanksgiving eve in New York City. The snow was falling fast and a sharp wind blew from the north, but the brilliantly lighted streets were crowded with happy people, while everything in the great city, from the wagon-loads of turkeys clattering over the stones to the ringing and chiming of the church bells, was saying: "Thanksgiving to-morrow, Thanksgiving to-morrow."

All the way home from the factory little Janet was crying, wiping her eyes on the faded shawl that covered her shoulders and drawing her ragged straw hat far down over her eyes to hide the tears.

Thanksgiving brought no mince pies or frosted plum cakes to her; she was only a poor little orphan girl working hard from morning until night in a flower factory to earn bread for herself and young crippled brother.

Wee, dear, patient, suffering Robbie, who in all the seven years of his little life had never known what it was to run about like other children. He was always pale and thin and feeble—Janet had never seen him otherwise, or dreamed that it meant sorrow; but that morning the gruff old doctor had told her that without fresh air and sunlight her little brother would surely die; so to-morrow morning the big wagon was coming to take Robbie away to the hospital.

The hospital!

Janet had never heard of those beautiful homes where suffering children are so tenderly cared for and loved. To her, the hospital meant some strange, distant place where she and Robbie would never see each other again; where no gentle hands would soothe him when he was in pain, no tender voice would lull his restless moaning. Who loved him but his faithful sister?

All day long Janet had forced back the tears that swelled from her aching heart, lest they should dim her eyesight or fall among the gay flowers she was weaving; but when night came and she was free to leave the crowded work-room, her long-suppressed grief burst forth into convulsive sobs.

"The hospital, the hospital," she moaned as she plunged into the dark, cold night, "how shall I tell Robbie of that dreadful place?"

Patient, suffering little Robbie! Though he was tired of always lying on his hard bed and was very lonesome in his dismal garret chamber, though Janet was often cold and tired and hungry, the two children were very happy, because they loved each other.

And now they were going to take Robbie away.

Never again would Janet see his sweet, pale face when she came home from work at night; never again would she hear his dear voice call her name.

Oh! it was cruel, cruel, to part them. That was why Janet was weeping so bitterly that gay Thanksgiving eve. She was but a child scarce 12 years old, and her burden was hard to bear.

"What shall I do? what shall I do?" she sobbed so wildly that strangers looked wonderingly at her as she passed; but Janet saw nothing—knew nothing but her own great grief.

Once a brilliantly dressed lady, in stepping from her carriage, dropped a cluster of creamy roses.

With a cry of joy, Janet sprang forward to seize the flowers as they fell. "They will make Robbie so happy!" she murmured, hiding them close under her shawl.

Janet soon left the wide, brilliant streets far behind to enter a more familiar neighborhood of darkness and poverty.

The street was lined with dingy, storm-beaten tenement-houses. The dingiest and dreariest of them all was Janet's home, and she had many weary steps to climb before reaching the garret chamber where Robbie lay.

Janet dared not enter until she had smothered the sobs that were choking her. She crouched down beside the closed door, and, burying her face in her cold little hands, tried thus to force back the tears. She must not cry, she must not, she must not.

There were many things to be done before she could tell Robbie of the secret that lay on her heart; until then she must be brave, for his sake.

Strong with her unselfish courage, she rose to her feet and softly opened the door.

The room was in darkness, save for a white glimmer that stole from the frosted window panes; but Janet needed no light to guide her to where Robbie lay moaning in a low, quivering voice, like one in great pain without strength to bear it.

In an instant Janet was by his side, forgetting her own heartache as she soothed her little brother's pain; shaking up the coarse pillows, smoothing back the heavy hair from his forehead, bathing his hot face and hands in cool water.

It was a merciful darkness that hid the children's faces from each other. Robbie would have grieved bitterly at the sight of Janet's tears, and Janet would have wondered at her little brother's bright eyes and strangely flushed cheeks.

"There, there, Robbie," Janet said, in the

pleading voice mothers use to fretful children, "see what lovely roses I have brought you; a beautiful lady dropped them from her dress. O Robbie! I wish you could have seen her; she was covered all over with diamonds."

Robbie eagerly seized the fragrant flowers, holding them tight in his little feverish hands; he lay quiet and happy now that Janet had come home. "Diamonds!" he repeated in a wondering way, "are those flowers too, Janet?"

"Oh! no, Robbie; diamonds are beautiful stones a thousand times brighter than glass," Janet answered, as she moved away to bring Robbie his supper from another part of the room.

Robbie held the flowers tenderly against his cheek. "They must be stars," he mused dreamily, thinking of the diamonds. "I'm glad the beautiful lady didn't drop those, because I can see the stars all night long, when I lie awake, but I never, never see flowers like these. Janet," he called, with a sudden ring of joy in his feeble voice, "do you think the beautiful lady was an angel mother sent from heaven to bring me these flowers?"

Janet was crying softly to herself in the darkness. She had not been thinking of flowers or angels, but of the great grief hanging over herself and little brother.

She could not answer when he spoke to her; she could only brush away her tears and silently carry to his bedside his supper of sweet milk and white bread—luxuries that cost her so dear.

Janet tasted no food herself that night, but throwing off her thin garments, she crept into bed beside her little brother, thinking all the while how best to tell him that after that night they would never be together again.

Her heart throbbed with pain as the dreaded moment of explanation drew near.

Robbie, so unconscious of his sad fate, pushed his untasted supper from him and nestled close to his sister's side.

"Tell me about the beautiful lady, Janet," he pleaded, pressing his head against her shoulder; "where was she going, all covered with stars?"

The question shot through Janet's bewildered brain like a flash of light.

It suggested an idea that would bring comfort for a little while longer.

Suppose she told Robbie of everything bright and beautiful she had ever seen or heard of? She knew nothing of the angels he loved so much, but she could tell him of the gay stores in the city and the merry Thanksgiving sights she had seen.

It would make him very, very happy; and perhaps even she might be happy too, for a time, if she could forget.

Yes, she would do her best to be merry; there would be sorrow enough afterward.

"The lady was going to a grand ball, Robbie," Janet answered gayly. "Everybody is happy to-night, for to-morrow is Thanksgiving day."

"Thanksgiving day! What day is that, Janet?"

"Oh, a very happy day," Janet replied.

"The rich people go to church and thank God for keeping them so nice and warm and comfortable; then they go home and eat turkeys and mince pie. That's Thanksgiving day, Robbie."

"Why, Janet!" Robbie exclaimed, his weak voice trembling with excitement, "we'll keep Thanksgiving day, too. What lots of things we'll have to thank God for to-morrow, won't we, Janet?"

Janet turned quickly to bury her face in the pillow.

"I'll thank Him for these beautiful flowers," Robbie continued in a low voice, all unconscious of his sister's tears; "and I'll thank Him for you, dear, dear Janet," he cried, stealing one feeble arm about his sister's neck and stroking her cheek with his little hot hand.

"Would you thank Him, too, Robbie, if you could lie on a soft white bed and see the bright sunlight all day long?" asked Janet, dimly conscious that the old doctor had spoken about such things.

"Wouldn't my back ache just as bad on a soft bed?" asked Robbie, "and could I see brighter sunlight anywhere than I see here? O Janet!" he exclaimed, clasping his little thin hands together, "I see such beautiful things as I lie here waiting for you to come home. Sometimes, when the sky is very blue, angels with silver wings float by. I often see mother's face among them. To-day she turned and smiled at me. Then, if there are no clothes hanging out to dry on the roofs, I can watch the big yellow sun shining in the windows opposite and see the box of pretty red geraniums blooming over the way. When the sun is gone and it's too dark to see the flowers any more, then I know you are coming home. I'm always glad and happy with you, Janet—always glad and—"

Robbie's voice grew faint and his head pressed heavily against Janet's shoulder.

Was he falling asleep—feverish, restless Robbie, who lay with wide-open eyes half the night through?

Janet's heart stood still with a sudden terror. What should she do if Robbie slept before she had told him of the dreadful thing she had to tell?

It was cruel to let him sleep only to be awakened by strange hands that would carry him far away before he knew what it all meant. "Robbie, Robbie," Janet called, shaking the frail form as roughly as she dared, "wake up, dear, for one moment."

"Where are my pretty flowers, Janet?"

Robbie murmured drowsily. "I must hold them tight so mother will know I've found them. I'm very tired, Janet; good-night, good-night."

Robbie was fast asleep. How quiet he lay! Janet could scarcely hear him breathe.

There was no need for Janet to struggle against her wild sobs. Robbie slept too soundly to be awakened.

From the room below came the harsh tones of a fiddle and a sound of shuffling feet keeping time to the music.

All night long Janet was tortured by the cruel mirth. Sometimes she fell into restless dreams and imagined she heard Robbie's voice calling to her, but she always awoke to find him lying silently by her side and to hear still the wailing music.

In a moment of despair she was tempted to snatch her little brother in her arms, and creeping away through the silent city to where the snow lay deepest, they could both fold themselves in its gentle arms and never open their eyes again. But alas! Janet's arms were but the arms of a child; the frail form of her little brother was a burden too great for them to bear.

Could she think of no way to save Robbie from going to that dreadful hospital? Was there nothing she could offer, nothing she could do or say, to spare him that sorrow? Alas! the poor are so helpless. Janet had only tears to give. Of what use were tears? Would they touch the hearts of the cruel hospital men?

Would they listen to her if she flung herself at their feet and begged and implored them not to take her little brother away? Or, if they could not leave him, could they not take her too to watch over him as she had always done? She would promise to be no burden to them, but would work hard to pay her way. Surely they could not refuse her this.

As soon as day broke she would creep down the steep, rickety stairs; she would wait patiently until the men came with the big wagon; she would tell them her sad story; she would tell them that it would kill her little brother to be taken away from her. She was sure they would listen to her.

Who knows if she and Robbie would not spend a happy Thanksgiving, after all?

Janet was so comforted by this new hope that the pain at her heart flew away and she fell at last into a gentle slumber.

When she awoke again a ray of sunlight was creeping through the frosted window panes. With a low cry Janet sprang to her feet. She remembered that it was Thanksgiving morning, and in a few moments perhaps the wagon from the hospital would arrive.

Robbie was still sleeping. Janet was very glad. She might perhaps get safely back before he awoke, but she hardly dared to hope so much.

Doors were banging and children with shrill voices were already quarreling in the hallways; heavy footsteps passed up and down the creaking stairs, but little Robbie still slept on.

Never before had Janet's lightest movement failed to awaken him. It was very strange. She looked at him in wonder when she at last stood ready to go.

"How pale he is," she thought, as she bent over his still face. "How sweetly he smiles. Perhaps he was dreaming of the roses drooping from his clasped hands—those tiny, waxen hands!" The sunlight flickered across his white face and nestled in his hair like the touch of loving fingers.

Janet must hurry away before it grew too late.

She stood for a moment with her hand trembling on the door-knob.

Heavy footsteps were stumbling through the dark passageway. Suppose they should belong to the men from the hospital—suppose they should burst in upon her and tear Robbie from her, sleeping? The mere thought set Janet's heart madly beating.

She would wait until the strangers had passed by; then she would fly down the stairs without losing another moment.

She listened to the rude steps coming nearer and nearer with all the fascination of terror; she heard rough voices muttering, followed by loud rapping, angry questions and a great slamming of doors.

A sudden silence fell in the midst of the noise; then came the cruel words that pierced Janet's ears like a sharp knife:

"Confound it, Jim, whereabouts is that sick boy, any way?"

A loud cry of anguish answered these words.

Janet, distracted with grief, flung herself across the form of her little brother. "Robbie, Robbie," she wailed, "they have come to take you away from me. Wake up, darling, wake up. See, Robbie, 'tis Janet, your own sister, Janet. I was cruel to let you sleep, but I meant to tell you all. I meant to save you, Robbie. Dear, dear little brother, wake up. Can't you understand—they have come to take you away. You must not sleep; you must not let them take you. Oh! why won't you open your eyes, Robbie, Robbie?"

In vain Janet wept and implored. Robbie smiled when her hot tears rained upon his upturned face. Smiled at her pleading words. Smiled when the door was flung open and two great rough men forced themselves into the room.

Like a wild animal at bay, Janet sprang from the bed, and standing before her little brother as though to shield him with her own slight form, she faced the two men and cried defiant-

ly: "He is my brother. You shall not touch him while he sleeps."

A long hush followed Janet's words.

One of the men stole softly to the bedside and gazed at the little form lying so peacefully there. "Come away, Jim," the man whispered to his companion; "come away; the little chap don't need our help; he'll never wake again."

"Never wake again," cried a young joyful voice.

"Never wake again," echoed the merry Thanksgiving bells all over the city.

As the men crept silently from the room, they caught a glimpse of a radiant upturned face and heard a glad voice crying to heaven, "Thank God! Robbie will never know."

That was Janet's Thanksgiving!

Alameda, Cal.

## DOMESTIC ECONOMY.

**BECHAMEL SAUCE.**—This popular French white sauce is very easy to make in even ordinary households, where economy is practiced. For instance, in making this on a large scale, a whole fowl would probably be boiled down for it, together with a knuckle of veal and a piece of lean ham. Proceed, however, as follows: Put into a saucepan the bones of a boiled or roasted fowl, broken small, with any scraps of fresh veal, and a bit of raw lean ham, or the bones from a piece of boiled bacon; add a bit of carrot, a slice of onion, a tiny bit of mace, a few white peppercorns, and, if at hand, a few button mushrooms, with a pint of cold water, not forgetting a sprig of thyme and parsley. Simmer until there is only half a pint of liquid, or even less, and if it does not taste rich put in a teaspoonful of gelatine. Stir until that is dissolved, then strain the sauce. In a separate saucepan bring to the boil half the measure of cream, mixed with a small teaspoonful of arrowroot; mix the white stock gradually with this, let the whole boil for a few minutes, then serve, adding, off the fire, a few drops of lemon juice or white vinegar and a little salt. If the stock can be allowed to cool before mixing with the cream, the fat will be more effectually removed.

**BOILED CHICKEN AND TONGUE.**—Clean, wash out with soda and water, then with fresh cold water, a large fowl. Fill with a good force-meat of crumbs, bits of fat, salt pork, pepper and salt; bind legs and wings to place with broad tape, and boil slowly until tender, from an hour to an hour and a half, in proportion to the age and size of the chicken. In another vessel boil a nice corned tongue. When the chicken is dished lay the tongue, skinned and sliced, each piece overlapping the next, in a circle about it. Serve a bit of tongue with each help of chicken. Thicken two cupfuls of strained liquor from the pot in which the fowl was boiled. With a tablespoonful of butter rolled in two of flour, add two beaten eggs and a tablespoonful of finely-cut parsley. Season with pepper and salt; boil two minutes, stirring all the time, and send to table in a gravy boat.

**CHOW-CHOW.**—Mince half a peck of green tomatoes, half a peck of small onions, one peck of tiny cucumbers and six green peppers; mince the seeds; to these add three medium sized heads of cauliflower, broken in small pieces; sprinkle salt over all and let them stand for 24 hours. At the end of this time drain the mass well and cover with vinegar. Put three heads of celery, cut in small pieces, one cupful of grated horseradish, half a pound of ground mustard, half a pound of mustard seed, two ounces of ground black pepper, two ounces of brown sugar, half an ounce of ground cloves and half an ounce of turmeric into enough cider vinegar to cover and boil for 15 minutes; then pour over the pickles. Put in glass jars and keep for a month before using. It improves with age.

**OLD DOMINION SAUCE.**—Bring the juice poured off from the can of peaches to boiling point. Dissolve one tablespoonful of cornstarch in half a teacupful of cold water, add to the juice and boil two minutes. Then add a small teacupful of sugar, and if wine is not objected to, one glass of sherry or Madeira. The sauce may be strained, but does not require it. In all cases where wine is mentioned as flavoring it is of course optional, many persons regarding its use as sinful. Education or conviction will govern here as elsewhere. In most rules where wine is specified as flavoring, the juice and grated rind of a lemon will be, so far as sweet sauces are concerned, a pleasant substitute.

**BAKED BREAD PUDDING (WITHOUT MILK).**—Soak about one pound of stale bread in cold water; drain it, and beat it up smooth; add two ounces of well-washed currants, two ounces of raisins, one-fourth pound moist sugar, two ounces melted dripping, a little nutmeg, four well-beaten eggs, and a little water; stir them all well together, and bake in a pie-dish.

**RICE PUDDING (WITHOUT MILK).**—Boil one-fourth pound of rice in water; beat four eggs with half-pint of water, drain the water off the rice; add it to the eggs, with three ounces of sugar, a little grated nutmeg, and a little finely chopped lemon peel, one ounce of currants or sultana raisins; mix all well together, put the mixture into a pie-dish and bake it.

## The Week.

In New England, where so many of us elders passed our younger Thanksgiving days, the approach of the great family festival was wont to be attended with sharp wintry weather. So it has felt seasonable to read, as we have been doing for several days, of the heavy storms prevailing away back East and around the lakes, burying the roads and obstructing traffic and travel with snowdrifts. To some Californians it appears among the things to be thankful for, that their lot is cast in a State where a stiff northern that rattles the windows smartly, with ice a quarter of an inch thick in the cooler spots, is the utmost of this frigid visitation. And in this connection it seems odd enough to have the furious wind (now no longer a blizzard) reported in the self-same paragraph with forest fires. Hoping that the latter will be quickly quenched with welcome down-pour from the gathering clouds, we give our readers all the good wishes of the season.

A NUMBER of capitalists of Gilroy have united in the cost of a scheme to drain Frazier lake, and thus open to cultivation several thousand acres of rich land. A canal is to be built from the lake to the Pajaro river, a distance of about two miles.

## The Day We All Should Observe.

The revolutions of time have again brought us to the verge of another day of gracious remembrance and grateful emotion. As we come into its dawn we are inclined to think that the greatest blessing that could happen to this people would be a good old-fashioned Thanksgiving Day. It is pre-eminently an American holiday. It was born of the external austerities of old New England; like her *Mayflower*, it came of ice and winter. It was a day of deep and sincere religious devotion. They had a hard and rugged theology in those days, but on this special day every man and woman seemed to do all they could to make a small Providence on earth. It was a noble phase of their religion, an oasis in those witch-drowning and quaker-persecuting days. But there were giants in those days. They were heroes, the men who anchored on that "stern and rock-bound coast," and in blood, tears and prayers laid the foundation of our liberties. The sons of the Pilgrims who celebrate this day over their rich viands will recall with wit, humor and eloquence the memories of those grand old nation-builders, but their eulogies will vanish with the smoke of the last cigar, typical of the fleeting sentiment of the hour. And yet human nature is the same. The human heart is still conscious of infinite need and cravings. Steam, electricity, the nation's growth, the multiplication of luxuries and inventions, and the Arctic breath of agnosticism and a stern materialistic science, have not wholly deadened the sense of dependence upon the Higher Powers. Rightly observed, this day brings men back to the realization of something immovable and unchanging amidst this drift of years. It is here we may all find safe anchorage ground.

Many have come to regard this day as more vividly suggestive of gastronomic functions than devotional moods, and think more of their turkey and cranberry sauce than of *Te Deum* Laudamus or Gloria songs and prayers; still, the ideal sentiment of the day is latent in every heart. We all possess at the center of silence the sense of the infinite; and we all have much cause for gratitude. It may be that retrospect brings very little satisfaction. There fit the specters of neglected opportunities, disappointments and failures, shadows that obscure the sun of joy; there dropped the withered buds of early promise, and may be seen graves too fresh for memory to hide. But still, there are glints of gladness and gleams of hope and love that may sweeten the bitterness of grief and pluck the sting from misfortune. In the crannies of the saddest and most desolate home some flower may be found. Gather only that to-day.

But, after all, that is a very narrow view of thanksgiving that thinks only of special blessings. There may be many things that fall straggling along the course of the whirling years we take little or no interest in. Some of us may not like the way the election turned out. Others may be fretting over the prospect of a dry winter. Many are shivering in the byways of destitution and despised neglect. The most of us no doubt feel that our lot has fallen in hard places, that we have been misunderstood and neglected by those who should have loved us, and wrecked in fortune when in sight of port. But a true retrospect is taken from a higher and more comprehensive view, and sees that the incidents and vicissitudes of the individual, the family or national life are only fragments of the mighty song of humanity. Only in this way do we come into any sense of a beneficent meaning in events. Not for the factors, but the sum, we give thanks. Not for the single notes, that may seem in discord heard alone, but for the ringing theme, the psalm of life, the symphony swelling by degrees into majestic grandeur, as the years fall as raindrops into the ocean of time. It is the race, and not man, the State and nation, and not a party or ward election, that touch the sweeping keys of praise, catching up the small tones, whimpers, plaints and tempers of petty men to make the anthem of the universal man.

Still we cannot forget that Thanksgiving is essentially the holiday of home. Christmas has its peculiar and glad some characteristics. New Year's is marked by social observances distinctly its own. Decoration Day appeals to a noble sentiment. Independence Day is enshrined as the occasion for patriotic demonstrations. But Thanksgiving comes with a

domestic charm all its own. It is a time for home gatherings, reunions and interchanges of affectionate greeting. To the pure delight of this happy holiday the *RURAL* commends its many friends and patrons, bidding them all to rejoice and be glad, expressing the hope that while they feast amid their loved ones they may not forget the needy, to whom a kindly remembrance at this festive season means a ray of sunshine through the glooms and mists of misfortune.

## Grand for the City Children.

As this is Thanksgiving week, we turn aside somewhat from the course of comment upon topics connected with practical agriculture and take up instead themes which seem to foster the Thanksgiving idea. One of the gladdest announcements of the week, and one in which we know our rural children will take deep interest, is the fact that the bequest of \$50,000 by the late William Sharon will not be expended in making a pretentious gateway to Golden Gate Park, but will be devoted to making a grand playground for the city children.

Our little people in the country, who have wide fields to roam over and deep canyons to explore, and grand old oaks or laurels or madroñas to play under, can have little idea of the fate of a city child who must generally play in the boarded area of a small city house or invade the dusty roadway of the city street at the risk of being knocked to pieces by flying butcher carts or milk wagons. It is a gala day in the lives of the little city children when they can get out to the Golden Gate for a ramble on the grass and eat their lunches under the trees. This they have done whenever opportunity offered, and yet the park has had no suitable place for the children. They have been in danger from reckless drivers; they have had no swings or ball-grounds or other appliances dear to the childish heart. The announcement, then, that Mr. Sharon's money is to be spent for the children will be hailed with satisfaction everywhere.

This is what they propose to do, as told by Mr. Hall, the State Engineer, in his report to the Park Commission. He favored a children's quarter as affording opportunity for rest and exercise, the true purposes of a great city park. The idea of the quarter is to have playgrounds, rambles, and protected and warm spots where children, in charge of their mothers or nurses, can freely play around undisturbed and uninjured, but within open view of the mass of park frequenters and with all the conveniences for childlike sports. Fitting structures for such a place are those adapted for music and exercise.

The site selected for the playground, which will bear the name of "Sharon's Quarter," is a little valley about 1300 feet long and 800 feet wide, located due west 1000 feet from the terminus of the Haight-street cars. The valley will have to be filled in an average depth of about four feet. The material is to be taken from a small mound northwest of the valley, and there, when leveled, will be erected a music-stand. The playground, which will be reserved exclusively for children, will accommodate 5000 or more. It will be hard, level ground, subdivided into places for lawn tennis, baseball, swings, and a picnic-ground composed of latticed arbors, with many snug nooks and corners. At the west end of the playground will be a sandstone dairy building to cost about \$40,000. There, milk, cream and eggs will be furnished to the little ones at cost price. The contract for this building will be let in 30 days, and the structure will have to be completed within 90 days from that time.

It seems so to us this is a good subject for Thanksgiving. Next summer when our little country readers come to the city with their parents, they must stipulate for an afternoon at the park. What a delightful sight it will be to look down from the hillsides upon a grand playground upon which 5000 children can have all the fun they can possibly think of, and no one with nerves permitted to come near or to complain that they are making too much noise.

**CORN CROP.**—The report of the Department of Agriculture says: The yield of corn, according to revised returns, is 22 bushels per acre, making the product upon the present adjustment of acreage 1,660,000,000 bushels. This accords with recent returns of condition, and will not be materially changed.

## Popular Exasperation.

Every order-loving, right-minded citizen will disapprove of lynching under any circumstance, and lament such manifestations of lawless violence. But there is no doubt that judges, juries, governors and criminal lawyers are largely responsible for these frequent exhibitions of mob law, so far as the punishment of murderers and notorious villains is concerned. When communities have long been harassed by highwaymen and robbers, or have often been horrified by brutal murderers, whom they have seen escape justice through some quiddity of the law, under the plea of insanity or the stupid sympathy of juries, it is not strange they should occasionally lose their patience and resort to the crowbar and a rope. There was a meaning in that multitude the other day that demanded atonement for the brutal murder of poor little Mamie Kelly, that our officials should pause and heed. Such ebullitions of wrath never occur in a community where the law is uniformly enforced. Only a few months before the public had been outraged by the causeless murder of young Guindon. The jails are full of murderers or those who have attempted murder or other monstrous crimes, and there is a latent feeling that the perpetrators of such tragedies should meet the inexorable penalties of the law.

A Scotch judge, who spent some time traveling through this country, made the remark that America had good criminal laws, but they were applied with such uncertainty as to be well-nigh useless. The taunting satire is too true. It has become a standing joke that a rich or influential criminal need have little fear of any serious harm coming to him, however black his crime. It is very easy, by methods known to smart lawyers, to turn a deliberate murder into a mild case of manslaughter or self-defense, or make the very atrocity and diabolism of the crime a proof of insanity, or secure a new trial on some absurd technicality. The Supreme Court in this State granted the scoundrel Wheeler a new trial because the judge had suffered the prosecuting attorney to read a few passages from "Brown's Medical Jurisprudence." That may be the law according to ancient sheep-skin literature, but is it strange that such word-dawdle should incense the people? Not long ago a man stabbed his wife on the street in Cincinnati with a knife he had bought for the purpose. Three times he was convicted and three times given a new trial by the Supreme Court of Ohio. At the first trial he was constrained to use up one of his 23 peremptory challenges in order to exclude a juror he wanted the Court to exclude for cause. The Supreme Court held the ruling to be error. In the second trial the Court made an order excluding all the witnesses on both sides, but one witness was permitted to testify who had inadvertently broken the order. Although the murder was proved beyond a doubt by other witnesses, this was held to be error. We allude to this case as a fair average of the way justice is often thwarted through some frivolous technic of evidence, a flaw in the pleading, or some kindred black-letterism, as prevailed in the Cincinnati case. Is it strange that the people should occasionally be come impatient of such a play at justice and seem inclined to lawless indiscretion?

## Fruit-Growers at the Capitol.

Agreeably to program, the Sixth Annual State Convention of Fruit-growers met in the Assembly chamber at Sacramento on Monday last. Elwood Cooper, president of the State Board of Horticulture, called the meeting to order and made the opening address. A resolution was passed inviting Senator Stanford to attend the convention when convenient. On Tuesday a committee was appointed, consisting of Prof. Kleo, Matthew Cooke and S. F. Leib, to formulate a law to be presented to the next Legislature looking to the suppression of insect pests. About 60 prominent horticulturists were present at the outset, and the attendance was doubled on the second day. The sessions will continue throughout the week. The *RURAL PRESS* has an editorial representative upon the ground, and will, in due time, publish his account of the sayings and doings.

THE Southern Pacific line from Newhall to Ventura is making rapid progress.

## Waking Thankfulness.

Among those who scan this page days before Thanksgiving will be some not so absorbed in preparing the season's cheer for their own family and personal friends but they will feel a desire to reach out beyond that immediate circle and do something toward making the 25th a happier day to others less favored than themselves in the good things of this world. These kindly outgoings of human hearts will often find fit objects in their own neighborhood whereon to spend all means available, but others will be glad of help in giving a definite direction to their generous impulses and will themselves be thankful to be shown how to waken thankfulness in the needy and deserving at this festal time.

To all such, and to any who are in doubt where to bestow their substance, we cordially commend the S. F. Fruit and Flower Mission, whose sixth annual report has just appeared. Says the secretary: "As our annual meeting is held in October, the year's work actually begins, not with the first flowers of the season, but with the activity and earnestness of our Thanksgiving labors. For, almost as soon as we have published our report, we begin to prepare our list of those who are to receive dinners, according to the honored custom of the Mission of giving a complete dinner to every family on its list of deserving poor. The workings of the Flower Mission are so harmonious, its members so imbued with a spirit of unity and helpfulness, that a difficult task is simplified and made easy by the willing co-operation of hearts and hands.

"First of all, every member is impressed with the fact that 'Thanksgiving is coming,' and that country friends must be asked to send something to the Flower Mission. We beg them to give us of the product of their farms, of their vegetable gardens and their dairies. We beseech them to rob their own hen-roosts for us, and to help pride to its proverbial fall by laying low the pompous 'gobble, gobble' of the barnyard. We desire poultry above all things. If it's a turkey, so much the better; but we are thankful for any fowl that ever strutted in the henhouse, paddled in the pond or 'quonked' overhead; the Mission having adopted as an active principle the injunction 'Ask largely that largely ye may receive.'

"From our city friends we ask all this, and more. We beg for cookies, pies and cakes, for poultry, for cooked and uncooked meats, for groceries, for vegetables, especially celery, and for cheese, bread and butter.

"It is endeavored to have all the supplies reach the hall on the Wednesday before Thanksgiving, to facilitate the distribution on the following day. Profiting by experience, we have learned to be quite systematic in preparing and distributing the dinners. Each name on our list has been investigated, and, as far as we know, we have issued tickets to none but deserving cases; and it is only upon presentation of a ticket that any person can get a dinner Thanksgiving day.

"Are you not imposed upon?" is a question that frequently meets us. Perhaps so, once in awhile, but not often. Most of those who have been helped by the Mission have been eager to express their gratitude and appreciation of the slightest favor. It would not be unworthy of a Dickens' pen to portray the various scenes enacted by the recipients of the dinners—and yet there is not much to tell. Many are overwhelmed with surprise and happiness, and their confused attempts to find words to tell how they appreciate the gift are eloquent with gratitude. Ofttimes the deepest grief is the most quiet, the bitterest poverty the most unobtrusive, and the convulsive pressure of the hand, the rising tear and the faltering prayer for blessings to fall upon the Mission and all its members, touch the girls far more than could fulsome praise or voluble thanks."

We will only add that the society is carried on by young ladies; that its address is S. F. Fruit and Flower Mission, 713 Mission St., S. F., and that Wells, Fargo & Co. will not only transport free all packages so directed, but also, when the request accompanies the address, return boxes and baskets to the donors.

## Decorative Art in Agriculture.

There have been some very fine specimens of decorative art, employing agricultural materials or presenting agricultural ideas and symbolry brought out at California fairs. In our notices of the various displays held this year, we have hinted at a number of them. Perhaps the exhibition richest in this direction was the horticultural fair held upon the opening of the new pavilion erected by enterprising horticulturists at San Jose. There were many pieces of decoration presented for the public enjoyment, as enumerated in our account of the fair in the *RURAL PRESS* of August 21st. Afterward we were favored with a photograph of one of the most attractive decorative creations, and a crayon sketch made therefrom is given on this page. It does not pretend to pre-

## Carnivorous Plants.

It has long been known that certain plants catch and kill insects, but only very recently has it been suspected that they devour and digest their prey. The matter has attracted a great deal of attention of late, both in this country and in Europe, and many careful observers are fully satisfied that these plants are really carnivorous. Others, among whom are some eminent foreign botanists, hold that the captured insects are devoured by bacteria, which may be detected by the microscope in the putrefying animal matter. A piece of meat placed on a leaf of *Drosera* disappears in the same way; but, according to these authorities, it is consumed by the bacteria as it decomposes, and is not absorbed by the plant.

The weight of evidence, however, appears to

continued for any considerable length of time. A piece of wood was soon released, and so was a dried fly; but when a live fly or caterpillar or spider was inclosed the contraction lasted on an average for about three weeks. The leaf at the same time gave out a viscous acid secretion. This appeared to be only the case when an insect was captured, and it was always present on such occasions; but whereas with a fat spider it was abundant, with a shriveled fly there was very little.

## Cranks Running at Large.

The murder of a worthy young English artist, Owen O. Leggett, in San Jose last Saturday by John Clark, a young man 20 years of age, in a fit of jealousy, is only another fearful illustration of the danger of allowing disordered minds to run at large. Clark was known to be mentally unsound and had recently been discharged from the asylum, where he had been sent for attempting to kill Leggett some months before. No sooner was he out than the homicidal impulse seized him again.

While there is a large number of persons who are unquestionably insane at all times, there is also a large class whose mental condition is not so well defined. They are insane at intervals. There are times, more or less wide apart, when it is clear they are not evenly balanced, that something is wrong; but the trouble seems a passing cloud, and in a few days they are apparently right again. Then there are many queer people, cranky, strangely eccentric natures, who are evidently standing in the penumbra of a total eclipse.

Now, for reasons readily apparent, many persons of the milder type of lunacy are often allowed to pursue their ordinary avocations without let or hindrance. Their friends and relatives cannot be persuaded to look upon them as seriously diseased as long as they appear perfectly rational most of the time. Their odd, whimsical ways, glooms or violent fits of temper they do not regard as dangerous, or if they do they shrink, as long as there is hope, from the publicity which must occur if their loved and sadly afflicted ones are treated as insane persons. And even when their wild, violent passions are a menace to life and property, and a constant source of terror, they still try to conceal the fact as far as possible, and put off the unwelcome duty. This, in most cases, is a great mistake, and such tragical results as that in San Jose are of frequent occurrence. The family and friends of the aberrant mind are not the only sufferers. The lives and property of the community are often involved by such reckless indulgence. Almost every day we read how some apparently harmless daft, crank or person afflicted with spells of melancholia has suddenly committed deeds of violence, among which arson, suicide or even murder is often numbered. There is something radically wrong in the laws or customs that permit such persons to run at large when ample means have been prepared whereby the various phases of insanity may receive skillful treatment and subject only to as much restraint as the case warrants.

No doubt there are many persons whose occasional lunacy is not dangerous, but it is difficult, if not impossible, at all times to draw the line between such persons and those who should be placed under restraint and subjected to proper treatment. It is always dangerous to allow an unsound mind to enjoy unrestricted liberty. Their friends should not conceal the facts from mistaken motives of pride or delicacy, and only repent when some terrible catastrophe happens, and suffering, sorrow and humiliation are the result. Let no one take the chance of living in the same house with a disordered mind. It is a duty all owe to themselves, their children, and the welfare of the community, to see that every shape of mental obliquity is promptly placed under proper treatment and restraint. The forms of insanity here alluded to are on the increase, and the results to be avoided, even in anticipation, far outweigh any false delicacy which may prevent the proper precautions from being taken. And the frequency with which discharged lunatics commit crime ought to warn the officials of our asylums that they had better err in rigorous caution than in the direction of indulgence and laxity.

Lompoc has probably the largest squash of the season. It weighs 251 pounds.

DECORATIVE ART AT THE SAN JOSE FAIR—THE CHARIOT OF CERES.

sent the beautiful work in detail, but simply to show its general features better than any mere description in words could do. The subject was the "Chariot of Ceres," and the design was by Mrs. E. O. Smith, of San Jose. In a chariot of classic pattern stood a beautiful lady, clad in a white tunic, her head garlanded with ears of grain and a bouquet of the same upon her bosom. Behind her, in the chariot, was a shock of grain of different kinds, as though just cut with the sickle, which hangs upon the prow of the chariot. Upon the front of the chariot there was a wreath of grain ears most artistically arranged, and of which the engraving gives but a faint impression. As one looked closer he saw that the body and wheels and pole of the chariot were all thickly covered with various grains and seeds, more than 25 kinds being used in the adornment of the chariot; the wood, of which the vehicle is made, being entirely concealed. There was also lettering, key patterns, etc., put on the different colored seeds. The design was unique and was commented upon with much appreciation by visitors at the fair.

be on the other side. The more closely these plants are studied the more clearly is their carnivorous character indicated. Some few years ago a series of very careful experiments were made by Dr. Balfour, of the Edinburgh Botanical Society, on *Dionaea Muscipula* and allied plants. These experiments fully confirmed the suspicions entertained by Ellis, Curtis, Hooker and Darwin, that the *Dionaea* is a carnivorous, and, it may be added, a most brutal plant.

Dr. Balfour classified the facts he had observed in regard to it under the heads of irritability, contraction, secretion, digestion and absorption. The irritability, it seems, is resident in six delicate hairs, so placed on the surface of the leaf that no insect can avoid touching them in crawling over. Dr. Balfour touched with a needle every other part of the leaf, and no response followed; but no sooner was the point applied to one of those hairs than a contraction of the leaf ensued. Chloroform dropped on a hair caused the leaf to close like a winking eye, but water had no such effect. It was only when the object seized was capable of affording nutrition that the contraction con-

A SHEEP-RAISER of Mendocino has lost over 8000 sheep during the past season by the depredations of thieves.

## THE STOCK YARD.

## Shorthorn Notes.

Under the head of "Shorthorn Intelligence," in *Bell's Weekly Messenger* of Sept. 27, 1886, Mr. Wm. Houseman says: "Various lessons are drawn from the fact that the highest price of the autumn sale season of this year, all breeds being taken into the reckoning, was paid for a Shorthorn, and that particular Shorthorn which commanded that price was Mr. Foster's Duchess heifer, at the recent Killhow sale. As regards the internal competition—the rivalry of families and tribes, and of strains of blood within the Shorthorn breed—the admirers of the cattle descended from the herd of Mr. Bates have the right to claim that the heifer of the day is bred from their favorite strain."

He then speaks of some of the different methods of breeding, followed by the breeders of Bates cattle, how some—the majority—by their warm defense of the Kirklevington tribes, against those people who held a contrary opinion regarding them, subjected them to a system of breeding which no tribe on the face of the earth could bear without suffering physical deterioration.

That "system of breeding" was a subservience to the fashion of the day, viz.: that of what is only too well—one might almost say disastrously—known in America as line-breeding, no out-crosses from the favorite Kirklevington tribes being allowed of by the so-called breeders of "pure Bates cattle."

"Still, there were Bates men who knew how to use the materials they possessed, and if they did not at all times dare to make the fullest use of their knowledge, because an overbearing fashion imposed fetters upon their judgment, they did, among them, preserve much of those materials for crossing purposes, to reproduce still the highest types of Shorthorn merit by happy combinations of blood."

It is now generally admitted that the best Bates cattle living are those descended from the herds of those breeders who bred their cattle according to their own better judgment and regarded not the fetters imposed by the followers after fashion, who, as a rule, did all their breeding on paper, almost regardless of the merits of the animals they bred. Happily, that kind of breeding has had its day—bred itself out, as it were.

However, our main object is to call attention to what Mr. Houseman has to say on the merits of the Shorthorn breed of cattle for general utility, independent of all theories and fashions about breeding, or of rivalry of families and tribes:

We have, however, a higher argument than this—one more like that which we draw from the queenly cows upon Mr. Wetherell's farms at Kirkbridge and Aldbrough, and the magnificent herds of steers which Mr. Anthony Maynard could drive to fair or market from his Ripon and Cleveland farms, yet telling, not for one strain of blood alone, but for the Shorthorn breed at large. It is drawn from the results of using good, massive Shorthorn bulls with ordinary farm stock, especially in dairy districts; and it has some of its best supporting examples where cows are bought in for milk and sold out for beef. Take, for instance, the supply of the metropolis, or of a country town, or of any large institution, such as an orphanage or an asylum possessing a farm for the supply of dairy and larder. Cows about to produce or having recently produced calves, so as to be immediately or very soon contributors to the supply, and at the time of purchase displaying evidences of their capabilities as dairy cattle, are bought from the farmers who breed and rear, and sometimes milk their own cows through the first year or two first years after they have reared them, and then sell out in rotation according to age, bringing in the heifers to take the place of the cows sold out each year. Now it remains for the dairyman, or the provider for an institution, to decide what stamp of cows he will have, as likely to be most profitable, taking into consideration the end as well as the beginning of their service to the various purposes which he has in view. A mere milker will be skin and bone when her milking is done, and if she is to be made into beef, the process of furnishing those bones and filling that skin will be an expensive one. Cows and calves are costly materials to be turned into beef. At a much less outlay than would be required to provide the necessary quantities of them to make a lean cow fit for the butcher, a large, substantial, flesh-retaining dairy cow may be purchased, instead of the mere milker. Such a cow is often to be found in districts where well-bred Shorthorn bulls are used; and the difference in price will be much less than the cost of buying meal and cake, eventually, to make the lean cow fat; while time, which also has its money value, will be saved by choice of the superior cow. In her case, when the milking season is ended, a very little extra food will give the ripening finish. In the case of the inferior cow, months of costly consumption must follow the last drain of the udder, and the room which might have been cleared for oncoming stock is occupied in the meantime by slow goers. Because really well-bred Shorthorn bulls, used by the farmers, give us the better stamp of cow here described, a cow worth a few pounds more than the one that cannot keep her flesh while she gives milk, the Shorthorn has still a sure footing in the country.

This is the argument on which we may rely more confidently than upon inferences from occasional prices at sales; and those Shorthorn breeders who, by producing cattle of the right sort, enable the friends of the Shorthorn to maintain that argument, deserve good prices for their stock, if they do not always get extremely high prices.

THE Nevada City *Herald* complains that much valuable stock has been killed by hunters in that vicinity recently.

## FORESTRY.

## The Tree-Planting Nov. 27th.

There was a meeting of those interested in tree-planting held on the evening of November 12th, at the Palace hotel, to make arrangements for an Arbor Day and a proper celebration of it. Ex Governor George C. Perkins was called to the chair and accepted the position temporarily. Adolph Sutro, who was unavoidably absent, was unanimously elected chairman of the Arbor Day Committee and John Vance Cheney secretary.

Prof. Hilgard, of the State University, spoke of the necessity of tree-planting for climatic reasons. He deprecated the deforesting of the Sierras and the mountains of the State. He said that in Contra Costa county, since the country had been denuded of trees, the streams had decreased in volume and the farmers had suffered. In Spain the same thing had occurred. In the southern part of the State the people did not like the idea of Arbor Day, thinking if more trees were planted they would have more rain, the streams would be fuller and they would be flooded out. He thought that they labored under a fallacy in regard to the matter, and earnestly advocated the appointing of an Arbor Day for the whole State. The following committee was appointed to make all arrangements for a proper celebration of Arbor Day: Major-General O. O. Howard, Adolph Sutro, J. V. Coleman, W. W. Blow, Sands W. Forman, G. D. Shadburne and Harry Wagner.

A motion made by G. D. Shadburne was carried, that the children of the first grade of the public schools should plant their trees on Goat island and those below the first grade at the Presidio. It was stated that many of the trees given by Mr. Sutro to the school-children had since died.

It being stated that the Board of Education had passed a resolution appointing Friday, 26th inst., as Arbor Day, as that would be the most suitable day for the teachers and scholars to meet together, the Executive Committee was instructed to confer with Messrs. Moulder and Hoitt to harmonize, if possible, any differences that might exist, and to decide on a day for the celebration.

A communication was received from Isaac Trumbo, offering, on behalf of the State Board of Silk Culture, to present 2000 mulberry trees, out of a large shipment that is shortly expected from Italy, for public planting. The trees are ornamental and shading, and the planting will aid the further advancement of our State in the culture of the silkworm.

After the meeting adjourned the Executive Committee met and appointed the following sub-committees: To Visit Schools—Coleman and Wagner; Music and Literary Exercises—Perkins, Cheney and W. S. Dewey; Transportation and Planting—Shadburne and Forman. E. R. Cooper, who has made a survey of Goat island and laid out a Greek cross on the north side of the island where the tree planting will take place, will attend to the preparation of the ground.

The Oakland Canoe Club, which has taken great interest in the matter and to whom Joaquin Miller gave 700 trees to plant, will hold a meeting next Sunday to consider arrangements for the planting on the island. They will attend the celebration in a body in their canoes.

## THE GARDEN.

## Beet Sugar.

Mr. M. D. Nicke is writing some forcible paragraphs for the *Fresno Examiner*, urging an investigation to determine the feasibility of introducing the beet sugar industry in his neighborhood. We hope he will succeed. The first thing to do is to grow some of the true sugar beets, of which seed has been procured by Mr. Denicke. Then, these beets should be examined by an expert to determine their adaptation to sugar-making. Not every place which will grow beets will grow beets which will suit the sugar-maker. Mr. Denicke seems to be on the right track and we wish him all success.

## A Letter From Mr. Dyer.

The following letter will be of general interest:

ALVARADO, Cal., Oct. 28, 1886.  
M. DENICKE, ESQ.—Dear Sir:—Yours of the 26th received. In order to give the cultivation of sugar beets a trial, you should plant several acres at different times. It will not do to plant too early in the season, as they are liable to go to seed. I would advise, in your locality, to plant, say, half an acre as soon as practicable after the first rain, then a month later another lot, and so on until late in the spring. You should plant in all several acres in order to determine what can be done in your locality. You should select land somewhat sandy. Plant at least 12 inches deep as early as you can. After the first plowing all that is necessary is to have the top of the land well pulverized; sow in drills 15 inches apart and put in plenty of seed. We use from 12 to 15 pounds per acre.

Unless you get a good stand your beets will not grow properly for sugar. You should thin them, to stand about four or five inches apart as soon as they are large enough. The sooner the better.

Beets for sugar should grow all under ground ex-

cept a small crown. You should order 15 pounds of seed to each acre you intend to plant. You should not plant before February, in my opinion.

We will test your beets without charge. We can furnish you as much seed as you wish at 20 cents a pound. Beets should not weigh over three pounds; cultivated for sugar, from one to three pounds are the best sizes. I will give you any further information I have at any time with pleasure.

E. H. DYER.

## Prizes at the Sacramento Citrus Fair.

The Executive Committee of the Citrus Fair Association held a meeting yesterday afternoon at the Board of Trade rooms. Several sub-committees made reports. It was decided to secure the Stanton Thompson building, on J street, between Second and Third, in which to hold the Citrus Fair. E. J. Gregory was elected superintendent of the fair.

## Premium List.

The Association has adopted the following:

Best county exhibit of citrus and other semi-tropical products, including wine and brandy, diploma; second best county exhibit, diploma; third best county exhibit, diploma.

Best individual exhibit of oranges, gold medal; second best individual exhibit of oranges, silver medal; third to fifteenth best individual exhibit of oranges, special prizes.

Best 12 oranges raised by one person, special prize; second best 12 oranges raised by one person, special prize; third best 12 oranges raised by one person, special prize.

Best cluster of oranges, special prize; second best cluster of oranges, special prize; third best cluster of oranges, special prize; fourth best cluster of oranges, special prize; fifth best cluster of oranges, special prize.

Best individual exhibit of lemons, gold medal; second best individual exhibit of lemons, silver medal; third best individual exhibit of lemons, special prize.

Three best individual exhibits of limes, three special prizes, according to merit.

Three best individual exhibits of olives, three prizes according to merit.

Three best individual exhibits of olive oil, prizes according to merit.

Three best exhibits of persimmons, special prizes according to merit.

Best exhibits of apples, two special prizes.

Three best exhibits of winter pears, three prizes.

Three best exhibits of pomegranates, three prizes.

Three best exhibits of sun-dried fruits (other than raisins, figs and prunes), three prizes.

Three best exhibits of evaporated fruits (other than raisins, figs and prunes), three prizes.

Best exhibit of raisins, gold medal; second best exhibit of raisins, silver medal.

Best exhibit of dried figs, gold medal; second best exhibit of dried figs, silver medal.

Best exhibit of dried prunes, gold medal; second best exhibit of dried prunes, silver medal.

Three best exhibits of nuts, three prizes.

There will be gold and silver medals and special prizes awarded to the best exhibits of wines and brandies, and there will be a large number of special prizes in addition to the above for various meritorious exhibits.—*See*.

## The Manufacture of Unfermented Wine.

A subscriber of the *S. F. Bulletin* makes the following appeal to the wine-makers of California:

GENTLEMEN:—Believing that you are not blind to the best interests of your kind, and recognizing the great and growing wine interest in the State, and also the great and growing temperance army, who need some safe, pleasant, unalcoholic drink for the table, and as a healthy beverage, I seek to bring this want and supply together. For this purpose I ask you to put up some unfermented wine—that is, the pure juice of the grape, with no deleterious substance in it. Having all the facilities, you are the proper persons to experiment in this direction. The article sought will be found. Demand and supply always keep company. Suppose you try some of the methods already used by private families until some better ways are discovered. One of these methods is pasteurizing the juice by heating to 160°, and keeping it there for some time, then filtering or straining it, and again heating to 160° before bottling. It should be put in the bottles hot. To be sure of killing all the germs, the bottles may be washed out with salicylic acid, and the corks to be thoroughly disinfected, may, when closing the bottles, be taken from a hot salicylic solution. No salicylic acid should ever be put in the wine, as its use is opposed to the healthy action of the stomach in the process of digestion.

The reward offered to him who shall discover the best method of preserving unfermented wine is a fortune for himself and an everlasting benefaction for mankind.

NORMAN HORSES COMING.—We have just received word from Mr. Skillman from London that he is on his way from France with a new importation of ten Norman stallions, seven blacks, one brown, two dark grays. As many of our readers are well acquainted with Mr. Skillman and some of his former importations, and as it is known he takes great pride in importing nothing but the best, we shall expect to see some good ones. Mr. Skillman informs us that he will be here on or about the 8th of December. It may interest those who are thinking of purchasing to see what Mr. Skillman brings here at that time.

## A Great Reward

Will be secured by those who write to Hallett & Co., Portland, Maine. Full information will be sent you, free, about work that you can do and live at home wherever you are situated, that will pay you from \$5 to \$25 and upwards a day. A number have earned over \$50 in a day. Capital not needed. Hallett & Co. will start you. Both sexes; all ages. The chance of a lifetime. All is new. Now is the time. Fortunes are absolutely sure for the workers.

## THE GREAT REGULATOR!

No medicine is so universally used as Simmons' Liver Regulator. It won its way into every home by pure, sterling merit. It takes the place of a doctor and costly prescriptions. It is a family medicine containing no dangerous qualities, but purely vegetable; gentle in its action and can be safely given to any person, no matter what age.

## WORKING PEOPLE

Can take Simmons' Liver Regulator without loss of time or danger from exposure, and the system will be built up and invigorated by it. It promotes digestion, dissipates sick headache, and gives a strong, full force to the system. It has no equal as a preparatory medicine, and can be safely used in any sickness. It acts gently on the Bowels and Kidneys and corrects the action of the Liver. Indorsed by persons of the highest character and eminence as

## The BEST Family Medicine.

If a child has the colic it is a sure and safe remedy. It will restore strength to the over-worked father and relieve the wife from low spirits, headache, dyspepsia, constipation and like ills. Genuine has our Z stamp in red on front of wrapper, price, and only 1 y

J. H. ZEILIN & CO., Philadelphia, Pa.

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. GATES & CO. PROPRIETORS,  
417 Sansome St. San Francisco

## JACKSON'S IMPROVED IRON HARROW.

60 % Steel Teeth. PRICE, - - \$32.50  
This Harrow was introduced to the farmers of the Pacific Coast, during the season of 1881. Since then, hundreds have been sold, giving entire satisfaction. I have made the malleable iron clamps heavier, and strengthened them, making this the **Best Iron Harrow**. The frame is indestructible, made entirely of iron and locked firmly together by the teeth passing through malleable iron clamps, and having screw-threaded shanks on their upper ends, which bolt the frame-work securely together. This mode of constructing a harrow frame dispenses with drilling or punching holes, thereby securing much greater strength and durability. **It is indestructible. No shrinking, swelling and rotting of frame-work.** It is constructed in narrow sections, each acting independently; will adapt itself to any uneven surface of the ground, and will cut the soil better and more evenly than any other Harrow. Constructed on correct mechanical principles; each section has a center draft, and each tooth cuts a separate track. No one tooth in line with another. The safety-hook prevents unhooking when turning round. Four different sizes to suit customers. **STRONGEST AND BEST HARROW MADE!**

PRICE LIST.		PRICE.
No. 1 has three sections, 45 % steel teeth; cuts 9 feet wide. This is a light size for two horses. Weight, 168 pounds.		\$25 00
No. 2 (represented in the cut) has four sections, 60 % steel teeth; cuts 12 feet wide. This is my standard style for two horses (generally used). Weight, 230 pounds.		32 50
No. 3 has five sections, 75 % steel teeth; cuts 15 feet wide. This is my 3-horse harrow; can leave off one section and use two horses with the same draft-bar. Weight, 291 pounds.		37 50
No. 4 has six sections, 90 % steel teeth; cuts 18 feet. For this size I use four horses abreast, with two draft-bars coupled together at the ends; adapted for large farms. Weight, 336 pounds.		48 00

"Your harrow is a good one."—M. MADDEN.  
"They give perfect satisfaction."—JAS. CASS & CO.  
"Your Iron Harrow is a good one and fully met my expectations."—DR. L. F. MOULTON.  
"I like your Iron Harrow very well."—MILTON CARPENTER.  
"I tried your Iron Harrow the other day, and it beats them all. My manager says 'it is the boss.'"—D. FREE-MAN.  
"We like your Iron Harrow very much."—STEELE BROS.

ADDRESS, **BYRON JACKSON,**

## Lands For Sale and To Let.

### SMALL TRACTS OF LAND FOR HOMES

Are offered for sale in 5 to 20-acre tracts, one mile from Tulare, the most rapidly growing town in the State, at prices ranging from \$15 to \$40 per acre, to those who will make homes on them.

The land lies in the northerly limit of the Artesian Belt, and is also easily supplied with ditch water. Soil, sandy loam. Good surface water at 10 to 12 feet.

#### ALSO LARGER TRACTS

Of 20 to 60 acres, on my home place, 7 miles S. W. of Tulare, 3 miles from Tokay Switch, S. P. R. R., centrally in the

#### ARTESIAN BELT,

Lying on north side of Elk Bayou. Smooth, clean, artesian land; \$15 to \$30 per acre.

A good flowing well, capable of irrigating 80 to 160 acres, is obtainable here at a cost of about \$500. The soil is dark, ancient lake bottom sediment. The land is fenced and mostly in cultivation; one flowing well on the place and others near by, with growing orchard, vines, grain, alfalfa, etc., showing adaptability of soil. The best of surface water is obtained at 10 feet from surface. Perfectly healthy locality. Plenty of oak timber near by.

This land, in whole or part, is bound to be sold soon, and rare chances are offered. Address, E. M. DEWEY, Box 27, Tulare, Cal., or call at the home premises.

### A NEW COLONY

On the new extension of Southern Pacific Railroads, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

#### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

#### FOR SALE—33 ACRES

Of very choice Land. All within the corporate limits of the lovely town of St. Helena, Napa county. Seventeen acres vines, fine varieties, five acres choice fruit. Cottage of eight rooms, beautifully situated, with shade and ornamental trees, including seven large Oaks. "St. Helena Nurseries" on the premises. A fine chance for a nurseryman. Address for further information,

Box 318, St. Helena, Napa Co., Cal.

## FRESNO COUNTY.

### BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

#### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

#### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

#### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

#### TITLE, U. S. PATENT.

#### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

Vacaville Notes and Other Things.

EDITORS PRESS:—You have a correspondent from this valley who is about as reliable as the average politician just before an election. The fruit crop this season has not been fair, and the prices paid a large majority of growers have been very poor, as some lost by shipping East and the home prices in too many instances did not pay expenses.

The Chinese are more unpopular every day, more especially this season, as a scarcity of them was occasioned by their going to other neighborhoods to gather hops, and those remaining, finding there was a great demand for laborers, became insolent and independent. There has never been a time in recent years when a white man of industrious habits and sober could not find a situation at remunerative prices among our orchardists from one end of the year to the other. It is only those who prowl from one place to another, stopping only long enough to get liquor money, that growl. There has been no time within the past three years that I could not have given a white woman as good a home as any one from any part of this State occupies, at as good wages as is paid in any part of the world, with as nice, genteel work as any farmer's wife is accustomed to do; but she could not be found. If you go to an intelligence office in the city, these women cross-question you and exact more than the average mother-in-law. It is rarely we secure the services of a white man who comes with a dollar in his pocket. Generally at the end of the first week he wishes a few dollars to buy some necessities, and continues those demands for a few weeks and then informs you at a most inappropriate time he wishes to knock off. If you ask his reasons for doing so he will tell you he "knows of a place that will pay him more." He "never likes to stop at any one place long." He "is not generally well and wishes a rest." His "uncle has written to him to come." He "never came to stay." In fact one Irish boy said, "the house, eating and everything is good enough, but you have no ladies in your family, and I would not live on a ranch where there are no young ladies." This was the best reason any one of them has ever given me, and I sympathized with him and gave him a letter of recommendation to a neighbor who had three marriageable daughters.

If you know of any sensible, industrious males or females that want steady employment, whose minds will be upon their employment and not harass a poor scale-bug hunter out of his existence with their rascality, just send them to

Vacaville. "VACA VALLEY."

A Moral Plague.

The Pioche Record says the greatest evil, and one that is rapidly growing on the Pacific Coast to-day, is that of the lottery business. Thousands and thousands of dollars, principally the hard earnings of the mechanic, the laborer and the servant girl, are being shipped East weekly by the agents of the Havana, Louisiana and other lotteries on this coast. Besides the thousands sent East by the lottery agents, many people who dwell away from these agencies established in cities and large towns send their money to the home office in the East for tickets in the various lottery schemes. Notwithstanding that these thieving lottery schemes have been exposed, and particularly the Louisiana lottery, by the press of New Orleans, the public, with their eyes wide open, rush anxiously to these rogues and beg them to rob them (the buyers) of the few dollars which they can ill-afford to lose. This lottery ticket buying business is getting to be as bad a craze with the people of this coast as the mining stock craze was with them some 10 years ago, when people could not spare the money to buy the necessities of life with because they needed it to put into stocks. The lottery craze is growing rapidly in Nevada, and in Pioche and surrounding settlements a large sum is monthly sent to the lotteries in the East, and the senders anxiously hope from drawing to drawing that they will be one of the fortunate ones, but they are always doomed to disappointment. These lottery schemes are prohibited publication by the laws of Nevada; even a raffle ticket, to raffle some small article to raise a few dollars for some poor mortal in distress, cannot be printed without violating the law; yet the press of Nevada publish, as Associated Press dispatches, that Mr. Brown or Mr. Black has drawn a big prize, making him independent for life. These lottery swindles pay the Associated Press for such a dispatch as that, and they get free advertisement in hundreds of papers from the mere fact of it being a press dispatch. Why the newspapers of Nevada, or any other State, should give these thieving schemes free advertisements, thus aiding them to rob the public, we are unaware of any good reason. The New Orleans Picayune, awhile ago, showed that in the wheel of fortune at the drawings of the Louisiana State Lottery, most of the large prizes were put in as blanks. Few fools amass wealth rapidly by dealing in lottery tickets.

A FINE STALLION.—Geo. T. Trescott and Ed. Eaton have a fine gray Norman stallion at the former's ranch, near Tulare City, which is worth seeing by stock fanciers. He is named Naivete, is six years old and weighs 1765 pounds.

Plants for Use and Beauty.

There cannot well be too much done in distributing seeds of useful and ornamental plants. All the enterprise of our seedsmen, all the effort of the Departments of Agriculture of the United States and of our State University, all the gifts from friend to friend, and all that we can do within the circle of our subscribers, cannot overdo the dissemination of desirable plants and seeds. We want to plant California from end to end with plants good for food and pleasing to the eye until the State becomes in fact a garden. The publishers of the RURAL PRESS have done something in this direction besides publishing the announcements of the seedsmen and nurserymen which are in themselves a great assistance to planters. The seeds which we have given in recognition of subscribers' favors have induced many to plant who might not otherwise have thought the garden worth a thought among the many cares and duties which press themselves upon the farmer's attention. We have been shown during our rural rambles many a flower-plat or vegetable-bed which has followed the planting of the RURAL's seeds, and we know that such beginnings always lead to more pretentious ventures afterward. When the gardening idea is once well planted in the Californian head and heart, all available sources of supply are searched for new and desirable things. Thus, our distribution not only acts for the pleasure and advantage of our readers, but serves not a little in extending the very valuable branch of production and commerce which is employed in distributing plants, seeds, and trees. We trust that our readers will avail themselves this year even more fully than they have heretofore of our offer to supply them with seeds for the flower and vegetable gardens. The announcement thereof may be found herewith. We would esteem it a favor if our friends would call the attention of their friends and neighbors to the offers we make, and thus aid us in enlarging the RURAL's parish and extending its influence.

ANNOUNCEMENT FOR 1886-87.

VEGETABLE SEEDS.		
83 Varieties.		
In Papers, post-paid.	Cts.	
BEET.		
1 Early Blood Turnip.	10

151 Indian Pink, double mixed.	10	188 Myrsiphyllum Asparagoides (or Smilax).	25

For \$1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and \$1.00 worth of the above seeds. For \$1.75 the RURAL six months and \$1.00 worth of seeds. For \$3.25 the RURAL one year, and \$1 worth of seeds. For \$4.50 the RURAL for eighteen months and \$1 in seeds. The seeds will be promptly forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL. In writing correspondence, items of information, or on other business, please use a separate sheet.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
Geo. McDowell—Fresno and Tulare Cos.  
J. H. SMITH—Plumas and Sierra Cos.  
J. C. SWEENEY—Sonoma and Mendocino Cos.  
O. F. BERGMAN—Yolo and Solano Cos.  
M. S. PRIME—El Dorado and Placer Cos.

BLACK MUSCATS.—The Black Muscats are making an exceedingly favorable impression as a table grape. We enjoyed the bounty of W. H. Aiken, of Wrights, Santa Clara county, in the shape of a box of assorted varieties of table grapes, and the Black Muscat was the king of the lot. We are glad to hear that the Santa Cruz mountain grape-growers have the prospect of doing very well with grapes from their late ripening neighborhood. They expect to send East about 20 carloads of them.

KANSAS HORTICULTURE.—If any of our readers are able to get to Emporia, Lyon Co., Kansas, on Tuesday, Dec. 7, they should give the balance of the week to attendance upon the annual meeting of the Kansas State Horticultural Society. The program sent us shows that there will be a host of interesting subjects brought forward. G. C. Brockett, of Lawrence, Kansas, is the secretary of the society, and no doubt programs of the meeting and other information can be gained from him.

PACIFIC COAST WEATHER FOR THE WEEK.

EXPLANATION.—Cl. for clear; Cy. cloudy; Fr. fair; Fy. foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 M. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

Good Health.

SLEEP AS A TONIC.—A scientific writer says: Sleep, if taken at the right moment, will prevent an attack of nervous headache. If the subjects of such headaches will watch the symptoms of its coming, they can notice that it begins with a feeling of weariness or heaviness. This is the time when a sleep of an hour, or even two, as nature guides, will effectually prevent the headache. If not taken just then it will be too late, for after the attack is fairly under way it is impossible to get to sleep till far into the night, perhaps. The giving of anodynes and the forming of the disastrous opium habit has often arisen out of such circumstances and ignorance of the preventive value of sleep. It is so common in these days for doctors to forbid having their patients awakened to take medicine if they are asleep when the hour comes round, that the people have learned the lesson very well, and they generally know that sleep is better for the sick than medicine. But it is not so well known that sleep is a wonderful preventive of disease—better far than tonic regulators and stimulants.

SUGAR AS AN ARTICLE OF DIET.—Dr. Phipson advocates, in a German scientific journal, the general use of sugar as a regular article of diet. For 40 years he has eaten at least a quarter of a pound daily, not counting sugar-forming substances taken at the same time, and has found it very healthful. Man's condition would be greatly improved if the use of sugar should substitute that of alcohol.

STRENGTH OF BLOOD-VESSELS.—Experiments reported to the Paris Academy of Sciences prove that the pressure necessary to cause the rupture of blood-vessels is very much greater than that to which they are normally subjected. The carotid artery of a dog required from 35 to 55 times the normal pressure of the blood, and the jugular vein from 32 to 35 times the usual force.

TARWEED FOR MEDICINE.—The Valjeo Chronicle says: "For the past few days a man has been at the navy yard clearing out the tarweed that grows in such abundance at the rear end of the island and bringing it over to Valjeo. He is going to dry the weed and use it for medical purposes. Several truckloads will be cut. It is worth \$1 a pound when properly dried."

An Appreciative Reader.

One of our subscribers at San Diego, remitting his postal order for another year in advance, thus voices his esteem and good-will:

No farmer or stock-breeder can afford to be without the RURAL. It would be a cheap paper to me at ten times the amount of the annual subscription. You keep square up with the progress of the day, and I can see an improvement in every number, and it is in fact a first-class, honest, candid journal and the tribute for all the people of the Golden West. May success attend your every effort to improve and extend its circulation.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

GRAPE PHOTOGRAPHS.—H. J. Lewelling, of St. Helena, has made a large collection of photographs of fruit which do him great credit as an amateur photographer. His grape series is very comprehensive and includes most of the varieties now popular in this State. Being himself a fruit-grower, he has applied his pastime of photography in the direction of horticulture with great skill and success. We hope to receive further samples of his work, which consists of a charming variety of fine rural scenes.

A FRENCH army officer is not allowed to marry a woman unless she can furnish an income of \$240 a year.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

Its causes, and a new and successful CURE for your own home, by one who was deaf twenty-eight years. Treated by most of the noted specialists without benefit. Cured himself in three months, and since then hundreds of others. Full particulars sent on application.

**DEAFNESS**  
T. S. PAGE, No. 41 West 31st St., New York City.

## INCUBATORS.

### THE PACIFIC INCUBATOR!

Awarded the Gold Medal at the State Fair, Sacramento, and at the Mechanics' Institute Fair of 1885 as the best machine made. It will hatch any kind of Eggs better than a Hen.

Send Stamp for Illustrated Circular to **GEORGE B. BAYLEY**, Manufacturer, 1317 Castro St., Oakland, Cal.

N. B.—A large line of Poultry Appliances, such as Wire Netting, Bone Mills, Chopping Machines, etc., for sale at the lowest rates. The Pacific Coast Poultryers' Hand Book and Guide; price 40c.

## PEERLESS INCUBATOR

### THERE IS MONEY IN CHICKENS!

The "Peerless" has the only Regulator that Regulates the flame of the lamp. That it has no equal, seeing is believing.

From five to fifteen minutes in 24 hours is all that is necessary to devote to the machine.

The "Peerless" has the best heater, the best self-egg-moistener, and best pure air supplier of any machine manufactured. Its great and 'crowning' feature is its automatic lamp or heat regulator. Its simplicity is taking. Acknowledged to have no competitor.

Send for circulars, etc.

**BIVEN & CO.**

Factory—Corner California and Lindsay Streets, Stockton, Cal.

## SHEEP AND SHEEPWASH.

### LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
**\$1.25**  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

**FALKNER, BELL & CO.,**  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

### Powdered Potash & Caustic Soda KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to **T. W. JACKSON & CO.**, 304 California St., S. F.

### Calvert's Carbolic SHEEP WASH

\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. **T. W. JACKSON**, S. F., Sole Agent for Pacific Coast

### BROWNE'S SQUIRREL and GOPHER SMOKER.

\$100 Reward to any one who will produce one of equal merit at the same expense.

It is the Cheapest,

By more than one-half, of any other in the market.

EVERY ONE GUARANTEED, or money refunded. I am in every way responsible. Refer you to the Editor of this paper.

Circular mailed free to any address.

State, County and Shop Rights for Sale.

Address

**PARKE & LACY,**

Sole Agents for Pacific Coast & Territories  
21 and 23 Fremont St. San Francisco.

### AGENTS WANTED to sell the MISSOURI STEAM WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

**MARY J. TAPPAN**, Reynolds, Neb.: "They exceed all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill.: The best machine ever invented by man. E. H. DUBANT, Corvallis, O.: Everybody likes them and everybody wants them."  
**S. R. ADAMS**, Union, D. T.: My wife would not take a quarter section (30 acres) of land for her machine, if she could get any other.  
**MRS. JOSEPH SWIFT**, State Center, Iowa: The most useful article about the kitchen. ANNA RAMSEY, Missouri, Tex.: Have thoroughly tested it on animals from here collected to bed quilts. Give entire satisfaction.  
**ST. CLAIR INKSTER, JR.**, Fort, Washington, Tex.: Sell myself and can not be spoken of too highly. JOHN DETTON, Brigham City, Utah. Have given it several severe tests and it is the best I have ever seen.  
**J. B. WHEELER**, Kansas City, Mo.: They have proved themselves to the families who owned them. A. P. SHIPLEY, Texas: Give entire satisfaction. Better handle the Washer than anything I have seen.  
**E. M. MASSEY**, Lockport, Tenn.: Have proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Nottingham, Mo.: If you will get up any instrument that will take as much labor off of man as this Washer takes off the women, and cost no more, I could sell one at every house.  
**MRS. M. C. DUBBINS**, California, N. J.: Give perfect satisfaction. I do my washing alone in same time I used to do with five help. **MRS. M. MOORE**, Newburg, Va.: Will do more than twice, especially washing flannels.  
**MRS. F. G. SINDEN**, Berkeley, N. E.: Would not take \$50 for mine if I could not get another. Washer quicker and better than it can be done by hand. **MRS. FRED H. HARRIS**, Hatterasboro, Va.: I tell that I could not be without one for twice its price.  
**JOSEPHINE CRAW**, Haverhill, Mass.: I have perfectly satisfied. I freely recommend it to all housekeepers. **MRS. MARY E. VAIL**, Patuxent, Md.: Saved me \$100 per year for 16 months I washed it.  
**MRS. C. W. TALBOT**, Newburgh, Iowa: I have thoroughly tested it for five months with entire satisfaction. **EDNA J. HUNT**, Newton, Mass.: I had rather give up my Jones new than part with my Washer.  
I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents \$100 MONEY. Write for particulars. Address **J. WORTH**, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

## S. F. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 17, 1886.

The past week has been unusually dull in all farm products, but while dull, prices did not shade off, but advanced for several, particularly wheat, barley and oats. To-day's cable from England giving the market is as follows:

LIVERPOOL, November 17th.—Wheat—Turn dealer. California spot lots 6s 3/4d to 6s 11/4d; off coast, 34s 9d; just shipped, 35s; nearly due, 34s 9d; cargoes off coast, firm; on passage, firmer and held higher; Mark Lane wheat, firm; English country markets, turn dealer; French, firm; wheat and flour in Paris, steady; wheat on passage to continent, 730,000 qrs.; wheat and flour to U. K., 1,875,000 qrs.

## Foreign Review.

LONDON, Nov. 15.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: Deliveries of wheat have been very small. Values at provincial exchanges have improved 6d/8s. Sales of English wheat during the week were 49,777 quarters at 31s, against 47,410 quarters at 31s during the corresponding period of last year. Flour is in better demand, and values are supported. Trade in foreign wheat in London is slow, and values are firm. American Red is scarce. Indian wheats are in request for mixing with the native crop, by country millers. Corn is firm. Barley and oats are quiet. Beans and peas are 6d dearer. One cargo of wheat arrived, and one cargo was sold. To-day the wheat trade was very slow, but values were firm. English, American, Russian and Indian wheats each advanced 6d. There was an increased inquiry for flour, and prices were 1s 6d dearer. Corn was scarce. Oats were 3d cheaper. Beans were 1s dearer. Linseed was quiet, and 6d lower.

## Eastern Wool Markets.

NEW YORK, Nov. 14.—Inquiry last week was mainly for parcels for some specific purpose, and regular line buyers were not represented. Consequently the market had a rather dull tone, but prices are unchanged. The sales of the week included 20,000 pounds of Oregon, at 24c. The Philadelphia market remains quiet. Pulled wools and average Territory wools are easier, but fleeces are generally held with confidence at unchanged prices. Bids for Territorial wools that were declined a few weeks ago were accepted last week, but the rates then refused and now accepted are about as high as any previously paid for similar wools. Among the sales were 20,000 pounds Territory fine medium at 22 1/2 cents, 5,000 pounds Territory medium at 25 1/2 cents, and 65,000 pounds Territory at 25 cents. The Boston market has ruled quiet, being a buyers' and not a sellers' market. Prices are generally from 1 to 2 cents less than two weeks ago. Among the sales were 343,000 pounds Territory at 22 1/2@24 1/2 cents and 47,000 pounds California fall at 15@18c.

NEW YORK, Nov. 16.—Wool is quiet and firmly held. Domestic fleeces, 30@38c; pulled, 14@35 cents.

## New York Hop Market.

NEW YORK, Nov. 14.—There is no indication of a favorable turn in the temper of the market; business between dealers is insufficient, and brewers buy in an indifferent manner; some very fine 1886 Pacifics have sold at 31@32 cents cash to brewers, but local buyers will not go above 28@30 cents on choicest samples; some offers from San Francisco were made at 2 cents under prices held a week ago; Pacific coast crop, 1886, prime to choice, 28@31 cents; fair to good, 26@27 cts.; 1885, good to choice, 13@16 cts.

## New York Wheat Market.

NEW YORK, Nov. 14.—The wheat market the past week was dull and weaker. The export demand has been rather light, owing principally to the fact that immediate shipments are impracticable, on account of the lack of tonnage, and because large shipping orders are now being held in abeyance, in consequence of which spot closed 1/4@1/2c lower, and options heavy and down three-quarters of a cent for November, at 83 1/4; December, 84 1/4; January, 86 1/4; February, 88 1/4; May, 93 1/4.

## California Fruit at the East.

CHICAGO, Nov. 13.—The receipts of grapes continue quite liberal, all consignments coming by passenger trains. A large portion of the grapes arrive in bad order, showing the effect of rains west of here, and are selling at low prices. It is so late in the season that there is more or less risk of freezing in transportation. Should it be pleasant and warm, the receivers would be able to sell the fruit at reasonableness, but if cold and wet they can only get low prices. Choice Muscats bring \$2.50@3. Tokays sell for about the same, while occasionally some fine lots bring a little over this, and some poor lots range down to \$2. Choice Verdals grapes keep as much as Muscats, and seem to have better keeping qualities. Pears are scarce and firm at \$3@4 per box. As to variety and condition, the market for California dried fruits remains steady and unchanged at former prices.

NEW YORK, Nov. 14.—Green Fruit—California pears, \$2@4 per box; quinces, \$1@1.50; grapes, \$2@5 for 40-lb cases.

## California Products at the East.

NEW YORK, Nov. 14.—In canned goods the demand for some descriptions continues to show a gradual though steady increase. Peaches are meeting with more attention, and the market is firmer. Tomatoes sell well at full figures. Corn is firm. Fine grades of canned pears are very scarce, and packers have no stock to offer. Dealers anticipate a positive shortage before winter is over, and higher prices are looked for. The imports of canned goods by rail, the past 7 months, amounted to 90,640 cases. California canned peaches, \$2.25@2.50; pears, \$2.25@2.50; plums, \$1.75@2; grapes, \$1.75; apricots, \$2@2.25; salmon, \$1.50@1.55.

Dried Fruit—Dealers in California raisins here say they cannot supply the New York demand for them. The recent heavy consignment was all taken previous to its arrival. There is no doubt Californians are being taken in preference to foreign. The prices run

from \$1.25 to \$2 per box. Malaga raisins have been moderately active at \$1.80, \$1.90 for loose Muscats, and \$2.40 for London.

Beans—California Limas were firmly held at \$1.90@2.

Mustard seed is dull; yellow quoted at 3 1/4@4 1/2c.

## London Agricultural Seed Trade.

LONDON, Nov. 1.—Messrs. John Shaw & Sons, seed merchants, of 37 Mark Lane, E. C., state that there was an average attendance on the seed market to-day, with a moderate amount of business doing. Cloverseeds generally are neglected. The new American Red just landed, being very cheap, is attracting some attention. White seed in Germany promises to be scarce, and high prices are therefore demanded which buyers here refuse to pay. Winter tares continue to sell slowly on former terms. Values have now dropped to holding over basis. Available supplies of canary seed are short, and firmly maintains the late rise. There is no change in hemp seed, which continues to sell at the remarkable low rates previously noted. Rape seed is in better favor. White mustard remains quiet. New French buckwheat, on account of its extremely moderate price, has been bought for speculation, and in consequence has become firmer. In Feeding linseed, the tendency is against buyers. Blue peas and Haricot beans are without alteration.

## Local Markets.

BARLEY—A strong, active market has ruled throughout the week, with a strong closing to-day. On Call transactions have been freer on steady advancing prices. The following are to-day's Call Board transactions: Morning Session: Buyer season—500 tons, \$1.46 1/4; 100, \$1.46 1/4; 200, \$1.46 1/4. Buyer 1886—400 tons, \$1.41; 700, \$1.40 1/2 c. Afternoon Session: Buyer season—100 tons, \$1.45 1/4. Buyer 1886—400 tons, \$1.40 1/2 c.

BEANS—The market is dull and heavy under heavy receipts, and only a moderate demand. Many are storing, expecting better prices later on in the season.

BUTTER—Both fresh roll and pickled are heavy and weak at the lower quotations, but solid in firkins is stronger and higher, with large dealers packing pickled so as to meet the demand for firkin.

CHEESE—The market continues exceedingly strong, owing to light supplies and a good demand.

EGGS—Heavy receipts from the southern counties and also from the East have created a weaker feeling, with concessions necessary to effect sales.

WHEAT—Farmers are offering very sparingly, consequently export buyers and millers have to bid up, with the closing indicating still higher prices. Two carloads of No. 1 hard are on the way from Chicago, bought for seed by a large farmer in the Sacramento valley. Transactions on Call the past week have been larger and at hardening prices. To-day's sales were as follows: Morning Session: Buyer season—300 tons, \$1.09 1/4; 200, \$1.09 1/4; 400, \$1.09 1/4. Seller 1886—200 tons, \$1.05 1/2 c. Afternoon Session: Buyer season—1100 tons, \$1.08 1/4; 300, \$1.08 1/4; 400, \$1.08 1/4. Seller season—100 tons, 99 cts. Seller 1886—200 tons, \$1.04 1/2 c.

[COMMUNICATED.]

## Market Information.

## Cereals.

Full returns of the wheat exports from this country for the months of July, August, and September this year, in comparison with the like months in 1885, give the following, which is of interest to the trade:

	1886.	1885.
TO	Bu.	Bu.
Great Britain and Ireland	13,644,995	7,342,169
Germany	158,252	46,223
France	7,069,166	109,803
Other countries in Europe	5,939,575	1,850,739
British North America	1,079,364	1,060,727
Central American States and		
British Honduras	15,329	10,073
Other countries	217,180	3,095
Total	28,723,861	10,512,829

The above comparison, which shows an increase to all consumptive countries, gives a most remarkable increase in the shipments to France. The increased exports emphasize the correctness of reports heretofore given that the crops abroad are short, and that the European countries' main reliance is on this country to tide them over into another season. The average increase for the first three months of this season over the like time in 1885 is all of 6,000,000 bushels per month. While the wheat exports give so large a return, that of flour shows equally as large an increase, as the following comparative table for July, August, and September shows:

	1886.	1885.
TO	Bls.	Bbls.
Great Britain and Ireland	1,836,258	943,529
Germany	7,429	2,028
Other countries in Europe	153,971	24,243
British North America	232,166	200,000
Mexico	4,014	5,214
Central American States and		
British Honduras	29,063	26,040
West Indies	214,875	269,986
Brazil	148,191	127,994
United States of Colombia	17,117	12,067
Other countries in S. America	56,431	83,134
Asia and Oceania	119,668	84,220
Africa	5,258	3,529
Other countries	6,154	7,273
Total	2,830,595	1,789,257

The above gives a wonderful large increase in the flour export to Great Britain, and affords food for study to those who delve into the mystery of the where and wherefore of our export trade in bread-stuff. Eastern advices indicate that Western farmers have delivered wheat more freely than any former season, and, consequently, have less in their granaries for delivery next spring.

In our market the sample market has ruled very strong, with a gradual but steady advance in prices, owing to an improvement abroad, light offerings from farmers and shippers' pressing necessities b reason of the heavy engaged tonnage in port to load. Sales have ruled from \$1.37 1/2 to \$1.41 1/4 for fair to choice white shipping, and \$1.40 to \$1.45 for good to gilt-edged milling.

The barley market has ruled very strong, with buyers' necessity causing them to bid up for both feed

and brewing. The demand is chiefly for export for both choice bright feed and also for good to choice brewing. The local and interior demand is fully up to last month, while there is a strong speculative demand under the belief that prices will rule quite high before the winter has passed, particularly if it shall prove to be cold and severe.

Notwithstanding receipts have continued free, prices have not shaded off. The firmness is due to an impression that barley will advance still more, which will create a better and higher market for oats. Much of the choice received goes into warehouse, to be drawn from as the trade call demands.

Owing to the low prices ruling here, there is less Western corn sent to this market, but notwithstanding which, values keep down by reason of the strong selling pressure of Californian.

## Dried Fruits.

Receipts are freer, yet all coming to hand are quickly placed, particularly if they be good to choice. The large proportion of consignments received are of better quality than last year, and therefore move off more quickly. The East is drawing liberally from us, with the outlook good for a continuance for some time to come.

## Feedstuffs.

Owing to colder weather there is an improved demand for both bran and middlings, which creates a strong market.

Ground barley continues very strong, with an advance for the better quality.

Oilcake meal is unchanged.

Hay is stronger, with a good demand ruling for the more choice grades. Sales of choice wheat have been made at \$1.50 per ton, by the carload.

Feed carrots are in liberal supply, but prices rule steady.

## Fruits.

The market for table grapes strengthened some on Friday last; since then prices have ruled steady, but the demand is not urgent, owing to the lateness of the season.

Pears are barely steady, with the poorer qualities hard to sell. Considerable coming in are overripe. Oregon sends us liberal supplies.

Apples, under very heavy receipts from Oregon, are weak and low, with the market in a very unsatisfactory condition. It takes something very choice to fetch \$1 per box. Fair to good are hard to sell, except at concessions.

Strawberries continue to contest the season with old Winter, and so far hold out against the severe frosty nights. So free are receipts, that even \$7 is difficult to get for choice.

Quinces are steady and in better demand.

Limes and lemons, under free receipts and an inactive demand, are in buyers' favor at the lower quotations.

Oranges are coming in more liberally, and as the demand is only fair, prices rule in buyers' favor. The quality of those received show an improvement on the earlier receipts.

## Hops.

The market, though reported dull, is said to have a very strong and healthy tone, with the outlook favorable to better prices later on. Shipments to the East continue free, both from this State, Oregon and Washington Territory.

## Honey.

Receipts are lighter, with the stock here well reduced; yet prices do not appreciate, owing, so say buyers, to our market being relatively higher than either at the East or in England.

## Live-stock.

Beef cattle and mutton sheep are higher and strong under a lessened selling and a good demand. It is claimed that large buyers secured in September all the cheap cattle and sheep they could handle, and are now holding for higher prices. Hogs are stronger, as packers are taking more freely. In horses, cows, etc., last week's report covers this week's. The following are to-day's meat prices: Beef—Stall-fed, 7 1/4@8c; grass-fed, extra, 7c; first quality, 6 1/2c; second, 5 1/2c; third, 4@5c. Calves, small, 9@10c; larger, 7@8c; 1 lb. Mutton—Ewes, 5@5 1/2c; wethers, 5c. Lamb—Spring, 6 1/2@7c; 1 lb. Pork—Live hogs on foot, 2 1/2@3c for grain and dairy feed; 2 1/4@2 1/2c for soft; dressed, 5@5 1/2c for hard, and 4 1/4@4 1/2c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed on foot, fetch one-third less than they sell at dressed.

## Nuts.

The strong market reported last week is continued, with the outlook favorable for good prices throughout the season. There is an improving demand for the holiday season.

## Raisins.

The market is reported in good position for good to choice, with the East continuing a heavy customer. Raisin-curers, to establish a market for their individual pack, ought not only to be very particular in packing the raisins in the best and most improved manner, but ought also to put them in neat, attractive boxes, having handsome labels. The bulk shipped by many persons come in boxes that are repulsive; consequently the raisins are hard to sell, even if the quality is unimpeachable.

## Vegetables.

Contrary to general expectation, potatoes shaded off still more, leaving the market, at the close, weak and heavy. Continued free receipts caused buyers to fight shy of the market, and only buy for immediate trade wants. To-day the market was stronger, owing to lighter receipt.

Sweet potatoes have ruled strong, with a slight advance at the close, owing to light receipts and good demand.

Onions held to strong prices for choice hard up to Monday, when more ease was noted, with a decline on Tuesday, and a weaker tone to-day. Sprouted onions are hard to sell.

Tomatoes continue to come to hand, but the quality is not good, owing to the lateness of the season. Other spring vegetables are out of market.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way	204,644	179,100
In port, disengaged	81,258	117,853
In port, engaged	73,596	27,900
Totals	359,498	324,853

The above gives a carrying capacity as follows:

1886, 575,186 short tons; 1885, 519,764 short tons; increase over last year, 60,128.

The poultry market has ruled fairly steady throughout the week, with choice large well-conditioned fetching an advance.

The demand for seed is improving, but prices are unchanged.

## Wool.

Owing to light stocks and light receipts very little can be said, outside of a continued strong market for all grades, particularly crossbred and merino.

San Francisco, Nov. 17, 1886.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Nov. 17, 1886.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

- FOR WEEK ENDING NOVEMBER 9, 1886.
- 352,385.—ROAD ENGINE—W. Applegarth, Fresno, Cal.
  - 352,181.—WINDOW—M. B. Burk, Dayton, W. T.
  - 352,182.—IRONING BOARD—L. M. Darrow, Stockton, Cal.
  - 352,482.—OPERATING VALVES OF HYDRAULIC ENGINES—Jos. Moore, S. F.
  - 352,483.—TRACTION WHEEL—R. R. Moore, Modesto, Cal.
  - 352,346.—SELF-PROPELLING WAGON-TRAIN—J. B. Osborne, Daggett, Cal.
  - 352,260.—WRENCH—J. M. & W. H. Parsons, Great Western Mine, Cal.
  - 352,278.—LINIMENT—O. W. Storer, Snelling, Cal.
  - 352,282.—FUMIGATOR—Jos. Watson, Petaluma, Cal.
  - 16,979.—DESIGN—F. S. Johnson, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Water Down the Gage Canal.

About three years ago Matthew Gage undertook to irrigate 4000 or 5000 acres of dry land above Riverside. Possessing no capital, he contracted with the owners of the land to supply water, on the basis of one inch to five acres, for the sum of \$100 per acre. With these contracts, to the extent of nearly half a million dollars, he entered upon the work. He secured some water from the Santa Ana river, purchased a large tract of arid land, sank wells and obtained some of the finest flows in the State. His canal is over 11 miles long, and on its line are 16 tunnels, one of which goes 700 feet through solid granite. It has a capacity of 3000 inches of water, sufficient for irrigating 15,000 acres, and he is confident of obtaining enough to fill it, mostly from artesian wells.

On Tuesday, November 9th, 500 inches of water—about one-third of the amount available—was turned into the canal upon the upper plain. The next morning it had made its way past the point of rocks east of Riverside, and by night reached the Turquoise Arroyo—the end of its course for the present.

In noticing the triumph of this enterprise, the *Press and Horticulturist* adds: When Mr. Gage commenced work the land under his proposed canal and above the Riverside upper canal was not really worth a cent an acre, although it had a speculative value of about \$5. Between the time that he commenced work and the day of his turning down the water, over 2000 acres changed hands on a valuation ranging from \$200 to \$300 per acre. Such is the confidence to-day in his water system that \$300 per acre is readily paid, cash down, for some of the choice locations.

But the end is not yet. Mr. Gage has recently purchased a large tract of land above the canal in Arlington, and it is now an open secret that in a short time surveys will be made for the extension of his canal across the big arroyo, and thence down along the foothills to the Temescal tin mine hills, below the present Arlington depot.

Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

Economy is Wealth.

Have our lady readers ever thought how much they can save by getting all the patterns they wish to use during the year for nothing? This can be done by subscribing to DEMOREST'S MONTHLY—the finest and best family magazine in the world. Each number of this valuable magazine contains a coupon order entitling the holder to a pattern of any garment in that number, of any size. Send 20 cents for the last number and see for yourself. W. JENNINGS DEMOREST, Publisher, 17 East 4th street, New York.

NEW COMMISSION HOUSE.—Mr. Ralph Brown, one of the oldest produce commission men in his city, has formed a copartnership for conducting the produce commission business under the name of Wolf, Brown & Co., at 321 Davis street, S. F. Their card may be found in our advertising columns from week to week.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$500 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

Farmers and Travelers

journing in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist (in preparation). CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, —

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER.

This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California.

We append, by permission, a notice of the book from Hon. H. P. H. Brownell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

DENVER, COLO., June 2, 1886.  
S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly,  
H. P. H. BROWNELL.

Price, \$1.25. Post-paid.

FOR SALE BY

DEWEY & CO., - 252 Market St., S. F.

A GOOD PREMIUM!

WEBSTER'S PRACTICAL

Probably all of our readers have occasion to use a dictionary every day. In some cases words cannot be correctly spelled; in others, the pronunciation is difficult; while in still other cases the meaning is not understood. This is true, not only of children and of the uneducated, but of many of the more intelligent as well; and every one who attempts to do without Webster's Practical Dictionary attempts to do without one-half of his opportunities for intellectual improvement.

Webster's Practical is an entirely new work by the editors and publishers of Webster's Unabridged and contains more than twice the amount of matter and illustrations ever before offered for the price.

Horse.

1, ears; 2, forelock; 3, forehead; 4, eye; 5, eyelid; 6, nose; 7, nostril; 8, point of nose; 9, lip; 10, lower jaw; 11, cheek; 12, poll; 13, mane; 14, withers; 15, parotid glands; 16, throat; 17, neck; 18, jugular vein; 19, shoulder; 20, chest; 21, ribs; 22, back; 23, loins; 24, hip; 25, flank; 26, belly; 27, hump; 28, thigh; 29, buttock; 30, stifle; 31, leg; 32, tail; 33, back; 34, cannon or shank bone; 35, arm; 36, knee; 37, passage for the girth; 38, elbow; 39, shank; 40, hock; 41, pastern; 42, coronet; 43, foot; 44, hoof; 45, fetlock.

It also embodies several entirely new features which render it pre-eminent to such a degree that for general reference in every household, it will not pay to use even the best of the older works any more than it would pay to journey across the continent in a lumbering old stage-coach while the numerous advantages of a lightning express are available. Those wishing to see sample pages and learn the particulars in regard to these new features before purchasing, should send their address to S. S. WOOD, Sole Agent, 134 1/2 West 33d St., N. Y.

SPECIAL OFFERS:

Webster's Practical Dictionary will be sent postpaid as a present to any person who shall send one new subscriber for THIS PAPER, or for any subscription two years in advance.

TO SUBSCRIBERS

Who will pay ONE YEAR IN ADVANCE for this paper (while this notice appears), and 50 cents extra, we will send the Dictionary postpaid.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7 1/2 x 5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address. DEWEY & CO., 252 Market St., S. F.

The world-renowned 60 acre POULTRY FARM OF FANNY FIELD, that pays her a profit of \$1,000 annually, is having an immense sale. Tells about houses, runs, incubators, brooders, chickens and capons. Every man, woman and child should read it. Price 25c. Stps taken. R. B. Mitchell, 69 Dearborn St., Chicago.

K. W. JONES' IMPROVED LAND ROLLER.

PATENTED MAY 13, 1884. No. 293,475.

By this peculiar coupling of rear and front rollers the team is allowed to turn to a one-fourth circle on a pivot with front roller, and the rear is allowed to remain standing still, and as the team moves forward it turns the rear rollers with a center draft, which does away with the laborious side-draft in turning.

Orders will be filled by applying to

K. W. JONES, Lemoore, Tulare Co. Cal.

GIVES PERFECT SATISFACTION WHEREVER USED.

THE MOST COMPLETE LAND ROLLER IN USE.

THE DOG In health, habits and disease. All breeds and treatment; 50 cuts; 25c. This office.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.  
STOCKTON, CAL., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no scale or indication of scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District.  
JOS. HALE, County Commissioner of Horticulture.

### B. V. CUTTINGS.

#### Bordeaux Varieties.

I OFFER FOR SALE, AT \$10 PER M., 200,000 CUTTINGS of the following renowned varieties, tube-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdor, Malbec, Tinturier, Portat-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from \$2.50 to \$5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

## THE CHEMICALLY HARDENED STAR MOLINE PLOWS

Are the Best, Cheapest, and Most Durable Plows Made.

We are the Sole Agents on this Coast for the Celebrated STAR MOLINE PLOWS. They are made EXTRA HARD, elegantly finished, and the only Plows which scour in every soil found in California and Oregon. Purchasers should see that each Plow is branded on the beam with a BRIGHT RED STAR and our name over it. There are many cheap, sheet-steel Moline Plows offered which are nearly without merit excepting the NAME "MOLINE." Many of the Plows are Iron which are sold for EXTRA-HARDENED STEEL, and purchasers should see that they are not imposed on by any imitations.

This Plow is made of Cast-steel; thoroughly hardened mold-board and landside. The STAR MOLINE PLOWS have been tested for the past ten years, and found to wear longer than any other, draw much easier, and scour in any soil. The reputation of the EXTRA-HARDENED "STAR" MOLINE PLOW, as sold by us, has been so great that the demand for them has induced numerous manufacturers to flood the State with sheet steel imitations. Caution is therefore necessary in buying Plows. See that all have "BAKER & HAMILTON" on over the star.

## EVEN THE CAT

Is pleased when she sees a "Cyclone" Windmill hauled on the farm. BECAUSE she knows that there will now be water enough to have a FISH POND, and she makes up her mind to GO FISHING SUNDAYS when the family are AT CHURCH.

When the Cat catches her first fish send to us and we will mail you our pamphlet on Irrigation and Drainage.

PATENTED.

These Mills are the BEST, CHEAPEST, STRONGEST and LIGHTEST,

AND ARE

SELF-REGULATORS.

### HENDERSON'S PATENT TRUSS.

Comfortable and Reliable.

This simple truss can be worn without inconvenience, and gives all the comfort to the wearer that can be obtained from a perfect-fitting, pliable apparatus. The pad is soft and yielding, and on account of its peculiar construction and the connections of its securing bands, cannot get out of place. It will remain in place no matter what position the wearer may assume. The engraving shows the construction of the appliance. It is simplicity itself, and is comfortable and reliable. Address,

JESSE G. HENDERSON,  
Grizzly Flat, El Dorado Co., Cal.

### DEWEY & CO.'S

Scientific Press

Patent Agency.

ESTABLISHED 1863.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

### The Abyssinian Banana.

The engraving on this page depicts a grand massing of a grand ornamental plant, which has already secured a strong foothold in this State, and is destined, we believe, to be very widely distributed. It is the Abyssinian banana, *Musa Ensete*, a native of the east coast of

tory plant for a long time. Its growth in the open air marks another era of its California life, and bounds can be set upon that. In November, 1882, a paper was read before the Gardeners' Society, of San Mateo, by John McLaren, in which he sets forth the beauty of the plant, the method of growing it, and announced that one had been set out of doors upon Mr.

color. As soon as the first whorl is in full flower another whorl follows, and so on to the end of the flower stalk. About the first week of December the seeds ripened. In the early spring these seeds were planted, as described by Mr. McLaren in the *RURAL* of May 8, 1886, and at this last date there were a lot of seedlings which were offered for sale, and, we presume,

### Fashion and Prices.

It looks very much as though Dame Fashion was stepping in to help our struggling silk industry upon its feet, if, indeed, it be found to have standing strength. Not long ago the same fickle lady stepped into the precincts of another California industry, but with a depressing

THE ABYSSINIAN BANANA (*Musa Ensete*)—A MAGNIFICENT ORNAMENTAL VARIETY.

Africa. It is a fine, noble-growing banana of rapid growth, attaining a height of 30 feet. The leaves of this species are of immense size, being the full height of the plant with a breadth of about three feet. The ground color is a deep green of a very rich hue, to which the deep red color of the very prominent mid-rib and veins forms a very pleasing contrast. For centers of foliage beds, for single specimens or for grouping with other plants, it stands unrivaled, and gives a tropical character to the landscape peculiarly its own. As none of our sub-tropical plants can compare with it either in size or beauty of outline, and now since it has proven to be hardy and can be had cheap, it ought to be in every garden in the milder portions of the State.

We are not aware when or by whom the Abyssinian banana was introduced into California. It has probably been here as a conserva-

Howard's place at San Mateo and was about to enter upon its first winter in the open air. The experiment was very successful. The plant made a noble growth, and in June, this year, Mr. McLaren brought us a photograph of the plant taken the preceding summer, which showed the banana towering up, reaching the second story of Mr. Howard's residence.

In an article which Mr. McLaren prepared for the *RURAL* last June, he stated that the plant had survived the hard winter of 1885 without any protection whatever. The frosty nights browned the leaves a good deal, but it started out again in the month of February, and made a new leaf about once a week until the month of September, when it sent up its flower stalk, which is about six feet in length by six inches in diameter. The flowers grow in whorls around the stalk, and are partly covered by enormous bracts of a reddish brown

were quite widely distributed in this State.

We have record in our columns also of the successful growth out of doors of the Abyssinian banana in Los Angeles. In the *RURAL* of June 7, 1884, is a note from Mrs. Jeanne C. Carr, of Pasadena, extolling the beauty of the plant and describing it as one of the most superb foliage plants known in modern gardening, and stating that Mr. Hollenbeck's splendid sample has grown without protection on Boyle Heights, in Los Angeles. Mrs. Carr had at that time one under cover and one in the open garden.

The engraving upon this page is from a photograph of a group of Abyssinian bananas in a garden in Germany. We are indebted for the engraving to the B. A. Elliott Co., of Pittsburg, Pa., large growers and importers of plants. At the East the plant is recommended for summer growth on the lawn, and it is to be consigned to the cellar or conservatory for the winter,

rather than an elevating influence. This was in the mohair production, and when mohair goods were frowned upon by the ladies the Angora breeders pined until enterprising manufacturers found in mohair a fine material for upholstery goods, etc., and now the Angora is climbing again.

What Dame Fashion is doing now is described by a recent New York paper. It says that Fashion in Europe decreed some months ago that women should use more silk for dress and personal adornment than had been their custom for the last few years. This made business lively for manufacturers and drove up the price of raw silk. Now raw silk costs from 10 to 25 per cent more than in the summer. Further advances are expected, and importers and manufacturers feel that the present stiff rates will be maintained and soon have a perceptible effect on the retail trade.

## CORRESPONDENCE.

## Notes on Soils and Cultures.

NUMBER I.

EDITORS PRESS:—"Freely you have received, freely give." My hints and directions on this subject are general, and apply to all kinds of crops. I do not claim entire originality, but progress in application of chemical and natural philosophic facts.

The art of soil-cultivation has more unforeseen difficulties, arising from the large exposed area where the labor is performed, the changes of temperature, the sunshine and rain, than any other art.

Ever since the settlement of California, how to obtain and retain moisture for growing crops through the rainless summer, has been the most important problem.

My purpose in No. 1 is to give practical hints and directions on this point, in connection with well-established scientific facts and theories on which they are based.

I hope none of my readers are among the number that would, when seeing land plowed, exclaim, "What a pity the soil was not put right side up!" Capillary attraction, the term applied to water rising in tubes or pores, is but one point in the universal law that all fluids and gaseous elements tend to diffuse toward an equilibrium, as when one end of an iron bar is heated the whole becomes warm.

Water continues to rise as the heat evaporates it from the surface of the soil. Now, if the soil is settled and uniform the tubes extend to surface, and the water from below is soon exhausted.

Cultivation should break the capillary tubes a few inches below the surface and cover the ends from the heat and evaporation of wind and sun. Mulching, or a covering with a stratum of different material, will have the same effect. Practically, this should be done at the end of the rainy season; for a heavy rain would settle the soil and again connect the tubes from below to the surface. Low wet spots and pools get dry first, because the rain has compacted the soil, reduced the size and connected the pores from below to the surface. Crops that are put in the first of the rainy season should be left loose and rough, not harrowed down smooth; first, because the rains will pass down quickly and not run off; secondly, the elevated lumps dry and warm first, and the temperature of the whole is thus raised. At the next rain the lumps, after being partially dried, dissolve and crumble down—effecting, so to speak, self-acting cultivation. Toward the close of the rainy season harrowing and rolling, either or both, are of great benefit.

With plants of deep roots, such as trees and vines, it is not necessary to pulverize so finely; simple plowing and harrowing is enough.

The following pertains to subsoil and preparation before planting. The reader must bear in mind that the finest interstices or tubes best favor capillary attraction, and that it is comparatively a slow process. All kinds of soil are honey-combed with holes of all sizes. Bugs and worms tunnel in all directions. Some holes appear lined and cemented, so that water will not affect them without their being mechanically crushed. The depth to which these smooth defined holes extend varies with the kind of subsoil from three to eight feet. In a climate where the ground freezes, these little tunnels are more or less broken up. Extreme dryness and then rain acts in a similar manner.

These facts show the benefit of subsoiling, which would be still greater if the subsoil could thoroughly dry, then dissolve and unite again. In this vicinity there is seldom, if ever, want of rainfall, but sometimes it nearly all falls in three or four months. In March or April, before the rains are quite done, it is too cold to plant corn, beans or seeds that require a high temperature to grow. As it gets warmer the surface gets too dry for the seed to germinate unless in perfect tilth, and thus it often happens that a mistake of a few days' time causes a failure.

In my next I propose to treat upon fertilization by cultivation. C. P. SCRANTON.  
Lower Lake, Nov. 12, 1886.

## Corn, Sorghum and Beets.

EDITORS PRESS:—"This is the time of year to prepare for the above useful crops. All require the same preparation of the soil. First give the land a good liberal dressing with manure in autumn; turn the soil over deeply in spring at the right time. Harrow well; mark the rows off about four feet wide with a plow. Strew the seed as fast as you can walk; cover with a harrow, going lengthwise. Roll the ground to keep in moisture. Let the plot be convenient to the house. No one who has not availed himself of about one acre of the above crops can appreciate their benefits. Begin to cultivate and thin out early, so as to bring the corn one foot apart from one stalk to another, and one or two good ears will be on each stalk. Sorghum or Chinese sugar-cane is not refused by any animal of mine. The pigs are fond of it; cows give the richest milk and make yellow butter at the season of dry feed. Stir the ground well with cultivator, and no water is required to irrigate. J. T. HOYT.  
San Mateo, Nov. 15, 1886.

## From Portland to S. F. Overland.

EDITORS PRESS:—"In this beautiful part of the country we have seen during the past year many tourists from the Atlantic and Central States, and hundreds from Chicago and its environs. Eastern exchanges are full of pleasant letters from friends who have seen and wondered with us at the beauties of these Willamette and Columbia valleys. Numbers who come by the Northern Pacific to this coast go by steamer from Portland, on the sound, to S. F., returning home by one of the roads east from that city.

All your readers know these roads, almost without seeing them, so many and fine have been the descriptions of all points of interest. Few, however, have taken what is called here the "Overland route" to S. F. You hear in the winter, occasionally, that trains are stalled, tunnels full of snow, etc., on the Oregon & Pacific road, which is about all that has been mentioned concerning it. Few have taken this trip, because to do it one must ride many miles in a Concord stage over mountain and plain between the terminus of the O. & C. road at Ashland, and the C. & O., which is fast being extended to meet the former.

Having no dread of a Concord stage, in one of which we passed many pleasant days in bygone years, both in Maine and Iowa, before a railroad had reached either State, we started on the Pullman car from this city one bright morning resolved to see the mountain route before the iron rail had bridged the 100 miles between Ashland and Dunsmore (now the terminus of the C. & O. road), which is being pushed through with their usual vigor by the S. P. R. R. Co.

The 24 hours' ride on the cars in Oregon, from Portland to Ashland, is through the best part of this State. Beautiful towns are growing all along the way, with an appearance of thrift and prosperity about them. Salem, Eugene City, Albany, etc., are well known to your readers, for many of them have friends and relatives in these places. Orchards and farms and fertile fields are seen all the way, and buildings which show the taste as well as the money invested in them. Ashland is a prosperous place, having a population of about 2000, and is considered the center of as rich a belt of fruit land as can be found even in California. Ashland creek and Bear river, into which it empties, make fertile the lands on which fine stock ranges are located and also give water power for mills.

The beautiful foothills of the Cascade mountains are south of Ashland, and both the soil and climate are found peculiarly adapted to fruit raising.

Our "homesteaders" on the prairie would look with dismay on land covered with brush and timber, which is sold every day here at from \$25 to \$30 an acre, and when grubbed and ready for the plow, cannot be bought for less than \$100. Yet buyers at these prices come from all parts of the world, and land is being cleared rapidly. There is no winter weather to prevent plowing, seldom one "freezing" day, and the beauty of the scenery can hardly be excelled.

The stage road, from Ashland south, commencing in Rogue valley, with the Cascade range on the east, the Rogue River mountains on the north, and the Siskiyou to the south, is full of interest and beauty. Though the valley has been settled more than 30 years, it has made little advancement until the last year or two. The parts of it through which we pass going on from Ashland show that in fertility and beauty it has great advantages. It is about 60 miles from the Pacific, the Coast Range mountains separating it from that ocean.

With a seat by the driver on top of the stage, with a jolly load of passengers below and the air fresh and sweet with the breath from pine forests, we passed a day more full of delight than we can describe. Soon we began the ascent of the mountains—and time fails us to tell of the wonderful places in sight as we progress. Pilot Rock, so often described by those who came in early days across the plains, and who hailed the first sight of it as the "beginning of the end" of their weary journey, is in view for hours. Castle Rock with its battlements and towers, bringing to mind many of Scott's fine descriptions of Scottish scenes, as we wind around and behold it in different lights and shades; Mt. Shasta in its grandeur appearing far away and then again so near that we seem at its very foot. The steep ascents of the Siskiyou range with mighty forests on one side the road, and deep ravines and gorges on the other; then down the mountains, over short curves, near the edge of the cliff, where the six horses go over the road at break-neck speed and all the strength of the driver is required on the brakes; these are new and most wonderful experiences.

Yreka is a quaint little town where we change coaches and make an hour's delay. Such a throng of cowboys, farmers and farmers' wives as crowded the platform here to see us mount our seats on top and crowd into the stage below! We are evidently the circus for the day. Mountain scenes again, with glimpses of Shasta, which, though nearer, seems more distant. This mountain is grand beyond description—not beautiful as our own snow-clad Oregon mountains, but like the mountain heights of Colorado, snow only at the top, with rocks and sand below and rugged sides covered with brush and dwarf pines. The grandeur of a mountain

14,442 feet above the level of the sea can only be appreciated by dwellers on the prairie when in full sight—no description can give any idea of it. The light of the setting sun shone on it as we silently watched it that evening, brightening the surrounding country with a beauty not of earth, while on Shasta itself "each purple peak, each flinty spire, was bathed in floods of living fire." The glory of that sunset hour is a picture on our memory for life.

As night came on we were entertained by the driver's stories of his wanderings and adventures over this part of the country—on foot, on horseback and with the stage—and so full of interest were they that when midnight came and we found ourselves at Sisson's, we had hardly thought of fatigue or sleep.

"Sisson," as every one calls him, is a pioneer who, for more than 30 years, has lived at the foot of Shasta and entertained in his way tourists, hunters and teamsters, at all seasons. In summer his rural house is thronged with Californians, who come for the bracing air, the mountain scenery, the fishing, and to drink the mineral water, both hot and cold, which is found in springs in several localities near. The railroad has been completed now nearly to his door, and "Sisson's," now that it can be reached without staging, will be changed from a country home to a railroad hotel. We are glad to have been there while it was in its rural state, for nowhere else have we found so quaint a home or so restful a spot, since Mt. Washington became a city hotel. The vicinity of Shasta, the lovely rural ride among the Sierra forests, the excursion to the headwaters of the Sacramento river, and the streams where mountain trout are actually caught, are attractions which visitors appreciate.

From Sisson's a 12-mile ride brought us to a tent town, where a ticket office in an old car and a few saloons make the station, where at daylight we took the cars on the California & Oregon road. We thought we had seen "scenic" routes of travel in Colorado and Southern California, but nowhere is beauty and grandeur found so combined as in the forenoon ride on this road, winding along the bank of the Sacramento river as it rushes to the sea. Sudden curves in the road, here a whirlpool with precipices on each side, and there a few acres of mighty forests. Another curve and the river has widened, and an island with a prospector's cabin among the rocks. All the way the track seems to overhang the river, and the only sign of civilization is the abandoned shanties of the laborers. The road itself is a marvel of engineering and is finished in the most perfect manner, but to us it looks as if no way-travel or freight would ever crowd the cars, so wild and rocky is the valley of this river.

By afternoon we "reach the settlements," and steam into San Francisco from Sacramento by the C. P. road, through towns and country so well known to your readers. "Fair as the garden of the Lord" is the whole of this region, and the vineyards and orchards and cultivated fields bear testimony to the fact that it is fertile as well as beautiful. PIONEER.  
Nov. 12, 1886.

## THE DAIRY.

## Improved Methods in Dairying.

EDITORS PRESS:—"Last June, in driving from Santa Cruz north along the coast to my place at San Bruno, I observed the country, especially in reference to dairying.

Most of the land along the coast is rich and abundantly supplied with water in small streams coming down from the Coast Range, which skirts the ocean but a few miles away.

It seemed to me that the opportunities for successful dairying in this district were superior to any portion of California that I have visited, and I may say that I have seen pretty much all of this State.

I must say, however, that these splendid opportunities have not, to my mind, been made use of to anything near the extent or in such a manner as to render the situation near as profitable as might be done.

I saw but very little cultivated grass and scarcely any of the splendid water privileges put to practical use, either for irrigation or motive power, and it puzzled me very much to understand why there was not more enterprise in this direction on the coast.

I will suggest an ideal dairy, which could be established in hundreds of places from Santa Cruz to Sanisnton, so far as location is concerned.

## Water Power.

I would secure the water first, as the main thing, sufficient for irrigation and power, with an elevation sufficient to make use of it by gravitation to irrigate at least an acre of ground thoroughly for every four animals kept.

I would locate my buildings at the central point of irrigation, that all the liquid manure and drainage from all the buildings could be carried by the water to all portions of the land, and so that the waste water, after being used for power, could either be used for irrigation or returned to the natural stream.

It is much easier, of course, to irrigate land when nearly level, yet by surveying carefully, rolling land can be irrigated with but little more expense.

The expense attached to bringing water

through pipes in order to retain the power seems to be the great obstacle to many that have the water. They undervalue the water in most cases, simply because they have not had the experience necessary to exercise a reasonable judgment in the matter.

In many places I saw, water might have been brought in a ditch, preserving the elevation until it reached within a distance of half a mile perhaps from where the building should be located. Now a half mile of pipe, say 14 inches in diameter at the head and 6 inches at the foot, strong enough for a 200-foot head, would cost not far from 50 cents per running foot, or about \$1300.

Such an investment would be worth far more to a dairy than if put in land, because every acre irrigated would produce at least five times as much as unirrigated land, or, in other words, 100 acres of land irrigated and manured by liquid manure, and otherwise, would produce as much as 500 acres, by the old process, and by much less labor.

The power can be used for many purposes; the grain can be thrashed and ground; the hay cut, the churning and wood-cutting; and with the hose everything can be kept clean and the fires put out.

## Farm Mechanics.

Every dairyman would find it profitable, especially if he has sons to help, to keep a good-sized shop, with an assortment of tools, so that repairs may be made at home.

With a shop that has a water power attached there would be an attraction that would tend to keep the boys at home, and the men too, for that matter, and a constant exercise of their ingenuity, would soon make mechanics of them.

There are many ingenious men that can be had by the month at moderate wages that could in a winter's work put in a water-wheel, a line of shafting, a turning lathe, drilling machines, a blacksmith's forge with power blast, run the grindstone, churn, cream separator, circular and jig saws, and put up a thrasher, feed-mill and fanning mill and make the most of the machinery themselves out of the raw material—iron. Horse-shoes and nails are so well assorted and completely made now that every farmer ought, with a forge, to be able to shoe his own horses. Extras in wagon and carriage material can be had so nearly complete now that every farmer's boy in his shop should be able to make their repairs.

The time, in fact, has gone by when a man who puts in his time with a team perhaps one or more days in a week in going to a distant shop for repairs can be successful.

A farmer without experience in mechanical work, on reading this, will no doubt smile and be incredulous, but I can assure him that I am writing from actual experience and am doing what I write about, and I have learned that if I had to go to a distant shop for what I needed in the mechanical line, the profit in my business would be small.

## To Return to the Dairy Business.

It is quite important to have your largest supply of butter or cheese when the market is the highest, say from August to February, and this can be done by having the cows come in at the right time and by having plenty of green feed for them when they do come in; and I know of no better way than by irrigation of the grasses, root crops and grain.

Along the coast the perennial grasses, such as rye grass and orchard grass, will remain green most of the year without irrigation, but with a free use of water two or three times during the dry season these grasses will furnish an abundant supply of food the year through. Butter or cheese from cultivated grasses is far superior to that from the native grasses, and will bring much higher prices, and the labor required in a dairy after the fields are in permanent pasture is perhaps not one-fourth of that required in the annual tillage of the soil. Natural pastures will not pay, considering the average price of land to-day, as they will not furnish the requisite quantity of food.

I know of a few parties along the coast that have been quite successful in the use and irrigation of cultivated grasses, and have only heard of one who was not successful, and from what I learned his failure was due to the fact that he used too much water and raised rushes and fresh-water plants in place of grass. Water should be used quickly and in large quantities, that the whole field may be saturated thoroughly and then allowed to dry. Once a month is quite often enough to irrigate, if done thoroughly.

A large proportion of the finest land between San Jose, Alviso and Milpitas is being water-logged and destroyed by the surplus artesian well water that is allowed to overrun the land. This, if properly cared for, would make magnificent perennial meadows and enrich the owners.

The tremendous growth of weeds that overtop the fences (soon after the annual crop of grain along the coast is secured) shows the wonderful fertility of the soil as well as poor farming. These weeds are mostly annuals, no doubt, and could be eradicated in a short time if the land was seeded to perennial grasses.

In making hay from cultivated grasses before these weed-seeds are ripe, they are prevented from coming, and should the field be needed for pasture—if the cattle do not keep them down—every weed-stalk should be cut down with a mower before its seed ripens, and if thus treated a few cuttings will destroy them entirely and leave a sod of pure cultivated grasses. The weeds thus cut will mulch the land and do

no harm, in allowing them to remain, as cut and lying upon the land.

I have seen hundreds of places throughout California where dairies could be established upon the basis herein indicated, and which would be profitable even with the low prices for their product that have ruled at times; and when these numerous places are utilized to their capacity, the dairy interest of California will make a showing far different from what it does now.

R. G. SNEATH.

Jersey Farm, San Bruno.

## HORTICULTURE.

### The Prune.

[By W. H. AIKEN, Wrights, Santa Clara Co., Cal.]

The following essay was read at the Sacramento Fruit-growers' Convention. The other papers presented at the meeting will come in due time:

The word prune is derived from the Latin *prunum*, which means plum, and may be more specifically defined as a plum of firm texture, easily dried whole in the sun or by artificial heat without fermenting at the pit.

Prune culture in this State has become a large and growing industry, and to successfully compete with foreign prunes, a protective tariff, an intelligent culture of the trees, and the best method of curing the fruit are indispensable.

The policy of this government is, and has been from its foundation, the protection of home industries and manufactures by proper duties upon foreign imports.

The products of the soil have not been protected to the same extent or degree as manufactured articles so much used by the farmer, and especially is this so with the prune. The tariff of one cent per pound on prunes was fixed before they were raised to any extent in this country, and was rated for purpose of revenue and not protection, as appears from the fact that the *ad valorem* duty on prunes amounts to only 18½ per cent, while the average *ad valorem* rate of duty on all articles is 42½ per cent.

The importation of prunes for the year ending June 30, 1885, was 57,631,820 pounds, valued by importers at \$2,147,505; and for the year ending June 30, 1886, 64,995,547 pounds, valued at \$2,026,595, showing an increased importation in 1886 of 7,363,725 pounds, but a decrease in value of \$120,910.

The prune product of California for the year ending June 30, 1885, was estimated at 1,875,000 pounds, of the value of \$150,000, at 8 cents per pound. For the year ending June 3, 1886, 1,550,000 pounds, valued at \$93,000 at 6 cents per pound, showing a falling off in production of 325,000 pounds, and in value of \$57,000.

The explanation of this is that there was not sufficient rainfall last year to mature a large prune that would command a fair price in competition with an unusually large and cheap importation.

The prune crop of this year is still in the hands of the producer, and cannot be definitely estimated; but it may be safely said, judging from the good quality and fair quantity on the trees, and the increased bearing acreage, that it will amount to about 2,000,000 pounds, which, at 8 cents per pound (a low price for so good an article), would yield the producer \$160,000.

The names of prunes cultivated here are French, German, Italian, Hungarian, Bulgarian and Silver prunes.

#### French Prune.

The French prune has been extensively and profitably grown in certain sections of this State, where the soil, climate and other conditions have proved favorable.

The first trees of the kind were grown by Louis Peller, at San Jose, about the year 1857, the graft having been brought from France by his brother in December, 1856.

The French prunes which are so largely exported from France are made of the Prune d'Agen or date plum, which is also named Prune d'Ente and Robe de Sargent. The Prune d'Agen is, according to the best authorities, the plum from which the finest French prunes are made, and is known as the prune of commerce. Orchards have been planted and cultivated in California for nearly 30 years, under the impression that we had the true prune of commerce, cultivated in France under the name of Prune d'Agen.

This was first seriously questioned by Mr. Felix Gillet, a Frenchman by birth, and a prominent and enterprising nurseryman at Nevada City, California, who asserted in July, 1884, that our French prune was very different from the Prune d'Agen of France, both in size, color, shape and time of maturity.

He based his opinion upon the conclusions drawn by certain horticulturists in France, from an actual comparison of the prunes raised and sent to them by him for that purpose with what they claimed was the true Prune d'Agen.

They failed to agree upon the points of difference, one insisting that the California prune is a seedling from the Prune d'Agen, and not as large and fine; another, that it is the same in shape, but not so regularly ovoid; another, that it is the same shape and color, but that there is a difference in the pit; and still another, a leading prune merchant of Agen, France, that it is exactly the kind known in France by the name of Prune d'Agen, or Prune d'Ente, and

that the nature of the soil has much to do with the beauty and size of the fruit.

Mr. Gillet, desiring to correct the error, and to introduce in California the Prune d'Agen, obtained trees from the north and south of France, and spared no expense in fully investigating the prune subject, and kept people the advised of his progress from time to time through the RURAL PRESS.

His investigations up to November, 1885, resulted in a change of opinion, as shown in his letter to the State Horticultural Society, in which he makes the following statement: "Our prune is a true type of the Prune d'Agen, and the kind grown in the north of France and the valley of the Loire is a very poor type of that famous prune." Our prune is not the very type of the Prune d'Agen, cultivated in the valley of the Lot, in France, where are grown the largest prunes, which are sold by merchants of Agen and Bordeaux, under the name of Prune d'Ente or d'Agen.

Through the kindness of Mr. Gillet I sent to a horticulturist, at Agen, a small package of my own prunes for inspection. In reply, under date of Aug. 16, 1886, he states that my prune has the shape and color of the Prune d'Agen, but is not the same type, the difference being in the pit, and sent me two pits of his prunes for inspection and comparison.

I am of the opinion that the French prune of this State is a true type of the Prune d'Agen, the prune of commerce of France, resembling it in shape and color though differing it may be in pit; the exact difference I am unable upon inspection to clearly define. This slight difference may be owing to climatic influence.

Whether the exact type of the prune grown in the valley of the Lot, in France, would prove a better and more profitable prune if grown in California than the one we have, is a matter for future experiment and consideration.

"Prove all things and hold fast that which is good."

The German prune is not generally grown; but as it contains more acid than the French, is preferred by some.

The Italian, or Fallenberg prune, sometimes called German, is quite well known; it has a rich acid flavor, is of a dark color with blue tint, and is nearly round.

The fruit thins itself, and often rather too much for profit, so that a full crop cannot be depended upon each year.

The Hungarian prune was brought to San Jose with the French prune, and quite generally planted and known as Gros prune. The tree is a strong grower and prolific bearer, the fruit growing large and fine, if properly thinned; and it is sometimes double. It has an acid flavor, light red color, and is in demand for Eastern shipment as a handsome plum. Pond's seedling plum is supposed to be its true name.

The Bulgarian prune is not generally grown, but is well spoken of by a few at Haywards, Alameda county, as bearing as well as the French, resembling the Italian but not quite as large.

The Silver prune was originated by a Mr. Alderman, of Dayton, Oregon, who believes it to be a seedling from Coe's Golden Drop plum, but a thrifter and hardier tree, and bearing larger fruit; the tree bears more on the body and the fruit does not break the tree down, and it ripens a week or two earlier. Many growers and nurserymen consider that it cannot be clearly distinguished from Coe's Golden Drop plum, which is a good plum for drying with the pit.

#### Prune Culture.

There seem to be no well-established rules governing the planting and cultivation of the prune in California. It might be well, however, to state briefly what the most experienced horticulturists have been doing, and think essential to be done.

Prepare the soil by deep plowing and harrowing early in the winter, and set out trees one year old, about an inch deeper than in nursery, the scar of old stock to the north, and not less than 20 feet apart; cut back the trees, after planting, to 18 inches from the ground, and shade on south side by some convenient shade. Three or four buds should be allowed to grow at the top, and the terminal buds of those below pinched back, after they have grown out a little, so that the buds will put out leaves and shade the stalk the first year. The second year, remove them and cut back the limbs to a foot in length; the third, two feet, etc.—the object in view being to shape a handsome tree with strength and bearing space, which can be attained only by low training and intelligent pruning.

After about six years of age, when in full bearing, the tree does not need cutting back as much as it does thinning out cross limbs, if any, and pruning out unfruitful wood. The sprays or small twigs in body of the French prune tree should be cut back to one or two fruit buds, so that the fruit may be large; some, however, advise the removal of all such sprays, as the fruit on them is small at best.

It is important in pruning to select buds on the upper side of limbs, as they will have a greater weight-bearing power than buds forming branches from under side of boughs. Summer pruning is not advisable; a full season's growth, properly pruned back in the winter and trained low so that the branches take a natural upward and oblique direction, will shape a tree that will be strong and broad enough to live long and be fruitful.

There is a natural adaptation of tree to root,

and it is generally believed that the apple should be budded upon the apple, the peach upon the peach, the pear upon the pear and the plum upon the plum.

The plum root generally throws out suckers from the root, and ought not to be used in budding plums or prunes. The myrobalan plum, however, does not sucker, and is much preferred as a root for the prune, especially in rich, damp or heavy soils; while in dry, light or sandy soil the peach root is found to be good for the prune, although some contend that the sap starts earlier and stronger in the peach root than the prune top is ready to assimilate, and becomes flooded and unhealthy.

In planting prune orchards, ascertain from those in your vicinity upon what root the prune does the best.

#### Method of Curing Prunes.

The French prune should be ripe enough to fall from the tree when shaken.

Dip the fruit into a boiling-hot mixture of one pound of concentrated lye in ten gallons of water and let it remain long enough to scald the skins; then dip in pure cold water and put out on frames or boards to dry in the sun. After the fruit has been out ten days or two weeks it should be taken up and put in bins to heat for a few weeks, then dipped in boiling-hot water two minutes, dried awhile, when it is ready for packing for the market. Do not dry prunes too much; they will keep without being dried to death. A common galvanized pail, made for the purpose, with three-eighths-inch holes on sides and bottom, makes the best dipper.

A canvas cloth may be spread under the tree, so that, in shaking, the fruit may be gathered clean and unbruised. Some, however, shake and pick from the ground.

The French method of curing prunes is substantially as follows:

The fruit-grower dries his fruit in an oven sufficiently to keep about two weeks without molding. The prunes are then sold to factories, where they are cured in this manner: After being graded by use of wire screens they are packed in long, hollow, metal tubes. After being filled a cap is screwed on them to make them airtight. These tubes are put in a steam drum and live steam is turned on and they are cooked for a longer or shorter time, according to the size of the fruit, at a temperature of 110 degrees. They are then ready to pack for the market. The peasants frequently cure or bake prunes in their bread ovens sufficiently for sale to the merchant, who grades and packs them.

It is not certain that we need imitate the French method of baking the prune. We may produce even better results in our own way.

The California sun-dried prune is delicious when stewed, while the French, being already cooked in the process of curing, tastes well before stewing, but becomes rather insipid afterward.

We can profitably imitate the French method of grading our prunes into at least three or four grades. After gathering the fruit, pass it over wire sieves arranged on an inclined frame two or three feet wide and eight or ten feet long. The fanning-mill movement is given to the frame by means of a wheel turned by hand; the largest prunes drop through the last and coarsest sieve, or pass over it entirely if very large.

The French merchants separate their prunes into several grades; the first four, ranging from 30 to 70 to the pound, are kept for the European market.

The fifth, or first grade for importation, about 70 to the pound, are sent to this country; also grades of smaller fruit, with which we have to compete for a market, with four grades of prunes, ranging from 40 to 100 to the pound.

Some rule of action should be adopted by prune-growers and merchants in California in grading prunes.

#### Prunes of California.

Samples of green prunes preserved, and others dried, are submitted for your inspection; many orchardists have kindly favored me with specimens. They are believed to be true to their names; the difference in color and size is owing to the soil, rainfall and temperature of the several localities where grown. There is no doubt that conditions in certain places are more favorable to the growth of the prune than in others.

A critical examination and study of such conditions and the habits of the prune, in wood and fruit growth, would be of interest and importance at our next meeting.

#### Crystallized Fruits at the East.

We have given information from time to time of the advancement of the crystallized fruit industry in this State. There are now large establishments in San Francisco, San Jose and Los Angeles, and others perhaps of less extent in other places. The business seems to court extension, and may result in the use of a large amount of our fruit and at the same time profitably employ the labor of women and young people. The following from the New York *Mail* is of interest: California is now acknowledged to be the fruit garden of the United States. In this productive State can be grown all the fruits of which France and Spain have heretofore had the monopoly. Finer grapes are now produced in California than Europe has ever sent to this market, and at prices much lower. The great abundance of the

product in the California vineyards has encouraged growers to make, for the American market, not only wines, but a class of raisins that even excel some of the finest imported. From samples sent to this city it appears almost certain that the California raisin will drive out the European in a very short time. Notwithstanding the fact that they have to be transported entirely across the continent, the expense of transportation does not so much increase the cost but that the dried fruit can be laid down in this city at a much cheaper rate than the French raisin, and far superior in quality. California also grows a very large-sized prune, which in flavor equals, even if it does not excel, the French "Imperial." These can be brought to New York at a much cheaper first cost than the foreign. Already the principal cities of the West, such as Chicago, St. Louis and so forth, have given up purchasing the foreign prunes and now deal entirely with those grown in this country. Other fruits could be mentioned, but these serve to illustrate the fact that home productions are making great headway against the foreign. But the newest industry arising from the California productions has been in the way of crystallizing fruits. About Christmas, it has been the custom among the rich to present to their lady-friends a box or basket of choice candied or crystallized fruits, but as these were imported from Europe, the cost was so great as to be beyond the means of the masses. Many a young man would have been pleased to have made such a present to his lady-love had his purse been plethoric enough for the purpose. Crystallized fruits were too high in price, and he had to confine his expenditures to candies of a less aristocratic character. This, however, is now likely to be remedied by home industry. Mr. J. M. Chapman, of this city, has just returned from California, and told a reporter for the *Mail and Express* that within 60 miles of San Francisco can be produced as fine crystallized fruit as ever was imported from France. He has had an opportunity while traveling through the State of visiting the fruit orchards, and there saw some fine specimens of crystallized apricots, plums, oranges, cherries, and other fruit grown in that State. Although the enterprise is yet in its infancy, he saw enough to warrant him in believing that these candied fruits would ultimately drive out the French. In point of excellence in taste, they are, in his opinion, not only equal, but superior, to the imported goods. And with regard to price, they can even now be laid down in New York 25 per cent cheaper, and, in course of time, at one-half the first cost of the French. Besides which, the supply of the fruits in California is so abundant that the crystallizers can have the pick of production without materially enhancing the cost. Many dealers here have ordered the crystallized fruit from California in bulk, and by putting them up in home-made fancy boxes, form as tasty a present to a lady as anything yet brought to New York from the other side of the Atlantic. And, what is more pleasing, this can be done at a price which will bring the articles within the reach of persons of even moderate means without being a heavy tax on their resources. Many of the uptown retail dealers in these fancy candied fruits said to the *Mail and Express* reporter that the prejudice against American productions in favor of foreign is dying out. The excellence of the article is now more sought after than the mere fact that they have been imported from abroad. Purchasers had found out, in many instances, that native productions had been passed off as foreign, and charged for accordingly. Preference is, therefore, now given to the home productions, if equal in quality to the imported, and, as a natural result, the dealer sells his goods for what they are.

#### Late but not Frozen Peaches.

EDITORS PRESS:—In your issue of November 13th, I noticed a communication from this place signed "G.," in which it is said that "McKevitt and Thurber have peaches so late that they always freeze upon the trees." That the two gentlemen named have some very late peaches I admit, but that Mr. McKevitt ever had any peaches freeze upon the trees I know to be a mistake. FRANK B. McKEVITT.  
Vacaville.

THE EFFECT OF CERTAIN ODORS.—The aroma of red cedar is fatal to house moths; the aroma of black walnut leaves is fatal to fleas. It is a matter of common observation that persons engaged in the business of making shingles from odoriferous cypress timber in malarial districts are rarely, if ever, affected by malarial diseases, and the persons engaged in gathering and distilling turpentine do not suffer from either malarial diseases or consumption. It is said that when cholera was epidemic in Memphis, Tenn., persons working in livery stables were entirely exempt from it. It is affirmed that since the destruction of the clove trees on the Island of Ternate the colony has suffered from epidemics unknown before, and in times when cholera has prevailed in London and Paris those employed in the perfumery factories have escaped its ravages.—*Boston Journal of Chemistry*.

THE LION AND THE TIGER.—It has been shown that the strength of the lion in the forelimbs is only 69.9 per cent of that of the tiger, and the strength of his hind limbs only 55.9 per cent. Five men can easily hold down a lion, but nine men are required to control a tiger.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

### Good of the Order.

Address on the Work of the Grange.  
Good Reading for the Anniversary.

We find in the *Daily Farmer's Friend* the address of Dr. John Trimble, of Washington, D. C., Worthy Secretary of the National Grange, at the Grangers' Inter-State Picnic Exhibition, at Williams' Grove, Cumberland Co., Pa., beginning the first of last September. The following is a summary of the salient points. It will be found appropriate reading for all the Granges which may be without an orator at the anniversary December 4th.

1. After some personal and local allusions the speaker launched out by asking: Whence came this organization, and how came it to spread, so like light from the rising sun, till it envelops the continent from ocean to ocean and from the frigid to the torrid zone? It came in obedience to the great law of compensation. At the close of the greatest and most expensive war in the world's history, in which vast areas of the country had been decimated and impoverished, and its productive industries unsettled, agriculture found itself held remorselessly by the throat, by the hand of giant monopolies, rendered possible by immense aggregations of capital, against which it was powerless to contend. In its unorganized condition agriculture was helpless and hopeless. From whence was its deliverance to come? Legislatures and Congresses, Courts and Administrations were controlled by its oppressors. Helpless and defenseless agriculture cried aloud. It could depend on nothing outside of itself for relief. In my opinion, and I say it reverently, Divine Providence put it into the hearts of the Founders of this Order to speak the words "combine" and "co-operate," and to devise and arrange the simple machinery by which combination and co-operation could be secured and made effective.

2. That the organization of the Order came in answer to a necessity for its existence, is evidenced by its phenomenal growth. Since its organization more than 25,000 charters have been issued, and probably more than one million and a quarter members have been initiated into the Order. That the Order has answered the call for its existence, if not all that was blindly expected of it, more fully than has ever been done by any similar organization, is now known and acknowledged of all men. Unjust and ruinous discrimination in the rates of transportation have become almost a thing of the past. Millions of dollars have been annually saved to its members in simplifying and systematizing methods of purchase and distribution of supplies, while the productions of American genius and the value of those productions have been vastly increased by the existence of the Order. Legislatures, both State and National, as well as the Executive and Judicial branches of the Government, have learned to entertain wholesome respect for the farmer whenever he speaks through his organization. A noticeable illustration of this is instanced in the recent triumphant passage of a bill by Congress, and its prompt approval by the President, relieving, in a measure, a principal farm product, butter, from ruinous competition at the hands of a fraudulent imitation which was backed by its dishonestly acquired millions. A few years ago oleomargarine would have controlled legislation, and the dairy farmer would have been powerless.

3. The intellectual importance to the farmer. The discussions in the Grange and the comparison of views and experiences have everywhere and always resulted in enlarging and strengthening their mental and moral status.

"The spirit grows with its allotted space.  
The mind is narrowed in a narrow sphere."

It educates speakers and parliamentarians. Men who lack confidence and skill in debate soon learn to be able debaters. When called to the chair, I have seen them preside over a body that, in appearance and deportment, would not compare unfavorably with the Senate of the United States, with an ease and dignity and a ready familiarity with parliamentary law and usage that would have done honor to Sherman or Carlisle. They had been educated in the school of the Grange. The principles and teachings of the Order, its ritualism and its laws, inculcate and enforce the spirit and the practice of fraternity, of good neighborhood and good citizenship.

4. The social feature. The brightest jewel in its crown is what the Order has done for women.

It is the first secret Order that ever admitted women to a full and free participation in its secrets, its benefits and its honors. In former times, and even now, where the benign influence of the Grange has not been felt, the lot of the wife and daughter of the farmer is more deplorable than that of the farmer and his son. While the farmer occasionally met his fellows at the store or the mill, or spent a social day with them at court or election, the poor wife was left at home to perform the monotonous drudgery of her daily rounds, with little of joy in the present or hope in the future. You

know that the Grange came to woman as a Savior, and that its announcement was to her "full of glad tidings of great joy." To this audience I need not enlarge upon the advantages and pleasures that have come to our sisters through the Grange. I saw the first few timid sisters take their seats in the National Grange abashed by the novelty of their position. But, after all, the future hopes of the Order rest upon the present farmers' sons and daughters. From them must its ranks be recruited, and through them must it be maintained and made "est<sup>o</sup> perpetua." To this end everything should be done to make membership therein desirable to them. The home life should be made enjoyable, and they should have frequent merry-makings and holidays. As soon as they are of sufficient age, they should be brought into the Grange and encouraged to take active part in its management.

Let no one be alarmed if perchance some young brother who has escorted his sister to the Grange hall should, in the confusion of leaving, find that he has somehow swapped sisters with some other brother, or on the way home the same old, old story first told in Eden:

"If Heaven one draught of heavenly pleasure spare,  
One cordial in this melancholy vale,  
'Tis when a youthful, loving, modest pair  
In others' arms breathe out the tender tale  
Beneath the milk-white thorn that scents the  
evening gale."

5. The Grange should be made a school. Perhaps no member of the Order has done more in advocacy of, or given intelligent shape and connection to, the work of education in the Grange than its Worthy Secretary, Bro. R. H. Thomas, the value of whose earnest and persistent efforts cannot be overestimated. His plan of establishing in every Grange a course of reading, extending over a term of years and including within its scope a knowledge of all the practical arts and sciences, history, biography and general literature, is, perhaps, the best that can be devised without withdrawing the student from the practical duties of the farm. No one can pursue such a course without becoming learned. One's education depends upon, and can only be rightly measured by, the extent, variety and accuracy of his knowledge. It matters not how this knowledge is acquired, whether through the training or curriculum of the schools or by self-application to the sources of information.

A reading circle, under careful supervision and direction as to its course, should be maintained and established in every Subordinate Grange. Its maintenance will be easy and impressive. Once the fires are lighted, the desire to learn will grow with what it feeds on, and in a few years the world will feel the effects of Grange education.

In conclusion, allow me to say and to assure you that occupying a position that brings me into immediate and direct communication with the whole Order throughout the United States and Canada, I can give you words of cheer for the present condition, and of faith and hope and confidence in the future progress and prosperity of the Order. I believe that it has come to stay, and that it will not only answer all the expectations of its ardent and most hopeful friends, but that, with its progressive spirit, it will hereafter develop capacities for usefulness now undreamed of.

"Knowing this, that never yet  
Share of truth in vain was set  
In the world's wide fallow;  
Other hands may sow the seed,  
After hands o'er hill and mead  
Reap the harvest, yellow."

### The National Grange.

Through the courtesy of W. M. and Sister Johnston, we have received the Philadelphia *Inquirer's* report of proceedings at the first day's session of the National Grange, which gives some details beyond the telegraphic account. Musical Fund Hall was neatly decorated with flags and bunting, and a profusion of flowers and growing plants. The morning was devoted principally to receiving the credentials of delegates and appointing the various committees. Gen. Putnam Darden, Master of the National Grange, presided. The Committee on Credentials reported representatives present from 24 States. Hon. M. Whitehead, of N. J., who was chosen Grand Lecturer at last year's session, but was not then present, appeared and was duly installed.

A committee of merchants, composed of John Garitee and representatives of the firms of Sharpless & Bros., Thornton Barnes, Sharpless & Carpenter, Simons Bros., Shannon & Sone, George Smith and Titus Bros., having been admitted to the meeting, Mr. Garitee addressed the Grange and heartily welcomed the delegates to the city. Invitations were given to attend various places of amusement, and participate in an excursion to Atlantic City.

Governor-elect Luco, of Michigan, replied on behalf of the members, assuring the merchants of the appreciation of the Grange for the courtesies extended. The thanks of the body were tendered the committee.

At the afternoon session W. M., Put Darden read his annual report, which Bro. Johnston has sent us in full and which we may print hereafter. In the evening the delegates attended the Walnut-street Theater and witnessed Miss Minnie Maddern in *Caprice*.

### For Our Needy Brothers in S. C.

Some weeks ago we received a circular ostensibly issued by the W. M. of the National Grange, concerning aid to members of the Order who suffered by the earthquakes in South Carolina. As the circular did not have the proper certification, we withheld it from publication, and wrote to Bro. Put. Darden concerning it. He replied that the appeal was genuine, and that its lack of official certification was because of the haste in which it was issued. In his letter Bro. Darden assures us that much distress exists among the farmers living along the coast of South Carolina, owing to the recent earthquake, and desires us to call the attention of the Patrons and farmers of California thereto, in such manner as we may deem best to secure the sufferers relief. He also transmits a copy of a letter from E. L. Roche, P. M. of Ashley Grange, to Hon. J. N. Lipscomb, Master of the State Grange of S. C., presenting the case as follows:

WORTHY MASTER:—My personal attention has been drawn to the condition of a number of farmers in the lower portion of this State, within the range of the recent earthquake shocks. They have suffered very severely from that calamity, their dwelling-houses and other buildings having been seriously injured. The chimneys and foundations are thrown down and demolished, and the houses in such a state as to render them uninhabitable and exposed to the weather. There are numbers of such instances in all parts of the coast belt of this State.

The near approach of fall and winter necessitates immediate attention to these matters, and in nearly every one of these cases the farmers are unable to make the needed repairs. Unless some outside aid can be obtained, these deserving and industrious people will suffer still more severely than they already have.

Not living inside of any incorporated city or town, these sufferers cannot obtain relief from the generous contributions sent already by our fellow-citizens. It is almost impracticable for this fund to reach the secluded country spots where they dwell, and indeed it is doubtful if the contributions, already sent, can do more than aid the needy in the city and its suburbs.

It has therefore suggested itself to my mind that an appeal made to the farmers of the country, through the National and State Granges, might not only result in the relief of their destitute brethren of this State, but would also give the opportunity to the agricultural interest to show their generous and kindly impulses. Their charity would go directly to farmers and grangers.

The first Grange in this part of the Union was the one established in this very vicinity, and the Order has always been popular with the farmers of this section. Very many of the present sufferers have been good members and supporters of the Grange.

What more desirable and grateful act than to open the way for the farmers of the country to aid those of their own calling, in this time of earthquake and distress?

To this feeling and fraternal appeal we need add but a reminder that Eastern winters, even in the "Sunny South," are fraught with frosty rigors such as California valleys seldom know. Any Granges or individuals who feel able and willing to extend somewhat of the asked-for aid should remit their offerings directly to Bros. E. L. Roche and A. B. Rose, of Charleston, S. C., who have probably ere this organized a board of relief.

### A High School for Yuba City.

At a late meeting of Yuba City Grange, Mrs. M. C. Smith offered the following:

WHEREAS, We possess a portion of the fairest and most productive of our State, which we expect to leave to our children as a goodly heritage; and

Whereas, Our citizens are a public-spirited, liberal-minded class of persons who have the good of our locality at heart, and desire our children to be fit inheritors of the aforesaid goodly heritage; therefore be it

Resolved, That we, the members of Yuba City Grange, devote our best energies and exert our influence by giving of our means, our time and our talents, to the furthering of some high-school project which will place in our midst an institution of learning that will meet all our requirements, thereby preventing all necessity of sending our children away from home influence to acquire what is styled an education. And be it further

Resolved, That a committee of seven be appointed to take this matter into consideration and to agitate it until we at least know the public mind.

In favorable notice of this movement, the *Farmer* says that the matter was brought up at the close of the meeting and no action had thereon, but it will be taken up at an early day and a committee appointed. Our county is second to no county in the State in wealth, according to population; in enterprise, as measured by the record and accomplishments of our people; in rate of taxation there is but one lower; in pleasant homes and surroundings we are not excelled. In one thing, however, we are sadly deficient. We run ferries, build bridges, construct roads and patronize railroads to get out of the county to purchase our supplies, including our advanced education. The money spent abroad by our people for educational purposes would easily build and maintain such an institution as would meet the requirements of our county for many years.

ST. HELENA GRANGE.—Worthy Lecturer Flint made St. Helena Grange a visit on the afternoon of the 6th, and writes the *Patron* that he found a neat, orderly room, its walls decorated with pictures of some prominent members who have received a demit to join a higher Order above. This Grange is not large in numbers, but compares favorably with any in

the State in point of intelligence; perhaps because the majority consists of sisters. Two sisters were instructed in the third and fourth degrees, and a fine harvest-feast was spread on the side-tables. In place of literary exercises, most of the members were called upon for quotations, which were well given with the author's name. The singing was very good, and under the head of the Good of the Order, several of the members made entertaining remarks. With the favorable surroundings, the W. L. does not see why this should not be one of the largest and foremost Granges in the State.

### State Grange—Session of 1886.

We continue the reports from Subordinate Granges as presented to the Secretary:

#### San Jose Grange.

San Jose Grange is still living, in fact it is a live Grange. The quarterly report contains all the statistical information of our condition and standing. I will simply remark here that, although we have not increased much in numbers, we have increased in activity, in fact we developed an energy that resulted in our expelling all drones. Those who did not attend nor take sufficient interest in the Order to pay their dues regularly were, in our opinion, better dropped from our rolls, consequently the number expelled may appear large, but those remaining are active working members.

We succeeded this year in erecting a fine horticultural hall for purposes of exhibition. It is 166x80 feet and without a pillar or pole or obstruction of any kind on the whole length or breadth of the building. It is furnished with galleries 10 feet wide on both sides of the whole length. We held a very successful exhibition of fruits and flowers on the 9th of August last, on the advent of the G. A. R. to San Jose, and I believe we gave our Eastern friends ocular evidence that all that is said in regard to the productiveness of California is not romance. To return to the inception of this enterprise, one year ago the Horticultural Society passed a resolution to hold a horticultural fair, appointed committees, met and adjourned, and repeated every week for three months. As several Grangers were members of those committees, they transferred the work to the Grange, and this transfer was made for the express purpose of securing the assistance of our sister to our enterprise, and subsequent events proved the correctness of our judgment in making the transfer. In less than a month we had a building rented and committees at work preparing for exhibits. Our Worthy Overseer visited us while it was in progress, and I think he will certify to its effectiveness.

The success of this exposition stimulated the Grange to attempt the erection of a building of their own, to be used for this purpose for all time. We have a board of directors, two of which are sisters, and those two develop more executive ability than the other seven. No reflection on the seven; it is simply in the nature of things.

FRANK DUNN.

#### South Sutter Grange.

I, as alternate representative of South Sutter Grange, beg leave to submit the following report:

South Sutter Grange, No. 207, P. of H., is situated in the town of Pleasant Grove, in the southern part of Sutter county. We are not near any railroad, and those members desirous of visiting us would necessarily have to come by way of stage or carriage. We have 62 members in good standing and most of them are staunch and true Grangers. We own a hall, which is well furnished, and also a Grangers' cemetery, which is in very good condition. We are out of debt and have money in the treasury for all current expenses. We have taken in no members lately, but had some names proposed at our last meeting. We meet the fourth Saturday in each month, but at our last session we talked of meeting in the future every two weeks. Death occasionally enters our ranks, and sometimes we find it necessary to suspend members for the non-payment of dues.

We had an average attendance of about 10 members at each session during the past year. We have our trials and disadvantages as well as our sister Granges, but if we will all have courage and "put our shoulder to the wheel," all will be well with us.

Our District Lecturer visits us occasionally, and we enjoy the companionship of himself and wife very much. The State Lecturer did not visit us during the past year, but hope to see him before long. We welcome any and all Grangers to visit as whenever convenient. Respectfully submitted,

ELLA M. JONES, Alternate.

#### Santa Rosa Grange.

Santa Rosa Grange, No. 17, P. of H., meets regularly on the 2d and 4th Saturdays of each month, at 2 P. M. Since the last session of the State Grange, the brothers and sisters of Santa Rosa Grange have been faithful to obligations, hopeful for the future of their Grange and the welfare of their Order, charitable to the needy and erring, and full of that fidelity which marks the career of worthy Patrons. The membership has increased but little during the past year, but that increase is of the most influential and valuable farmers in the vicinity. Those who are now members of Santa Rosa Grange have joined the good work for a worthy purpose, and intend to battle for the cause. There are enrolled as members 44 brothers and 45 sisters, making a total membership of 89, as

shown by the last quarterly report of the Secretary. Santa Rosa Grange has always taken a lively interest in all that tends, in any way, to develop the resources of Sonoma county, believing that therein much good is done for the Order, and that agriculture is thus made more honorable and more profitable.

The officers are generally prompt in the discharge of official work, and confer the degrees in an impressive and dignified manner. The harvest-feast is always celebrated when the fourth degree is conferred. Pomona Grange of Sonoma county gets some of its best material from the membership of Santa Rosa Grange.

During the past year the messenger of death has invaded the farm, and deprived Santa Rosa Grange of one of its laborers and faithful Patrons, Bro. John Peterson. During his prolonged sickness he was daily visited by the Relief Committee, who did much to console and comfort their now departed brother.

As long as the grand old Grange ship sails, there will be found among the membership of Santa Rosa Grange able and willing Patrons, who will be ever ready to man the helm, protect every spar and keep the colors flying from the masthead. No enemy will be permitted to tamper with the cargo, to endanger the lives or honor of any of the Patron Company, or to disgrace or hinder the progress of the ship, so long as the members of Santa Rosa Grange can prevent it. To the mystic word and well-known rap our Grange doors always swing open, and the weary but honest husbandman, or the modest Matron, is sure to find with the Patrons of Santa Rosa Grange a hearty and honest welcome.

E. W. DAVIS, Master.

#### Stockton Grange.

Number of members in good standing, 108; number of meetings in a year, 51; number of volumes in the library (of standard works), nearly 200; amount of money in the treasury, \$650; average attendance, 30.

The Mortuary Benefit is a decided success, and the assessments therefore generally promptly paid. Only two members have received the benefit, but those two show conclusively its beneficiary effect. Four members have been received this year and 16 have dropped or withdrawn, while death has removed two. Stockton Grange is out of debt. H. BOWMAN.

SISTER ASHLY, Alternate.

#### Yuba City Grange.

Yuba City Grange, No. 65, P. of H., meets at Masonic hall in Yuba City regularly on the first Saturday of each month, with such called meetings as the work demands. We have held 17 meetings during this Grange year, with an average attendance of 25 members. Members in good standing, 75; brothers 38, sisters 37. We have gained nine members by initiation, five brothers and four sisters, and lost one by death. Have held one very successful public meeting. We have a literary committee that furnishes us entertainment whenever an opportunity presents itself, at any session of the Grange; also a Musical Union, whose purpose is to drill our members in music, and furnish music on all occasions. The condition of Yuba City Grange, as compared with one or two years ago, shows a gradual improvement and healthy growth, largely due to the energy and determination of the worthy sisters. There are still many worthy persons within our jurisdiction that ought to become members of our Grange, and some means must be devised to induce them to unite with us, as we need them to make our society all-powerful for good, and they cannot afford to remain outside the gates when they once thoroughly understand the objects for which we are banded together, and the great advantage to be gained by organized effort. Personal effort on the part of each member of the Grange will accomplish all that is desired, if persistently and properly applied. And some general and systematic plan must be put in operation, and cannot be applied too soon for the Good of the Order, in our vicinity.

B. F. WALTON, Master.

TWO ROCK ON ROADMASTERS.—"H. A. X." writes the Petaluma Courier that Two Rock Grange discussed at its last meeting the subject of "Roads." The question was suggested by the number of petitions in circulation for the appointment of roadmaster. The general opinion was that the present road law was not the best by any means; but as we have it, the next best thing is to work for a suitable person for roadmaster—one who wants, and knows how to make, good roads, instead of working to get a good income out of a year's work. It was thought that the roadmaster should not only be held responsible to the people for a proper discharge of duty, but should be under the direct oversight of the supervisor of his district; consequently one should be appointed in every township. There seemed to be a general feeling that the next roadmaster should see that the money is "spent to the best possible advantage and not squandered in useless extravagance." These are some of the ideas expressed in speeches, and the following resolutions were adopted:

That we are in favor of the appointment of under roadmaster in different sections and neighborhoods to keep the roads passable and in repair, particularly in the rainy season.

That we believe that the least expenditures necessary should be made to keep up the roads, and the bulk of the money be spent for graveling or macadamizing the same.

We think the macadamizing (or graveling) should be done in the fall of the year, when farmers' teams are at leisure, so that the work can be done at the least possible expense.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Alameda.

CHOKED WHILE CHURNING.—Haywards Journal: Wednesday morning, Miss Emma Dobbie met with an accident that nearly cost her life. She was engaged in driving a horse, which was hitched to a power, attached to the churn, when she had occasion to fix a bolt in the tumbling-rod, and as she was about to resume her position, the cape which she wore became entangled around the rod, at once tightened about her throat, and choked her until she became unconscious. Her mother soon after found her insensible, and she was soon rescued from her perilous position. It was at first thought she was beyond recovery, but energetic efforts, after awhile, brought her to life.

THE PUMPKIN CROP on the Meek ranch, Geo. Gray informs us, amounted to nearly 800 tons. The average amount raised per acre was fully 30 tons. The boss pumpkin on the ranch weighs 225 pounds, and takes three men to put it into the wagon. It is not so much the weight that floors the muscular chaps, but the shape, as a man cannot get a good grip on it. Lots of the other pumpkins required two men to handle them. A dairyman from S. F. purchased 400 tons at \$3 per ton, delivered at Roberts' landing. Nine wagons are now engaged in hauling them to the landing.

#### Butte.

NICE RAISINS.—Oroville Register, Nov. 18: For the past ten years, C. L. Durban, of Mesilla Valley, has been putting up raisins, and each year they seem better than ever before. They are made from the finest raisin grapes, are cured in the best manner, and are large, luscious, and of fine flavor. We have tested them for several years past and know that in keeping qualities they equal the finest imported raisins.

#### Inyo.

WANTS.—Independent: We want a dairy near Independence; there is not butter enough made here to supply the local market. Fresh butter supplied to regular customers the year round sells for 60 cents a roll. We want more oats, barley and corn raised here; there is not enough for the local market. These grains are now worth at least \$1.75 per 100 pounds. We want more potatoes, more apples, pears, peaches, grapes. In a word, there is not enough of any kind of farm produce raised to supply the home market, though the soil has no superior in the State and there are thousands of acres of uncultivated lands.

#### Los Angeles.

FRUIT MARKET.—Express, Nov. 20: Fruit of all kinds is a scarcity in the Los Angeles market. Grapes are rapidly disappearing. Apples, outside of Missouri importations, which have been but light, are following suit, and the smaller fruits—berries, etc.—have gone for the year. Fruiterers throughout the city report a most successful year, and say the demand for their stock has increased 100-fold in the past two years. The second blossom crop of oranges are already coming into market, 350 boxes of the delicious fruit having been sent to town by raisers yesterday. The outlook for a bountiful yield of oranges was never better, and growers in consequence are jubilant over the prospect.

RAISIN SHIPMENTS.—Telegram, Nov. 21: Seventeen more carloads of raisins were sent from Santa Ana last week, making the total sent out so far this season 39,000 boxes. Their estimated value is \$75,000.

#### Napa.

PYRIFORM PRODIGY.—Calistogan: G. W. Logan, of Montecito, on Mt. St. Helena, has exhibited in this office a pear that weighed a little more than four pounds. The tree did not bear well this year, though there were several very fine pears on it, and all were blown off and bruised during the recent high winds. The tree bore 2200 pounds of fruit last year.

#### Placer.

NEW CROP ORANGES IN MARKET.—Record-Union, Nov. 17: Gerson & Co. received yesterday several boxes of oranges of the new crop from the Newcastle Fruit Co. The fruit was large, well packed, of very inviting appearance, and attracted a great deal of attention. Naturally, there was much comment relative to the adaptability of this section of the State to the growth of citrus fruits, and an undercurrent of gratulation that the crop is so early.

RAISINS.—A gentleman just returned from a trip through the foothill region brings back a sample of raisins from the vineyard of Hayford & Lobner, at Colfax, which are of a very choice quality, and will rank high in the market. The prospects are that raisin-making will become a lively industry in that vicinity, and orchards, too, are being rapidly put out in all directions. The raisin samples are from grapes grown upon vines three years old, from cuttings.

#### Sonoma.

HOPS.—Healdsburg Enterprise: A gentleman of much experience in hop-growing and hop commission business, who visited Healdsburg last week, informs us that Russian river hops are the choicest in this State, and command the best price. They retain their strength and flavor, during hot weather, better than any other hops grown in this State.

LIVE-STOCK FOR THE ISLANDS.—Petaluma Courier, Nov. 17: James Carty has, within the

last few days, purchased here for the Sandwich Islands 17 horses and eight graded bulls. All of them are valuable animals. Up to this date, Mr. Carty has shipped 40 horses, including the above, from Sonoma county, besides other stock that we have had no inventory of. Our farmers can feed their surplus products to stock that will in the end pay them better than grain or potato farming.

CUTE COLT.—Democrat: J. B. Rue has a four-months-old colt, with its mother, at the Anteeo stables. It is not tied up, but is allowed the free range of the barn. During its wanderings Thursday, it came across a sack about half filled with barley. Unable to get away with it all, the little animal picked up the sack, carried it across the barn, a distance of at least 50 feet, and laid it down before its mother. As the latter was enjoying the barley, Mr. Sanborn chanced along, removed the sack to a distant portion of the stable and hid it. It was not long before the little horse found where it was covered up with several empty sacks, and carried it back to its mother. The colt's last feat was witnessed by Mr. Sanborn, who was so pleased with its shrewdness that he allowed the mother to finish the barley unmolested.

#### Sacramento.

COTTON.—Galt Gazette: An experiment in cotton-raising was made this year in Buckeye valley, Sacramento county. The seed was planted on the 29th day of May by Mrs. Dr. Nistscke, the daughter of a Southern planter, who is well posted in the cotton industry. The result of the experiment was gratifying, and samples of the cotton are now on exhibition in the real estate office of I. M. Smith, of this place. The pods are large, and the cotton is as fine as we ever saw raised anywhere. No irrigation was used. All the plants are strong and healthy and bear a large crop.

#### Santa Clara.

COTTON.—Mountain View Cor. Mercury, Nov. 12: I send you to-day a stalk of cotton. Not on account of its superior excellence, but to show the wonderful possibilities of our soil and climate. The plot of ground on which this, with perhaps 50 other plants, grew, is a dry, gravelly soil, 80 feet to surface water, and situated very unfavorably for the growth of anything, shaded as it is on the south by a large fig and cherry tree, and on the east by tall pine and spruce. But in spite of these unfavorable surroundings, this cotton has grown without any irrigation, and no cultivation save the two plowings in preparing the land for planting. We shall continue to plant a few seed in our flower-garden for ornament, for it is a plant of considerable beauty when it begins to open its fleecy bolls, and at the same time continues to put forth its blooms.

ACREAGE AND YIELD OF CEREALS.—San Jose Times: During the past year the farmers of this county sowed to wheat for grain 44,528 acres; for hay, 37,046—an increased acreage of nearly 4000 acres over the previous year. There were sowed to barley for grain 40,147 acres; for hay, 31,924—an increased acreage of 13,660. To oats there were sowed for grain 475 acres, and 19,476 for hay—an increase of nearly 1000 acres. The results of this year's crop as ascertained from the dealers and producers are flattering. The amount of wheat produced has not been up to that of former years, neither has the quality been up to our previous standard; still, the crop has been good. A great deal that was sowed for grain was cut for hay. Careful estimates place the yield at about 8000 to 10,000 tons. The prices obtained by our farmers have not been satisfactory, \$1.25 per cental being about the highest realized. The yield of barley has been very good. Estimates place the crop at about 20,000 tons. The quality is unsurpassed. The chevalier was unexceptionally good, while the common was much above the standard, and some reached as high as 51 pounds to the bushel. Nearly all of the last crop of chevalier was engaged early in the season by English firms. The common barley, being so fine, has been in considerable demand for the same market. This is the first shipment of common barley to England. As to oats, very little has been produced except for hay. As a grain it does not yield so profitable a crop as barley. The same may be said of rye. As to hay, this season has been very favorable, and the yield is up to the average. The prices are fair. There is very little old hay left over, and the local dealers are feeling confident of a rise in prices.

#### San Joaquin.

LEEVEE ON FIRE.—Stockton Independent, Nov. 17: A gang of Chinamen are remodeling a levee on the farm of J. M. Learned, on the Sacramento lower road. Yesterday afternoon a fire broke out in the dry grass surrounding their camp, and the flames spread to the levee, igniting the peat blocks used in the construction. The Chinamen were fighting the fire several hours before it was brought under control. It is supposed to have been caused by the careless dropping of a cigarette in the dry grass.

#### Santa Barbara.

A CURIOUS EXOTIC.—Independent, Nov. 13: Dr. L. G. Yates has a curious plant in bloom for the first time in Santa Barbara. It was sent from Panama under the name of the "Panama Lily," and had somewhat the appearance of a large scaly bulb. Mr. Tebbetts gave the doctor one of them to see what it would do. It was grown in a flower-pot, changed into various sized boxes to accommodate its growth, and was

supposed to belong to the genus *Foucroyia* until some weeks ago, when it began to throw up from its center a shoot which attained a height of some 15 or 20 feet, somewhat resembling the flower stalk of the century plant. It now has a large number of green and white bell-shaped flowers, which are very fragrant, having a peculiar, spicy odor. The doctor has some of the flowers at his office. The plant is probably allied to the Agaves.

#### Siskiyou.

GLANDERS.—Yreka Union, Nov. 10: It is reported that several horses at the railroad front afflicted with glanders are turned loose to run at large. The Board of Supervisors talk of sending Dr. Turlinger down to investigate and see whether it is glanders or not, that it may not get scattered among the horses of Siskiyou. It would be very damaging to stockmen if it once gets spread. Persons knowing horses to have glanders and not killing them are laying themselves liable to a severe penalty, as there is a strict law against allowing horses to live afflicted with glanders.

#### Tulare.

MAIZE AMAZING.—Times, Nov. 18: There is on exhibition at the office of G. A. Botsford, three stalks of corn, grown in one hill, that are 18 feet in length. They were raised on the ranch of Joseph H. Thomas, one and a half miles east of Visalia. Each stalk bears two ears of corn of uncommon size for this section of country, of the variety known as "Big White." This same variety has been known to produce 100 bushels per acre, and Mr. Thomas gathered from the 40 or 45 acres he had an average of 70 bushels per acre. He planted the crop May 1st.

#### Yolo.

HUGE FRUIT-DRIER.—Mail: Glenn & White have completed a raisin drier of 160 tons capacity for the famous Briggs vineyard near Woodland. This is the largest raisin or fruit drier on earth. It is a substantial frame structure, two stories high, and 46x136 feet upon the ground, built according to plans tested by Byron Jackson, and the design of it was made by him. He also, we believe, put in its engine, piping and machinery. The fruit is placed on trays, which are loaded on cars, which run on a track extending into the long hot-air chambers. By means of an immense blower, operated by steam, a young African sirocco is kept passing over the grapes for seven or eight days. At the end of this period the cars are drawn out and the raisins are ready for the processes preliminary to packing. The heating of the air is effected by steam. This drier will hold 36 cars or trucks, and as we said, cure 160 tons of grapes per week. It is declared to be a grand success.

GRAPE MANURE.—Democrat, Nov. 18: The farmers of Yolo county are using the refuse of the wineries for a fertilizer with good results. After the grapes have been crushed, the seeds, stems and skins are gathered up and carried off by the farmers, who dump them on their lands and plow them under. It would seem as if there was no waste to the grape, and no limit to its resources.

MUSCATELLE RAISINS.—Henry Bros., Blacks Station, have presented the Democrat office with a box of cluster raisins of the Muscatelle variety, which they have just put up, as fine as we have seen in this county. They have 75 acres of Muscates, Muscatelles and Sultanias, all in good bearing condition. They have had fine success in curing the raisins and will finish packing this year's crop of 3000 boxes in about three weeks.

#### NEVADA.

CATTLE IN MASON VALLEY.—Lyon Co. Times: N. H. A. Mason has driven from his King river ranch a herd of 800 head of steers to his Mason Valley place on Walker river, to feed during the winter months. He also drove 950 head from the Malheur country, in Oregon, to the Humboldt House, and from that place he shipped them by rail to Wadsworth, thence drove to Mason Valley. The extreme low price of hay in the Walker river country induced Mr. Mason to try the experiment of moving his steers from his northern ranges to its lower and milder valleys, for the purpose of winter feeding. He has now on his Mason Valley ranch some fine shorthorn Durham bulls, and a few days since purchased the herd of imported Hereford bulls recently on exhibition at the State Fair at Reno.

WASHOE CO. APPLES.—Virginia Chronicle: A box of apples from Smith's ranch, in Pleasant valley, was received here as a sample of the product of that locality. The apples are dark red, of medium size, and are pronounced by all who have sampled them the most deliciously flavored ever brought to this market. Mr. Smith realized \$1000 from the sale of his apple crop this season.

FAIR AT PHOENIX.—The Arizona Association has just held its third annual exhibition at Phoenix. Hon. De Forest Porter made the opening address. There were hall displays of horticultural and other products; an aquarium of Arizona fish, including carp; a stock-show, embracing Shorthorns, Devons, Ayrshires, Holsteins and Galloways—in all, a hundred head or more—and numerous races.

THE hotels in Fresno county are all reaping a rich harvest. They have not accommodation for all of their guests. This is the case in all of the counties south of Merced.

### Higher Ground.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

We who live true and just,  
With aim set high,  
And feet that spurn earth's sordid dust,  
Face toward the sky,  
Who render what is due  
To God and man,  
Live Christian-like and true  
Thro' life's brief span,  
Will climb to higher ground  
As we grow old;  
Catch glimpses of heights far beyond,  
Illumined with gold.  
The love of wealth and power  
We cast away,  
And aim but for the brighter dower  
Of an eternal day.  
Passion and pride subdued  
Beneath our feet,  
Life's grandest lessons understood,  
At last we greet  
The close of this eventful stage  
That we call life.  
Is it not grand? A good old age  
With wisdom rife?  
So climb we steadfastly  
To higher ground,  
What tho' our brows serene  
Are silver crowned?  
Is it not splendor shed  
Thro' gates of gold,  
With faint reflections on our head,  
As we grow old?  
But the full flood of that sublime  
Light far away  
Is not revealed in earthly time;  
But endless day  
Breaks grandly, gloriously,  
On Beulah's crests  
As, journeying upward, we  
Find perfect rest.  
And tho' stern sorrow sends  
Trials to the soul,  
Life's darkest clouds are often gemmed  
With gleams of gold.  
Be ours forever upward!  
With longing sight,  
Until our wand'ring feet shall press  
Eternal heights.

Arcadian Heights, Napa Co.

### Miss Elizabeth.

[Written for the RURAL PRESS by ALICE DENISON.]

Not a very wonderful woman was she—any one would have told you that; only a dress-maker, and a busy one, too, ever since she had come to the bustling, practical town of Atwood, a score of years ago, and nailed the modest sign, "Elizabeth Elton, Dress and Mantua-maker," to the one broad oak that shaded her modest dwelling. People liked her, there was no question about that; her charges were moderate and her fits perfect, and there was much that was attractive in her cozy little home with its clinging vines and blossoming roses; but as to Miss Elizabeth herself, the most romantic schoolgirl would never have dared to suggest the word "sentiment" in connection with her, even had she thought it, which was not likely. Not that she was morose or haggard. Quite the contrary; there was nothing in the trim little figure in the clinging gown of gray, which had a certain style and grace of its own, to suggest that.

The soft brown eyes might have spoken volumes, but they never did, nor allowed others to. When she first came to the place, a few busy-bodies decided that she had a history and determined to learn it; but a blind mule trying to burrow in solid rock would have made greater headway. She met all their advances with sweet but impenetrable reserve, and finally they ceased to speculate about this princess in disguise, and she became simply "Miss Elizabeth, the dressmaker." She attended to her business strictly, seldom went out except to church and for a walk on the beach with her little sister Aline, who had grown in their 12 years' life at Atwood from a tiny slip of a child, with blue lakes of eyes, into a tall girl who looked as near like a briar rose as a girl well could. There was the same bloom and freshness and swaying grace. She was a girl who with an heiress' dowry would have had throngs at her feet, but who as simple Aline Elton, with no protector or fortune but Miss Elizabeth, might be charming but could never be dangerous. So thought the girls of the village who petted and patronized her by turns, or would have done so, but somehow a look from

Aline's blue eyes was sufficient to check the most supercilious. She exacted respect, and she received it. Studious at school, though roguish and laughter-loving elsewhere, she was a general favorite. The affection between the two sisters amounted almost to adoration.

Elizabeth's one thought in life was Aline, and Aline's intense desire was to become a teacher that she might loosen the bonds of the "poor slave of the wheel," as she sometimes laughingly called her sister. This was not to be wondered at, for Elizabeth had worked, thought, planned, dreamed of this one wee lamb as the only link which bound her to life, and loved her sister with a passionate intensity of which even Aline herself never dreamed. For her the small parlor was kept bright and cheery, decorated with flowers and beautified by a few fine engravings. For her, too, was the small piano, with its exquisite tone; and in the hours of dusk, when Elizabeth allowed the poor, needled-pricked fingers a few moments' rest, it was keen joy to her to listen to Aline's touch upon the ivory keys and her rich and powerful voice floating out upon the silence of night.

"Now there remaineth a rest—a rest for the people of God." How often the words of that tender chant had filled Elizabeth's soul and lifted her far above the wearisome toil of her daily life.

Ah! what a salt sea is the rolling tide of music; what pleasure it brings and what an undertow of pain. Did there come to her at these times visions of a life that had not been toil, but luxury and joy? If there did, she made no sign, and the days were filled with the dreary minutiae of cutting, fitting and planning styles for capacious patrons, who, destitute of taste themselves, were not content to accept hers without proper deliberation. Truly, a life little calculated to satisfy the higher longings of the soul, and if the patient brown eyes sometimes cast longing glances toward the Emerson and Shakespeare that lay untouched upon the small shelf surrounded by various other congenial book comrades, who could blame her? None except those who thought such books and a piano beyond "a dressmaker."

If Elizabeth dreamed that such unkind thoughts were given voice, no one ever knew it. Her real self was hidden as completely as were the actors of ancient Greece by their masks. She did her humble duties quietly and faithfully, and if the years speeding by stole some of her bloom and elasticity, no one, not even Aline, marked the change; it was so gradual. Then, too, these self-repressed natures, who constantly shrink into shadow, are easily overlooked. The flowers of such a soul must be sought. Like the wildwood fern, they are content to hide beneath blooms of ranker growth.

"Sister," said Aline, coming in one evening flushed from her walk, "here is a letter for you. I think it is from Miss Prime. Open it quickly and see."

Elizabeth opened the letter quietly. It was from her old teacher—the one correspondent she had permitted herself to retain in her changed life. What the closely-written pages contained it is not our business to inquire; one paragraph alone concerns us:

"Who do you think I met yesterday? A ghost of the past—your old friend Arthur Hanum. He asked many questions about you, and you must not be surprised to see him soon. He is changed, of course, more mature and a little gray, but to my mind handsomer than ever and very rich. Not that that changes any personality, but you and I, who have lost wealth, know what large opportunities it gives for mental culture, and Arthur Hanum, never a dunce, has naturally improved. 'A decade of years and more since he saw you last,' he said, and he has never married. Now I have no desire to meddle; I never knew what passed between you before he left; but, my dear, there comes an Indian summer into every one's life, and I think the glow of yours is approaching."

"What is it, sister? What does she say?" asked Aline, who had been waiting anxiously.

"Only that an old friend, dear—one who knew us both long ago when you were a wee girl—is in New York and will probably find his way to see us," answered Elizabeth, vexed that she could not keep the crimson flush from brow and forehead.

Aline, shrewd little puss, made no outward comment upon her sister's evident confusion, but out among the morning-glories she wove a charming little romance with her sister as heroine and this strange unknown friend hero in as fair a castle in the air as ever girl of 17 built.

I do not like to go on. I would like to leave these two sisters happy in their innocent love and wholesome toil; but if I am to tell the story at all it must be truthfully. If only one could pause when things are pleasant and not pass on to the shadows which always come!

"Why should I expect? why should I care?" said Elizabeth to herself in the solitude of her chamber that night. "He never spoke; it was only a summer's flirtation that he has doubtless forgotten. And I—am I a woman so lost to womanly dignity as to care for a man who has never thought of me save as a friend? He admired me then, but the belle of a gay circle, the beauty of 18, is a vastly different person from a faded woman of 30 and—the village dressmaker."

She pronounced the words with lingering, stinging emphasis, and going to the mirror pushed back the heavy masses of black hair

and gazed long and earnestly into it, marking every line and token of years with unrelenting sternness.

"Why, he will scarcely recognize me as Bessie Elton. I wish—I wish he wouldn't come. My past life is dead; why should its ghost arise to haunt me?"

Then, obeying some sudden womanly impulse, she took a necklace of rubies and laid them on her shining hair.

"I remember when he said these became me as a rose's crimson petals its golden heart, and then he said— But why should I recall those words of love? That was carrying our flirtation too far, too far; and he left me without one word of farewell afterward. My woman's pride shall make me spurn him, or at least treat him with cold indifference. A stranger he is and must be. Why does he come to view the wreck of my life? Was not my burden hard enough before?"

So she resolutely tried to banish him from her mind and go on with her daily tasks, and when he was announced, one evening, she made no change in her simple dress—no ribbon or flower should bring a false bloom to her faded cheek—but went into the small parlor calmly and quietly. Their meeting would have excited no comment from a stranger. A pleasant greeting between old acquaintances—that was all. But at last the inward feelings of his heart burst forth:

"Bessie—Miss Elton—is this your life? You—how can you stand it? Why have you come here?"

"To support and educate my little sister, sir," she said, with grave dignity, though her voice trembled. "Do you not know? Have you not heard of my loss of fortune, parents, and consequently of friends? I came here because I was not likely to meet those I had known. I had to work, and the taste in dress that had once been envied by a gay circle of butterfly friends now became my own support and Aline's. I had accomplishments, it is true, but so common are they that we must have starved had not my genius for dress come to the rescue. It is the bright little needle so frequently despised that has been chiefly my friend."

"Yes, and the brave soul that kept it going. Poor little hands! Brave little hands! Oh, Miss Elton, how different both our lives might have been had your answer been different in the long ago."

"I do not understand," and the brown eyes looked out questioningly from a very pale face.

"Do not—can it be? Did you not get my flowers, with their concealed note, asking you to be my wife, and wear the white roses I sent?"

"No."

"Can it be that a boy's romantic fancy has blighted two lives? Why did I not ask you instead of writing? Because I did not feel myself strong enough to hear the word 'no' from Bessie Elton's lips, and—would it have been otherwise? O Bessie! we have lost the best part of our lives, perhaps. I am but a middle-aged man, with all the fancy and fire of early life deadened, but will you not come to me and let me make up to you a part of what you have suffered? I have never forgotten you, Bessie—I never dared to hope; when I left I could not say farewell, but all these years your bonny brown eyes have been a beacon light in my memory. Let us forget the past and begin a new life in the present."

Elizabeth's face was very white, but her voice was firm when, after a moment's pause, she answered:

"No, Mr. Hanum; the tide of 13 years cannot roll by without leaving its trace. Your life has been one thing, mine another. You have spent the time in the accumulation of knowledge, the improvement of your intellect. The few locks of white upon your brow were not caused by agony of soul. You stand today in the prime of your manhood, while I—well, I," she said wearily, "am old. Women age so much more quickly than men, and my life has been one of constant toil. There has been no time for mental growth or expansion, and so you see, Mr. Hanum, that it cannot be. I thank you for the offer, but I am no fit wife for you now. Besides, think what would be the world's verdict upon your nuptials with a dressmaker. Nay, I know what you would say; but wait. If, after we have had a little time to grow into a knowledge of each other, you still desire it, I may consent; but not now. I would wed no man to lower his pride by my presence, and I am sure that you will agree with me after a time."

This was Elizabeth's answer which his earnest entreaties could not change. He was a friend, and was received on that footing alone.

The days passed swiftly and pleasantly away, and the dainty work grew under Elizabeth's swift fingers. The strange new influence that had come into her life was bringing light to her eyes and bloom to her cheeks. What a wonderful beautifier is love! It was never spoken of, but it brightened Elizabeth's life in a thousand ways. Dainty baskets of fruit and flowers found their way to her home, and some way there seemed more time for the writers she so loved. Read aloud by his pleasant voice, they gained a new meaning, and through the chain of their lives wound Aline in and out like a shining thread. Mr. Hanum seemed charmed with her, and nothing pleased Elizabeth so much as to watch the growing friendship between the two.

One night she sent them away for a walk and remained behind to finish a piece of work.

Completing it, she thought to give them a pleasant surprise, and walked out to meet them.

She saw them sitting on the sand watching the sunset on the sea; and walking softly, so as to startle them into merriment, some words caught her ear, and she paused, unable to stir from the spot.

"O Aline! will you not be my wife? I love you so! Can you not love me a little? Only say yes, and your life shall be one dream of delight."

The listener swayed as if about to fall, but by a strong effort controlled herself.

Aline's voice broke the stillness.

"But, Mr. Hanum, I thought you were engaged to my sister. She loves you, I am sure."

Then he told her, in low, eager tones, what the reader already knows, pleading with her to become his wife.

"And your sister shall never be separated from you, dear. She shall be my care as well as yours, for she is noble and true."

Elizabeth heard no more. Back to the house she went, fast, lest she fall by the way.

"O my Father!" she prayed—"my mother's God! Help me never to let them know. Yes, it is best so. My sweet Aline! She will be happy. I have not toiled in vain. She will make him happy, too, and be a far more suitable wife than I could ever be."

Did the tempter whisper, "She in her fresh young beauty could win any love and be happy—why should your love be sacrificed?" If so, she fought him back.

"For Aline's sake," she whispered. That had been her watchword through all the toilsome years, and she murmured it still over and over through the martyrdom of her rejoicing with the happy pair.

For Aline's sake the dainty laces grew into a robe of beauty, a wedding garment fit for the lovely girl. Elizabeth did as she had always done—she threw her whole heart into her work, and at last it was finished and the time had come. Aline looked like a spirit in her cloud-like dress, and she kept tight hold of her sister's hand until led to the altar.

"Stay by me, dear. You always have, and I am frightened," she said.

Elizabeth was very calm, very quiet, and she encouraged her sister by a few sweet words that sent the color back to the flower-like face. I think I have never seen such a look of perfect peace on any face as that which Elizabeth's wore as she waved the bridal pair good-by from the little porch.

They found her next morning, with the same sweetness of expression still on her face, dead, in the little room which the sisters had occupied together.

"Heart disease," the doctor said. Perhaps it was.

### The Horsewoman.

At the Ladies' Tournament during the late Ventura Fair, Mr. C. L. Woods, of San Luis Obispo, one of the judges, recited the following verses of his own composing:

FAIR LADIES: Since it is a pleasant duty Of man to worship at the shrine of beauty, Since all we gain by argument or arms We count as dross compared to woman's charms, You will perhaps the better understand The task your humble servants have in hand.

The horse—that beautiful servitor of man— Bearing his rider in the battle's van, Proudly advances through the smoke and flame To victory, to glory and to fame; Or, if upon the turf he goes for meed Of proud pre-eminence in point of speed, He nobly strives to win fair honor's place, And be the first and foremost in the race.

But though upon the turf or on the field, Our admiration to the horse we yield; Yet still some charm he ever seems to need— 'Tis woman's grace that beautifies the steed.

The broad Pacific, with its ceaseless roar, Sends wave on wave upon Ventura's shore; Yet though each wave be powerful and grand, Moving majestically toward the land, Something each lacks, until before our eyes A crest of silver flashes to the skies, Making of it the ocean's mighty swell— Grand in itself, and beautiful as well.

So we admire the horse, whose strength and pride In various ways so often have been tried; But when fair woman lends her charming grace To guide his course, to regulate his pace, Ah, then, where we admired so much before, To tell the truth, fair ladies, we adore.

PROPAGATION OF FLIES.—Their particular office appears to be the consumption of those dead and minute animals whose decaying myriads would otherwise poison the air. It was a remark of Linnaeus that three flies would consume a dead horse sooner than a lion could. He, doubtless, included the families of the three flies. A single fly, the *Naturalist* tells us, will sometimes produce 20,000 larvae, each of which, in a few days, may be the parent of another 20,000, and thus the descendants of three flies would soon devour an animal much larger than a horse.

A SCIENTIFIC CURIOSITY.—One of the curiosities of light and heat is the fact that rays of the sun should pass through a cake of ice without melting it at all, as is the case when the thermometer stands a little above zero. That the rays of heat actually penetrate the ice is shown by the fact that a lens of ice may be used for setting fire to inflammable substances.

## What I Saw at a Fair.

[Written for the RURAL PRESS by S. P. SNOW.]

I saw the races. I saw them all the afternoon. I went with the full determination that if there was good in them I would find and enjoy that good. But, alas! I saw it not. Of course, I must be wrong; for when so many of the best people find so much that is praiseworthy in them, the good must be there. I must have been born with a sense lacking—the sense of horse-racing—for I could find no sense in it.

"But we want to speed our horses; we want to breed from those of most wind, and bottom, and speed."

"Then run against time, and save all this costly track and soul-killing excitement, and loss of time."

"Pshaw! there would be no interest, no competition, no effort, and the whole fabric of your fair would dwindle to nonentity."

But about what I saw. The first thing I saw was a man being dragged over the sand, behind his broken cart and his foaming steed. A wild cry of excitement ran through the multitude, for we are a sympathetic people. There was hurrying to and fro; the immense crowd rolled like the heaving billows when the roaring winds of an eastern storm strike the waters. There was mounting in hot haste; the steed and horsemen flew to the scene of the mishap. There was silence for a brief moment; brave men and fair women speaking with bated breath, when word was passed along that "the man's back was broken—nearly;" then, "he is not much hurt, only badly bruised and barked;" then, "he is all right, and will soon take another cart and try again." Better luck next time.

Still I stayed on, hoping to see better things ere long. There was an auction—selling "pools;" whatever that may be I am sure I don't know. I asked a country friend, but he was ignorant as I about it. He seemed to think it some kind of a "sell," and a little boy cocked up his eye in a very funny manner, thrusting his tongue into his left cheek, and said: "You bet." But this I never do.

"Five, five, eight, ten, ten, ten dollars, and sold to Mr. A.; name your horse. First choice, two, three, three, five, five, five dollars—sold to Mr. B.; what horse?" and thus on at intervals all the afternoon. I hope there was no gambling or betting in all this; at least I didn't see any money put up or change hands. Somebody says: "He who is willing to take money for which he returns no honest equivalent is not on the road to the highest level of morality." But I dare say he was an old fogey anyway, and lived in the remote ages.

But soon other races were made up and run, and others and still others to the long, dismal, bitter end. I saw a couple of wires stretched across the track, which I at first thought were for the horses to jump over, as they have the "Flying Dutchman," I believe, and "Lightfoot" and so on, but I think they must have been for some other purpose, as none of them attempted the feat.

When the first racer swung round the circle there would come up an awful yell from the crowd, and I would look round to see what had broken loose, but I soon saw it was only because his horse outran the others by a length or two. Pshaw! I'll warrant Bonner's horse could do even better, and if he could I would care not a snap, nor yell like an idiot.

"Time, three hours and a quarter," says somebody they call Judge, in a high, airy building, and the rabble laugh. "Three minutes and a quarter," says the Judge, thinking he had made a mistake.

There were a great number of people to see this little bit of fun, fair women and brave men; I counted, I think, some 75 carriages, and there were likely 25 more that I didn't count. A few dirty oaths went hurtling through the otherwise pure air, but the assemblage was quite curt and polite. Some of the best citizens were there; I was there myself. I saw, or tried to see, all, but alas, in vain. I went away with my fingers in my mouth, and my spirit in the dust. I was disappointed, dejected, sad and despairing, without joy and without hope. For I know that the county must have race-horses; it is, in fact, her greatest need. The worthy president has made diligent inquiry (he must, unfortunately, have as little taste for horse-racing as I, or he would have gone himself) and hears of no fighting, no quarreling, no drunkenness, at the race-course. Would it be a work of supererogation to say the same of other portions of the fair grounds?

I left the race-course with thoughts too full for utterance, and returned to the pavilion. Here, indeed, was beauty, and the incubus was soon swept from my mind. Here was nature, here was art, here was culture and skill; here was wonderful advancement and progress, and my soul was satisfied. I said in the fullness of spirit, "Our fair is a grand success."

ANCIENT ENGINEERING.—One of the most extensive and remarkable works of the engineers of Ancient Rome is the Cloaca Maxima, well known as the great common sewer of that city. It is of Etruscan architecture, and still serving its original purpose, is as firm as when its foundations were laid. It was built at least 2400 years ago, and is one of the few monuments of Rome whose antiquity has never been assailed.

## YOUNG FOLKS' COLUMN.

## With All His Might.

Charlie Haines' short, curly hair stood almost upright about his young head as he clutched it in his endeavor to get some aid in mastering the long rule in division. He had been making this grand effort to study for about ten minutes, and as the day was bright and beautiful, and Saturday at that, the minutes seemed like so many hours. He sat on the porch outside the sitting-room door, so his eyes were much more frequently on the garden than on his book, and his thoughts were more than a mile away at a quiet little stream where he often went to catch fish, and where he was going this morning if the arithmetic lesson was ever learned.

"I can never get this, mother," he called into the window.

Mrs. Haines looked out.

"Are you trying with all your might?" she asked.

"I can't any way," he answered, evasively.

"I am afraid you have already forgotten the text you learned last Sunday."

"O mother! that said 'hand,' not head."

"Whatsoever thy hand findeth to do,"

"So you are willing to give the Lord your hands, but not your head?"

Charlie muttered something about doing just what the Bible said, and began repeating the rule like a parrot, without any sense of what the words meant. After awhile he could say a few lines stumbly, when not looking on the book; and he cried out:

"I know it now, mother."

"You do?"

"Yes, ma'am; I really do. May I go fishing now?"

"Yes, and when you come back I shall hear you say the lesson."

He bounded up with an "All right," rushed into the sitting-room, and tossed the book upon the table.

"Does not 'with thy might' mean doing it right?" Mrs. Haines asked.

Charlie put the book in its proper place on top of the other schoolbooks.

"You make so much of that rule," he almost complained.

"Isn't there much in it? When we talked about it last Sunday evening, we concluded that it was a most perfect guide to all our actions."

"Yes ma'am," Charlie's always-respectful lips answered; but he secretly wished he had not learned that verse last Sunday, or talked about it in the evening, for his mother had all the week tried to make him guide his life by it. "Is my lunch ready?"

"Dinah will give it to you."

He kissed her good-by, and went into the kitchen, where Dinah, the colored cook, gave him a very large lunch in a very large basket, which basket he was to bring home filled with the fish he was to catch. With this basket in one hand, the fishing-rod in the other, Snap, his pet dog, following, he set off, a very happy boy, the rule in division all forgotten. It was a long walk, but Charlie was doing it for his own pleasure, so he did it with all his might. The creek where he fished was not a deep one, so there was no danger of his drowning, even if he fell in. He baited his hook, and waited patiently for more than an hour, but no fish accepted this gracious invitation to dine. Snap played about, chasing the butterflies, then lay down to sleep. Long before noon Charlie was weary of fishing without catching anything, and very hungry; so Dinah's ample lunch was taken from the basket.

"I think Dinah put up this with her might," he said to himself, "and I'm glad she did. Somehow when people do things with their 'might' and just as they ought to it's nicer for me. I wonder if it's nicer for mother when I do, and if the Lord does like it better. Want more, Snap? You're glad Dinah did it with her might, aren't you?"

The lunch over, Charlie and Snap went to sleep, while the line lay in the water to catch the fish the best it could alone. Charlie slept an hour, and when he awoke, proceeded to give Snap a lesson in sitting up. Poor little Snap was very sleepy after his big dinner, and felt like anything but sitting upright on his haunches for Charlie's entertainment; but he made great efforts, and finally succeeded.

"There!" cried Charlie, lying face downward, resting on his elbows, his heels high in the air, "I knew you could do it if you tried with all your might. All your might. That's just the way mother says I must do my duties. There! Sit up. Don't go down. Sit up! You're got to learn this lesson well before I let you go."

Snap gave a feeble bark by way of protest, and sunk on his forepaws, but Charlie set him up again, and made him sit there until he was not only able to sit up well, but to raise himself up. It was a tired little dog that was at last permitted to lie down.

"You've learned your lesson, any way, if you are tired," Charlie said to him. "I wonder if you hated it as much as I hate that rule in division; because if you do, why, you've done better than I have, that's all. I say, Snap, you did it with all your might, didn't you? If I had studied with all my might this morning, that rule would be learned now."

Charlie lay on the grass looking up to the blue sky, thinking for some time, while Snap rested beside him. He bounded up at last,

and suddenly drew his fish rod in with a jerk. "Come on, Snap!" he called. "We'll go home, and I'll get that arithmetic lesson. You're not going to beat me, old fellow. You tried with all your might to learn your lesson, and you learned it. That's what I'm going to do."

Mrs. Haines was more surprised to see him home early than to hear that he had caught no fish.

"I've come to learn my lesson," he said. "Mother," he added gravely, "I've been thinking about the verse, 'Whatsoever thy hand findeth to do, do it with thy might,' and I'm going to try to do with my might everything I do."

And he kept his word.

## GOOD HEALTH.

## To Prevent Diphtheria.

The Ohio State Board of Health have published a pamphlet, which urges the strict observance of the following rules:

1. When a child has sore throat with fever, especially when diphtheria is present in the neighborhood, it should be kept apart from others until a competent physician has determined it is not diphtheria.

2. When a person is known to be sick with diphtheria, he should immediately be separated from all others, excepting his attendants, and removed to a room which should be specially prepared for his occupancy.

3. This room should be prepared by removing from it all superfluous furniture, carpets, books, window curtains, and all similar articles not needed in the room. It should be as remote as possible from the family rooms—preferably in the upper story—and care should be taken to secure an abundance of fresh air, without exposing the patient to direct drafts.

4. No one should be admitted to the sick-room, except the necessary nurses and attendants.

5. No food or drink which has been in the sick-room should be partaken of by the well. The dishes carried in should be washed separately.

6. Under no circumstances should the bed-clothes or the patient's body linen be mixed with the other soiled clothing, or be admitted to the general wash, without being first thoroughly disinfected.

7. All persons recovering from diphtheria are dangerous, and should not be permitted to attend school, church, or public assembly, until, in the judgment of a careful physician, they are no longer a source of contagion.

8. No public funeral should be held of any person dying of diphtheria. In no case should any child be permitted to attend.

Then follow general instructions on disinfection, with rules for prevention of the disease, etc.

IS THERE A TOOTHLESS TIME COMING?—The American tooth, the dentists tell us, is something fast disappearing. What is to take its place they leave to conjecture. Whether a toothless race is on its way, or whether a new animal is to be evolved from the present human creature on this continent, is perhaps an open question. Whatever it is that may come to pass, the fancy recoils before the prospect. Children of 12 years often have \$100 worth of gold in their mouths, others needing as much quite as badly, but unable to afford the outlay. Children of 16 often wear complete sets of false teeth and other children innumerable have teeth that are decayed before they penetrate the gums, and that have to be filled as soon as they are in sight, the crumbling material and thin enamel, even then, giving but little to work upon. At first it was thought all this resulted from ignorance, from candy eating, from want of care and cleanliness. But it is now understood that in most cases the fault is inherent in the quality of the tooth, and the only remedy so far suggested is a diet calculated with special reference to the making of sound bone. This is supposed to be found in the coarse grains and food of similar character, and the most confirmed beef-eater alive yields to the superiority at this point of the little kernel of grain that feeds his beef itself.—*Harper's Bazar*.

SIGNS OF THE TONGUE.—The tongue is the indicator of the system. A white-coated tongue indicates febrile disturbance; a brown, moist tongue indicates disordered digestion or overloaded *prima via*; a brown, dry tongue indicates depressed vitality, as in typhoid conditions and blood poisoning; a red, moist tongue indicates debility, as from exhausting discharges; a red, dry tongue indicates pyrexia, or an inflammatory fever; a "strawberry" tongue, with prominent papillae, indicates scarlet fever or rotheln; a red, glazed tongue indicates debility, with want of assimilative power of digestion; a tremulous, flabby tongue indicates delirium tremens; hesitancy in protruding the tongue indicates concussion of the brain; protrusion at one side indicates paralysis of the muscles on that side.

STOPPING HICCUGH.—A Brazilian physician states that refrigeration of the lobe of the ear will stop hiccough, whatever its cause may be. Very slight refrigeration will answer, the application of cold water, or even saliva, being sufficient.

## DOMESTIC ECONOMY.

HOW TO KEEP CIDER SWEET.—Pure sweet cider that is arrested in the process of fermentation before it becomes acetic acid or even alcohol, and with carbonic acid worked out, is a most delightful beverage. The following scientific method of treating the cider to preserve its sweetness is recommended: When the saccharine matters, by fermentation, are being converted to alcohol, if a bent tube be inserted air-tight into the bung, with the other end in a pail of water, to allow the carbonic acid evolved to pass off without admitting any air into the barrel, a beverage will be obtained that is a "fit nectar for the gods." A handy way is to fill your cask nearly up to the faucet, when the cask is rolled so that the bung is down. Get a common rubber tube and slip it over the end of the plug in the faucet, with the other end in the pail. Then turn the plug so the cider can have communication with the pail. After the water ceases to bubble, bottle or store away.

WHY ENDURE STARCH-SCRATCHING?—"I was once riding in the cars through Kansas," remarked a gentleman, "and suffering excruciating misery from a pricking, irritating little point of starched stuff, such as a careless laundress will sometimes leave on a shirt band. I pulled, and rubbed, and tried to smooth it down; but the plaguey thing hung there, and I was fast losing all interest in life. At Topeka a gentleman got on board having on a fresh shirt. I saw him rub his sleeve once or twice with an air of annoyance. Ah! thought I, a fellow-sufferer. And I felt somewhat comforted. But suddenly he walked to the water tank, wet his fingers, ran them up his shirt sleeve, and returned to his seat with the air of a wise man made perfectly happy. It was a revelation to me! He had wet down the starch prickler. Years of happiness have been added to my life by that man."—*Exchange*.

RAGOUT OF BEEF.—Cut cold underdone beef into neat dice, lay in a pot with minced onion, parsley and enough gravy or broth to cover it. Cook very slowly at the side of the range until tender, stir in a lump of butter the size of a walnut, rolled into a tablespoonful of browned flour, the juice of half a lemon, a teaspoonful of Worcestershire sauce and half a glass of wine; simmer one minute and turn out on squares of fried bread. If you have no gravy ready made, make it out of the refuse bits of skin, gristly pieces, etc.

APPLE MERINGUE.—Two cups of strained applesauce, four eggs, four tablespoonfuls of sugar for the sauce, one for the meringue; one tablespoonful of butter stirred in the sauce while hot; some good pie crust; grated lemon peel for seasoning; beat four yolks and two whites light with the sugar, and whip with the sauce; have ready a pie plate lined with nice crust, baked; fill with the mixture, spread with the meringue made of the remaining whites and sugar; brown lightly and quickly in a hot oven; eat cold.

LITTLE DUMPLINGS.—This recipe for little dumplings for stew requires sour cream and sour milk or buttermilk. Half a pint of buttermilk or sour milk, half a pint of sour cream, one teaspoonful of soda in the milk, two well-beaten eggs, a little salt, and flour enough, with which is sifted one teaspoonful of cream of tartar, to make a stiff batter. Drop the batter by the spoonful into boiling water, boil for 20 minutes until the outside is done, and put in the dish with the stew.

FRESH VEGETABLES SALTED DOWN.—Sweet corn can be salted in brine for winter use, first boiling and skimming the brine and then immersing the corn in it after it is cold; a flat stone should be used to keep the corn under the brine, and before it is used it should be freshened to a palatable degree by soaking in fresh water; the brine should contain all the salt it will absorb. String-beans, asparagus and egg plant may be similarly kept in brine for winter use.

DANISH PUDDING.—One cup of pearl tapioca, one pint cold water, one pint boiling water, one-half cup sugar, one-half teaspoonful salt, one cupful of currant or some acid jelly. Soak the tapioca in the cold water over night; in the morning put it into a double kettle with the boiling water, and cook an hour, or until transparent; stir often, add the sugar, salt and jelly. Stir well and put into a mold to cool. Serve with cream and sugar.

DRIED APPLE CAKE.—Two cupfuls of sweet dried apples, soak over night and chop; two cupfuls of molasses, and let it simmer over two hours; when cold add one cupful of sugar, two eggs, one-half cupful of sour cream, sour milk and butter, two teaspoonfuls of soda, four cupfuls of flour, four teaspoonfuls of cinnamon, one teaspoonful of cloves and one nutmeg.

PANCAKES (WITHOUT MILK).—Make a batter of four eggs, three tablespoonfuls of flour, a little water, a pinch of salt, and a little very finely chopped lemon peel; put some good frying oil into a frying-pan, and when it boils, drop some of the mixture into it; fry on both sides, drain it, sprinkle with powdered sugar and lemon juice; roll it and serve very hot.

## The Week.

We print the RURAL one day earlier than usual this week, so that our employees may have opportunity to enjoy the Thanksgiving holiday. The papers will not reach readers until after they have made their conquest of turkey, and we trust that naught will remain of the day but pleasant memories. The American people can generally be trusted to make quick work of the turkey problem, and American methods could be safely commended to the Czar.

Saturday of last week brought the widest-reaching storm of the season. It was quite a cold rain and brought from the north some of its normal temperature. Its extension south was at least as far as Los Angeles, where over an inch of water was precipitated. Heavy snows fell on the Sierras—in fact, snow was telegraphed as far eastward as Ogden. On the other side of the continent there was a complement to our storm, snow and rain being reported at prominent points all over the great west. Overland passengers arriving on Sunday dropped from the snows on the mountains into the bloom and verdure of the Sacramento valley—an experience which is becoming very

common, and yet one of which one never forgets his first impression.

The winter may now be considered fairly begun. The weather prophets announce heavy storms as forthcoming, and the working season in California is about to begin in good form.

## The Care of the Poor.

This is a problem that always presses upon the attention of the benevolent in our cities and large towns, especially during the winter. Even in this mild climate it gives much solicitude. In Cincinnati the question has received a solution, which, if not perfectly successful, is so generally satisfactory that a brief account of it may be of interest to our readers.

It was found there, as may be found in every city, that there were large numbers of persons securing aid from various sources, many from several churches or a number of individuals. Many of these habitual beggars were actually accumulating money in this way. Each church, of course, helped its own poor, as they do in all cities. But there were no facilities for knowing whether others were not aiding the same individual or families. Begging from door to door had become a positive nuisance, it was so extensive. There was much indiscriminate giving, and poverty and pauperism seemed to be fearfully on the increase. It was apparent that the money bestowed in this way was doing more harm than good. Under these circumstances, an organization was formed that is known as the "Associated Charities of Cincinnati." This article of the constitution describes its purpose:

Its object shall be the improvement of the condition of the poor. It will aim, first, to secure the proper relief of all deserving cases of destitution; second, to protect the community from imposture and fraudulent begging; third, to prevent indiscriminate and duplicate giving; fourth, to make employment the basis of relief when practicable; fifth, to reduce vagrancy and pauperism and ascertain their true causes.

There is a central office conveniently located, where a paid superintendent may be found who oversees the whole work under the direction of a board of managers. The city is geographically divided into 12 districts. Each district has a sub-board of directors who meet monthly in a centrally located office. This office is open about three hours every day, usually under the direction of a woman, who has a corps of volunteer visitors who carefully investigate every application for aid. Blanks are furnished each district superintendent on which to systematically report a full account of every person applying for aid to the central office. There a minute record is kept, so that any one in a few moments may learn all about the one applying, what aid he had or is receiving; what is his character, how long idle, etc. A circular, giving a list of all the districts with their boundaries, is freely distributed to all citizens. In that circular they are requested not to give to beggars, but to send them to the nearest office.

Now this system may seem a little bit formal, but according to the Cincinnati papers it works admirably. Street begging in that city has nearly disappeared, and the worthy poor are wisely aided, with clothes, food and work when possible. Duplicate charities, to the manifest injury of all concerned, are practically unknown. The churches generally heartily co-operate with the society, and are hence relieved of much responsibility. They are at least protected from professional frauds. The system, or one embodying its main features, is worthy of trial in all cities. This city is now infested with tramps and beggars; even little ragged children are sent out to solicit charity under various pretenses. They crowd around the rooms of the various benevolent associations, they flock around the station-houses at night begging for a place to sleep. An organization like that at work in Cincinnati might greatly reduce this amount of pauperism by weeding out the unworthy, and prove of benefit to the community by the judicious bestowal of its charities.

BULL BUTTER BULLETINS.—A bill passed both houses of the Vermont Legislature last week providing that all hotels or restaurants using oleomargarine shall put up large signs notifying the public of the fact.

The branch of the S. P. R. R. from Newhall is progressing rapidly toward Ventura.

## Hessian Fly-Proof Wheat.

EDITORS PRESS:—Mr. A. Y. Moore, of Tulare City, years ago a mill-owner and a merchant in Michigan, gave me an interesting statement regarding the introduction in that State of what was termed "Michigan Amber Wheat." In 1838 he obtained, from a distant friend, a pint of Mediterranean wheat, and after sowing it several years, and grinding it in their mill, he and his brother concluded it would be a disadvantage to have it grown by farmers in the vicinity, as the flour was not so white as some other kinds. But when it was finally found to be exempt from destruction by the Hessian fly, they sold it rapidly and profitably at double the price of ordinary seed wheat. A gradual but decidedly favorable change in its character and productiveness came with its repeated reproduction, and so far as Mr. Moore is informed, it remained uninjured by the destructive fly.

The leaves of this wheat, where they joined the stalk, possessed a flange so bent, it is said, that when the eggs of the maternal insect dropped, they were caught in a rounded recess and prevented from falling into the V-shaped recess formed by the leaf and stalk of other varieties of wheat, and where the eggs are usually hatched.

Mr. Moore was for years president of the State Agricultural Society in Michigan, and one of the organizers and directors of the State Agricultural College or University. We hope he will soon write for the RURAL, giving information on some of the important topics mentioned during our brief interview, and also add to the hasty notes taken as above.

These statements by Mr. Moore are certainly of interest, and we shall be glad to hear more from him. The facts he recites about his experience with fly-proof wheat being known as long ago as 1836, are corroborative of statements on record in Eastern publications. The Bulletin No. 4 of the U. S. Entomological Commission is a comprehensive compilation by Dr. Packard of all that has been observed of the insect since its introduction by the Hessian mercenaries during the Revolutionary war. It is shown that the "Underhill variety has for nearly a century been highly recommended." Dr. Fitch, State Entomologist of New York, stated that its fly-proof qualities were supposed to be due to the hardness or solidity of its straw. The fly laid its eggs freely upon the leaves, but it was seldom, if ever, materially injured by it. Throughout the Middle States a so-called "Mediterranean wheat" has long been in high repute for its fly-proof and hardy nature. In this district the "Lancaster," also a red variety, has been claimed for years to have been exempt from the fly. In Michigan, in much later time than that cited by Mr. Moore, the "Clawson" has become famous as a fly-proof wheat, and red varieties generally have done well in this direction.

The experiments at the University described in Bulletin No. 53 of the University Agricultural Experiment Station, and published in the RURAL in October, were undertaken to show how far varieties would prove resistant in this State. The records of these experiments will be published in the report of the College of Agriculture for 1886, and they will show that some varieties claimed to be resistant east of the Mississippi were so badly infested here as to be a failure. Such varieties are the Fultz and Molds Red. The Clawson, which is so highly praised in Michigan, is looked upon as a failure in New York, and in the University experiment the Clawson is recorded as "badly infested." This would seem to indicate that there is something in local conditions of growth, etc., as well as in the characteristics of a variety.

We are inclined to think that the reason advanced by Mr. Moore for the exemption of certain varieties has not been approved by later investigations. The eggs are not literally dropped by the female fly, but are carefully placed upon the surface of the leaf with her ovipositor and are firmly held to the leaf by a gummy secretion which accompanies them. Thus the fly sometimes places the eggs on the under instead of the upper side of the leaf, and they remain where placed. It is after hatching that the maggot makes its way downward between the sheath and the main stem. It is doubtful whether a maggot hatched from an egg on the under side of the leaf would ever get to its desired location, but might reach the ground instead. As for the downward turn of the leaf in certain varieties being the reason of their safety, a rather more rational explanation is mentioned in a letter from William Strong, of Kalamazoo, Mich. (Bulletin No. 4, U. S. Entomological Commission, page 14), in which he says: "A reason given by some why the fly does not injure red wheat as much as white is because the leaf of the red grows so long and slants down from the shoot so that when the egg hatches the maggot works down the wrong way, falls to the ground, and so many fail to

harm the wheat." In our opinion the fly-proof qualities of certain varieties rests, as Dr. Fitch intimated, in the character of the stem of the plant rather than its acting as a pitfall for the larvae in any way; but the matter has not reached demonstration yet, although the problem is about as old as the nation. What Mr. Moore says of the improvement of the red wheats from the Mediterranean countries when grown in this country is especially true with reference to California. They rapidly become more starchy, and consequently whiter and more acceptable to the millers.

## Ex-President Arthur.

The death of ex-President Arthur takes the country by surprise. Though it was known he had been an invalid for a year, still, as no definite account had been given of his disease, the hope was generally indulged that his unusually robust constitution would pull him through.

He was born in Fairfield, Vt., in October, 1830, and was therefore 56 years old at the time of his death. He had received the advantages of a collegiate education, went through the usual transmigration of a school-teacher to the profession of the law. His legal attainments and abilities were respectable, but he was chiefly known as a shrewd and successful politician. Nature was kind to Arthur. He possessed a fine physique, an amiable temper, and his instinctive urbanity made him many steadfast friends. He first became known to the public as quartermaster-general during the administration of Governor Morgan, where he rendered good service. He was indefatigable in efforts to enlist troops in his State and furnish them with abundant supplies during the Civil War. He occupied a seat in the New York Legislature for one session, and under the administration of President Grant won that some of all New York politicians, the New York custom-house. We are not aware that his integrity in this position was ever suspected. He was removed by President Hayes because he was indisposed to sternly apply the doctrine of civil service reform. This removal so exasperated Senator Conkling that, as a rebuke, he pressed Arthur's nomination for the Vice-Presidency at the Chicago convention in 1880.

No man ever came to the executive chair under more trying circumstances. It was well known that he was an ardent friend of Senator Conkling, had warmly espoused his quarrel with President Garfield, and was even in the conspiracy to re-elect Conkling and Platt. In a few weeks Garfield was no more. Since the tragic death of Lincoln the heart of the nation had not been so sadly stricken. Death apotheosized him, and yet such were Arthur's amiable discretion during Garfield's long sickness when the Government was practically without a head, his prudence and eminent good sense on coming into power, that he soon won the confidence and esteem of the people. His great urbanity and courtly manners were the charm of Washington society. Never were the sociabilities of the White House more brilliant. He was an ardent Republican, true and loyal to his friends, and his record is one that the nation may remember with gratitude and pleasure.

THE PORK PRODUCT.—From statistics at hand it appears that the great Western pork product will be larger than usual this year, and that even in the face of increased production prices are better than last year. The Cincinnati Price Current shows that the total number of hogs packed, at eight leading packing centers, from March 1st, is 4,445,000 against 3,820,000 a year ago, making an increase of 625,000, and for the entire time since Nov. 1st, an increase of 465,000. The export movement is liberal, especially so of lard, exceeding the corresponding time of last year in both meats and lard.

THE project of the Santa Rosa & Benicia R. R. is being pushed with vigor. A meeting in its behalf, held at Santa Rosa on Monday, is reported large and enthusiastic. Forty-five thousand dollars had been subscribed in one week. Other meetings are announced elsewhere.

FIRES in woodland, brush and stubble occurred frequently in various quarters during the dry, windy time preceding last Saturday's rain. In some cases the losses of wood, hay and fencing were quite serious.

## The Convention and the Shipping Problem.

### Earnest Consideration and Promising Accomplishment.

Perhaps the most important direction in which the effort of last week's Fruit-growers' Convention in Sacramento was put forth was the attempt to improve the arrangements for shipment and sale of California fruit at the East. Very satisfactory work was also done in other important matters, as will appear in due time in our columns, but as we look upon the perfection of methods for the disposal of our surplus product at the East as the safety-valve of our high-pressure orchard extension, we select this branch of the convention's work for special consideration in this issue. And in introducing this matter we find it impossible for the RURAL PRESS to refrain from expressing its satisfaction at the result (as shown by the discussion and action of the convention) which has followed our enlistment of Capt. H. Weinstock, of Sacramento, as a special correspondent and commissioner for the careful investigation of the existing state of marketing California fruit at the East. The discussions showed that his letters had been carefully studied by the fruit-growers and his conclusions approved, and the leading part which Capt. Weinstock took in shaping the expression of opinion by the convention, and his forcible exposition of important considerations involved, was assurance to all of his mastery of the problem which he took upon himself to advance toward solution. These facts were apparent all through the meetings, and hardly needed the formal approval of a vote of thanks which was unanimously extended upon motion of Mr. Gray, of Chico—although such a vote was a graceful and appreciated act.

The management of the convention set apart the afternoon of Wednesday for this subject: "How the fruit-growers are to dispose of their fruits without coming in competition with each other as to prices for the same quality and kinds of fruits." The discussion was opened by the presentation of a preamble and resolutions by Capt. Weinstock, of which we give in this paragraph those parts which were adopted at that session:

WHEREAS, This season's experience has demonstrated that the following serious evils exist in our methods of marketing green fruits in the East:

First. The provision exacted by transportation companies that 15 carloads of fruit must be shipped at a time to obtain a \$300-rate from California to Chicago.

Second. The excessive freight rate from Chicago to such Eastern points as New York, Philadelphia or Boston.

Third. The precarious and uncertain time on which fruit trains are run between here and the East, frequently causing delays of from 12 to 36 hours, and thus seriously depreciating the value of the fruit before arriving at its destination.

Fourth. The lack of a sufficient number of cars adapted to the fruit-carrying trade.

Fifth. The lack of regulated distribution, the want of which has, during the past season, caused as many as 20 or more carloads of perishable fruit to reach the city of Chicago within 24 hours, many of these carloads becoming rotten and worthless before they could be sold, while, on the other hand, cities like Brooklyn, Baltimore and Washington have received only from 50 to 75 crates from the middle of August to the end of September, and cities like Boston and Philadelphia have received only from a quarter to half a carload each per week, and the city of New York, with its population of nearly 1,500,000, has, during the same period, received not over a carload a week.

Sixth. The need of proper inspection at this end of the line, vast quantities of inferior and imperfectly packed fruit having been permitted to go East, thus not alone causing its owners serious losses but also greatly depressing the price of such good California fruits as happen at such times to be in the same market.

Seventh. The need of a speedier method for the disposal of our fruits on arrival at their points of destination, the present method being such that perishable fruits often remain in the hands of Eastern agents an entire week before being closed out; and, lastly, the need of a system whereby our fruits will be thoroughly distributed, and placed in the hands of the largest possible number of Eastern retail dealers, so that the competition among retailers may reduce the fancy prices they now demand in many cities, and so that our fruits may be as completely popularized, and placed within the reach of the millions, in all the cities of the Union, as they this year have been in the city of Chicago, where they were retailed at ten cents a pound, and where the consumption was increased in one year from an average of three carloads to an average of 18 carloads per week; and

Whereas, We know of no good reason why the California grape-grower, whose products are universally pronounced among the finest in the world, should be obliged to accept for his magnificent fruits much less than half the returns realized by Mediterranean growers for inferior fruits, sent here by them and sold in our own country, and in a territory that rightfully belongs to us; and

Whereas, We fully realize that unless the evils herein set forth are promptly remedied, fruit-growing and shipping must, as a rule, prove as unprofitable in the future as it has during the past two seasons; and

Whereas, We fully realize the very great influence the success or failure of fruit-culture must have on the future of our State; be it therefore

Resolved, That the fruit-growers of California, assembled in State Convention, do hereby call the attention of the California railroad authorities to the present serious condition of affairs in the fruit industry, and express the hope that the action of this convention may awaken a deeper interest on their part in the crisis at hand. It is to be trusted that they realize as fully as we do that fruit-growing, so far as it lies in the power of transportation companies, should be made a profitable industry. It is useless to look for much desirable emigration so long as fruit-culture, which has now become one of our chief industries, does not, with the closest attention, yield a living. Fruit-carrying should be looked upon by California transportation companies as nails are regarded by the hardware merchant, calico by the dry-goods trade, and flour and sugar by the grocer. In other words, fruit should be treated by the railroads of this coast not as a fancy article, to be made to bear a fancy tariff, but as a leading staple, worthy to be transported at the least possible cost.

Resolved, That a committee of ten growers and shippers be appointed by this convention, to lay a copy of these resolutions before the railroad authorities, and ask:

First. That the present restrictions be so modified that ten carloads, or less, shall constitute a \$300-rate fruit train. That the rate upon cars by passenger trains be \$400 per car, and that the slow freight rate be \$200 per car.

Second. That the rate to such Eastern points as New York, Philadelphia, and Boston, be made not to exceed \$400 per car.

Third. That passenger time be guaranteed to special fruit trains; and

Fourth. That a sufficient number of cars suitable for the fruit-carrying trade be provided.

The adoption of the last resolution was preceded by discussion which was, however, rather explanatory than in controversy. It was agreed by all speakers that the rates of the last season were much too high, and that the \$300-rate for trains of 15 cars did not make the reduction available; that the railroad companies had secured far more than their share of the sales value of the fruit; and that if the business of shipping fruit is to be successful, there must be considerable reduction in transportation charges. It was stated that the Directors of the Fruit Union had conferred with the railroad managers on this subject, but had received no satisfactory assurance from them. The resolution as adopted and given above embodies the rates which the Fruit Union asked for with reference to cars on passenger trains to Atlantic points, and for slow freight, and were engrafted upon the original resolution by the adoption of an amendment by Mr. Hatch. The committee appointed under the resolution was as follows: H. Weinstock, of Sacramento; L. W. Buck, of Vacaville; I. A. Wilcox, of Santa Clara; W. M. Williams, of Fresno; P. W. Butler, of Penryn; S. J. Stabler, of Yuba City; C. W. Reed, P. E. Platt, E. J. Gregory and Edward Curtis, of Sacramento. This committee met and organized, and has begun its work—a conference with the Southern Pacific Company having been held on Saturday, Nov. 20th. Another act of the convention was to authorize Mr. D. Lubin, of Sacramento, who is at the East, to appear before the convention of railroad managers in Chicago and request the rates indicated in the resolution above.

A few words will suffice us to sketch a discussion into which the convention was led, and which, from the disposition manifested by some of the disputants, was rather unpleasant to contemplate. The issue was naturally brought up by the linking of the words "growers and shippers" in the resolution. This served as a scarlet fabric to rouse the combative spirit, and the discussion for a time was as hot and pointed as we have ever beheld in California agricultural circles. Even this served a useful purpose, because it brought out points which were of value in showing to all the unsatisfactory character of this season's shipment and distribution. Even those who would be supposed to be naturally enlisted on the side of existing arrangements, frankly declared the need of radical changes to bring the business upon a satisfactory basis. Advocates of the California Fruit Union and the California Fruit-growers' Association were sharply pitted against each other, and each displayed the other's weakness. The session closed with nothing accomplished except in regard to rates of transportation.

The resolution which served to precipitate this discussion was one providing for the formation of a new organization, in which both growers and shippers should participate. There was apparent throughout the convention a disposition to enlist all agencies which seemed to promise aid in disposing of the fruit. The attempt at concentration made this year was so defective in the matter of distribution, as shown

by the preamble of Mr. Weinstock above, that it seemed to be the general opinion of the convention that it was a failure. Even some of those who have taken a leading part in the direction of the Fruit Union admitted this, and argued that as all who took part in the first day's debate were stockholders in the Fruit Union, the proper procedure would be to refer the issues to the annual meeting of that organization in January, and if the majority of the stockholders approved the whole policy then if need be the name itself could be changed to embody the new ideas advanced. This course was silently agreed to by most parties in interest, as the effort to start a new organization after abandonment of the old was seen to be fraught with particular difficulties. As this decision was announced a quieter feeling was spread abroad, and the despondency which was engendered by the lack of accomplishment at the first day's session gave place to expectancy for the second.

The afternoon of Thursday brought full benches, the interest in the previous discussion having evidently propagated itself. Mr. Weinstock was again the leader of the discussion, not so much by his own choice as by vote of the convention, which was that he speak first in explanation of each section of the following resolution which he introduced:

Resolved, That the fruit-growers assembled in State Convention do hereby recommend to the California Fruit Union, that at its next annual meeting, to take place January 19, 1887, the by-laws of that association be modified so as to embrace the following resolutions, namely:

First, That all persons raising or shipping fruits for Eastern markets be eligible to membership.

Second, That such association, through its management, appoint a commissioned agent in every Eastern city that can use a carload or more of California fruits at a time, and that the management, by compiling such facts and statistics as may be at their command, arrange a table of distribution, subject to such changes and modifications as the market may from time to time demand; and it shall become the duty of the General Manager of such fruit to regulate the distribution of all fruits strictly in accordance with such provisions.

Third, That said management also establish regulations to control the quality, the weight and the manner of packing all fruits offered for Eastern shipment, and that its inspectors reject such fruits submitted for shipment as do not come up to the established requirements.

Fourth, That the Eastern agent be instructed to sell all fruits which may be consigned to them by the Exchange, by auction, at public trade sales, and in no other way, the auctioneer's charges to be paid out of the commissions allowed these agents.

Fifth, That it is the sense of this convention that all subscribers to the stock of the California Fruit Union should contract with the other subscribers that they will not sell any fruits for Eastern shipment to any one except to members of said Union (Eastern shipment meaning east of Ogden), reserving the privilege to sell any and all fruits for any other purpose.

Sixth, That members of the Exchange shall be allowed the privilege of naming points of destination for their fruits, and the further privilege of naming their own consignees; and it shall be the duty of the general manager to faithfully observe such wishes, provided the space allotted to such points of destination be not all taken; and provided such members also instruct their consignees to sell their fruits by public auction, and at the same time and place at which the fruits consigned to the agents of the Exchange are sold; and, finally,

Seventh, That the management of said Exchange shall make such rules as will place all members on a level, and will make it impossible for any member or members to permanently monopolize any special market, to the exclusion of other members.

The discussion of these resolutions occupied the afternoon session and ended in their adoption, *seriatim*, by large majorities, and then as a whole, unanimously. Any one who studies them carefully can see in what respects they would change the rules and policies which guided the Fruit Union this year. It will be understood that they are, however, but advisory, and the final disposition of them will rest with the stockholders of the Fruit Union at their annual meeting in January.

One of the features of the afternoon was the full opportunity given the Sacramento shippers to express their views of the situation. The statements made by them were very interesting. It was shown that this year's arrangements had advantaged no one at the California end of the line. The shippers undertook their vigorous opposition to the Fruit Union because they did not propose to let go a business which they had labored years to build up. Mr. Platt took the ground that growers should give attention to the many things involved in producing good fruit and should leave dealings to the merchants. Others held the advantage which would result from a flock of buyers eager to buy. The objections which were fatal to these views were that the eagerness of buyers could not always be counted upon and that the merchants' interest

alone could not be trusted to move eastward the vast quantity of fruit which must be disposed of. The general sentiment of the convention evidently was that dealers should be used to the extent of their ability and disposition, but that growers must have an outlet of their own in good order, so that the merchants' instinct, to buy low and sell high, could not restrict Eastern shipments to whatever amount can be sold at a high rate and large profit. The proposition to sell all fruit, at large receiving points at least, by the auction method was received with even greater favor than might be expected for such an innovation; there were but two or three speakers against it, and they admitted that further reflection might lead them at least to a trial of the plan. We have called it an innovation, and such it certainly is, so far as California fruits are concerned; though, as Mr. Weinstock has shown by his letters in the RURAL, it is not new, but is well tried in the disposal of some other fruits in Eastern markets. There were also in the convention a number who had become familiar with fruit auctions in the East and abroad, and their evidence carried weight to the inexperienced. Even those who had no positive convictions of the success of the auction method were sure that something new must be done, and were ready to believe that the auctioneer might prove the deliverer. The result was the approval of the section providing for auctions with marked unanimity. We do not remember to have seen a body of men so well agreed on a matter involving so much. Section fifth of the resolution was offered by Mr. Hatch, with the intention of restricting outside competition to the fruit sold at auction, by fruit which might be bought here and shipped East to win buyers away from the auction, with the idea of giving the method a bad name, or from other motives. It is evident that there must not be much California fruit outside of the auction if the plan is to yield good results.

Such were the results of the two half-days' deliberation on the fruit-shipping problem by the convention. We have omitted the clashing of interests and ambitions which called forth many words and did not touch the real merits of the question. We have tried to present the matter succinctly, that the reader may clearly see what was accomplished. As we have said, the stockholders of the Fruit Union were made the court of last resort and the trial will come on in January next. There are, of course, many things to be determined, and radical changes in the by-laws of the Fruit Union will be required if the membership and methods are to be changed as contemplated by the resolution. In the mean time it is very desirable that the matter be fully discussed and every effort made by the stockholders to prepare to act intelligently. We shall be glad to aid in this direction as far as possible, and therefore invite the use of our columns for discussion by all who can give good reasons for their opinions.

**COTTON MANUFACTURING.**—It is a commercial anomaly, says the *Mobile Register*, that this country, which is the greatest cotton-producer of the world, should import \$30,000,000 worth of cotton manufactured goods. There must be something essentially wrong in a system of laws and trade that renders such a thing possible. Every pound of cotton raised in this country ought to be manufactured here and the product sent to the four quarters of the globe. Yet American consumption is hardly one-third of American production, and foreign countries which buy our raw material send it back to us in a manufactured state. There is a possibility that the seat of cotton manufacture will yet be in the United States. Reason dictates that it should be.

**AN IMMENSE COLUMN OF FLAME.**—We have had several immense displays of flame in this country, produced by burning petroleum, but nothing compared to the following: "In the last volume issued by the Geological Survey of India is an account of a fiery eruption from one of the mud volcanoes on Cheduba island. A body of flame 600 feet in circumference is said to have at one time reached an elevation of 2400 feet, petroleum being the cause." Such an outburst of flame can be compared to nothing but some of the outbursts which astronomers tell us are of constant occurrence in the sun. To describe one of those outbursts, however, we must read miles instead of feet.

## Some of the Latest Fashions.

## Ladies' Toilette.

FIG. 1.—The combination here achieved illustrates Salambo-blue satin Rhadames and velvet, and is exceedingly rich. The mode has a dressy and *distingue* air without conspicuous elaboration, and its skirt is so shaped that the fashionable *bouffant* effect may be produced with a long or a short bustle and reeds, or without either. About the foot of the skirt is a narrow side-plaiting, over which the draperies fall. The front-gore is hidden by a handsome fan that reaches to the belt, the plaits all turning to the center of the fan and flaring prettily. Joining the fan at each side is a plain panel that reaches to the side-back seams, and an invisibly sewed hem is the only finish at the edge. A *bouffant* effect is achieved on the hips by short

varied and attractive. The plastron reaches to where the fronts separate, and is permanently attached at one side and secured with hooks and loops at the other side. The standing collar is fashionably high, and the coat sleeves are trimmed with *passementerie*. In adjustment the basque is perfect, the fashionable number of darts and seams being introduced.

The liking for velvet bodices with contrasting skirts is here shown, and the finish of the basque may be entirely plain if desired. Such combinations permit a costume that is "good as new" in the skirt, but much worn in the body, to be revived in a handsome-looking toilette; and such economies in dress cannot fail to elicit the approbation of all ladies of good taste.

When the skirt is made of silken textures or of soft woollens, the plain panel will usually be lined with thin crinoline. Cloths and heavy

ever, the deepest. The skirt is formed of two front sections, two side sections and two back sections, all joined in seams that are turned to one side and stitched in welt fashion. The back sections are gathered at the top, which is finished with a binding and is tacked to the body underneath. A row of stitching is made down the front edges of the skirt, and the closing may be visibly or invisibly made, or the edges may be left open, as preferred. The collar is in the high standing style, and its edges are stitched.

Over any style of costume this coat may be suitably worn, and its skirt is ample enough to accommodate the most *bouffant* draperies. All kinds of cloths and coatings will be made up into such coats, and the tailor mode of completion will be generally adopted. Bindings of any preferred braid, stitching at a severely plain finish, may be visible at the edges. The body may be warmly lined if the material be not sufficiently heavy, and nice coats will frequently have the skirt lined with thin silk or satin. Fur will be used for trimming winter coats with handsome effect, all varieties being in vogue.

The hat has its brim smoothly faced with velvet, and is trimmed with velvet and fancy-edged ribbon.

looped under the chin in a simple way. A bonnet of this style developed in steel beads and gray would be effective, but the black is certain to harmonize with any costume.

## INTERESTING ARCHEOLOGICAL DISCOVERY.

An interesting discovery has recently been made in Mexico. The rocks which form part of the foundation of the promontory on which the Castle of Chapultepec rests, Mr. Batres says, are covered with hieroglyphic characters, which will prove interesting for the study of Mexican antiquities and history. Hitherto the surface of the rocks has been hidden by a dense growth of moss and shrubs, but they are now being cleared off and the hieroglyphic inscriptions have come to light. Mr. Batres has commenced to decipher the characters, which he confidently expects to be able to finish by spring.

A HEALTH HINT FOR TEACHERS.—Dr. Holbrook, writing of memory culture in schools, says: The teacher should remember that the memory cannot be disciplined to advantage when the mind of his pupil is distracted by feelings, sensations and thoughts foreign to the subject of study. It may also be said that if a child is badly fed, insufficiently clothed, or suffering from some inward complaint; if the

Fig. 2.—MISSES' COAT.

paniers that do not extend quite to the center of the front, and are draped in a wonderfully pretty arrangement of intercepting folds by plaits at the belt and in the back edge. Two ornamental pieces suggesting Turkish sash ends of different lengths are tacked to the top of the paniers at each side over the side-back seams and are plaited at both ends, the lower ends being finished with *passementerie* ornaments. The simple draping of the back-drapery is achieved by two seamed *bournois* loops at the top and deep, downward-turning plaits in the side edges.

The basque is handsomely shaped, and is trimmed down the middle of the back to accord with a plastron applied to the fronts. The plastron is in V-shape and side-plaited, and joined to its sides are lapels that taper to points at their lower ends. The lapels are overlaid with *passementerie*, and the simulation on the back is produced by a V-shaped plaiting of silk, bordered at each side with *passementerie* that is tapered to a point at the waist-line. Below the waist-line the back is arranged in two short loops, which are underlaid with pointed tabs that deepen the back ornamentally. The side-backs fall in points at their back edges, and the sides of the basque are curved very high, while the fronts shape double points below the closing, thus rendering the outline

fabrics do not require a lining. All varieties of dress goods may be made up into such toilettes, and a contrast may be developed in the fan or panels, with stylish effect.

The straw hat is trimmed with lace, velvet and plumage, and has a smooth facing of velvet on its brim.

## Misses' Coat.

FIG. 2.—The coat combines a close-fitting, double-breasted body with an ample skirt that is made separate and then is made secure by tappings to the body underneath. Mixed cloth was here chosen for the garment. The adjustment of the body is made with single bust darts; wide side-back gores and a curving center seam; and the closing is made with buttons and button-holes in regular double-breasted fashion, knotted cord loops being fastened over the buttons with decorative effect. The center seam is turned to the right, and all the other seams are turned to one side and stitched in welt fashion. A row of stitching is also made close to the edges of the body, and three rows of stitching are made at the wrists of the coat and sleeves. The lower outline of the body is pleasingly varied, being square across the double-breasted portion, curved over the hips and shaping three not very sharply defined points at the back, the center point being, how-

## Ladies' Velvet Hat.

FIG. 3.—This hat is very artistic in its outline, and is of dark-blue velvet; the material is smoothly put on over the frame, and the broad brim is underfaced exactly as the outer side is covered. Drawn over the high crown is dark-blue net having dots of the same color upon it; the velvet shows quite plainly through this, giving the lace an air of greater sheerness and bringing out the pile of the velvet in an effective way. At the left side of the front are arranged a number of small mode tips curled until they seem like balls of fluff.

## Ladies' Bonnet.

FIG. 4.—The outline of the becoming Marie Stuart bonnet is achieved in this pretty *chapeau*. Over the light frame is laid at each side a jetted piece simulating a leaf and reaching quite to the top. From the very center of the edge in front where it is fastened is drawn back a folded scarf of black grosgrain silk that is laid in soft plaits and terminated at the back, giving the effect of a puffed crown. Against this crown in front are ladder loops of fancy ribbon that are caught by a jet ornament. A fold of silk covers the very narrow brim, which is outlined with large jet beads. The ribbon ties are of black grosgrain with a fancy edge, and they are

lungs and circulatory system be oppressed by the foul atmosphere of a crowded schoolroom; if the nervous energy be suppressed by imperfect oxidation of the blood; if the eye be deprived of the natural stimulus of a good light, the nostrils assailed by disagreeable odors, and the ears confused with an incessant tumult of noises; if one set of muscles be kept in a state of constant tension and others in a state of abnormal relaxation by sitting in a constrained position hour after hour, a condition must be induced very unfavorable to the culture of memory.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

OIL GLASSES will not get clogged up with oil if first filled with glycerine.

## THE VINEYARD.

## Raisin Curing and Packing.

We have given descriptions of a number of the methods of raisin-curing used in this State, both by sun heat and artificial heat. Each year brings out something new, either in methods or appliances. The Fresno Republican recently gave an account of operations at the Forsyth vineyard in that vicinity, from which we take the following:

Artificial drying has ever been a question of interest to raisin-growers. Men have schemed and improved. The idea is to let the sun do the work, as the raisins are better thus dried. The trouble with this at this time of the season is, the nights are too cool and the days too short to dry fast enough. To a certain extent the nights undo the work of the day. Col. Forsyth has thoroughly studied this question of successfully drying raisins, and in his drier has, by improving on Mr. Goodman's drier, which has been described before, reached perfection. He has reduced it to a certainty.

Two hundred feet long, 12 feet high and 14 feet wide, facing the south, with the entire front of glass, stands his new drier. In front of it he has had placed a bed of white sand, which reflects the sun's rays. Above the glass doors, on an angle, so as to better catch the sun's rays, is a glass transom. The rear is composed of wooden doors so when the hot north wind is blowing the entire drier can be thrown open, giving the hot air full sway. There is at each end a brick furnace in which a fire is kept burning all night. Running from them are eight-inch galvanized iron pipes, laid at an incline to insure suction, and thus keep up

## The Heat at Night.

The trays of drying grapes are placed so as to give the air full access between them. In drying grapes a moisture must necessarily arise which retards the drying more or less, and the getting rid of this has been a vexed question with raisin-growers. Here they have overcome this difficulty. On the top of the drier, a few feet apart, have been built 20 flumes, 16 feet long and a foot square. They are made high, so they will have draught enough to carry away all the dampness arising from the drying grapes. These flumes are regulated with a lever at one end which works a slide at the bottom of the flumes, opening and closing all at will; also regulating the extent of the opening. In building this drier Col. Forsyth

## Has Solved the Problem

Of successful artificial drying. The difference in the temperature inside the dryer and outside is very marked. Although when we tested it the dryer was not complete, being open in a number of places, the thermometer indicated an increased temperature in five minutes' time of 22 degrees. When completed, the temperature inside will be fully 30 or 35 degrees warmer than in the open air.

From the drier the raisins are taken to the packing-house, which presents a scene of activity. Here, 1200 20-pound boxes of raisins are prepared for shipping each day.

On reaching the packers the raisins are again sorted; bunches in any way defective are taken to the stemmer and cleaner for stemming and grading. There are two grades of these loose raisins—the former grade is packed in 50-pound boxes and shipped as loose Muscatelles.

## The Spanish System

Of packing raisins, showing the stems, is followed in this establishment. It is considered by good judges the best system. The large bunches of raisins are sorted and laid out in boxes after being first weighed. The stems are exposed, showing immense bunches of the finest raisins to be found in any market; bunches in size and lusciousness that surpass anything ever seen, even in Spain. They are not pressed out to make them large. They are laid in boxes neatly packed, and are as delicate to the touch as the softest of velvet. They are in layers, but each layer is the same. A buyer for one of the largest San Francisco firms said, on examining one of these boxes: "This is the finest I have ever seen, but they are not the same all the way through. It is impossible." A box was opened and the raisins dumped out before him, showing that each layer was the same. Being fixed in every way for putting up the best of raisins, they are at this establishment putting up grades that will successfully compete with the best Spanish brands. Here they do not press the raisins very much, believing, and very wisely too, that the life is often crushed out of them by pressing. They merely press them so they fit into the boxes neatly. All the native sweetness and perfection is left with them. Of the fine raisins they

## Put up Three Brands.

The "Tehesia Cluster," the finest raisins ever sent from any country, are the choicest. They are the biggest bunches carefully selected and are packed in layers across the boxes, each bunch separated by wax paper. They are put up in five-pound boxes. The other brands are in London layers, and are all packed in Spanish style, showing the stems.

About 30,000 boxes will be packed here this season, and at Mrs. Austin-Blatchley's place—which Col. Forsyth is running this season in connection with his place—13,000.

The object now is to save the second crop which is on the vines. If the weather keeps clear and warm for two weeks longer they will at this vineyard pack this season about 45,000 boxes of the finest raisins ever sent to the Eastern market. Here they have reduced the art of raisin growing and packing to a certainty, and it is through the efforts, skill and progressiveness of such men as Col. Forsyth, that has placed Fresno raisins at the top of the Eastern market. The result of packing raisins so carefully and understandingly is, the supply does not now equal the demand.

Every day sees carloads of these raisins leaving Fresno for the Eastern cities, where they command the highest prices.

## SERICULTURE.

## The Silk Board and Its Doings.

The Board of Directors of the California State Board of Silk Culture held its annual meeting Saturday afternoon, Nov. 20th, and elected the following officers for the ensuing year: President, Isaac Trumbull; vice-president, G. W. T. Carter; treasurer, R. H. McDonald, Jr.; secretary, Mrs. Louise Renzi.

The treasurer's report showed that of the \$5000 appropriated for the fiscal year \$3971.40 had been expended and \$1028.60 remained to be covered back into the State Treasury. The sum of \$208.13, held to pay for mulberry trees which are on the way from Milan, Italy, is included in the year's expenditures. The principal items in the account are as follows:

Salaries of teachers.....	\$394 66
Salaries of pupils.....	336 30
Reeling machines.....	444 85
Cocoons bought.....	729 36
Rent.....	385 00
Mulberry trees.....	238 50
State Fair exhibit.....	117 15
Traveling expenses of members attending meetings.....	309 85

The Chronicle says: One teacher and an assistant are employed, who instruct gratis those who desire to learn to reel silk from the cocoons or to tend the worms at spinning time. The practice of paying pupils anything has been abandoned, and the filature devotes its attention to the free teaching of those who desire to learn. There is at present room for a few more pupils, and when the new machines are received there will be still more vacancies. The pupils are each assigned certain hours of the day, so that, though no one reels all day, the school is never idle.

The present reeling machines, of which there are three, though only two are operated, are single—that is to say, but one thread is reeled at a time—the number of cocoons reeled from, and consequently the number of strands in the thread, varying with the quality of the cocoon and the fineness of product desired. Three new automatic Batteneuse reeling machines, purchased in Milan, Italy, have arrived at this port and are held by the Custom-house, which demands \$135 duty before they may be removed. The association claims that the law exempts from duties articles imported for use in incorporated free schools, and has appealed to the Treasury Department for the release of its machines. Each of these machines will reel four threads at a time, and one expert reeler can tend a four-thread machine as readily as the single-thread machines now in use.

The \$729.36 paid for cocoons was in sums varying from a few dollars to about \$100, and went to a large number of persons in various parts of this State. It is the special mission of the board to encourage the production of these cocoons, which are grown at farmhouses by women and children, the mulberry leaves upon which the spinners feed being the product of the mulberry plant, which is indigenous to California. The worms require very little care except in the six or eight weeks in the spring when they are spinning, and they are regarded as a petty source of income by members of farmers' families, as poultry and eggs are regarded on the farms in the Eastern States. To profitably raise silkworms requires some technical knowledge, to impart which worms are cultivated by the board at the filature, 21 Montgomery avenue, and in the spinning season pupils are given free instruction in handling them. The board pays from \$1 to \$1.45 a pound for cocoons, according to quality; so the number of pounds purchased can be approximately estimated from the figures.

The item for mulberry trees is principally for those of an improved variety, brought from Milan, Italy, which produces abundant foliage, but no flowers nor seeds.

The secretary read a letter from Dexter, Lambert & Co., manufacturers of silk goods at Paterson, N. J., to whom she had sent a sample of silk reeled at the filature in this city, in which they say: "The silk appears to be of extra quality, clean, elastic and strong." There are on hand about 100 pounds of silk reeled at the filature, besides a large stock of cocoons. This reeled silk is valued at from \$6 to \$7 a pound, whereas the Chinese and Japanese reeled silk is worth but from \$3.75 to \$4.45 a pound.

The meeting was adjourned to Saturday, December 4th.

## Farmers and Travelers

Sojourners in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

## THE FIELD.

## Government Report of California Crops.

WASHINGTON, Nov. 20.—The Agricultural Bureau has received the following report from its agent in California as to the condition of the crops in that State: The conditions for the growth of corn have been favorable this season and a fair crop was made, with the quality a full average. Grapes are a fair average crop throughout the State as compared with a full crop. They have been favored with fine weather, and the quality is very good. A few sections were visited by a light frost early in October, but no serious damage was done. Apples are not an average crop. Serious damage was done in some sections by the codlin moth, and stringent measures are needed for its extermination. Pears are a fair crop. They also were considerably damaged by the codlin moth. County correspondents in California, Oregon and Washington Territory report as follows respecting the corn crop in the counties named:

California—San Luis Obispo—Corn is grown to some extent, but mostly as mere fodder. Placer—An average crop. Butte—A poor yield, but good quality. San Benito—Very little raised, and that on low lands bordering the streams. San Mateo—Very little raised, except for green feed for milch cows. Tehama—Very little raised. Kern—Crop not yet gathered.

In Oregon, Lane county reports an average crop. Douglass—Yield reduced, owing to drought. Linn—Short crop, owing to drought. Columbia—Crop somewhat affected by drought. Coos—Above an average crop. Yamhill—Average crop.

Washington Territory reports as follows: Skamania—The yellow dent corn "Pride of the North," received from the department, was planted the 2d of June, and grew rapidly and formed fine large ears and matured before the rains set in this fall. Garfield—Very little corn is raised, but it is of fine quality. Skagit—A good crop.

Returns have been received from the following counties in California as to the apple crop: Amador—Badly damaged by the codlin moth. Contra Costa—Injured by the codlin moth. San Mateo—Good on the coast, but in the valleys damaged by the codlin moth. El Dorado—The fruit was badly worm-eaten and fell off before ripe.

On the subject of sorghum a correspondent in Skamania county, W. T., says: "Seed sent by the department was planted on June 2d, and it grew finely and matured, so we shall succeed in saving seed to plant another year."

Hay is thus spoken of by the county correspondents in California, Oregon and Washington Territory: California—San Luis Obispo—The crop is much larger than usual, and the quality is above the average. Placer—There was a good crop, owing to the late rains in the spring, and it was cut and housed in fine condition. Fresno—The crop was of average quality, mainly alfalfa, and yielded from four to eight tons per acre in from three to five cuttings. Grain has yielded from one to two and one-half tons per acre. Humboldt—There was a lighter crop than was expected, but it was of fair quality. Alpine—The crop was damaged by too much rain in July. Butte—Good yield. Contra Costa—There was an unusual quantity secured and in good condition by converting inferior patches of grain into hay. Kern—Alfalfa is the principal crop for hay.

## You Can Learn How to Get Rich

By sending your address to Hallett & Co., Portland, Maine; they will send you full information about work that you can do and live at home wherever you are located. Work adapted to all ages and both sexes; \$5 to \$25 a day and upwards easily earned. Some have earned over \$50 in a day. All succeed grandly. All is new. You are started free. Capital not required. Delay not. All of the above will be proved to you, and you will find yourself on the road to a handsome fortune, with a large and absolutely sure income from the very start.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

## THE GREAT REGULATOR!

No medicine is so universally used as Simmons' Liver Regulator. It won its way into every home by pure, sterling merit. It takes the place of a doctor and costly prescriptions. It is a family medicine containing no dangerous qualities, but purely vegetable; gentle in its action and can be safely given to any person, no matter what age.

## WORKING PEOPLE

Can take Simmons' Liver Regulator without loss of time or danger from exposure, and the system will be built up and invigorated by it. It promotes digestion, dissipates sick headache, and gives a strong, full tone to the system. It has no equal as a preparatory medicine, and can be safely used in any sickness. It acts gently on the bowels and kidneys and corrects the action of the liver. Indorsed by persons of the highest character and eminence as

## The BEST Family Medicine.

## Lands For Sale and To Let.

### SMALL TRACTS OF LAND FOR HOMES

Are offered for sale in 5 to 20-acre tracts, one mile from Tulare, the most rapidly growing town in the State, at prices ranging from \$15 to \$40 per acre, to those who will make homes on them.

The land lies in the northerly limit of the Artesian Belt, and is also easily supplied with ditch water. Soil, sandy loam. Good surface water at 10 to 12 feet.

#### ALSO LARGER TRACTS

Of 20 to 80 acres, on my home place, 7 miles S. W. of Tulare, 3 miles from Tokay Switch, S. P. R. R., centrally in the

#### ARTESIAN BELT,

Lying on north side of Elk Bayou. Smooth, clean, alfalfa land; \$15 to \$30 per acre.

A good flowing well, capable of irrigating 80 to 160 acres, is obtainable here at a cost of about \$500. The soil is dark, ancient lake bottom sediment. The land is fenced and mostly in cultivation; one flowing well on the place and others near by, with growing orchard, vines, grain, alfalfa, etc., showing adaptability of soil. The best of surface water is obtained at 10 feet from surface. Perfectly healthy locality. Plenty of oak timber near by.

This land, in whole or part, is bound to be sold soon, and rare chances are offered. Address, E. M. DEWEY, Box 27, Tulare, Cal., or call at the home premises.

### A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

#### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

#### FOR SALE—33 ACRES

Of very choice Land. All within the corporate limits of the lovely town of St. Helena, Napa county. Seventeen acres vines, fine varieties, five acres choice fruit. Cottage of eight rooms, beautifully situated, with shade and ornamental trees, including seven large Oaks. "St. Helena Nurseries" on the premises. A fine chance for a nurseryman. Address for further information,

Box 313, St. Helena, Napa Co., Cal.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

#### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

#### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

#### TITLE, U. S. PATENT.

#### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

## FRESNO COUNTY.

### BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

#### THE WATER RIGHTS,

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### JACKSON'S IMPROVED IRON

Cheapest and Best

#### HARROW.

60 % Steel Teeth.

Four Sections Complete.

PRICE, \$32.50

This Harrow was introduced to the farmers of the Pacific Coast, during the season of 1881. Since then, hundreds have been sold, giving entire satisfaction. I have made the malleable iron clamps heavier, and strengthened them, making this the **Best Iron Harrow**. The frame is indestructible, made entirely of iron and locked firmly together by the teeth passing through malleable iron clamps, and having screw-threaded shanks on their upper ends, which bolt the frame-work securely together. This mode of constructing a harrow frame dispenses with drilling or punching holes, thereby securing much greater strength and durability. **It is indestructible.** No shrinking, swelling and rotting of frame-work. It is constructed in narrow sections, each acting independently; will adapt itself to any uneven surface of the ground, and will cut the soil better and more evenly than any other Harrow. Constructed on correct mechanical principles; each section has a center draft, and each tooth cuts a separate track. No one tooth in line with another. The safety-hook prevents unhooking when turning round. Four different sizes to suit customers. **STRONGEST AND BEST HARROW MADE!**

#### PRICE LIST.

No.	Description	Weight	Price
No. 1	has three sections, 45 % steel teeth; cuts 9 feet wide. This is a light size for two horses.	168 pounds	\$25 00
No. 2	(represented in the cut) has four sections, 60 % steel teeth; cuts 12 feet wide. This is my standard style for two horses (generally used).	Weight, 230 pounds	\$32 50
No. 3	has five sections, 75 % steel teeth; cuts 15 feet wide. This is my 3-horse harrow; can leave off one section and use two horses with the same draft-bar.	Weight, 291 pounds	\$7 50
No. 4	has six sections, 90 % steel teeth; cuts 18 feet. For this size I use four horses abreast, with two draft-bars coupled together at the ends; adapted for large farms.	Weight, 336 pounds	48 00

"Your harrow is a good one."—M. MADDEN.

"They give perfect satisfaction."—JAS. CARR & CO.

"Your Iron Harrow is a good one and fully met my expectations."—DR. L. F. MOULTON.

"I like your Iron Harrow very well."—MILTON CARPENTER.

"I tried your Iron Harrow the other day, and it beats them all. My manager says 'it is the boss.'"—D. FARRMAN.

"We like your Iron Harrow very much."—STEELE BROS.

ADDRESS,

BYRON JACKSON,

625 to 631 Sixth St. { SAN FRANCISCO. } 149 to 169 Bluxome St.

# California Nursery Company.

[By J. C. H.]

It has become a settled fact that the paramount interest of the Pacific Coast is fruit-raising. During the last decade we have demonstrated the adaptability of California in soil and climate, in growing not only the general fruits of the temperate zone, but we are now furnishing a large proportion of semi-tropical fruits used in the Northern States, and sagacious men anticipate and predict that we shall be a dangerous competitor with France, Italy and Sicily, in growing the olive and fig as we now are in the vine. Anticipating a demand for young trees, an incorporated company was formed by men of large means and experienced nurserymen, to establish a plant that could supply nursery stock in unlimited amount. After a careful and full investigation, they selected 460 acres of land lying between Alameda creek and the C. P. R. R., one mile north of Niles, Alameda county. The writer recently made a visit to this nursery and a flying trip in and around Niles. From his notes and memoranda he gives a succinct description:

The California Nursery Company was started three years ago in a stubble field with new and clean stock of every sort, importing roots and scions from reliable firms in Europe and the Eastern States. Their location is next to the foothills in the "warm belt," and adjacent to the wide-spreading fields of the Beet Sugar Manufacturing Company of Alvarado. The soil is composed of alluvium and a light sandy loam. Its productiveness is attested in the marvelous growth of every variety of vegetation. From actual measurement whole rows of cherry trees had grown six feet and eight feet from the graft or bud in one season, and pear, peach and apple stock from five to seven feet. This thrifty growth was attained without irrigation, although this company have facilities for running water over their land if desired. Two large windmills and a steam pump on the high ground next to the Alameda creek could flood their present nursery which is now planted (200 acres) in case of a severe drought.

It is a picturesque sight to ride through this nursery. On the north and west are undulating hills, some of which are planted with vineyards, while to the south and east there is a great stretch of valley land. This nursery is divided into 5 and 10-acre lots, the main avenues to which are graveled from an ample stock that is procured from the Alameda creek. The buildings erected are arranged with a view to perspective and convenience, having the appearance of a villa.

It is a subject that gives food for thought when we contemplate the wonderful change wrought by the managers of this company. Within 300 yards of the main office stands the old adobe building where 20 years ago the vaquero rested from his labors in herding wild cattle and horses.

Three years ago the husbandman was raising grain to feed the overworked population of Europe. At this time the California Nursery Company has changed the whole aspect of this lovely valley and converted this spot into an Eden. Their plans were laid on a broad gauge and grand scale to fill the requirements of our market, extending from British Columbia to the Tropics, and from the Pacific ocean to the Atlantic seaboard. No insect pest has been found in this nursery, and there are no adjacent orchards from which they could be propagated. The managers in selecting this locality took the precaution of isolating themselves from old orchards.

As an evidence of the fertility of this section we learned from Mr. H. H. Hunting, foreman, that from 17½ acres, 244 tons of sugar beets were raised this year. In our rambles we saw four large beds to propagate the olive, containing over 40,000 tiny trees, and fig trees of the best known varieties, including the "fig of commerce," and orange and lemon trees had found in this place soil, climate and conditions for their best development. In addition to a select and unusually complete assortment of fruit trees, small fruits, grapevines, semi-tropical and citrus species are to be had at this nursery. The managers have planted an experimental orchard to which will be added all new varieties of apparent worth.

Their descriptive catalogue for the season of 1886-87 is before us. It has 48 pages, 24 of which contain the lists of the different kinds of fruits and 24 cuts showing the latest and favorite varieties. One page has hints on transplanting in which is announced: "A work on Horticulture in California, issued by the publishers of the PACIFIC RURAL PRESS, will be found very useful." This catalogue should be in the hands of every fruit-grower, or any person who is about to become one. On the title page they say: Our object shall be to make this the nursery of the Pacific Coast. To this end, the observations of life-long experience in the business, untiring energy, coupled with every convenience which such experience or necessity may suggest, shall be devoted.

As a matter of information to our readers as to the reliability of the California Nursery Company, we herewith give the names of the officers: Directors—John Rock, James Hutchinson, R. D. Fox, Thos. Meherin, Wm. J. Landers. John Rock, president; R. D. Fox, vice-president; J. H. Henna, secretary; Thomas Meherin, treasurer.

The promoters of this great enterprise intend to make it the model nursery of the Pacific Coast. With ample means, wide experience

## PACIFIC COAST WEATHER FOR THE WEEK.

EXPLANATION.—Cl, for clear; Cy., cloudy; Fr., fair; Fy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 m. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

and the services of John Rock, the veteran nurseryman, as manager, it may be confidently expected that 1000 acres or more of this rich virgin soil will be devoted to propagating young trees, small fruits and vines, that shall be planted in valley and hillside to ornament and beautify our homes, promoting health, wealth and happiness. There has been a fair demand for their nursery stock this season, and one large order has just been filled for China. Any one interested in fruit is cordially invited to take the C. P. R. R. at the foot of Market street, and a two hours' ride will give him a chance to inspect this great plant, by which four trains pass daily, the latest at 4 o'clock P. M. The length of our article precludes us from giving a detailed description of the orchards and berry farms adjacent to Niles, reserving this for a future issue. We will answer the question whether fruit-raising will pay by stating this fact: Mr. H. G. Ellsworth, from his orchard, situated two miles south of Niles, that was planted four years ago, trees placed 21 feet apart, has had such a luxuriant growth that the limbs touch each other, and from 18 acres there were shipped 80 tons of apricots this season.

If enterprises of this character have enlisted the best efforts of men of experience and large means to create a nucleus that shall make our sister States and the world pay a tribute to our own State, such men should receive the plaudits of a grateful people.

## List of U. S. Patents for Pacific Coast Inventors.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 252 Market St., S. F.

- FOR WEEK ENDING NOVEMBER 16, 1886.
- 352,849.—PLOW—John A. Ball, Grass Valley, Cal.
- 352,674.—REIN-GUARD—C. L. Bard, San Buenaventura, Cal.
- 352,675.—VEHICLE SPRING—E. Bowman, Santa Cruz, Cal.
- 352,732.—HYDRAULIC NOZZLE—J. H. Byrne, Nevada City, Cal.
- 352,527.—SIGNAL BUOY—T. Duffy, S. F.
- 352,744.—CAR COUPLING—S. J. Ford, Placerville, Cal.
- 352,685.—JOURNAL BEARING—Frank & Wicks, Pinal, A. T.
- 352,686.—BALING-PRESS—J. L. Gilbert, Lebanon, Ogn.
- 352,825.—STEAM BOILER—C. N. Hitchcock, Stockton, Cal.
- 352,695.—APPARATUS FOR TRANSFERRING LIQUIDS—Kenworthy, Sexton & Thompson, Colton, Cal.
- 352,544.—PROTECTING FRAMEWORK FOR LEVES, ETC.—J. Kernaghan, S. F.
- 352,761.—CAR AXLE—E. E. Kregle, Buena Vista, Ogn.
- 352,891.—SKIRT-HOLDER AND RACK—F. M. Reynolds, Pinacate, Cal.
- 352,574.—STEAM ROAD-ROLLER—J. Scheerer, S. F.
- 352,578.—ORE CONCENTRATOR—S. W. Shaw, S. F.
- 352,719.—WINDOW-SASH HOLDER—H. W. R. Strong, Oakland, Cal.
- 352,896.—WATER HEATER—Swager & Fercher, Astoria, Or.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

YELLOW PINE AND BEDBUGS.—The American Architect and Building News says: "The southern pine seems to be the natural habitation in this country of the *cimex lectularius*, or bedbug, which is found in immense numbers under the bark of old trees of that species. If the wood contains natural clefts the insects and their eggs remain in these after sawing, and are often carried in that way in the seams of large timbers into buildings. It is worth noticing that living trees of yellow pine sometimes keep houses near them infested with the vermin, which stray in all directions from their home."

SEEDS, TREES AND NURSERY STOCK.—W. R. Strong & Co., the long-established and well-known nursery and seedsmen of Sacramento, have already issued their annual catalogue for 1887—a liberally illustrated pamphlet of more than 50 pages. It embraces descriptive and price lists of vegetable, flower, and tree seeds, plants and bulbs in great variety, with directions about planting and other information convenient and useful.

## Taking Agencies and Signing Contracts.

An old subscriber has lately written us as follows—excepting date and signature :

There came to Hollister, about three weeks ago, a couple of men representing themselves as agents of the Hydrocarbon Burner Co., of Chicago, with their branch office 118 Eddy street, S. F. They tried to get me to take the agency for this part of the State. They wanted me to sign four different papers; one I should keep, one for the company, one for the patentee, and the fourth for the agent in the city. I would not do anything of the kind. When they found they could not get me to bite at what I considered a swindle, they went to one of my neighbors, and got him to take the agency and sign the papers. The next day they went to the bank and got two of them cashed for \$300—which were two notes for value received. I am convinced that the whole is a perfect swindle, as they showed me papers that they had from different parts of the State. I asked them why they did not get some of the business men in the town to take the agency. They told me that they thought a farmer would take more interest in it, and at the same time they wanted us to make money out of it. The price of the burner is \$20, but the local agent was to get them for \$9. They claim for their burner that it costs worth of crude coal oil will keep up a steady fire for 10 hours in an ordinary cooking stove. I wish you would try and find out all you can about it, and let me know through your paper.

Soon after receiving the above we sent a representative of the PRESS to No. 118 Eddy street, where he found the company's sign out and one of the burners set up in a large cooking stove and in charge of an honest-seeming and genial-mannered old gentleman, who explained its construction fully and set it in operation.

Nevertheless, we find this in the Fresno Republican:

A HAYSEED CONTRACT.—A slick individual representing himself to be Thomas E. Hall, and as representing the Excelsior Hydrocarbon Company, has been over the country fleecing the innocent. He runs on them a hayseed contract, which is nothing more or less than a promissory note. Many times have farmers been warned to be careful what they sign or they will sign away more money than they intend to. The promise to pay is a bad thing for a man to do provided he can, and his credit is good. This fellow Hall caught several of the unsuspecting over this county. He gets their signature to his "hayseed contract," which is nothing more or less than a note, and then he shaves it at some bank.

And this in the Tulare Register:

HE'S AFTER YOU.—A nice young man, who sometimes answers to the name of Thomas E. Hall, is around the country wearing store clothes and with his mouth full of guile. He is representing some kind of an outfit called the Excelsior Hydrocarbon Company, and contracts signed turn up shortly in the form of promissory notes. This matter may be all right, but from the way our friends up north are coming out in the newspapers and declaring to be fraudulent the notes with their signatures which have been sold by this company, it has a suspicious appearance. It may be well to use care in tackling this business, unless you wish to pay double price for a small stock of inferior experience. If you want to get your eye-teeth cut it will be cheaper to wait and patronize the next soap man who happens along.

And we feel bound to caution our readers against signing documents without thoroughly studying and understanding their purport for themselves, if at all doubtful submitting them to the inspection of some keen and reliable legal friend, and then, finally, taking good care to scrutinize every copy (if the papers be in duplicate) before they affix their signatures.

If a man thoroughly understands and realizes the fact that he is giving his note for value received to the amount of say \$300 for the privilege of being allowed to try to sell on commission say 100 machines or devices of a given pattern in a certain neighborhood; and that he is taking all the risks—even that of the alleged "company" failing to fulfill their part of the contract in supplying the wares in case he succeeds in securing the orders—let him realize all this; and then, if he suffers a plausible "general agent" to talk him into "giving himself dead away," he may soon have cause to feel that he has been victimized in a heathenish and heartless fashion, but he can hardly hope for any legal redress.

So, beware what you sign!

If, in the case described by our correspondent and by the Fresno and Tulare papers, many should be found to have been swindled, it is to be hoped they will combine and see that parties to such a swindle receive their just deserts.

## Rural Seed Offering—1886.

Great Inducements for New Subscriptions.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

### VEGETABLE SEEDS.

83 Varieties.	34 Cactalia Coccinea (Tas-sal flower).....	95 Can panula Speculum (Venus's Looking Glass) 5
In Papers, postpaid. Cts.	96 Candytuft, white fragt 5	97 Centaurea Cynus (Bach-elor's Button)..... 5
1 Early Blood Turnip... 10	98 Clarkia, fine mixed..... 5	99 Convolvulus (Morning 5
2 Early Extra Bassano... 10	100 Foxglove, mixed..... 5	101 Gilia, mixed..... 5
3 White Sugar..... 10	102 Globe Amaranthus..... 5	103 Gypsophila Elegans..... 5
4 Yellow Sugar..... 10	104 Ice Plant..... 5	105 Larkspur, finest mixed 5
5 Early Long Dark Blo'd 10	106 Aster China, mixed..... 5	107 Love-in-a-mist..... 5
CABBAGE.....	108 Marigold, db (French) 5	109 Marigold, African, dbl. 5
6 Early York..... 5	110 Mignonette, Sweet..... 5	111 Nasturtium..... 5
7 Early Dutch..... 10	112 Nolana..... 5	113 Portulaca, mixed..... 5
8 Early Wakefield..... 10	114 Poppy, Double..... 5	115 Rocket, Sweet..... 5
9 Ex's Fine Large Dutch 10	116 Scabiosa, Dw't, mixed. 5	117 Sensitive Plant..... 5
10 Early French Ocheart..... 10	118 Sweet Pea, White..... 5	119 Sweet Pea, Crimson..... 5
11 Late Drumhead..... 10	120 Sweet Pea, Everlasting..... 10	121 Sweet Pea, Everlasting..... 10
12 Red Dutch (pickling)..... 10	122 Sunflower, Cal, Dble. 5	123 Adumia Cirrhosa (Mountain Fringe)..... 10
CELERY.....	124 Al Bea (Hollyhock) fine 10	125 Aster China, mixed..... 10
13 White Solid..... 10	126 Sweet Pea, White..... 10	127 Australian Vine..... 10
CALIFLOWER.....	128 Balm, Fine Paris, dbl 15	129 Balm, Splendid, dbl. 15
14 Early Paris..... 10	130 Balm, Dwarf, double 25	131 Balm, Rose Fl'd, dbl 15
CARROT.....	132 Balm, Rose Fl'd, dbl 15	133 Browallia Grandiflora..... 10
15 Extra Early Forcing..... 10	134 Canna (Indian Shot)..... 10	135 Canna, fine mixed var. 10
16 Long Orange..... 10	136 Celosia Cristata Varie'a 10	137 Celosia Cristata Pur-pura..... 10
17 Early Horn..... 10	138 Celosia Cristata, fine 10	139 Celosia Cristata, fine 10
18 White Belgian..... 5	140 Dianthus Chinensis (Indian Pink)..... 10	141 Dianthus Chinensis 10
CUCUMBER.....	142 Celosia Cristata, fine 10	143 Dianthus Chinensis 10
19 White Spine..... 10	144 Chrysanth. Albun..... 10	145 Chrysanth. Albun..... 10
20 Early Cluster..... 10	146 Datura, fine mixed..... 10	147 Evening Primrose..... 10
21 Early Farm..... 10	148 Forget-me-not..... 10	149 Geranium Zonale..... 10
22 Long Green..... 10	150 Geranium, fancy color-ed leaves..... 25	151 Godetia (The Bee)..... 10
23 Eng. Gherkin, Pickles..... 10	152 Gourds (Hercules Club) 10	153 Ipomoea (Cypress Vine) 10
24 Early Curled Silesia..... 10	154 Indian Pink, dbl, mxd 10	155 Lobelia, Crystal Palace 10
25 Ice Drumhead..... 10	156 Compacta..... 25	157 Golden Pheasant..... 10
26 Simpson's Early Cur'd 10	158 Musk Plant..... 10	159 Nierembergia Gracilis..... 10
27 Prize Head..... 10	160 Pansy, fine mixed..... 10	161 Petunia, mixed..... 10

93 Antirrhinum Majus, single mixed..... 5		

Refer to Nos. in latest issue when ordering.

For \$1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and \$1.00 worth of the above seeds. For \$1.75 the RURAL six months and \$1.00 worth of seeds. For \$3.25 the RURAL one year, and \$1 worth of seeds. For \$4.50 the RURAL for eighteen months and \$1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL. In writing correspondence, items of information, or on other business, please use a separate sheet.

SUNLIGHT ON THE FIRE.—It is a mooted question whether the sunlight falling upon an ordinary wood fire retards the process of combustion. This is a popular notion, and one writer says it looks as if the fire burned more feebly when the sun shines full upon it. It is now alleged by scientific men that there may be some influence produced by the action of the sun.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

MRS. M. E. NEWHALL, San Jose. White and Brown Leghorns, Langshans, Plymouth Rocks, Light Brahmas, Pekin Ducks and Bronze Turkeys.

JAS. T. BROWN, 18 Georgia St., Los Angeles, Cal. Breeder of Thoroughbred Poultry of the leading varieties. Send for circular and price list.

CHOICE LAND AND WATER FOWLS for sale at all times of the most popular and profitable varieties. Please inclose stamp for new circular and price list to R. G. Head, Napa, Cal.

T. D. MORRIS, Sonoma, Cal. Tuolouse and Embden Geese, Bronze and W. Holland Turkeys, and all leading varieties of Thoroughbred Poultry.

D. H. EVERETT, 1616 Larkin St., S. F., Importer and breeder of Thoroughbred Langshans and Wyandottes.

AXFORD'S IMPROVED INCUBATOR.—400 eggs, \$50; 150 eggs, \$25. Guarantee satisfaction. For particulars address, I. P. Clark, Mayfield, Cal.

J. N. LUND, Box 116, Oakland, Cal. Wyandottes, Langshans, L. Brahmas, P. Rocks, B. Leghorns, B. R. Game Bantams, T. Guineas, Hom'g Antwerp Pigeons.

### SHEEP AND SHEEPWASH.

### LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
\$1.25  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE STUMPS AND TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder is too strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN & CO., General Agents

GIANT POWDER COMPANY, SAN FRANCISCO, CAL.

## LIGHTNING HAY KNIVES

WEYMOUTH'S PATENT.

This Knife is the BEST IN USE for cutting down hay and straw in mow and stack, cutting fine feed from bales, corn stalks for feed, cutting peat and ditching marshes. The blade is Best Cast Steel, spring temper, easily sharpened, and is giving UNIVERSAL SATISFACTION.

A few moments' trial will show its merits, and parties once using it are unwilling to do without it. Its sales are fast increasing for export as well as home trade; and it seems destined to take the place of all other Hay Knives. They are nicely packed in boxes, 1 dozen each of 60 pounds weight, suitable for shipping to any part of the world. Manufactured only by

HIRAM HOLT & CO.

EAST WILTON, FRANKLIN CO., MAINE.

For sale by the Hardware trade generally.

Warning of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture. EAST WILTON, Sept. 1, 1886.

CAUTION.

We are informed that various parties are infringing upon the widely-known Letters Patent granted originally to GEORGE F. WEYMOUTH for an improved Hay Knife. The invention patented by him is a sword-shaped blade provided with operating handles, the edge of the sword-blade being furnished with knife-edged serrations or teeth. It is our purpose to PROSECUTE ALL INFRINGEMENTS, and to hold responsible to the full extent of our ability and of the law, all parties who manufacture any knife infringing upon the patent, or who deal in the same. Several suits are now pending in the U. S. Courts. All manufacturers and dealers are hereby warned of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture. HIRAM HOLT & CO.

## S. F. MARKET REPORT

NOTE: Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Nov. 23, 1886.

Changeable weather the past week has influenced the market on leading cereals from day to day, but with clearer skies at the close the tone of the market is more reassuring. In fruits, assortments are growing less and vegetables are also lessening, with only winter varieties to be freely seen. In wheat the English markets have been gradually advancing, with a strong closing to-day. The following is to-day's cable:

LIVERPOOL, Nov. 23.—WHEAT—Firmly held and buyers hold off California spot lots 6s 10½d, to 7s 1¼d; off coast, 35s 6d; just shipped, 36s; nearly due, 35s 6d; cargoes off coast, demand fair prices and a shade higher; on passage, buyers and sellers apart, with upward tendency; English country markets, firm; French, steady; wheat and flour in Paris, turn dearer.

## Foreign Review.

LONDON, Nov. 22.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: Wheat deliveries continue very restricted. In London, trade is slow, at an advance of 9d; in the provincial markets, values are very firm and slightly above the current rates in London. The sales of English wheat during the week were 48,464 quarters, at 31s 4d, against 58,097 quarters, at 30s 1½d during the corresponding period of last year. Flour is steady, barley inactive. The trade in foreign wheat is hardening; quotations are irregular and tending toward an advance. The heavy arrivals of foreign oats caused a fall in values of from 3d to 6d. Beans are 1d dearer. Eight cargoes of wheat arrived; two cargoes were withdrawn and five remained, four of which were California and one Oregon. To-day there was an increased inquiry for wheat. A shilling advance was asked on Indian, American, and Russian. Flour and corn were each 6d dearer. Barley was quiet. There were further large arrivals of oats, and prices were 3d lower. Beans and peas were firm. Linseed was 6d dearer.

## Eastern Wool Markets.

BOSTON, Nov. 20.—Notwithstanding the fact of a quiet trade at present, prices have held up firm, and manufacturers, when in need of supplies, have to pay full prices. There is little shading on prices of desirable wool. The virtual settlement of the labor troubles in New York State and Philadelphia removes what promised at one time to be a serious drawback to the trade. On the whole the situation of the market has improved this week. California wool has been in good demand. The sales include 407,000 pounds spring and fall. Of fall wool, 100,000 pounds were sold, all on private terms. In spring there have been sales of 50,000 pounds, at 19c to 25c; 80,000 pounds at 20c to 24c; 77,000 pounds on private terms.

NEW YORK, Nov. 21.—Holders do not offer goods with anxiety, but continue to expect to do better later in the season than at present. The demand has been slow for some time, and confined largely to small invoices wanted for some special necessity. Business last week was again only fair, but dealers in several cases report little more than looking around within the last day or two, with indications that consumers have commenced to exhaust supplies and feel like replenishing. Among the sales were 20,000 pounds Oregon, at 24½ cents. The Philadelphia market is very quiet, but holders show no signs of weakening. Manufacturers are showing more interest, and have been trying unsuccessfully to buy at 1 or 2 cents below the general asking prices. Among the sales were 5000 pounds Nevada fine, at 22 cents; 50,000 pounds Montana at 25½¢ to 26 cents; 5000 pounds medium territory at 24 cents; 25,000 pounds territory at 25¢ to 26½ cents; 2000 pounds California at 19½ cents. The Boston market is quiet, with an improved undertone and better interest shown by manufacturers.

## New York Hop Market.

NEW YORK, Nov. 21.—First-class goods still command a good premium over the ordinary run, and other than positively inferior goods are at least steady. Pacifics and States remain in about the same position that they have been for some time past, with the principal holders apparently indifferent sellers of fine qualities at current prices. Pacific coast crop of 1886, prime to choice, 28¢ to 30 cents; fair to good, 26¢ to 27 cents; 1885, good to choice, 13¢ to 16 cents; mix-d Germans, 24¢ to 25 cents; Altmars, 18¢ to 20 cents; Kents, 23¢ to 25 cents; Sussex, 20¢ to 22 cents. The Cooperstown Journal of Nov. 20 says: Lane, Avery & Co. have cleared out another grower's entire crop of 1886 hops, in bale, at 18 cents. They were of common quality. This firm has also bought during the past week about 15,000 bales of German and Pacific hops of 1886, at 30¢ to 33¢.

## New York Wheat Market.

NEW YORK, Nov. 21.—In wheat, the past week, pot has met with moderate inquiry, both for milling and shipment. Options have been fairly active, and dealings were larger than in the preceding week. During the latter part of the week the general market ruled higher, in sympathy with stronger reports from European markets. Spot closed ½¢ to 2¢ higher. Options, November, 85½¢; December, 86¢; January, 87½¢; February, 88½¢; and May, 93½¢.

## California Fruit at the East.

CHICAGO, Nov. 20.—The shipments of grapes to this market from California, for the past three or four days, have been of a somewhat more liberal character than during the three or four weeks previous to this. The market for all varieties of California fruit is about steady, with a moderately good demand. Tokays in choice condition sold for \$2.75 to \$3.40 per box, and Muscats at \$2.50 to \$2.75. Tokays of lower condition brought \$2.25 to \$2.50, and Muscats and Verdelis at \$2.25. The bad condition of the fruit that is shipped here shows that the season is very nearly over, and any further shipments here have been stopped by commission men. Pears are scarce and firm. There is not much of this fruit on the market,

nor is it thought there will be any more consignments received. The prices for pears range from \$3.50 to \$4.00 per box. There is a scarcity of quinces. There has been no change in dried fruits for some months.

NEW YORK, Nov. 20.—California pears are quoted at \$2.40 per box; quinces, \$1.50 per box; grapes, \$2.45 per case of 40 pounds.

## California Products at the East.

NEW YORK, Nov. 21.—Lima beans, \$1.80 to \$1.85. Seeds—Sales are reported of 300 bags of California yellow mustard, at 3¼¢ to 4¢. Quoted at 3¼¢ to 4¼¢. Canned goods of all kinds are moving with increased freedom at hardening prices. The tendency in corn and tomatoes is upward. California canned peaches are quoted at \$2.25 to \$2.50; pears, \$2.25 to \$2.50; plums, \$1.75 to \$2; grapes, \$1.75 to \$2; apricots, \$2.15 to \$2.25. Columbia river salmon, in this market, is working into a decidedly stronger position. The stock here, it appears, has been reduced. The supply, not exceeding 6000 cases, is all in jobbers' hands. Columbia river, \$1.57½¢ to \$1.60; outside rivers, \$1.40 to \$1.45.

## Local Markets.

BARLEY—The tendency, throughout the week, has been upward under strong buying. On Call transactions have been free, with an advance established. The following are to-day's sales: Morning Session: Buyer season—100 tons, \$1.09; 500, \$1.09½; 200, \$1.09½; 200, \$1.09½; 100, \$1.09½; 200, \$1.09½. Afternoon Session: Buyer season—500 tons, \$1.09; 200, \$1.09½; 200, \$1.09½; 100, \$1.06½; 100, \$1.06; 100, \$1.05½. Buyer 1886—200 tons, \$1.06½; 100, \$1.06; 100, \$1.05½.

BEANS—The market is dull and inactive, yet large holders express confidence in the future.

BUTTER—The market continues overstocked with both pickled and fresh, which favor buyers.

CHEESE—Supply lighter, demand light, market strong at full quotations.

EGGS—Continued receipts of Eastern and Californian from the lower counties have broken the market, with a weak closing at quotations.

WHEAT—There was a stronger and more marked inquiry to-day, with buyers quietly paying an advance for straight lots. On Call transactions have been free, at gradually hardening prices. The following are today's sales: Morning Session: Buyer season—400 tons, \$1.47; 1200, \$1.46½; 300, \$1.46½. Buyer 1886—100 tons, \$1.41½. Afternoon Session: Buyer season, 2400 tons, \$1.40½; 2600, \$1.46½.

[COMMUNICATED.]

## Market Information.

## Cereals.

The RURAL PRESS has been a firm and consistent believer in higher prices for wheat, not abating one iota even when, under manipulation, the market did not appear to justify the correctness of the assumed position. That the position has been proven correct is witnessed in the fact that an advance of fully 20 cents per cental (\$4 per ton) has been established since July 1st. Although this is a decided advance, yet the present statistics of the market justify the conclusion that still higher prices will rule before the end of the first quarter next year. By referring to issues of this paper running back from six or eight weeks, or, if convenient, to even up to July, a more thorough understanding of the situation can be arrived at, for in these back numbers statistical and other information of a valuable character, bearing on the market, is given, which will aid no little in proving the correctness of the position of the PRESS.

Throughout the past week wheat has ruled strong abroad, with several advances reported. These advances are due in the main to a decided falling off in the Indian shipments, owing to lessened supplies there, and also to the advance in silver operating against the exporting of wheat.

The stock of wheat in France is below an average. Late advices from France report that "millers are for to be turning their attention more to foreign wheat, owing to the defective condition of home-grown, and the scarcity of dry native wheat." French foreign requirements are placed at 55,000,000 bushels. St. Petersburg shipments are falling off. At Odessa, with a stock of 1,728,000 bushels, the market is steady. The London *Miller* states that in every English village where a mill is the center of local flour supplies, the local wheat delivery is below expectation. Foreign wheat or foreign flour has to be obtained to supplement the short local supplies. Deficient supplies thus early in the season indicate greater deficiencies in the future.

In the local wheat market there has been a fair degree of activity at gradual advancing prices, owing to holders' unwillingness to sell except at a slight advance every day or two. Sales, as usual, have been all of 1½ to 2½ cents per cental above the quotations of the daily press.

In barley there have been several advances, with a strong closing to-day. The advance is due to lessening supplies and a continued strong export and home demand. It is now conceded that the RURAL PRESS estimate of this year's crop, which was considerably below other estimates, was correct, and consequently the very heavy exports and home consumption have reduced the surplus to as low a point as last year at this time.

The oat market has ruled strong at steady prices throughout the week. Receipts have been fair and consumption good. Holders' views have been strengthened by the strong and higher barley market.

Throughout the week there has been more steadiness to the corn market, with the more choice grades fetching a slight advance. This is due to higher asking prices for Western corn to arrive, and also to less selling pressure by farmers in this State.

## Dried Fruits.

The firmness heretofore noted is continued for the more choice kinds, which have been well cured. It appears to be the prevailing opinion that prices not only keep well up, but advance later on. The high prices ruling for canned fruits help, very materially, dried fruits. The East continues to report a strong and good market.

## Feedstuffs.

Ground barley has been advanced under a good demand and also in sympathy with higher prices for barley.

Bran and middlings continue strong at unchanged prices. An advance is looked for.

Hay is held more firmly, owing to an absence of

heavy rainstorms, and also to a large demand and moderate receipts.

Feed carrots are in good supply at from \$5 to \$6 per ton.

## Fruits.

Although grapes come in more sparingly, yet the market does not respond, owing to the light demand. It takes very choice to fetch top quotations.

Under heavy receipts from Oregon, the market for apples is weak and in buyers' favor, notwithstanding an increase in the demand. It takes something very extra to fetch over \$1 a box. Lady apples are strong at from \$1.50 to \$1.75 as per quality.

Japanese persimmons are in the market, but they have slow sale at from 8 to 10 cts per pound.

Choice pears are very scarce and command good prices, but fair to good are in liberal supply.

In citrus fruits the market is easy, owing to freer receipts and only a moderate demand. The quality of the oranges was never better. On Thursday last, Messrs. Wittland & Fredrickson received a consignment of seedless lemons which are pronounced superior to any other lemon cultivated in this State. It is not only seedless but the skin is no thicker than the skin of a lime. The shape is oblong.

## Hops.

It seems quite impossible to obtain anything new or deserving of especial mention. Holders of choice do not exhibit any uneasiness, for they still assert that brewers must pay considerably higher before the end of the season.

## Honey.

The demand is light, but as the supply is light, values are steady and firm. The home trade is reported to be better.

## Live-stock.

Large holders of beef cattle are trying to obtain an advance, but as yet, unable. There is some inquiry for stall-fed. Mutton sheep have a strong tone. Hogs are in better demand, but buyers do not name an advance except for something very choice. In horses there are no changes to report.

The following are to-day's meat prices: Beef—Stall-fed, 7½¢ to 8¢ lb; grass-fed, extra, 7c; first quality, 6½c; second, 5½c; third, 4½c. Calves, small, 9¢ to 10c; larger, 7¢ to 8¢ lb. Mutton—Ewes, 5½¢ to 6c; wethers, 5c. Lamb—Spring, 6½¢ to 7c lb. Pork—Live hogs on foot, 2½¢ to 3½¢ for grain and dairy fed; 2½¢ to 3½¢ for soft; dressed, 5½¢ to 6c for hard, and 4½¢ to 5½¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed on foot, fetch one-third less than they sell at dressed.

## Nuts.

Nuts are in better demand for the holiday trade, with a very strong market ruling for Brazil walnuts, almonds and peanuts.

## Raisins.

Both home and Eastern orders are increasing, with a stronger holding of the more choice. Eastern advices continue to note the growing favor of Californian. This increasing popularity of Californian can be made more marked by great care exercised in the curing and packing.

## Vegetables.

Potatoes have ruled fairly steady throughout the week, at firmer prices for choice. Were it not for heavy receipts from Oregon, the market would be higher. The quality of those received from Oregon have not been up to the previous season, consequently they did not fetch as high prices as they otherwise would. The last received sold as follows: Burbank seedlings, \$1 to \$1.30, and Garnet Chilis, \$1 to \$1.15.

Onions have ruled fairly steady for hard sound keepers, but weak for the poorer qualities. Receipts have been fair and demand steady.

Sweet potatoes advanced slightly, under lighter receipts and a good demand.

String beans and sweet peas continue to come in a small way, and sell at fancy prices.

In cabbages and root vegetables the market is not strong, yet the feeling is firmer.

Pumpkins and Marrowfat squash are without change.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	193,727	169,718
In port, disengaged.....	93,392	122,266
In port, engaged.....	75,018	27,745
Totals.....	359,137	319,729

The above gives a carrying capacity as follows: 1886, 574,619 short tons; 1885, 551,666 short tons; increase over last year, 22,953.

Poultry has ruled fairly steady throughout the week. Turkeys advanced, but on Monday they shaded off, with a weak closing to-day.

Seeds are in better demand, but as yet the orders are not large.

San Francisco, Nov. 23, 1886.

## ENTOMOLOGICAL.

## Home-Made Lye for Insect Pests.

EDITORS PRESS:—Within the last year I have read in the papers of the destruction of fruit by the scale bug and other insect pests that make their home in most kinds of fruit trees, and the treatment recommended for their expulsion by different parties, and D. W. Coquillett was directed by Professor C. V. Riley, U. S. Entomologist, to conduct some experiments in killing the cottony scale. Mr. Coquillett says, nearly all remedies experimented with were fatal to the young insects, but the adults, especially the females with egg-masses, were still more difficult to destroy on account of their being massed together in such large numbers and protected by the cottony matter secreted by the female. I am now in my eighty-fourth year and have planted three orchards, one in the State of New York and two in Michigan, and took care of each orchard till the trees were from four to six inches in diameter, and my practice was to set up a leach of house-ashes, pour hot water on the ashes in order to get the full strength of the ashes, so that the lye would be strong enough to bear up an egg, then take a broom handle or some suitable stick and tie some woolen rags on one end; with a pail of the lye, proceed to wash the trees and well up the limbs; the lye will penetrate all the crevices, if any, and run down to the root of the trees, killing the larva and every insect pest that are barrowed there, and is also a good fertilizer. I go through the above process every spring when the leaves are about the size of a mouse's ear; the lye causes the bark to grow very smooth and gives it a bright and shining appearance, and I never had a wormy apple in either of those orchards. I have treated my plum trees in the same way and it gave them a beautiful plum color. My trees, treated as above, beat my neighbors in growth and beauty, whose trees were whitewashed. Mr. Tibbets and his co-worshippers to the contrary, notwithstanding. I object to the whitewashing treatment, because it contracts the bark and retards the growth of the trees. In regard to old orchards that are not bearing well, and have a sickly and stunted appearance, I would recommend the scraping of the trees, and burn the scrapings, and prune the trees thoroughly, and in the absence of wood ashes lye, use concentrated lye reduced to the strength of wood ashes lye, and wash the trees with the lye, and on your individual enterprise you are sure to win a vigorous growth of the trees and an abundance of fine fruit.

LESTER CROSS.

Stockton, Nov. 22, 1886.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
Geo. McDowell—Fresno and Tulare Cos.  
J. H. SMITH—Plumas and Sierra Cos.  
J. C. SWERNEY—Sonoma and Mendocino Cos.  
O. F. BERGMAN—Yolo and Solano Cos.  
M. S. PRIME—El Dorado and Placer Cos.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

SOAP LAKE, near Gilroy, is to be drained, and the water therein to be run through a canal into the Pajaro River. When drained a large body of land will be reclaimed.

## The Best Alfalfa Land in Tulare County for Sale.

Mr. W. McFadden, whose postoffice address is Tipton, Tulare Co., offers for sale, at the low price of TEN DOLLARS PER ACRE, 320 acres of land on the east side of Tulare lake, just south of the mouth of Tule river, about 12 miles nearly due west of Tipton, on the S. P. R. R. He has 30 acres of as fine a stand of alfalfa as can be found growing in the county. It grows green and thrifty the year round, without any irrigation whatever. The larger portion of this land is also equally good for stock, alfalfa, grain or vegetable growing. It affords rare quarters for hunting and fishing. Also 400 head of hogs for sale. The proprietor is called East and will sell at a sacrifice. Write as above, or call on W. McFadden, on the premises.

## The New Cast AJAX TINNERS' SHEARS

(Patent applied for) at the extremely low price of 50 cents each; postage, 16 cents. Length of cutting edges, 2 inches. Carefully made, well finished, very serviceable, edges chilled, and hard as steel, equal to the best steel goods in cutting qualities. OSBORN & ALEXANDER, Mechanics' Tools, Hardware and Machinery, 628 Market St., San Francisco.

## H. C. SHAW PLOW WORKS.

YEAR. } WHITE ADRIATIC, } YEAR.  
SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Proparturiens, Macowarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

Stockton, Cal., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no scale or indication of scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District.  
JOS. HALE, County Commissioner of Horticulture.

B. V. CUTTINGS.

Bordeaux Varieties.

I OFFER FOR SALE, AT \$10 PER M., 200,000 CUTTINGS of the following renowned varieties, duly packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portat-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from \$2.50 to \$5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]  
"MARY J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill.: The best machine ever invented by man. H. H. DURANT, Cottagesville, S. C.: Everybody likes them and everybody wants them."  
"S. B. ADAMS, Ash Grove, N. C.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get a good one."  
"MRS. JOSEPH SWIFT, Sears, Grove, Iowa: The most useful article about the kitchen. ANNA RAMSEY, Mission, Tex.: Have thoroughly tested it on articles from lace collar to bed quilts, gives entire satisfaction."  
"ST. CLAIR INKSTER, JR., Kover, Washington Ter.: Sold five and I can not begin to tell of too highly. JOHN DETTON, Buchanan City, Utah: Have given it several severe tests and it came out triumphant every time."  
"JNO. H. WIDEMER, Kansas City, Mo.: They have proved treasures to the families who secure them. A. P. SHIPLEY, Toano, Nev.: Gives entire satisfaction. Rather than lie the Washer than anything I have seen."  
"E. M. MANNING, Leander, Tex.: Have proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Spencer, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house."  
"MRS. M. C. BOHNS, California, N. J.: Give perfect satisfaction. I do my washing alone in some time I used to with hired help. MRS. M. MOORE, Niagara, N. Y.: Will do more than twice as much washing as I could do before."  
"MRS. F. G. SINDEL, Thompson, N. Y.: Would not take \$50 for mine if I could not get another. Washer quicker and better than it can be done by hand. MRS. FRED H. HARRIS, Buchanan, Mo.: Is all that is claimed. Would not be will of me for twice its price. MRS. ISAAC B. POND, Georgetown, Ches.: Have used it nearly four months. Am perfectly satisfied. I feel no more about it to all hand-keepers. MRS. MARY E. VALE, Patuxent, Md.: Saved me \$10.00 per year for 12 months I've had it."  
"MRS. C. W. TAYLOR, Northbrook, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Watrous, Minn.: Had rather give up my housework than part with my Washer."

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 546, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

**DEAFNESS**  
its causes, and a new and successful CURE at your own home, by one who was deaf twenty-eight years. Treated by most of the noted specialists without benefit. Cured himself in three months, and since then hundreds of others. Full particulars sent on application.

# HAWLEY BROS. HARDWARE CO.

WHOLESALE DEALERS IN HARDWARE AND AGRICULTURAL IMPLEMENTS

## The Celebrated SCHUTTLER Wagons.

THE BEST WAGONS

IN THE  
WORLD!

Made expressly for the Western Coast of America. Warranted to withstand dry climates and to wear longer than any other wagon manufactured.

THEY ARE THE PIONEER WAGONS of the Pacific Coast, and especially adapted for the hard usage to which wagons are subjected here.

STRONG, DURABLE,  
OF  
LIGHT DRAFT.

Made of the best material by experienced workmen, in the most approved manner of construction.

## PERKINS' WIND-MILL.

EVERY MILL WARRANTED.

PRICES GREATLY REDUCED.

The Genuine Perkins' Wind-Mill has earned a reputation for excellence that will be maintained. It is unquestionably the most perfect and beautiful Wind-Mill in the market.

Perfectly noiseless, easy and graceful in all their movements. Positively Self-Regulating, with no coil spring or springs of any kind, no little rods, joints, levers, or balls to get out of order, as such things do. Mills in use six to twelve years in good order now, that have never cost one cent for repairs.

SEND FOR SPECIAL CIRCULAR.

## OUR "SOUTH BEND" CHILLED PLOWS

CANNOT BE EQUALED FOR

Lightness of Draft, Quality of Work, Ease of Handling and Adjustment, and General Construction.

WARRANTED TO GIVE PERFECT SATISFACTION.

Look for the Name, "South Bend Chilled Plow," on the Beam, and take no other.

THIS CUT REPRESENTS OUR Nos. 1 and 1 B ONE-HORSE PLOW.

## JOHN DEERE MOLINE PLOWS

THE LEADING PLOWS ON THE PACIFIC COAST.

We take pleasure in calling special attention to our recent improvements in the construction of Plows, which consist of a brace crossing and WELDED SOLIDLY TO THE STANDARD, extending down and bolted to the landside, affording a firm brace to the standard and giving much greater strength than will be found in any other set up handle plow. It also extends up and bolts to the handle with two T bolts, producing the best braced and finest plow made.

SOLE AGENTS FOR THE "NEW DEAL" GANG PLOW, "KEYSTONE" DISC HARROWS, H. W. DAVIS & CO. BUGGIES, Etc., Etc.

The Celebrated **HOWE SCALES** in all Varieties.

SEND FOR CATALOGUE.

HAWLEY BROTHERS HARDWARE COMPANY, San Francisco, Cal.

## GREAT WHALES!

It can be proved by figures that a PAIR of BIG "CYCLONES" can pump ENOUGH WATER, in a certain time, for a WHALE TO SWIM in.

If anybody doubts this, let him DIG A POND and FURNISH A WHALE not less than 60 feet long, and we will supply a mill, FREIGHT PREPAID to any point in Sacramento or San Joaquin Valley.

PATENTED.

These Mills are the BEST, CHEAPEST, STRONGEST and LIGHTEST,

AND ARE

SELF-REGULATORS.

These birds are all bred from my prize winners. Send for circular and mention PACIFIC RURAL PRESS. Address

J. N. LUND, Box 116, Oakland, Cal.

## Large Draft Horses for Sale.

A bay team of large, strong, healthy, and every wise desirable draft horses, seven to eight years of age. Would make splendid city dray horses. Will sell cheap, or exchange for desirable breeding mares. Address, W. McFADDEN, Tipton, Tulare Co., Cal.

## STENCIL PLATES.

We have an arrangement by which we can furnish our readers with Stencil Plates for marking boxes, bales, and sacks of produce, at reduced rates during the continuance of this notice in our columns. Address DEWEY & CO., 252 Market St., S. F.

## THE ROLLER ORGAN.

C. H. HAMMOND, General Agent for Pacific Coast.

It plays the songs of England, Ireland, Germany and France, For Church or Social Meetings, for a Concert or a Dance. 'White Wings,' 'The Quilting Party,' 'Climbing up the Golden Stairs,' 'America,' 'The Mikado' and all the latest airs. It makes a pretty ornament, although it is no toy, And the music it produces is a never-failing joy. No paper strips are needed and the tones are full and sweet. For the Rollers are all perfect and the parts are all complete. The most renowned Musicians who have tried them all protest That "The Roller Organ" is beyond comparison THE BEST.

## A NEW MUSIC BOX.

PLAYS ANY TUNE BY ANY ONE. (Even Without the Slightest Knowledge of Music.)

It employs no paper, but its music is obtained from a roller furnished with pins similar to those of a music box. PRICE, with 3 Rollers, \$12. Send for Circular.

## The Herefords at Chicago.

Just a year ago, when the reports of awards at the Chicago fat-stock show came in, we gave the Hereford breed the honor of presentation on our first page, because of the prizes won at the fair in competition with other beef breeds. We have occasion to repeat the process in this issue because the Herefords again have come to the front at the exposition, though their prominence is not so marked as last year. This year the contest between the Herefords and the Polled Angus was quite sharp. It seems to have been an off-year with the Shorthorns, for the leading feeders of this breed and its grades kept their cattle at home.

The reports which have come thus far give the grand sweepstakes prize as judged in the ring to Rudolph Jr., a pure bred Hereford, coming 3 years old, owned by the Wyoming Hereford Cattle Company. There were other prizes, of course, in the live classes, of which we have not full record at present, but we know that an imported Angus steer won three first prizes, and pressed Rudolph Jr. closely on the sweepstakes. In the dead classes, the premium for the best 3-year-old carcass was awarded to "Jerry," a grade Hereford, owned by Fowler & McNatta, and for the 2-year-old carcass to "Plush," a Hereford grade owned by Swan & Bosler—the yearling carcass prize going to an Angus. In the sweepstakes for the best carcass of any age, the Hereford "Plush" was again the winner, and accounts say the award was universally approved.

The heaviest fat steer at the fair was "McGregor," a grade Hereford, of Fowler & McNatta, which weighed 2565 pounds alive, and the next heaviest steer was also a Hereford grade, at 2355 pounds. The next in weight was a Shorthorn grade, at 2300 pounds.

It is an interesting fact that the animals which gained the prizes in the ring did not win on the block. For example, Rudolph Jr., the grand sweepstakes animal, was displaced by other Herefords when the judges passed upon the carcasses. Rudolph Jr. had too much fat and lacked in quality. The premium for the greatest amount of eatable meat was given to a three-year-old grade Hereford, "Quality," owned by Adam Earl. The manifest disagreement between those who judged in the ring and

on the block would indicate the truth of the objection which is often made by stock-growers that judges know nothing of "handling," and that "touch" and "quality," which cut so great a figure among the early breeders, had better be revived and made use of in our cattle judging.

As pertinent to the success of the Herefords, we give on this page the portrait of a representative animal of that breed, the bull Diffidence 7695, owned by the Indiana Blooded Stock Co.

THE CITRUS FAIR.—Much interest is being taken in preparations for the Citrus Fair which

the fruit in firmly, makes his boxes extra-tight, and certainly such fruit as he gave us would seem to be fitted for long preservation from insects and fungi.

THE FRUIT-GROWERS' CONVENTION.—In presenting our reports of the recent Fruit-growers' Convention at Sacramento, we propose to follow our usual policy of making careful preparation of the various addresses and discussions. It will serve the reader better to have a subject treated accurately, even if such handling takes a little more time. Those who

## Notes on Wheat.

Statistics show that the wheat production of the United States is something over 20% of the quantity produced in the whole of Europe. The wheat crop of this country for 1882 was 504,000,000 bushels, and for 1883 it was 421,000,000 bushels. The next largest wheat producer is France, which produced 346,600,000 bushels in 1882, which fell off to 285,600,000 bushels in 1883. France never furnishes the full demands for her own consumption, but imports more or less every year. Russia comes next to France. She produced 203,000,000 bushels in 1882, but only 160,000,000 in 1883. Russia, with a much larger population than France, produces less wheat and yet exports considerable. Her people use but little flour. The European countries next in order of production are as follows: Italy in 1883 produced 128,000,000 bushels; Spain, 120,000,000; Portugal, 77,000,000; Germany, 72,000,000; Great Britain, 69,000,000; Turkey, 41,000,000; Austria, 33,500,000; Belgium, 21,000,000; and Roumania, 20,000,000, etc.

Wheat in this country, 30 years ago, averaged nine bushels to the acre. Lately it has increased to 12 or 13; but it is still much below the average

yield in England, which, for many years, has averaged 29 bushels to the acre. This large yield is due to careful cultivation, more particularly in supplying the land with proper mineral food to supply the nutriment withdrawn by the annual cropping of the same growth. But little attention is paid to that important requisite in this country. The wheat-grower here, as a general thing, raises continual crops of that grain so long as the land will produce a crop; then he converts his land to some other use, and gives up wheat-growing to his neighbor "further west." It is thus that the once celebrated wheat lands of New York, Vermont and other Eastern States have been turned to other products.

A large portion of the wheat-producing lands of California will not now yield one-half of what they did originally, and the time is not far distant when such lands will have to be turned to other uses, unless special attention is given to a proper restoration of the soil by mineral or other forms of dressing.

PURE BRED HEREFORD BULL, "DIFFIDENCE," NO. 7695.

will open in Sacramento on the 13th of this month. A number of counties are working well in securing collective displays, and in others there are many individual efforts which will make good returns. Mr. Carrington, of the *Record-Union*, who made us a call last week, assured us that the outlook for the fair was most excellent, and that a display far surpassing last year's effort will result. Our readers who can spare a part of next week for an excursion will be profited and well treated if they visit the capital city.

FINE SULTANAS.—Mr. R. B. Blowers, of Woodland, gave us the other day a sample of his fine Sultanias. They are perfectly cured, cleaned of stems, and evidently carefully selected before packing, as the fruit was uniform and excellent. After selecting, stemming and winnowing, Mr. Blowers treats his Sultanias to a bath of glycerine solution (one pound of glycerine to 15 gallons of water), which freshens them up after the cleaning process, and acts also as an anti-ferment. Mr. Blowers presses

take part in the discussions are often unintentionally misrepresented and made to advise things they do not themselves approve. For this reason we deem it better to submit the matter to a careful revision rather than publish imperfect accounts.

SANTA BARBARA CENTENNIAL.—The people of Santa Barbara are getting ready to celebrate in high style the hundredth anniversary of the founding of the Old Mission, which they regard as the birthday of their charming city. The program covers four days, beginning Sunday, December 5th, with imposing church ceremonies at the Mission. On Monday the special feature is a parade, intended to reproduce the characteristic life and costumes of a century ago. On Tuesday a grand bazaar will open in the pavilion. Wednesday, beside the fair, there will be a grand Rodeo, riding of wild horses and feats of horsemanship, and at night a costume ball at the theater, with real Spanish dance by 15 couples in costume. Great interest has been taken in the preparations.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Tehama County Notes.

EDITORS PRESS:—Being a constant reader of your valuable journal, which leads any I have seen as a family paper, I beg leave to write you a few facts about Tehama county fruits. Oranges and lemons are now hanging in golden clusters from the bending boughs of Red Bluff trees—a beautiful and convincing proof that the northern Sacramento valley can raise the luscious fruits and ripen them early. A splendid exhibit will be made at Sacramento at the Citrus Fair. Olives, figs, prunes, plums, raisins, etc., will also be shown, all raised without irrigation. From 15 four-year-old French prune trees in Red Bluff, Wm. Duncan gathered 6000 pounds of fine fruit this year, selling at two cents per pound, on land which was worth \$50 per acre four years ago.

Thorough cultivation is needed, as is the case all over the world. Allowing liberally for all expenses of setting and cultivating, and there remains a fine balance-sheet on a 40-acre tract, and during this time vegetables and melons are raised in the spaces, affording a profit on the land. This is on river-bottom land, mellow and deep.

Fruits have been neglected in Tehama because, being abundantly blessed with a splendid rainfall, grain has been a sure and remunerative crop, and wool and stock took second place. Now, however, grain is low in price, and the future will see fruits go to the front. Oranges are a most beautiful and tasty fruit to raise, and strike the fancy of those who, like myself, were from the East; but other crops, such as prunes, peaches, pears, figs, and the raisin and wine grape, will bring quicker returns and equally large profits. Formerly an extensive fruit-grower and farmer in New Hampshire, I see here great possibilities in store for the careful and industrious grower of almost any fruit, and see that if he will put up only the best for market, and acquire a reputation for fine fruit, he will be abundantly repaid.

Please let me quote an instance in my own experience. Four years ago I sold my Baldwin apples, raised in New Hampshire, to Hiland, Chessman & Co., of Boston, Mass., for \$3.50 per barrel, that being much above the current price. I put my name and written warrant on every barrel, and told Mr. Hiland to keep them till the last and notify me of selling price. I received a card in May following, saying: "Selling some of your apples to-day. They are perfectly sound and sell for \$6 per barrel."

I saw him in Boston in July and he had just sold the last of the lot at \$7 per barrel, and told me he would always give me \$1 per barrel above market price for all my apples. The same care here will insure a market always, and fine fruit will sell at paying figures.

Mr. Duncan (above referred to) has 50 acres in fruit, but had not enough to supply home demands, and will put out 10 or 15 acres more this winter, an orange grove among the lot. He will exhibit largely at Sacramento. We need a thousand men in Tehama county like him—men who know how to raise and properly market fruits, and indications point to a large immigration this winter. Fortunes await all who will intelligently cultivate fruits here, and a new northern market is opening through the completion of the California & Oregon Railroad, which gives Tehama county the inside track. We are the nearest, and will thus save freight charges. Hundreds of acres will be set in fruit this winter near here.

Are barberries raised in California, and, if so, can they be raised here?

Red Bluff. H. S. DE ROCHEMONT.

## Vacaville Notes.

EDITORS PRESS:—The north wind blew very hard the most of last week, but let up Friday, and on Saturday morning rain began to fall and kept up the most of the day. About one-third of an inch fell.

The RURAL PRESS has evidently a wide circulation. A man in New Jersey a few weeks since wrote to Henry Bassford that he saw an account in the RURAL PRESS of some grapes that he had sold to Mr. Allegretti to preserve and ship East, and he wanted some further information, which Mr. Bassford gave him.

Four fruit-growers, T. Wilson, G. and J. M. Gates and Dr. Dobbins, have entered into a contract with the owner of the Benicia cannery to deliver all the merchantable fruit they raise for the next five years of the following kinds: peaches, pears, plums and apricots, the apricots to average 13 to the pound, and the peaches to measure 2½ inches. These gentlemen own about 700 acres of orchard. The fruit will be shipped in 60 pound boxes. These boxes cost 16 cents apiece, and can be used several years. Mr. Gates shipped, this year, 100 tons of fruit with 200 boxes, and has the most of the boxes for another year. By contracting fruit this way, each man knows just what his fruit is worth as soon as he has it boxed. There is a great deal of expense saved which is necessary when shipping East or to S. F. The parties to the contract have each entered into \$40,000 bonds to fulfill it.

In answer to your correspondent, who signs himself "Vacaville," I will say that he is part-

ly right and mostly wrong. The fruit crop here was not generally a full crop, although several had larger crops than ever before. It is always the case among producers of anything marketable, that some will raise poor stuff that will not pay expenses, and others will not put up their produce in a decent shape, thinking that anything is good enough to send to market. Perhaps your correspondent "Vacaville" is of the latter class, as he seems to be tender on the paying point. It is true that many who shipped East lost money, and some few who shipped to San Francisco did so also, as there are but few years when at some time in the season the market is not glutted, and perishable produce is sold at a loss. This season, F. Buck paid 1½ cents for apricots delivered at his packing-house; John Cory bought the peaches and grapes on about 20 acres, paying two cents per lb., taking them on the trees and vines; J. Gates had 50 tons of apricots on ten acres, which he sold to the cannery at 2½ cents per lb.; H. Bassford bought a great many peaches and grapes, paying from \$25 to \$50 per ton, he picking them. He paid \$25 per ton for second crop grapes. The first wine grapes that went from the valley brought \$30.10 per ton in San Francisco, but were lower the latter part of the season. There were other sales higher, as peaches sold for 4½ cents by the crop. Now though all the fruit did not bring as high prices as the ones I have named, the most of the good fruit sold at home paid well.

As to help, he is partly right about that. It is true that a great deal of the white help that comes here is of the genus tramp, and worthless, but the fruit-raisers are partly to blame for that, for they have refused to hire white help so long that but few come that are of any account to work. G.

Vacaville.

## Tolumne County.

EDITORS PRESS:—Tolumne county has not been represented in your paper for some time. We are rather under a horticultural cloud than otherwise, not having recovered from the raid of grasshoppers. They ate the young trees and buds of vines, so that orchards which produced 17 tons of grapes two years ago barely have one and a half tons this season. Next year promises to be an improvement, as the present has produced a good supply of bearing shoots. The young trees suffered more than vines; many were entirely destroyed. Hugh Quinn lost a young peach orchard which gave promise of fine fruit, being planted on rich soil, washed from Table mountain, distinguished for raising fine grapes and peaches. With all the drawbacks, Mr. Quinn got away with many of the prizes at the late Stockton fair.

To-day we witnessed a very beautiful growth of oranges in the garden of James Goodwin, of Mountain Pass. The oranges are now appearing in their golden yellow. Amid the green foliage, dotted all over with luscious and inviting fruit, they speak volumes as to the productiveness of our foothills, when conditions are only half attended to. But distance from market and cost of transportation will keep capital away and cripple enterprise.

The Arbor Day excitement has not reached our foothills, and we do not know that it is necessary, where the nut-pine flourishes. When one old tree falls or is cut down, a dozen rise in its place, and soon a dense thicket fills the level patches; and even upon barren, rocky hillsides, where nothing else can live except it be chapparal or manzanita, these nut-pines grow and thrive. The sugar-pine regions we are not capable of describing, not having knowledge from actual experience.

Arbor Day is tinged with romance, and if followed up, will benefit the future, as well as the present, generation. The young forester will visit his planting venture in after years with as much pleasure as his ancestral home. We remember, when only a schoolboy, planting two young willow trees, which grew into one. When we think of home, or long for a visit, that tree comes uppermost; and so it would be with our young foresters of San Francisco and the State if they follow out the program in the true spirit. "He that makes two blades of grass grow in place of one, is a benefactor." The producer should be honored above all other occupations. To work with nature is to work with God. How beautiful the creations which arise from combined manipulations! Nature is ever true to man's effort when conducted in wisdom. Many a smiling, happy home gives testimony to well-ordered industry. If Arbor Day becomes an institution and is yearly attended to, 20 years will so alter the face of Nature as scarcely to be recognized by pioneers or those inaugurating this great and grand movement. We will see to it that a tree is planted on the date of this attempt to start a pleasant and profitable observance. Let each planter make a record of the event; let time and place be noted, also what kind of a tree, by whom provided, etc. In future years all these facts will be gathered to make history and to keep alive a beautiful and wise law of spontaneous adoption.

Your last issue was exceptionally rich in literary gems. That essay of C. E. Mack was particularly good. My young lady hopeful thought that Mr. Mack made rural life too rainbow-hued; that the reality is not equal to the description, and that city life might be described to perfection by those living in the country yearning for the pleasures and glare of city life and city society. The country has its

advantages and its disadvantages. So has the city. A little of both is best for man and woman. The intellect requires the toning of the city, where talent is cultivated and refined. The country, carpeted by nature's flowers in spring, trees in bloom, gardens teeming with fruits and vegetables, rivers murmuring melody sweet and soothing to heart and brain, voices in the air and all around, speaking of peace and paradise, and much more of reality and romance which poets love to dwell upon, make the country a very heaven to lovers of nature; but there is a rough, practical side to this fanciful and real picture. The plodder in field or kitchen has little time for dreaming of the beauties around, or enjoying grand mountain scenery like the city dweller bent upon a tour of country pleasure. To him or them the comparison of city and country life gives preference to the latter so long as he is not compelled to grub a living from Nature's bosom. The first day's experience would send him back to the city, cured of country life and its romance, with sore back and blistered hands. The countryman sighs for city improvement and the many means to obtain it; while the smoke-choked, din-dazed citizen longs for the quiet of country seclusion and freedom from ledgers and wild speculation. If city and country could be entwined in one, an Eden could be enjoyed, and life lengthened from its present uncertain limit. But let us do justice to the essay by Mr. Mack. He must be possessed of a soul in accord with Nature and its grand manifestations, and nowhere is it made more manifest than among the rugged hills and grand Sierras, whose song is sung by rivers of pure, sparkling water, which the gods might delight to drink or bathe in.

JOHN TAYLOR.

## FLORICULTURE.

## Seed Exchange Proposed.

EDITORS PRESS:—The RURAL, Nov. 13, arrived last evening, and I read the article under heading "Floriculture," with much interest; also turned back to Oct. 30, and read the article referred to. Already I feel an impulse to be up and doing, ready to make the most of lessons in experience and encouragement to be found in "Floriculture Column." Your many readers will have cause to thank you more and more, if through your suggestions a State Society is formed to promote a knowledge we all need. There will, however, be many hundreds who, like myself, are too far from large centers to take an active part in such organizations, yet will benefit much thereby.

You refer to an "exchange of views and experiences," in addition to which, I am going to ask something. By way of preface let me tell something. Last winter I received a little package of flower seeds. Two or three seeds of each kind, and many varieties, indiscriminately mixed. It was a little mine of wealth. For although we have a large number of young roses from Dingee Conard & Co. (Father's flowers), it has not been my good fortune to find many cents to spare for flower seeds. I "sowed" the seeds, sent, in a box with southern exposure. And oh, the delight I did take in watching those little things sprout. Having slight knowledge of seeds and young plants, I could form little idea of what was coming. I transplanted, however, in good faith, and blossoming time couldn't come quick enough. Armed with flower catalogue I have discovered the names of most of the plants and flowers. One case, as instance: two little plants "grew in beauty" and bloomed early. All summer and autumn they have been rich and brilliant spots of color. A bright maroon coreopsis (named from catalogue) and a golden coreopsis with yellow center. I have saved seeds for all the neighborhood. I might have saved enough to furnish seeds to hundreds of RURAL readers.

Now this is what I would ask: Would a seed exchange be practicable? Suppose I have a few flowers from which I save seeds in quantity, and send you a little list, numbered thus:

1, bright maroon coreopsis; 2, golden coreopsis, maroon center; 3, pansies, mixed; 4, root of white Japanese chrysanthemum; 5, cutting of double scarlet geranium white eye; and so on—

Accompanied by my address, which list and address you published once in "Floriculture column;" and Miss A. sends a list, and Mrs. B. and so on, with understanding that any one wishing seeds from any of the lists is privileged to send to address accompanying lists, always inclosing three cents (.03) to pay for postage and envelope to inclose seeds. (Those sending you lists of seeds or cuttings to notify you when supply gives out.)

A great many might thus be furnished with seeds—for most of us can gather together a few cents occasionally—and all our beautiful State made to bloom, literally, like a flower garden.

Of course it may be some trouble to fold up little packages of half a dozen or more seeds, (and write number on packages), but it may encourage within us a spirit to think for others. Saticoy, Ventura Co. M. W. MASON.

[The best way to prove the advantage of such a plan is to try it. Exchanges of material is quite common among collectors of scientific specimens, etc. We will agree to make free announcements in our columns as long as the plan seems to work favorably for all concerned. —EDS. PRESS.]

## HORTICULTURE.

## Importance of Good Trees.

EDITORS PRESS:—The tree-planting season is at hand, and tree-peddlers and agents swarm in some parts of the State. Every year is this repeated, and every year the farmer encourages these conscienceless hucksters, and in a few years bitterly rues the purchases he innocently made.

The gullibility of human nature is surprising, and however badly a man is cheated one year, his neighbor is always ready to go through the same process the next.

These thoughts naturally suggest themselves at this time of the year, and, as an orchardist of considerable experience on this coast, I deem it not out of place to utter a timely warning to intending tree-planters, against dealing with "tree-peddlers," or being taken in by flash advertisements of cheap stock, auction sales, etc.

Any fruit-grower knows that trees cannot be raised to sell below a certain price, and when he sees nursery stock offered for sale at rates much below those of known responsible dealers, he naturally, and with reason, is suspicious of such stock, or, to quote his own words—often heard—he "would not take such trees as a gift."

The amateur, or novice in the business, if he be possessed of an ordinary amount of common sense, consults with some well-known fruit-grower or nurseryman, as to what he shall plant, and where he shall get his trees.

I have been referred to an association recently organized, called "The Pacific Coast Nurserymen's Association," formed somewhat after the plan of similar organizations existing in the East, and which result in much permanent good to horticulturists generally. In reading over the by-laws I note the following clause as being of peculiar interest to the fruit-grower, for past experience in California will be sufficient emphasis, and the many mixed-up orchards of unsuitable and worthless varieties will be proof enough of the need of some such organization:

The objects of the association shall be \* \* \* third, to aid in the protection of our patrons from fraudulent dealings, and the injurious results arising therefrom to members of the association.

As a fruit-grower I want to see orchards planted more intelligently, and that we encourage our nurserymen in their profession—the future success of this great industry depending largely upon them—by patronizing only members of this association, and keeping clear of all cheap stock or auction sales.

The expense of raising trees is much greater than formerly, as every one knows, owing to the extra care to be given in order to keep free of insect pests; and if we want intelligent, progressive nurserymen to remain in the business we must be willing to pay them fair prices for their trees. FRUIT-GROWER.

[We suppose the writer would make a distinction between authorized agents of established nurseries and men who buy refuse stock and hawk it through the country.—EDS. PRESS.]

## Prunes from France.

Mr. S. F. Leib, of San Jose, well known as a prune-grower, has recently returned from an Eastern visit. While at the East he took occasion to examine the condition of the prune market, and has given the San Jose Times some of his observations, among others the following:

There are serious obstacles to overcome as regards marketing our prunes. In portions of the country west of the Mississippi the population is too sparse to make any considerable market at present, while freights to those regions from here are actually higher than to the seaboard cities, in consequence of the present fight between the Pacific Mail steamship line and the railroads, which involves rates cut down probably to a small margin, if any, above the cost of service. The rates to Denver, for instance, are \$1.90 per 100 pounds for prunes in less than carload lots, while to New York they are \$1.16½, and for carloads 91½ cents. Including extras, this would not be less than 1½ cents per pound, and whenever the Pacific Mail and the railroads agree, that rate is liable to be nearly doubled.

On the other hand, a leading dealer in New York, a Frenchman by birth, having an experience of half a lifetime in the prune business, informed Mr. Leib that freights from French ports to New York were only \$5 per ton, or one-quarter of a cent per pound, to which is added a duty of one cent per pound. This places the California and the French prunes on an exact equality in the New York market, with the important exception of cost of production, and it is here the shoe pinches.

"I said to him," remarked Mr. Leib, "I understand that in France you only pay 30 cents a day." This he indignantly denied, claiming that they paid four cents an hour. "Very well," I replied, "we will concede you the extra dime."

This gentleman further informed Mr. Leib that until within four or five years, prunes in France had only been grown in odd corners, along hedges, etc., and not planted systematically.

ically in orchards as with us; but after large areas of vine land had been devastated by the phylloxera and efforts had been made, without success, to stop the pest by destroying the vines and replanting, the vines had been taken off the second time and the land planted with prunes. It was the first sprinklings from these orchards, the Frenchman claimed, from these phylloxera lands, and not—as Mr. Leib supposed—unusually large crops, that had for some years past overloaded the American market. "When these orchards come into full bearing, California prunes will go out of the market, and California prune orchards out of existence," remarked the Frenchman.

In Mr. Leib's opinion, the cheaper labor and extensive planting of prunes in France will drive California prunes out of the Eastern markets unless the duty is increased from one cent to three cents a pound. And in the event of that market being closed to us, it would affect not only that but all of the other industries of the county in a greater or less degree.

# THE VINEYARD.

## The University Experimental Vineyard at Cupertino.

University Experiment Station, Bulletin No. 59.

The experimental vineyard-plot at Cupertino, placed at the disposal of the University by Mr. John T. Doyle, two years ago, has this season borne its first available crop, and samples of most of the grape varieties have been shipped to the University Viticultural Laboratory for experimental vinification, to the number of 36. Of some of these, samples have been gathered and fermented at two different times, to determine the peculiarities at the several degrees of maturity, and the rate of increase of sugar. As is well known, the sugar percentages have generally been low this season, so that a good opportunity was afforded for observing those varieties which will yield a proper saccharine strength even under adverse circumstances.

The detailed record and discussion of these results will be found in the report of viticultural work for 1886, now in press at the State printing office. But it will be of general interest to give in advance, at this time, when the choice of vines to be newly planted or grafted is being made by grape-growers, the record of the actual product of the several varieties, which has been kept by Mr. John J. Doyle, the manager of the Cupertino vineyard, for all the more important varieties, his leisure not allowing the extension of the observation over the whole of the collection.

### Character of the Soil.

The University tract being practically level, and its soil of remarkable uniformity, it will show characteristically the differences between the grapes and wines of the several varieties, being in this respect parallel to the case of Mr. H. W. Crabb, a comparison of whose varied wines is given in the report of the work for 1885, page 70. Moreover, the soil being a very much generalized one for the west side of the Santa Clara valley, the points elicited will be applicable to a large region, from the neighborhood of Mountain View to that of New Almaden.

The land on which this tract is located forms part of the gently undulating valley slope that lies between the Santa Clara valley proper and the Coast Range, and into the higher part of which Cupertino creek and its branches have cut narrow and deep, abrupt valleys. The experimental plot assigned to the University lies immediately adjacent to the valley of the main Cupertino on the west and about 50 feet above it. The soil is a drab-tinted clay loam, largely intermixed with gravel and rock fragments, showing the whole to consist of the wash from the adjacent and other ranges lying toward New Almaden. In the bluff banks that fall off steeply into the creek bottom it can readily be seen that the same material, only with larger proportions of gravel, and yellow instead of a drab-colored loam, extends down nearly to the creek level. It is perfectly penetrable by both water and roots, the latter being seen in it at levels from 12 to even 20 feet below the trees and vines to which they belong. The land is therefore perfectly underdrained and thus fulfills one essential condition of first-class wine-grape land. It is, of course, easily workable soon after rains.

In order to obtain a full insight into the nature of the soil and subsoil, a trench 6 feet deep was dug in what might be considered a representative spot of the tract, and the soil material was sampled for each 12 inches from the surface, so as to obtain fair specimens. Three of these—viz.: 0 to 12 inches, 12 to 24 inches, and 5 to 6 feet—were fully analyzed chemically, as reported below; and as these analyses are sufficient to show both the general character and the rate and character of change downward, the samples representing the other intervals received only a physical examination. From about 30 to 36 inches below the surface there is usually a noticeable change of tint toward the yellow, and an obvious increase of the gravelly ingredients, which is apparent in the wide difference in the percentage of "fine earth," in the table below, between the immediate subsoil 12 to 24 inches depth, and the

sample taken from the interval 36 to 48 inches, the latter containing less than one-fourth as much of soil matter proper than the former. But it is also seen that from 36 down to 72 inches the soil percentage remains almost the same, and judging from the aspect of the bank where the level land breaks off into the valley, the same might be true to the depth of 10 or 12 feet, if not more.

Hygroscopic moisture absorbed at 15 deg. C.	5.14	5.13	8.05

It will be noted that notwithstanding the wide differences in the mechanical composition of the materials analyzed, they do not differ materially in the general composition of the fine earth; although there is a manifest increase downward of several of the ingredients. The potash supply is from good to high, the lowest material having one-fourth more than the surface soil. The lime percentage is good in all, but decreases slightly in the lowest material, while the magnesia increases steadily downward. Phosphoric acid is practically probably the same throughout, and is in fair supply; sulphuric acid is low throughout, and might advantageously be raised by the aid of plaster. Humus in the surface soil shows a fair percentage, perhaps as large as so previous a soil will maintain in the local climate. The moisture-absorption reaches a very satisfactory figure, and increases downward, parallel with a greater heaviness of the soil, as is shown by the increase of the item of alumina, the characteristic ingredient of clay.

Altogether the soil is a very fine one for vineyard purposes, both as to its mechanical and chemical composition; and considering the great depth to which roots can readily penetrate it, it promises high durability. It is, moreover, so "generalized" in its character as to render the results obtained on it of wide applicability.

### Product of the Vines.

In order that the conditions under which these results were obtained may be fully understood, the history of the vines in this plot, already given in the report for 1886, should be re-stated. The vineyard plot of which the use is granted the University, consisted originally of 37 rows, eight feet apart, of 40 vines each, the latter being, at the time, three-year-old Zinfandels. These were, in 1884, grafted to the following varieties of wine grapes:

Grossblau,	Herbement,
Crabb's Burgundy,	Franken Riesling,
"Portals' Ploussard,"	Pizzutello di Roma,
Gamay Teinturier (Crabb)	Chauche Gris,
Barbera,	Sauvignon Vert
Nebbiolo, 2 varieties,	Johannisberg Riesling,
Malbeck,	West's White Prolific,
Verdot,	Kleinberger (True Burger)
Meunier,	Chasselas Fontainebleau,
Carbener Franc,	Semillon,
Petite Sirah,	"Golden Chasselas,"
Ploussard,	Burger,
Chauche Noir,	Seedless Sultana,
Fresa (Monfra),	Muskateller,
Black Hamburg,	Huasco Muscat,
Barbarossa,	Lignanza,
Teinturier Male,	Alexandria Muscat,
West's St. Peters (?),	Pinot St. George.

Most of the grafts took well, and those which had not were mostly regrafted to the same varieties in 1885. It was expected that in that year at least a small crop would be obtained from them, but the season being so universally unfavorable, the product was too small to serve for more than an identification of varieties in doubtful cases.

This season, 1886, all the vines were pruned long, three canes, and trained on stakes, so as to insure an adequate crop for experimental winemaking. This point must of course be taken into consideration in judging of the results, since short-pruning varieties would thus naturally overbear and show a heavier crop than that which they could be permanently charged without greatly shortening their lives.

The following table shows, in the last column, the average product, in pounds, of the vines sampled, the number from which this average is

deduced being given in the first column, while the middle one gives the total product of all:

### PRODUCT OF VINES IN UNIVERSITY EXPERIMENTAL PLOT AT CUPERTINO, SANTA CLARA CO.

Variety.	No. of Vines.	Total Weight of Grapes.	Average for Each Vine.
Nebbiolo.	20	650	32.5
Fresa.	7	200	28.5
Black Hamburg.	40	1050	26.2
Franken Riesling.	20	686	34.3
Grossblau.	20	685	34.2
Crabb's Black Burgundy.	20	404	20.2
Chauche Gris.	20	853	42.6
Gamay Teinturier.	20	596	29.8
Malbeck.	20	253	12.6
"Portals' Ploussard" (Malbeck)	20	247	12.3
Meunier.	20	510	25.5
Sauvignon Vert.	20	1037	51.8
Folle Blanche.	20	765	38.2
Johannisberger Riesling.	20	309	15.4
Herbement.	20	658	32.9
West's White Prolific.	33	1953	59.1
West's St. Peter's (?).	20	345	17.2
Cabernet Franc.	20	425	21.2
Teinturier.	20	440	22
Sirah.	14	430	30.7
Kleinberger.	20	1000	50
Ploussard (proper).	20	881	44
Chasselas de Fontainebleau.	20	1412	70.6
Semillon.	20	750	37.5
Barbarossa.	13	991	76
Gros Verdot.	7	555	79.2
Palomino ("Gold'n Chasselas").	28	1605	57.3
Zinfandel (?).	18	1145	63.6
Burger.	32	1884	58.8
Sultana.	7	487	72.4
Chauche Noir.	7	457	65.3

It will be seen that the highest product of this list is that of the Gros Verdot, which gave nearly 80 pounds to the vine. This figure may require to be discounted to some extent, from the fact that it is an average of only seven vines, which were picked out from the somewhat mixed row of which it is intended to form the sole ingredient. Making all allowances, however, the Verdot must be classed as a very prolific vine. It will be interesting to see what is the quality of the wine resulting from such heavy bearing.

Immediately below it, but still in the seventies, we find the Barbarossa, Chasselas de Fontainebleau, Palomino and Sultana. Of these the latter is usually supposed to be capable of bearing the heaviest crops, but it is evident that on this soil at least, the two others are even with it.

Ranging close to the sixties we find the Zinfandel, Chauche Noir, Burger, Palomino and West's White Prolific.

Close to the fifties are the Sauvignon Vert and the Kleinberger, or True Burger.

Close to the forties are the True Ploussard, Chauche Gris and the Semillon. The latter, as so prolific a bearer, will agreeably surprise some of those who have hesitated about planting this noble grape. The Ploussard, likewise, is a high-grade grape which thus shows its claim to attention.

Near the thirties, we have the Sirah, Nebbiolo, Fresa, Franken Riesling, Grossblau, Gamay Teinturier, Herbement, Meunier, Black Hamburg.

Near the twenties, Crabb's Black Burgundy, West's St. Peter's, Teinturier Male.

Between 20 and 12, the Johannisberger Riesling, and Malbeck, including "Portals' Ploussard," which is undoubtedly identical with the Malbeck of the University plot, Krug's direct importation.

The low figure for Malbeck will be a disappointment to many who would like to cultivate this desirable variety. To these might be said, what is true of the entire series here recorded, that what is true at Cupertino may not hold good elsewhere on different soils, and also that of the several sub-varieties of the Malbeck, some may be found more prolific even at Cupertino, hereafter; also that vines of greater age may bear more abundantly.

As to the Riesling, its low product will disappoint no one; it is in accord with experience on soils to which it is adapted, although on valley soils it may be forced into heavier bearing with a corresponding reduction in quality.

It will, of course, require the experience of several years to obtain a reliable average of the bearing of these several varieties, even on this particular soil. Still, the season of 1886 was in general a good one, except in the case of particular varieties badly affected by *coulure*. From the record on the latter subject made by Mr. F. W. Morse, with respect to the grapes received from Cupertino, it does not appear that either the Malbeck or the Riesling was materially affected by *coulure* this season. A detailed account of the discussion of this point will be given in the forthcoming report.

In view of the numerous additional grape varieties that have come into notice since 1884, and deserve exact comparison in respect to their adaptation and merits in the Cupertino region, Mr. Doyle has added to the list above given, by grafting on five-year-old Zinfandel stocks, the following:

Isabella Regia,	Cinsaut,
Howland's Black Hamburg,	Petit Verdot,
Black Prince,	Bastardo,
Grape of Almeria,	Mourastel,
Semillon,	Pedro Jimenez,
Pinot Vert d'Orce,	Verdelho,
Canon Hall Muscat,	Palomino,
Ugni Blanc,	Tinta Amarella,
Franc Pinot,	Merlot,
Noirien,	Gros Mancini,
Pinot de Pernand,	Aramon,
	Serine,

Pinot Blanc Chardonay, Tinta Cao, Mondeuse, Tinta Madeira.

Still further additions to the collection are contemplated for the coming season, so that, including the varieties constituting Mr. Doyle's large vineyard, nearly 100 will be represented in 1887. E. W. HILGARD. Berkeley, Nov. 26, 1886.

# THE STOCK YARD.

## The Percheron Horse-breeders' Meeting.

The American Percheron Horse-breeders' Association held its annual meeting at the Sherman house, Chicago, Nov. 17, 1886, a large attendance of the members being present.

In the absence of the president, Senator T. W. Palmer, the chair was occupied by the vice-president, Mr. Rufus B. Kellogg, of Green Bay, Wis.

Mr. Kellogg congratulated the society upon its large number of members, on the harmony of its action, on the wonderful success achieved at the Illinois State Fair, and upon the favorable condition of its treasury. He concluded by saying: "Gentlemen, you are engaged in the noble work of planting on American soil what we believe to be the best race of draft horses in the world. The process of selection is continually going on in France, while pride and self-interest induce you to import the best. Let it be our characteristic aim to raise our standard of excellence and seek to give to our country a better race than now exists in France. We extend the hand of friendship to our brothers of the other draft breeds, with the hope that they will give to America the best of the European races."

The following extracts from Secretary S. D. Thompson's report will show the standing of the association: "The progress of our association since its reorganization one year ago as a Stock Association, is unprecedented in the history of any like organization. Without one dollar in the treasury, we have in that short time collected the large sum of \$11,420.72. Out of this, we have expended for fair and other purposes \$9702.58, leaving a balance to the credit of the association of \$1718.14, to which is to be added \$2530 of the capital stock that is as good as cash, making the grand total in favor of the association, \$4248.14. The membership numbers 180 bona fide stockholders, representing \$2470 of the capital stock." The secretary further reported that the fourth volume of the Percheron Stud-book was now in process of active compilation and would be issued at an early date. This book will contain, in addition to the 3000 new entries, an alphabetical appendix of all the horses registered in previous volumes, thus making it a complete hand-book of Percheron horses.

The Fair Committee made a very elaborate report, stating that the Illinois State Board of Agriculture has extended to them every assistance in their power to make the exhibition a great success.

After the usual routine of business, a resolution was passed that the secretary be instructed to prepare letters of thanks to the Societe Hippique Percheronne for their generous gift of 5000 francs and to the Minister of Agriculture of France who so kindly acceded to the society's request to select some competent person to act as judge at the Percheron exhibition, and also to the Canadian Minister of Agriculture and the United States Commission of Agriculture for like courtesies.

## Dehorning.

EDITORS PRESS:—In your issue of Oct. 30th is an article on "Safety in Handling Bulls." I know of but one way to make a bull's horns safe, and that is to cut them off. We have begun the practice of dehorning cattle at the Wisconsin Experiment Station, commencing with a vicious six-year-old Jersey bull and running down to calves but a few days old. My mind is not settled on this question yet in all points, but this I know, that for bulls it is best to dehorn and then take all possible precautionary measures in addition. Be sure to dehorn the good bulls first; "good" bulls kill twice as many people every year as vicious ones. When I hear a man praising his bull's disposition, I always wonder if he will leave his widow in comfortable circumstances.

To remove the horns, put the bull in a strong stanchion, fasten his head by cross pieces so he cannot move, and with a carpenter's fine saw cut the horn close to the skull. Our bull lost about a pint of blood. Use absorbent cotton, tar or whatever is at hand on the wound.

We dehorned 12 steers this week and did not apply any remedy to stop the flow of blood; the animals bled freely at first, but it soon stopped.

There is a waste of sentiment against the practice of dehorning, but better the horns come off than a human life be lost.

Of course when sawing off the horns the bull will make a fearful fight, and so must be held very firmly. W. A. HENRY,

Director Wis. Agl. Experiment Station, Madison, Wisconsin.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## A Better Man Demanded.

Bro. Geo. Ohleyer, the "Gen. Grant" of the anti-debris contest, is hopeful that the Democratic Legislature will not be so undemocratic as to replace Geo. Hearst in the U. S. Senate to further misrepresent the farming and other industrial interests of California. He believes a better man should be selected for the interest of the Democratic party and the people. Within 12 months past two U. S. Senators have been elected from California (besides the one appointed), whose names, if submitted fairly to the people of the State for their votes, would neither of them have received anywhere near a majority for the high office they have filled.

No one doubts this. Neither political party would have dared to have nominated either of the three for the suffrage of the voters of the State. Who will say that Bro. Ohleyer is not right, consistent and an honest member of his party, and an honest citizen, in opposing the election of an unfit and decidedly objectionable office-seeker? And more, one who has been weighed in the scales and found wanting. It is to be hoped that there are honest and independent men enough in the Legislature elect to prevent such an unwise, humiliating choice. Farmers throughout the State should unitedly counsel their representatives to the Legislature against consummating so barefaced a wrong against the great body of voters of this State.

## The National Grange.

Our reports of the late session are as yet but straggling. It seems doubtful whether the telegraphic statement was correct that Lansing had been fixed upon as the place for next year's meeting. Resolutions were indeed presented providing for the holding of the next annual session at Lansing, Michigan, and at Elmira, N. Y., but it does not appear that either of them were adopted, nor that the question was finally disposed of in any way.

An invitation was received from the secretary of the Board of Promotion of the Permanent Exhibition at Washington to attend a convention of directors and others in December, to consider and perfect a plan for properly celebrating the 100th anniversary of the Constitution of the United States, the 400th anniversary of the discovery of America by Columbus, and to arrange for a permanent exposition of the antiquities, arts and industries of the three Americas.

Among the resolutions offered was one looking to the admission of the children and wards of Patrons into the Order without initiation fees or dues, when under 18 years old, also to the establishment of Juvenile Granges.

At the open meeting Thursday evening, Alex. McClure, of the Times, made one of the speeches, telling farmers that they alone were to blame for bad legislation. This address, though loudly applauded, created a good deal of dissatisfaction. The *National Farm and Fireside* remarks that while Mr. McClure might have been less harsh upon the Granger to his face, and while the Granger might have replied with equal force upon him as a representative of the press—still he told a good deal of wholesome truth, which the Patrons from all over the country would do well to take and put in their pipes and smoke it and let the smoke go all over the land. There is no doubt that farmers, having the power, fail to protect themselves. So long as they see fit to send lawyers and every other class save farmers, to their legislative halls, who have they to blame but themselves?

## A Californian in Philadelphia.

"V" sends from the Quaker City to the *Record-Union* a chatty letter, of which we extract these paragraphs:

I found myself here a day or two since to see a gathering of Grangers from all parts of the United States. I wanted to tell them of the beauties of California and the advantages of our glorious climate, so that when they returned to their several homes and were sitting by their huge fireplaces, with big, blazing back logs to throw out sparks and a ruddy glow of heat, while they listened to the blowing of the icy blasts, they might ponder on what might be for them if they came to the beautiful Sacramento valley. I supplied them with books concerning California; with illustrations of the fruits now ripening in the November sun of our State, so that they might contrast the barrenness and dreariness of their own surroundings with what we offer them. I have made arrangements to disseminate among the Grangers information about our State, and thereby induce the proper kind of immigration to California. When I spoke of the healthfulness of our glorious climate, I pointed to the ruddy glow of health on the face of Hon. Wm. Johnston, Master of the State Grange of California, and to his stalwart body, and as for his ability and intelligence, they find that out by the success he meets with in his work in the Grange.

The meeting of the National Grange is a stir-

ring event in Philadelphia, and creates much interest. Senator Johnston is doing finely, and embodied in his report is a description of the advantages of California, which will be a widespread advertisement of our State, and will do much good. The indications are fair for a large immigration to California the present winter, and the people inquiring about the country, with a view of migrating, are of the most desirable class to produce wealth and increase commerce.

## Farmers' National Congress.

The following call for a Farmers' Congress, at Washington, appears in the *National Farm and Fireside*:

THE PLAINS, VA., Nov. 15, 1886.

Dear Sir:—At a recent meeting at St. Paul of the Farmers' National Congress, it adjourned, subject to the call of the president, to meet at an early day the coming winter, in the City of Washington, D. C. It is very necessary that a full meeting shall be held to take counsel with co-operating organizations to concert measures and take action for the promotion of the general welfare of agriculture.

In view of the present doubtful attitude of the great political parties of the country toward the measures proposed by resolutions of your body now pending, and reported by committees of both Houses of Congress, and in view of the sudden appearance upon the political field of the compactly organized grand army of skilled labor, calculated to withdraw attention from the affairs of agriculture, it is urgently necessary that you shall cause it to be known that you are in earnest in the advocacy of those measures, which, by your resolutions, several times renewed, reiterated and reaffirmed, have been presented for the consideration of the Congress of the United States; and that you are prepared to take political action, if necessary, to enforce attention to your reasonable demands. Measures deemed by you and by all agriculturists indispensably necessary for the relief of our business from the ruinous exactions of arrogant and irresponsible and defiant corporate power; for the suppression of perils in the face of which we are helpless without the effective aid of our Government, and for the rightful recognition of the importance of our calling; and the exercise of its proper influence in the great councils of the nation.

In the present industrial and political crisis, the voice of agriculture, the great conservative reserve power of the nation, should not be silent, her influence unfelt, her power unsuspected, her rights disregarded, her necessities unrelieved.

The time is opportune for effective action on your part; therefore, in pursuance of your resolution of adjournment, I hereby summon the Farmers' National Congress to meet in the City of Washington, on the 15th day of January next, for the transaction of such important business as may be brought before it, and I personally urge each member to be present, without fail, that we shall demand the passage of the resolution passed by your Congress, and now reported to the Congress of the United States by their several committees.

ROBERT BEVERLEY, President.

## Death of Mrs. G. H. Ashley.

The following notice of the late Mrs. Sarah A. Ashley, wife of the Master of Woodbridge Grange, and a charter member of the same and of Pomona Grange, No. 3, has just been received from our valued sister, Mrs. W. D. A.:

Passed to rest near Woodbridge, Nov. 22, 1886, after an illness of eight months, Mrs. G. H. Ashley. Love and skill availed naught to save a life more precious than fine gold, and calmly she obeyed the Father's will, leaving to His care her devoted husband and three sons, who rejoiced in the plenty given in her life as the means to minister to her comfort.

Thanksgiving day, with the warm sun on level fields and on great oaks, still holding their leaves, from whose branches birds sent sweet refrain on the still air, a large concourse of friends and Grangers, under the auspices of Woodbridge Grange, gathered at her home, with many chaste flower pieces, to lay her in the cemetery by the little church in Live Oak Center. Rev. C. Sprecher paid touching tribute to the graces of inner life she had cultivated. Patiently she had borne intense pain; now her example comforted her dear ones. Worthy District Lecturer Huffman had charge of the large funeral, and the service, conducted by W. M. Fiske, of Pomona Grange, No. 3, and venerable Chaplain Guernsey, was impressive.

In New Bedford, Mass., Sarah A. Edwards was born in 1834. Married G. H. Ashley in 1858, and came to this State, and in 1864 to the home where she died. Twenty-eight years she had brightened the life of our brother with her sterling New England virtues. A woman of inestimable worth, modest and unassuming, her quiet and gentle life endeared her to friends and made for her a friend in every acquaintance. Ever busy for her home and in works of usefulness, her influence in Woodbridge Grange, where she was Ceres, strengthened the bond of unity and drew members. Our hearts go out in sympathy to our sorrowing brother and her sons.

## Sacramento County Pomona Grange.

EDITORS PRESS:—Please give notice that Sacramento County Pomona Grange will hold a meeting at Grangers' Hall, Sacramento, Thursday, Dec. 16th, at which important business will be transacted. By order of Grange. J. E. BEACH, Secretary. *Routiers, Nov. 27, 1886.*

FARMERS' LEGISLATIVE COMMITTEE.—The State Grange appointed a Committee on Legislation, to look after the farming interests in our Legislature. It is none too soon for them to confer with the farmers who have been elected to the Senate and Assembly, and discuss the questions of moment to agriculturists that must arise at the opening of the session.

## State Grange—Session of 1886.

We conclude this week the report from Subordinate Granges as presented to the Secretary:

## Sutter Mill Grange.

As alternate representative of Sutter Mill Grange I beg leave to submit the following report: Number of members on the roll-book, 25; average attendance, 15; suspended for non-payment of dues, five; admitted, none. We are not rich, but can pay all claims on demand. The outlook for the future is not bright, but we yet have hope of building up a good working and permanent Grange.

W. NICHOLS.

## Temescal Grange.

[See RURAL PRESS of Nov. 6th, page 380.]

## Valley Grange.

Valley Grange, No. 279, located at Pacheco, Contra Costa county, was instituted April 18, 1885, with 18 charter members. From the date of its organization to this time, our baby, as it was christened by a visitor, has been steadily growing in numbers. At the last annual session of this body, the Master had the pleasure of reporting 60 members. Since that time the Master has admitted 31 by initiation, all engaged in agricultural pursuits.

The hand of death has called from our midst one of our charter members, Bro. John C. Martin, in the prime of life, beloved and respected by all who knew him. Surrounded by our sisters and brothers, his remains were interred in the beautiful Alhambra cemetery, with the ceremonies of our Order. Brother, we miss you; your memory will ever be cherished by our little band.

Three members have withdrawn by demit, with the assurance that they would seek admission or form a nucleus for a new Grange, if there was not one at their new home, leaving us at this time 87 members, 46 sisters and 41 brothers. Our sisters still hold the balance of power, which we hope they will continue to do. We have on hand two candidates elected, with several applications in the hands of committee.

At the time of organization it was said we would be the death of our present Grange. Our reply was that we thought differently. The sequel has shown that we were correct. It awoke them from their apparent lethargy and afforded them so much pleasure that they then added upward of a score to their number. We say, brothers and sisters, there is plenty of room for all. Cultivate your fields well and you shall have the reward. During this brief period of our existence we have met all of our obligations incident to the formation of our Grange. Our attendance has at all times been large, fully two-thirds of our members being present; our officers rarely missing roll-call. Our younger sisters and brothers are taking special interest to make our meetings pleasant. Our Grange has followed in the steps of our elder sister, Alhambra, by giving monthly socials. While not strictly a Grange social, still under their control, the committee is held responsible for the cards issued, which we believe has added much to our success.

In response to the question asked us many times during our present session, how do you manage to get so many new members? our answer is, we hand to those who desire to join us our declaration of purposes; we take every occasion to hand them a copy of the *Patron*, to have every member have blank applications on hand, and not make a miss when offered an opportunity. Lastly, not to accept an application of which we have any doubts as to being a proper person, or who will not make a good member. Hence we escape the use of the blackball, which, in our judgment, is the cause of much dissension and ill-feeling within the Grange, as well as causing outside prejudice. So far not a single blackball has been cast in our Grange.

In reply to the question, asked our Grange, if they had any commands, they bid me give our fraternal greeting to the State Grange, that our organ, the *Patron*, be sustained, and at the next session they would report above par.

G. P. LOUCKS, Master.

## Woodbridge Grange.

Our Grange may be said to be in a prosperous condition. Our monthly report of the secretary will answer that question. We are somewhat in debt, but not embarrassed. We have some faithful members, like every other community—a few that are ever ready to advance or carry the Grange cause with smiling faces and ready hands, while we have many that are very honorable, good men, who think they have done well when called to pay their dues. And so they are, for that is important too. Our delegation here is not so great as in the past. In fact this has been a bad session. Our crops have been light and prices small, for when money is tight we all feel the pressure.

I believe the *Patron* is taken by the most of our Grangers. In regard to the *Patron* stock, I think there is some disposition yet in our Grange to take some, but the most of our members that we might expect something from are rather shy of corporations. They cannot see and comprehend it all, but do see some things that are not so clear in a business sense as they desire, hence they doubt and hesitate. I think that they are reasonable and might be prevailed upon to take some stock, not as a business move or investment, but for the Good of the Order and to sustain our organ.

## Grange Items.

[Culled from the *California Patron*.]

BRO. COULTER, of Santa Rosa, has recovered from his recent illness.

In the death of Sister Ludie Dismarchias Pilot Hill Grange has lost a most earnest, valued and beloved member.

THE Grangers' Co-operative Business Association is thriving in Sacramento under the management of Bro. E. Greer.

THE house of Bro. Veerkamp, W. M. of Sutter Mill Grange, was burned to the ground on the 14th ult. The loss is a severe one and there was no insurance.

SACRAMENTO GRANGE decided to pass her second regular meeting for November, and hold a special meeting Dec. 4th in honor of the birth of the Order, with a Harvest Feast, whereto all good Patrons are cordially bidden.

FARMERS IN THE LEGISLATURE.—It is a pleasure to congratulate the Grangers of this State on the election of several of their staunch and true members to the Legislature, including Senators A. L. Chandler from Yuba, George Steele from San Luis Obispo, and Representatives George Ohleyer of Yuba City, Sherburne of Danville, and I. A. Wilcox of Santa Clara. Besides these Grangers several representative farmers are elected from other parts of the State, among them Mr. John Boggs of Colusa. We hope their constituents will confer and advise with them freely during the session and make them feel that they and all other well-doing legislators will be well sustained in faithful and independent action for the good of the commonwealth.

POMONA GRANGE ELECTION.—San Joaquin County Pomona Grange held its first quarterly meeting at Lodi on Thursday, Nov. 18, a good representation being present from the subordinate Granges of the county. The following officers were elected for the ensuing year: W. L. Overhiser, M.; E. R. Elliott, O.; Mrs. E. J. McIntosh, L.; R. Pixley, S.; W. B. White, A. S.; A. A. Guernsey, C.; Ezra Fiske, T.; J. D. Huffman, Sec.; S. W. Sollars, G. K.; Mrs. J. L. Beecher, Ceres; Mrs. C. P. Allison, Pomona; Mrs. O. O. Norton, Flora; Mrs. Jos. Adams, L. A. S. The installation of officers will take place in Stockton on the last Thursday in February, 1887, with the accompaniment of a Harvest Feast.—*Independent*.

FARMERS TO THE FRONT.—With Brother Robie as Governor of Maine, Bro. Luce as Governor of Michigan, Bro. Jones ("He pays the freight") as Lieutenant-Governor of New York, Bro. Lipscomb as Secretary of the State of South Carolina, Bro. Williams, a member of the Senate of North Carolina, Bro. Rhone, member of the Pennsylvania Legislature, and several others of other States in the same fix, it looks as if all will "get there" in time, and the sooner the better if of the same material as these above named. Farmers are coming to the front.—*Esperance, in Farmers' Friend*.

EDEN GRANGE'S THANKSGIVING.—The party given by this Grange in Oakes' hall, Hayward, Thanksgiving night, is spoken of in the *Journal* as one of the finest social affairs that has occurred in the town for five or six years. Fully 100 couples were present, Mt. Eden, San Lorenzo and San Leandro being largely represented. The music was superb, a fine supper was served in Luce's hall about midnight, and on the whole, everybody had a delightful time.

THE GAMBLERS' EFFORT.—A telegram from New York says a bill is in preparation, to be submitted to the Legislature, whose main feature will be the legalizing of betting in any form on the racetracks of the State, though with a stringent provision against permitting betting by minors. It is confidently believed in sporting circles that if the bill is passed it will be approved by Governor Hill.

ILLINOIS LEADS.—At the meeting of the National Grange, says the *American Grange Bulletin*, Illinois stands at the head of the roll of honor for membership and activity.

A CRUEL ASSAULT.—The telegraph brings the news from New York that Prof. C. H. Dwinelle, of the University of California, who has been traveling abroad for a year, has brought suit in New York against the New York Central Car Co., for a cruel assault inflicted upon him, without provocation, by a porter in one of the sleeping cars. We had heard of the assault before, but hoped it would prove less serious than is indicated by the dispatch, which says: "The blow of the negro's fist fractured and indented his cheek-bone so that his face is distorted. The blow also paralyzed the nerves of his eyes, so that he can no longer bear the ordinary amount of light." As Mr. Dwinelle gave much attention to microscopic work, such an injury is of exceptional importance to him. The suit against the railroad is to recover \$50,000 damages for the injuries inflicted. We know Prof. Dwinelle as a gentleman of very quiet and peaceable disposition, and we are quite ready to believe that the assault was unprovoked. There should certainly be a lesson given to the railways against employing such pugnacious agents.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Colusa.

**LEVEEING.**—*Sun*, Nov. 27: We took a trip up the east side of the river, Monday, as far as E. McDaniel's. All along the line we found teams at work, or else newly-worked levees. At Joe McVey's place, about 50 teams were at work moving the levee back from the river. They were putting up an immense levee—some 20 feet or more wide on top. A great length of strong levee work has been done above Colusa, and we may expect to see some big water here—that is, if some weak place does not first give way. The river accommodates itself a great deal to circumstances. At the bridge, for example, it is at least 50 feet wider than it was when the bridge was put in. This means 35 feet by 50 feet of water at floodtime. The river is also scouring out at the bottom and becoming deeper.

### Contra Costa.

**RAISINS.**—*Antioch Ledger*: A lot of raisins made by Messrs. A. J. & P. K. Biglow at the Oak Point Farm are for sale at the store of G. C. Carman. They are among the best that we ever saw, and for flavor and size cannot be excelled. They are made from Seedless Sultana grapes.

**POULTRY.**—*Concord Sun*: S. Bacon has placed about 250 head of poultry on his ranch, with the intention of increasing the number to a thousand. He feels confident that, with proper attention, the poultry business will return large dividends. This profitable industry has been much neglected in California, considering the enormous consumption of eggs on this coast shipped from the Eastern States, besides the immense demand for poultry for table use.

### El Dorado.

**RAISINS.**—*Placerville Republican*, Nov. 25: The Muscatel raisins produced by Thos. Hardie, at the Cedar Hill Vineyard, near Placerville, are carefully put up, and equal in size and flavor to any we have ever seen, either of home or foreign production. Such fruit ought to find an unlimited sale in the East and eventually displace imported raisins. Mr. Hardie has about six tons of raisins cured this fall.

### Humboldt.

**FORAGE PLANTS.**—*D. A. Spear in Eureka Standard*. I notice a request that some one mention the most profitable clover or grasses for Humboldt county. For the mountains I find the English rib grass and orchard grass most certain, with burr clover mixed, for late fall feed; for the lower lands, white clover and orchard grass. These two kinds are certainly the most profitable where used for stock to graze on. If dairymen are confined to quite low, moist lands and wish to make a large quantity of hay, then I recommend plowing their land every two or three years and seeding to alfalfa and red clover, equal parts. My reasons for mixing the seeds are that cows require a variety of food, and often one variety will fail partially while the other will prosper, and if the farmer or dairyman wants early grass for his cows, every time he plows his clover and alfalfa land sow 20 pounds of cheat seed to every acre, independent of alfalfa and clover, 10 pounds each of clover and alfalfa per acre), as it will protect the clover from frosts. Some might ask my reasons for plowing the lands for alfalfa and clover often. First, the land will naturally become grown up with briars and wild weeds that cows will eat and damage the quality of butter; second, the foul weeds are in your hay, and when the dairyman is feeding his cows beets, carrots or shorts he will detect the peculiar taste of his butter, and if his hay is not free from weeds the butter will taste of the herbs or briars as the case might be.

### Lake.

**HOLSTEINS.**—*Lakeport Democrat*, Nov. 26: We have always taken great interest in the Holstein cattle brought to this county by A. G. Platt, with the laudable purpose of giving our people a chance to improve their breed of cattle for either milk, butter, cheese or beef. Mr. Platt's bull is a thoroughbred from one of the purest and best herds in the world. We are led to these remarks by seeing the progeny from this bull, "Edgar S," the third and last one belonging to L. H. Twede. They are all beauties, and so far as markings in color and form go, only an expert could tell that they are not full-blood Holsteins. No better evidence of the value of this bull to Lake county need be cited than the fact that \$50 will probably not buy either of these calves, while ordinary calves can be purchased for from \$2.50 to \$7.50. A blind man can figure the difference in profit if he cannot otherwise appreciate the difference between fine and common stock.

### Lassen.

**SHIPPING APPLES.**—*Sagebrush Stockman*, Nov. 24: L. P. Whitney, of Milford, shipped a carload of apples to Sacramento Monday. This is the first shipment Mr. W. has made to that city, and if the experiment is successful he will establish an agency there. He has an orchard of 1600 trees, and this year the crop was about 3000 boxes.

### Los Angeles.

**RAISINS AT POMONA.**—*Times-Courier*: E. S. Gerling has, from a three-year-old vineyard of 10 acres, made upward of 6000 pounds of raisins; his grapes are of the Sultana variety.

C. E. White has put up about 300 boxes of Sultanas and 500 boxes of Malagas. W. J. Jewell has also been somewhat extensively engaged in the business. Each of the above gentlemen will in future give considerable attention to the raisin industry, and many others are contemplating the same course.

### Nevada.

**PERSIMMONS.**—*Nevada City Transcript*: There are on exhibition at the rooms of the L. and I. Association five varieties of Japanese persimmons, raised on the ranch of S. Allison, near town. Some of the kinds will keep until next March, if not eaten before. They are splendid specimens of this luscious fruit, being large, fine of texture and possessing rare flavor. The Japanese persimmon is raised with much success in the Bartlett pear belt of this county, and should be more generally cultivated by our ranchers.

### Plumas.

**APPLES AND POTATOES.**—*Quincy Cor. Repub. Free Press*: Our valleys have a large and excellent crop of apples this year, worth from a cent to a cent and a half per pound. The potato crop is short. Potatoes have been selling at a cent and a half, but are now worth two cents. Oats are a cent and a half.

### San Benito.

**RANCH RETURNS.**—*Free Lance*: L. B. Shaw's farm is in the San Benito district, 32 miles from Hollister, and 25 from the terminus of the S. P. Co.'s railroad in this county. The section of country in which he resides is regarded by those unacquainted with it as rocky and mountainous, adapted to little else than stock-raising. In proof that this conception is erroneous, it is only necessary to give the returns received. Mr. Shaw has 128 acres of deeded, tillable land. Of this, 100 acres are in grain, and 28 in orchard, pasture, etc. His grain land yielded him this year an average of 18 cents per acre, or 1800 cents. For this he was offered, Tuesday last, \$1.26½ per cental, or \$2277 for the lot. He estimates the actual cost of preparing the land, harvesting, and hauling to the warehouse at Tres Pinos, at \$700, which leaves him a profit of over \$1500 on his grain. He has now 700 young fruit trees which will come into bearing next season. These are mostly prunes and apricots, the fruit of which can be easily dried and commands a ready sale. If the yield of Mr. Shaw's ranch can be exceeded by that of any other farmer in his district, we should be glad to learn of it.

### San Bernardino.

**COLD SNAP.**—*Valley Echo*, Nov. 25: The frosts of last week were quite sharp in places. The young and tender sprouts of new growth on the orange have in many orchards been killed back a foot or two, and many leaves begin to show white, as the frosted foliage fades. It amounts to a little pruning, that's all.

### San Diego.

**APPLES.**—*San Diego Union*: A wagon-load of apples was brought to town yesterday from the orchard of J. P. Parsons, a mile and a half from Julian. The load comprised Bellefleurs, Greenings, Baldwins and Bush's Seedlings. No such fruit is shipped in here from any place outside the county as that comprised in this load. In form, size, color, flavor and quality of pulp, nothing better could be desired. This fruit grew upon four-year-old trees.

### San Luis Obispo.

**BEANS.**—*Tribune*, Nov. 26: Arroyo Grande is surprising herself and the world by the quantity of beans she has raised and is shipping. From early morn until late at night our streets are thronged with wagons heavily loaded with beans. A reasonable price for them would make our people rich.

**THE PASO ROBLES "BOOM."**—The actual sale at the auction exceeded \$35,000, and since then the sales have averaged \$1000 a day, and at prices 25 to 50 per cent better than those obtained at the auction. R. E. Jack, M. Goldtree, M. Donohue, Baron Von Schroeder, R. M. Shackelford, C. H. Street, C. H. Reed, J. W. Smith, and men remarkable for business foresight and success from Hollister, Watsonville, San Jose and San Francisco, are purchasers, besides those from San Luis. The sales on the Paso Robles ranch during the last 80 days aggregate \$121,254. None of the purchases thus far have been made for speculative purposes, but have been made by actual settlers, by business men for their own permanent occupation. These sales comprise 4767 acres of farming land.

**GRAIN EXPORTS.**—*Telegram*, Nov. 27: The shipment of grain from Port Harford, the San Luis Obispo seaport, for the last four months has amounted to 23,131 tons.

### Santa Clara.

**THE GRAPE INTEREST.**—*Times*, Nov. 21: Along the coast counties, Santa Clara especially, the preference will be for wine grapes. As an evidence of the growth of this industry, take the following exhibit: In 1855 this county had 6945 acres in vineyard, two-thirds of which were for wine purposes; in 1856 there were 9918 acres, and more than three-fourths for wine purposes. In 1857 there were 5,404,000 pounds of table grapes sold from this county; in 1858, 3,534,400; in 1859, 1,116,500. For 1856 no accurate figures can be given, but vineyardists think that the total will be greater than last year. But, as to the yield of wine, in 1853 there were reported 190,040 gallons; in 1854, 535,030; in 1855, 615,500. Careful esti-

mates indicate that the vintage this year will be greatly in excess of that of last year, some placing it as high as 1,000,000 gallons. Thus it appears that while the grapes produced for table use have steadily decreased, the production of wines has rapidly advanced. Among the most extensive producers of wine in this county may be mentioned these: J. T. Doyle, Capt. Merithew and Mr. Portal in the Cupertino country; Le Franc, Lone Hill, Estarde, toward the foot-hills in the west side of the valley; two companies, one in Los Gatos, the other between Los Gatos and Saratoga; Bowen, A. Devaux, J. Cuzard, in the southern part of the county; Delmas & Snyder, near Mountain View; Collins, Gaines & Crandall, Paul O. Burns, etc. Besides those mentioned there are a great many others manufacturing large amounts in San Jose and surrounding country.

**PRUNING EARLY.**—*San Jose Times*, Nov. 24: A ride across the valley, yesterday, disclosed the fact that a number of orchardists are already busily engaged in pruning. In several vineyards, also, pruners were noticed at work. This pruning in the middle of November is unusual. Trees were seen clipped which had not dropped their leaves. It may be all right, but it is unprecedented. As to vines, according to the commonly received opinion, early pruning tends to make them put forth their shoots much earlier in the spring, and thus renders them much more liable to injury by frosts. It does seem that one crop ought to be fully gathered before pruning commences.

### Santa Barbara.

**OLIVES.**—*S. Maria Times*, Nov. 20: We were shown yesterday a sample of olives from Mr. Selby's orchard, near the Mission of Santa Ynez, that would be hard to beat in any country. The orchard is only three years old, yet it is bearing a good crop. A. M. Boyd has a fine one-year-old orchard of several thousand trees, all growing well, and will plant out 40 acres more the coming season. Mr. D'Urban also will put out 20 acres to this fruit the coming season near the town of Ballard.

**WEEDING BY FIRE.**—About one-half of the valley has been burned over by the farmers in their efforts to rid the land of the tall stubble and obnoxious weeds.

**LOMPOC SPUDS.**—*Record*, Nov. 20: J. M. K. Bateman, principal of our town school, presented us this week with as handsome a potato as we have ever seen. It was grown on his ranch near the river, evidently on geometrical principles. It has a bright, smooth, whitish skin, and weighs 2½ lbs. It measures 14 inches in length, with an almost uniform circumference of nine inches, tapering at the ends to 7½ inches. We were shown yesterday a Peerless potato weighing nine lbs.; also three Early Goodrich potatoes weighing respectively 4, 3½ and 3½ lbs. They were grown on the G. L. Hunter farm by Wm. Downing. W. H. Trowbridge showed us last Saturday three Peerless potatoes, weighing respectively 7½, 7½ and 5½ lbs. He states that they had been dug three weeks and had lost some weight by shrinkage.

### Santa Cruz.

**BLUE-GUM FUEL.**—*Sentinel*, Nov. 27: Ten years ago Joe Arana set out 120 eucalyptus trees along the north side of the road leading from this place on the west. During the past month the trees were cut down and chopped into cordwood. Over 25 cords of excellent stove-wood were realized therefrom, valued at \$5 per cord. Allowing the space occupied by these trees to be one-half an acre of ground, this is considered a good return. Mr. Arana believes that these trees could be planted with profit in this locality.

**TABLE GRAPES FOR TEXAS.**—*Courier-Item*, Nov. 25: We learn from Judge Anson S. Miller that a Texas fruit-buyer visited the Summit last week, making purchases of table grapes for shipment at prices ranging from \$50 to \$80 per ton, with cost of crates added, expense of packing and delivering at Wright's Station being borne by the grower. The Eastern shipments of this year, says Judge Miller, have paid better than those of last year. The rainfall of Saturday was much less on the Summit than at points nearer the coast, and the grapes remaining on the vines are still in good condition for shipment.

**SUCCESSFUL DAIRYING.**—Since our visit to his ranch last spring, D. D. Wilder has built an addition to his dairy barn, making the present dimensions 36x320 feet. He has also introduced a steam mill for cutting and grinding feed, which works to a charm. For a month past he has been feeding about three tons of cut pumpkins daily, and the operation of cutting and feeding is a very interesting one. Mr. Wilder's figures show an increase in the production of butter this year over last of 10,000 pounds, the greater portion of which he attributes to the use of the cream separator.

### Shasta.

**CITRUS SUCCESSSES.**—*Free Press*, Nov. 27: Last Wednesday our reporter visited the old Wiser orchard on the Shasta road to view the orange trees, and found them literally breaking down under their loads of golden fruit, which is now ripening. Not a leaf is injured by the frost. In the same inclosure are some beautiful young lemon trees growing thriflily.

**ORANGES.**—*Cottonwood Index*, Nov. 23: Aleck Leiter, Warren Dunham and Thad Jones, near Igo, have orange trees loaded full of oranges as fine as ever grew in Florida. These trees are not in especially protected places, and

are at an elevation of about 1000 feet above sea level. At "The Winery" are half a dozen trees, probably 15 years old, that have yielded a bountiful crop of the golden fruit every season for several years. A year ago G. W. Hopkins set out a small orchard of 24 orange trees on the Schafer ranch, just north of this town, that are all doing nicely. These trees are in a decidedly open and unprotected spot, and their growth will be watched with great interest.

**POTATOES.**—Nine tons of Peach Blow potatoes were dug this season from one acre on Mr. Boot's mountain ranch.

**CORN.**—Antone C. Nunis, a thrifty farmer on Battle creek, left at the Land Office some ears of corn that other farmers, who have never tried to raise corn, should come in and see. The corn is of the white flint variety. The ears are solid, well filled and larger than the average corn grown in the Mississippi bottoms. Mr. Nunis raised 1000 bushels on 40 acres this year and 2000 bushels on the same 40 acres two years ago. He has averaged for all the corn he has raised in 12 years, \$1.50 per hundred, or, as our Eastern friends would count it, 90 cents per bushel.

### Siskiyou.

**GLANDERS ALARMINGLY PREVALENT.**—*Shasta Co. Democrat*, Nov. 24: T. Trullinger, a veterinary surgeon, appointed by the Board of Supervisors of Siskiyou county to examine into the condition of horses at the railroad front reported to be diseased with glanders, reports as follows: "On the day of my appointment I started for the railroad front, and upon my arrival there examined 95 horses, 10 of which I diagnosed carefully and found two cases of glanders and eight cases of farcy in different stages of the disease. Of the remainder, I found 38 animals in the first stage. Twenty-six of the horses were working on the highway between Butteville and Keyser's place. I found three out of the ten (where the disease had fully developed) on the range along the line of the public road between the points. The disease is contagious, and if not eradicated is almost certain to spread generally among the horses of the county. Prompt and efficient means should be taken to destroy all animals affected with the disease and to otherwise prevent its spread. All of which is respectfully submitted." Mr. Trullinger's report shows an alarming state of the malady in that locality. Glanders is not only fatal to horseflesh, but persons are susceptible of being inoculated with the deadly disease, and as the locality is contiguous to Shasta county, people should keep vigilant watch lest the dreadful disease should get a start in this county.

### Sonoma.

**VINTAGE OF '86.**—*Flag*, Nov. 24: The vintage season is at an end in Sonoma county. Summing up the results, we do not find a satisfactory showing. Yield and quality have been all that could be desired, but in other respects the grape-grower has been at a decided disadvantage. Coöperation has been inadequate to make the grapes into wine, and prices have been unreasonably low, much lower than prices paid for like varieties in Napa county. Young vineyards have come into bearing, and the local market for the best varieties even has been overstocked. Few grape-growers have made money and many have lost.

### Stanislaus.

**FINE ORANGES.**—*Modesto Herald*, Nov. 25: On Saturday last, Mr. A. Collins, of Knight's Ferry, brought to Modesto the first installment of oranges from his orchard. They are as beautiful in size and color as any we ever saw, ripe and sweet, and the crop this year promises to be plentiful.

### Tehama.

**EDITORS PRESS.**—Mr. W. O. Jennings lives 22 miles east of Red Bluff, in the mountains. He has a neighbor who has 12 apple trees, set out only 12 feet apart, which is very much too close, of course. Mr. Jennings bought 300 pounds of apples at three cents per pound from him, and the trees produced this year 3000 pounds, giving \$90 returns on a bit of land 36x48 feet. Surely Tehama county is a poor place for fruit!—*R., Red Bluff*.

### Tulare.

**MONEY IN BLACKBERRIES.**—*Register*: J. W. Dunlap, living four miles north of Tulare, has three rows of Lawton blackberries, each row 100 feet long. From this little patch he gathered and sold 600 lbs., at an average price of 8 cents per lb., and still had all that was required for table use during the berry season, and to put up for family use during the winter.

### Yuba.

**COUNTY'S CAPABILITIES.**—Brown's Valley Cor. *Record-Union*: I have lived in the foot-hills of Yuba and Butte counties since 1858. There are two things needed to make this part of the State flourish equal to any other, viz., a large ditch to carry water for irrigating and a branch railroad to run along the foothills. The quality of the land here is a guaranty of success, both in farming and in fruit-raising. Grapes of any variety grow to perfection; peaches, pears, apples, apricots, and even oranges, ripen well and are fine-flavored, and all kinds of vegetables grow to perfection. I have seen as fine wheat and barley raised here as is grown in any place. The land is mostly claimed, but it can be bought cheap in lots to suit the buyer, with all of these advantages and a fine climate.

## November in California.

[Written for the RURAL PRESS by MALLIE STAFFORD.]

The year is fading; but it fades in splendor,  
Like some grand monarch of the forest world;  
Sunlit and tipped with gold his flag is furled,  
And unto Time his trophies he surrenders  
To dirges low and tender.

Not with stern blasts and storms that bitter wail,  
And winds that sigh their mournful tale of woe,  
And lowering clouds that trail their weight of snow  
Mid withered leaves that drift before the gale  
'Neath slanting sunbeams pale;

But gentle rains have drenched the waiting earth,  
And green the grasses spring on hill and plain.  
Only the fading leaf whispers of autumn's reign,  
While plenty lingers round the radiant hearth  
With jest and songs of mirth.

Adown the garden-walk bright blossoms bend;  
The rose has opened again its varied blooms,  
The tender violet sheds forth its sweet perfume,  
Green leaves and vines and rarest buds doth lend  
Grace to the old year's end.

Warmth and bright sunshine and the songs of birds,  
The golden oriole and the soulful lark,  
The blue jay and the linnet, the robin red—and  
hark!  
That was the quail's shrill piping note I heard,  
The sauciest of birds.

Along the lanes the grass is springing green,  
And lo! the plowman turns the damp dark mold,  
And Nature's God with blessings manifold  
Will deck ere long the sodden fields serene  
With robes of emerald sheen.

It is Thanksgiving; over land and sea  
Deep anthems float from many a templed dome;  
Sweet songs and praise from hut and happy homes  
Our grateful hearts doth render up to Thee,  
Adored Divinity!

Arcadian Hights, Thanksgiving, Nov. 25, 1886.

## In the Rocky Mountains.

[Written for the RURAL PRESS by FANNIE ISABELL SHERRICK.]

I could not imagine a lovelier spot than this mining camp at the present writing. The autumn frosts have turned the foliage, and the mountains are regal in their garments of gold and scarlet. Seen in the morning sun, I can liken the slopes to nothing but a golden plush, deepening into a wine-brown, and touched here and there with flames of crimson; and if they are splendid in the noon they are even more gorgeous when viewed under the rose-hues of the sunset.

Perhaps of all the surrounding hights "Red mountain" is the most singularly beautiful. It is well named. All of the lower slope is covered with a rich, deep red, while the crown is of pure yellow. When the full glory of the afternoon sun falls upon it the effect is beyond the power of words to describe.

Often as I stand wonder-stricken with my eyes upon this mount, I wish for the power of an artist to immortalize it, but reason tells me that no brush or pen, however skillful, could transfer one tithe of that supernal beauty to canvas. Like all of Nature's master-pieces, it cannot be copied.

Every day this brilliant coloring seems to change, but only to grow more and more beautiful, the amber tints deepening, the crimson hues more resplendent. It will be almost a sorrow to see the colder finger of October laid upon them, making them sere and unlovely.

Like Tamalpais, this mount has a meaning above and beyond all the rest. All summer long it was beautiful in its emerald blossoming, and I think it will be supremely grand when robed in the kingly white of winter.

Aspen is encircled with mountains literally hemmed in, as it were, by rocky walls, and beyond these nearer mountains are the purple cloud-paths of the ranges, with now and then a hoary head lifted up loftily into the azure spaces. Even in midsummer, the snow lies white and unbroken on these far grand peaks.

On the Fourth of July our party crossed the range and we snowballed each other on the summit. On the very edge of the snow-plains we gathered flowers. It seems almost incredible that these dainty darlings of summer should bloom on the snow line, but so they do. They are of a pure white with creamy yellow centers somewhat resembling the edelweiss.

It is like an Alpine dream to cross this range. I think Switzerland knows nothing grander. From Twin Lakes, sparkling sapphire gems in an emerald setting, to Aspen, the ride is one of continual beauty and grandeur. Staging is always hard and this journey is no exception, but the compensations in the way of scenery are many.

Leaving Leadville at six in the morning, the stage arrives at Aspen at six in the evening,

having traveled 60 miles across the range. To inexperienced travelers these mountain roads are appalling, but having done the Yosemite and the Geysers in California, I was prepared for the steep grades, though scarcely for the great altitude which we reached. It was almost painful to see the stage-horses toiling up those fearful mountain roads, panting in the rarified atmosphere. At 10,000 feet one loses breath with the least exertion, and we were much higher than that. Above timber line our own breath came with difficulty, and when we reached the divide and descended from the coach we found our lungs aching with the effort to breathe.

From the snow-fields the mountain streams flowed, gathering force and momentum as they sped downward to the mighty rivers and the sea. Above the clouds we paused, but only for a moment was that grand outlook ours. In a trice we were flying down on the other side at a speed that threatened the dissolution of soul and body. How the stages ever maintain their equilibrium is a mystery. Every moment it seems as if the wheels must swing over the road and precipitate coach and passengers in the bed of the stream, hundreds of feet below. Yet there is a mad sort of pleasure even in the danger—to see the leaders sweeping around the sharp curves—to feel the exultation of the swift movement and to see the dizzy slopes growing lower and lower beneath until we merge into the valley.

In the summer-time the mountains and valleys are beautiful in their blossoming. The wild flowers are luxuriant, and though so hardy their forms and coloring are of the most delicate type. Now they are gradually fading, as the frosts grow nightly more severe.

After riding for miles and miles through the unbroken solitude of the mountain forests, Aspen is a surprise. Isolated as it is from the rest of the world, it is yet modern in all its improvements. Wide-awake, ambitious, full of energetic people, and marvelously rich in its mineral resources, it has a future of great promise. Its rapid growth is remarkable. Several years ago there were a few log cabins here—now there is a prosperous town with beautiful residences and handsome business blocks which would not do discredit to a much larger and older town.

The mines, of course, form the mainspring of wealth, but the valley beyond is rich in its agricultural resources and is being gradually filled up with fine ranches.

The Roaring Fork river runs through the valley; a sparkling mountain stream, fresh from the snows of the upper slopes.

Not far from Aspen are the Glenwood springs, famous for their curative properties. The water of the springs is salt and sulphurous, and comes from the ground at a boiling temperature. The baths are not unlike sea baths.

In quite another direction are the hot springs on Rock creek, almost at the foot of Mount Sopris. They are comparatively unknown to the public, being very difficult of access. The only way to reach them is over a rough and dangerous trail. But it was my good fortune to camp near these springs in August, and I was much pleased, not only with the springs, but the beauty of the location. It is a delightful spot, and the memory of many pleasant days there will linger a long time.

The water of these springs is of a somewhat lower temperature than those of Glenwood, and they are sulphurous but not salty.

I wish time and space might allow of a detailed description of our camping life in the wilds of the Rockies. It was, indeed, an interesting experience, but to most Californians, camp-life is no novelty. It was, perhaps, more the ideal of our camping-grounds and the jollity of our party that made our trip so successful. We camped in the shadow of that grand peak, Sopris, which is snow-crowned the year round. Looking down our canyon the massive heights of the Elk range could be seen, and on either side of us rose cliffs of the most exalted grandeur. Through the canyon flows Rock creek, more poetically known as Crystal river. It is, indeed, a beautiful stream, crystal-clear and full of enchanting rapids and quiet mirrored pools.

The narrow canyon hemmed in by the straight-walled cliffs reminded me more of Yosemite than any spot I have ever seen.

Fishing, riding, rambling and progressive euchre parties around the camp-fire—these were our principal amusements. They were varied the last evening by a supper and dance at a neighboring ranch. This proved to be quite a unique affair. Considering the fact that we were nearly 50 miles from Aspen, in one of the wildest spots of the mountains, the supper was a remarkably good one. Our costumes were more picturesque than elaborate. It would have appalled a society reporter to have seen them. But notwithstanding our camping attire we managed to have a good dance and a jolly time. The house was certainly primitive in its arrangements and furniture, but all lack of exterior adornment was amply compensated for by the cordial hospitality of the inmates.

One of the girls, a rosy-cheeked, healthy little lassie, is soon to be a bride. She came to Aspen the other day and ordered her trousseau, a very elaborate one—indeed, the stores in this thriving little city were not equal to her wants. She was obliged to order part of her wedding outfit in Denver. Her father, it is said, has made considerable money as a ranchman.

On the walls of this home I saw the loveliest head of a mountain sheep that I have ever seen.

It was indeed a superb specimen. In winter these sheep come down from the higher mountains and may be seen in the close vicinity of the ranches. Formerly there were great quantities of elk and bear, but the former, owing to indiscriminate slaughter, have become rare.

The country surrounding Aspen is an interesting one. A lover of the curious and beautiful might well find material for a summer's study, and stretching out beyond here is a long line of scenic travel.

From Gunnison the Denver & Rio Grande Railway leads one through one of the grandest gorges on the continent. If possible, it is even more beautiful than the Royal Gorge of the Arkansas, of which I think I made mention in a former letter. Of all the mighty freaks of nature, I think these canyons are the most remarkable. It seems almost incredible that a small mountain stream should force its way through the heart of these august mountains, laughing in the face of dark-browed cliffs whose very walls suggest a mysterious terror. The stupendous forces that rent them asunder show plainly in their seamed and scarred fronts, impressing the beholder with the Titanic majesty of nature.

In this far-famed Black canyon is the Current Needle, one of the most singular formations I have ever seen. It is in reality a massive structure, but in the perspective it narrows to a slender shaft that seems to pierce the sky. And even when one approaches it, it wears that look of ethereal slenderness. It is only when the train has sped onward, under its shadow and beyond it, that the mind comprehends in the least its overwhelming massiveness and grandeur.

This gorge of the Gunnison is replete with wonders. But it would take a volume to tell of its turrets and towers and the wondrous forms and faces carved on its castle-walls, as though Nature would fain wrest the crown of master sculptor from all humanity. These graven, fantastic shapes are very similar to those seen below The Dalles on the Columbia river.

But space and power are lacking to tell you of all the beauties of this Black canyon—the emerald splendor of the river, the dusky wonders of the cliffs and the white-foamed radiance of the over-leaping falls. Neither can I give you much idea, unless you have seen part of it yourself, of the wondrous sublimity of Colorado scenery and the enterprise of a people which boasts a railroad that reaches an altitude of nearly 11,000 feet.

Unless you have stood on Marshall Pass and seen the great ranges stretching out into the limitless space around you, you have not felt the exultation that comes from the triumph of human skill over the stern, unyielding powers of Nature.

And why go to Switzerland to view the Alps when the Rockies and the Sierras hold out their sublime hands to ennobel and uplift us?

Aspen, Colorado.

## A Defense of Fact.

EDITORS PRESS:—It seems to me that Mr. Berwick has wandered, in his letter of October 3d, from the original contention, viz: fact versus fiction.

Fact versus sentiment is a quite different subject; however, as Mr. Berwick has advanced it, I shall make a few strictures concerning it.

I quite agree with him in thinking right sentiments edifying. But I cannot concur with his remark that "a mind well stored with fact is rightly credited with knowledge, which puffs up." I believe, with Bacon, that knowledge is power, and with Shakespeare that

"Ignorance is the curse of God;  
Knowledge the wing wherewith we fly to heaven."

The characters of our great philosophers, scientists and naturalists teach us that much knowledge makes us very humble and full of reverence for the Power that is above it all. Herbert Spencer has some fine remarks on this point in the first chapter of his essay on education, which any one would profit by reading. He, himself, is a living refutation of the assumption that fact tends to inflate us. His, undoubtedly, is the most comprehensive mind of the age, and the extent of his knowledge is something overwhelming to an ordinary mind; still he has a great, kind and gentle heart. And so it was with Newton, Darwin, Faraday, the brothers Humboldt and many others. The fact is, that the more we know the less we feel we know.

Man has an intellect as well as a heart, and it is his duty to cultivate both. There is, as Agassiz says, a hunger keener than physical hunger. It is the craving for knowledge. Man is a thinking, aspiring being, as well as a moral one, and his intellect imperiously demands sustenance. And what wonders has it not accomplished. The nineteenth century may well be proud of her sons.

I liked very much what the correspondent who signed herself "Working Girl" said a few months back in the RURAL on this subject, viz., that she wished people were more interested than they are in natural science. This, I believe, is one of the chief ends of man. And what a vast domain of facts it opens to us! What an immense field for study! Brought up in the city, my love for nature did not awaken till the kindly voice of one of her lovers bade it arouse. It was the poet-naturalist Thoreau that

first woke it from its slumber; then Humboldt, Lubbock, Huxley, Proctor, Tyndall and many others helped to keep it on the *qui vive*.

The field occupied by fact is a very broad one. It covers all the earth and extends up into the heavens. It behooves us to know something about who we are, where we are and what surrounds us. F. A.

## When the Day is Gone.

How quiet the house is at midnight! The people who talk and laugh and sing in it every day are asleep, and the people who fell asleep in it long ago come back into it. Every house has these two classes of tenants. Do we love best those with whom we can laugh and talk and sing, or the dear silent ones who come so noiselessly to our side and whisper to us in faint, sweet, far-away whispers that have no sound, so that we only hear their very stillness?

I am not tired, but my pen is weary. It falls from my fingers, and I raise my head. I start to leave the table and my eyes fall upon a little book lying on the floor. It is a little "First Reader." He left it there this afternoon. I remember just how I was impatient because he could not read the simple little lesson, such an easy lesson, and I told him it was a waste of my time to teach him, and pushed him away from me. I remember now. I see the flush come into the little tired face, the brave, cheerful look in his eyes, his mother's brave, patient cheeriness struggling with his disappointment and pain. I see him lie down on the floor and the little face bend over the troublesome little lesson, such a simple, easy lesson, any baby might read it. Then, after a little struggle alone, it has to be given up, and the baffled little soldier, with one more appealing look toward me for reinforcements, sighs and goes away from the lesson he cannot read to the play that comforts him. And there lies the little book, just as he left it. Ah, me! I could kneel down and kiss it now, as though it were alive and loving.

Why, what was my time worth to me to-day? What was there in the book I wanted to read one-half so precious to me as one cooing word from the prattling lips that quivered when I turned away? I hate the book I read. I will never look at it again. Were it the last book in the world, I think I would burn it. All its gracious words are lies, I say to you, though all men praise the book, and though an hour ago I thought it excellent. I say to you that there is poison in its hateful pages. Why, what can I learn from books that baby lips cannot teach me? Do you know I want to go to the door of his room and listen; the house is so still; maybe he is not breathing. Why, if between my book and my boy I choose my book, why should not God leave me with my books? My hateful books!

But I was not harsh. I was only a little impatient. Because, you see, his lesson was so easy, so simple. Ah, me! there were two of us trying to read this afternoon. There were two easy, simple lessons. Mine was such a very simple, easy, pleasant, loving one to learn. Just a line; just a little throb of patience, of gentleness, of love that would have made my own heart glow and laugh and sing. The letters were so large and plain, the words so easy and the sentences so short. And I! Oh, pity me, I missed every word. I did not read one line aright. See, here is my copy now; all blurred and blistered with tears and heartache, all marred and misspelled and blotted. I am ashamed to show it to the Master. And yet I know he will be patient with me; I know how loving and gentle he will be. Why, how patiently and loving all these years he has been teaching me this simple lesson I failed upon to-day. But when my little pupil stumbled on a single word—is my time, then, so much more precious than the Master's that I cannot teach the little lesson more than once?

Ah, friend, we do waste time when we plight ourselves for ourselves. These hurrying days, these busy, anxious, shrewd, ambitious times of ours, are wasted when they take our hearts away from patient gentleness, and give us fame for love and gold for kisses. Some day, then, when our hungry souls will seek for bread, our selfish god will give us a stone. Life is not a deep, profound, perplexing problem. It is a simple, easy lesson, such as any child may read. You cannot find its solution in the ponderous tomes of the old fathers, the philosophers, the investigators, the theorists. It is not on your book shelves. But in the warmest corner of the most unlettered heart it glows in letters that the blindest may read; a sweet, plain, simple, easy, loving lesson. And when you have learned it, brother of mine, the world will be better and happier.—R. J. Burdette.

MARRYING DRINKING MEN.—Marrying men to reform them has never been a successful enterprise on the part of women. Girls are worth too much to sacrifice themselves to beat sense into the head of any man on God's footstool. Such a man does not wean so easily as a calf. He will go home only to sober up, and then not till all the other places are closed. A girl will marry such a man, hoping that on next year he will be better; but the next year he will be worse. There are sober boys enough for all the girls; and there is no need of marrying a drunkard.—Exchange.

## Our World.

[Original—By J. W. MACKIE.]

How strange, indeed, is this world of ours!  
Now gaily dressed in summer flowers,  
Then draped in winter gloom.  
And we, like it, feel light as air,  
Or sad, oppressed with grief and care;  
We feel at times inclined to dare  
The terrors of the tomb.

Still, holy raptures fraught with joy  
Will oft the saddest heart employ,  
And heaven then is near;  
The love of friends, the mirth of youth,  
The gleesome jest or solemn truth,  
Or affections pure from gentle Ruth,  
Can make a heaven here.

I welcome all these scenes to view;  
They prove that God is kind and true  
To all that life possesses.  
For life indeed is Deity,  
In all, the only entity,  
Throughout the universe.

Tulare, Cal., Nov., 1886.

## College Boys at Work.

Some years ago a young man graduated from the Georgia State University, and returned home to Columbus. His father was a large contractor and prominent citizen, and one day we saw the son hard at work laying brick with all the skill of an experienced mason. In reply to our expression of surprise, the father, Judge Coleman, said: "My son did not go to college to forget how to work, or to become ashamed of his father's calling. He comes back better fitted by education for earning his own living, and he proposes to do it, believing a mechanic is quite as honorable as a lawyer or doctor, if he is their equal morally and intellectually."

We had always held to that view, and contended that while Elihu Burritt was no better blacksmith, and Hugh Miller no better stonemason, because of classical education, they elevated their callings and dignified their manhood by their high moral and intellectual culture. Our boys make a great mistake, the *Cultivator* believes, when they think a college education elevates them above the ordinary pursuits of life, and consequently they must go into one of the professions. A few days ago we saw a handsome, bright, energetic young fellow, Harry Snook, hard at work with hammer, saw and screw-driver, boxing furniture at his father's extensive shipping warehouse on Walton street. And yet he has only recently graduated from the State University with credit to himself and honor to his class. Instead of taking to law, medicine or other overcrowded profession, to continue an expense to his father for years, probably, he wisely resolved to at once assume the burden of an active, laborious life. So he is to-day earning a handsome salary (one-half of which he gives monthly to his devoted mother for investment), and training himself for a thorough and successful business man. Would that thousands of college boys—instead of dozens—would follow the example of young Coleman and Snook, and learn by experience that labor is honorable.—*Southern Cultivator*.

IF HE CHOOSES.—"He read dime novels, and was a thief from way back," is the tell-tale heading of a young man's arrest for crime in Brooklyn. What the world needs is a dime Bible and a dime Shakespeare.—*Alta*.

What the world needs is to know that we have dime Bibles, that the New Testament can be had from five cents per copy upward; that the best of American and foreign literature can be bought in the popular library forms at the same prices for which the printed horrors, known as dime novels, are sold, and that for the money a young man spends for "zwei glasse," a drink of whisky, or a package of cigarettes, he can, if he chooses, purchase the brain work of a Shakespeare or the inspiration of the apostles. The pith of the whole matter lies in the three words, "if he chooses;" when our young men learn to choose, they will find no restriction in the matter of cheap and good literature.—*Courier-Item*.

OVERSTUDY.—School-girls of the present day are too often overtaxed. Think of an undeveloped brain getting up book knowledge on ten different subjects all the same day, and this going on day after day for several years! It is altogether contrary to the principles of a sound psychology to imagine that any sort of mental process worthy of the name of brain thinking can take place in that brain while this is going on. The natural tendency of good brain at age to be inquisitive and receptive is glutted more than satiety. The natural process of building up a fabric of mental completeness, having each new fact and observation looked at in different ways, and having it suggest other facts and ideas, and then settle down as a part of the regular furniture of the mind, cannot possibly go on where new facts are shoveled in by the hundred, day by day. The effect of this is bad, boys, but it is worse on girls, because it is more alien to their mental constitution.

THE Fruit and Flower Mission wishes to thank the paper for calling attention to its needs at giving; also to thank all those who so generously responded to the appeal for contributions. Many poor people were made happy through the gifts of the friends of the Flower Mission.  
—ELIZA D. KEITH, Secretary.

## YOUNG FOLKS' COLUMN.

## A Lesson for Boys and Girls.

There is nothing like Purpose, Pluck and Perseverance to make a boy's or a girl's spirit strong and effective. Purpose, Pluck and Perseverance are the winning P's. Purpose sees something that ought to be done; Pluck dares to undertake it; Perseverance sticks at it until it is accomplished. The people of the world, both old and young, are largely indebted to these three P's. A writer in the *Christian Advocate* illustrates what they can do in the following brief history, which every boy and girl ought to read and remember: Boys and Girls, I want to tell you about a man who is not often referred to in society, though millions of people are constantly enjoying the fruit of his Purpose, Pluck and Perseverance. We do not eat this fruit, but we wear it on our heads, backs and feet, and it is used for many household, mechanical and scientific purposes. To this man you are indebted for your nice gum overshoes and ulster. While you are enjoying their protection from the dampness you do not think to honor the name of Charles Goodyear, whose noble Purpose, Pluck and Perseverance gave to the world one of its most useful improvements. He was a native American, born in New Haven, Dec. 29, 1800. He had not the favorable opportunities for obtaining an education that the boys of to-day have. He received a very limited course of instruction in the public schools. When he was quite young his father moved with his family to Philadelphia and opened a hardware store. Charles grew into familiarity with the business. When he became of age his father took him into the store as a partner. The firm for several years enjoyed a fair degree of prosperity. The financial crash of 1836 threw both father and son into bankruptcy.

During the time he was engaged in the hardware trade, Charles had his attention directed to the experiments being made with India-rubber. Now, being out of business, he determined fully to investigate the subject. With this purpose he went to New York, and sought an interview with the agent of a company that had been operating in India-rubber; here he received a discouraging account of the whole business. He was told that every effort to successfully work it was a failure, and that the most sanguine friends of the enterprise had abandoned it, because no durability could be imparted to goods made of India-rubber. He listened attentively to all this, and to an explanation of the process employed in the effort to manufacture rubber goods.

He saw that mankind would be greatly benefited if this business could be so perfected as properly to utilize gum elastic; formed the deliberate Purpose to undertake to accomplish what many others had failed in trying to do. His Pluck was displayed in attempting to accomplish what others had failed to do. He experimented long, and labored hard, and suffered much from poverty and discouragement. At last his wife, pleading their poverty and the helplessness of their family, besought him to cease his efforts with India-rubber and provide for his family; this plea was more powerful than all arguments, for he was a man of tender feeling and loved his family ardently. He would have yielded to his wife's entreaty, had not Perseverance said, "On, keep on; you are near the realization of your hopes. The secret that has so long eluded you is within reach; another effort will unfold it." The effort was made, the secret obtained, glorious success crowned the efforts and sacrifice made during ten years of constant application to one purpose. He was the first man to produce a perfectly vulcanized India-rubber. By doing this he gave to the world a new material that could be used in a great variety of ways for man's benefit. Out of it are manufactured various articles of clothing, boots, shoes, caps, and many articles for family use, besides toys, mechanical, surgical and scientific instruments. It is a blessing to men on land and sea, and is the fruit of Charles Goodyear's Purpose, Pluck and Perseverance.

## Discontented Polly.

Polly ought to have been a very happy little girl, but she was not, because she hadn't a doll. She had everything else: a beautiful kitchen, a stove with everything to use on it, some pretty china dishes, a table to put them on, and a neat little wicker chair to match the table.

Only a little while ago she had three lovely dolls; but there was another D to Polly's name—Destructive Polly; and now there was not a bit of a doll left, and mamma had determined to let her wait till she wanted one so very much that when it did come she would be sure to take care of it. But Aunt Alice said one day, "That child shall have a doll to-morrow." And sure enough! the next morning, in the little wicker chair, Polly found the most beautiful doll she had ever seen.

It had fluffy, golden hair, and bright blue eyes, and a dress just like Polly's best one with puffed sleeves. It could say "papa" and "mamma" quite plainly, and could move its eyes.

Of course, the first thing to be done was to find a name for the new treasure, and that

made Polly discontented again. She wanted to call it after herself, but she said "Polly is such an everyday name, it would never do; my doll must have a 'company' name." So she called her doll "Rosalinda."

The next day mamma said there might be a party in honor of the new doll; so Polly carried Rosalinda into the play-room, put her in the little chair, and began to get ready for the party. Rosalinda looked as though she would like to help; so Polly filled one of her prettiest cups with milk, and put it in the dolly's lap, while she went out for three lumps of sugar.

Just then a dreadful thing happened. Puss, who had been hidden under a chair, came out, jumped to Rosalinda's lap, and began to drink the milk as fast as he could. Before it was half gone he heard Polly coming, so he jumped down again in a hurry, and out of the window. But one hind paw caught the cup by the handle, spilled the milk on dolly's dress, dashed the cup to the floor, and broke it all to bits!

When Polly came in and saw this, what do you think she did? She just looked at Rosalinda a moment, then she took her out of the chair and shook her—shook her so hard, and sat her down again with such a bounce that the pretty blue eyes shut up tight, and wouldn't come open.

Polly didn't mind that at first. She said, "Yes, you'd better shut your eyes, you naughty thing! Don't tell me it was 'a accident.' You did it yourself, I know, and I don't love you one bit. You don't look fit to be seen, and the party will be here before I'm ready. Oh, dear! Just open your eyes and see what you've done."

But poor Rosalinda's eyes wouldn't open, and the more Polly shook her the tighter shut they stayed, till she ran crying to mamma to ask for help. Mamma had seen it all; so now she took Polly and Rosalinda both on her lap, and gave what Polly called "a little preach."

It did her good, real good, and at last she said: "Dear mamma, if Rosalinda will only open her eyes once more and look at me, I believe I will never be so naughty again."

So mamma found a way to open the pretty blue eyes, and Polly kissed them both, and then kissed mamma for helping her.

By the time the party came, everything was ready. Polly was very good, and let the girls play with her beautiful Rosalinda the whole time. I do not know how long the good will last. I hope till every one forgets to call her Discontented Polly, and learns to call her Darling Polly instead.

## GOOD HEALTH.

## Smoking and Heart Disease.

In a report by Dr. Frantzel, of Berlin, on immoderate smoking and its effects upon the heart, it is stated that the latter show themselves chiefly by rapid, irregular palpitation of the heart, disturbances in the region of the heart, short breath, languor, sleeplessness, etc. Dr. Frantzel says that, if the causes of these complaints are inquired into, it is generally found that the patients are great smokers. They may not smoke cigars rich in nicotine, but full-flavored cigars imported from the Havanas. Smoking, as a rule, agrees with persons for many years, perhaps for 20 years and longer, although by degrees cigars of a finer flavor are chosen. But all at once, without any assignable cause, troubles are experienced with the heart, which rapidly increase, and compel the sufferer to call in the help of a medical man. It is strange that persons consuming cigars of ordinary quality, even if they smoke them very largely, rarely are attacked in that way. The excessive use of cigarettes has not been known to give rise to similar trouble, although it is the cause of complaints of a different nature. The age at which disturbances of the heart become pronounced varies very much. It is but rare that patients are under 30 years of age; they are mostly between 40 and 60 years old. Persons who are able to smoke full-flavored Havanas continue to do so up to their death. If we look round among the better classes of society, who, it is well known, are the principal consumers of such cigars, it is astonishing to find how many persons with advancing years discontinue smoking. As a rule, affection of the heart has caused them to abjure the weed. In such cases the patient has found the best cure, without consulting the medical man. If he makes up his mind to discontinue smoking at once, the complaint frequently ceases at once; in other instances it takes some time before the action of the heart is restored to its normal state. In such cases, besides discontinuing smoking, relief must be sought also by regulating the diet, taking only easily digestible food, light beer and wine in moderate quantities, abjuring coffee, as well as by short walks, residence among mountains of moderate elevation, and suitable interior treatment. By taking this course, all symptoms disappear in the course of a year and do not reappear if the patient does not recommence smoking. In a third category of cases the more acute disturbances leave the patient; he feels well and hearty, but an irregularity of the heart, more or less pronounced, is left behind. It has not yet been determined what it is that makes smoking injurious; but this much appears certain, that it does not depend upon the amount of nicotine which cigars may contain.

THE SECRET OF SCARLET FEVER.—Certain English physicians have made a most important discovery. They have found that the scarlet fever poison really comes from diseased cows. The contagion is not necessarily in the milk. Indeed, a cow impregnated with the fever may give wholesome milk, but there is always danger that in milking the cow the matter from the sores on the udder may find its way into the milk-pail. Then comes the rapid multiplication of the scarlet fever germs, which technically are known as "streptococcus." These germs have been transmitted to calves and other animals, which have thereupon shown the symptoms of scarlet fever. The disease is so deadly an enemy of the human race that now we have discovered its origin every effort will be made to put an end to its depredations. The cow is of the greatest benefit to the human race, but the milk it furnishes sometimes communicates the infection of typhus as well as scarlet fevers.

SHADE TREES CAUSE SICKNESS.—The shade trees about our dwellings have done much to make our wives and daughters pale, feeble and neuragic. Trees ought never to stand so near to our dwellings as to cast a shade upon them. If the blinds were removed, and nothing left but a curtain with which to lessen on the hottest days the intensity of the heat, it would add greatly to the tone of our nerves and to our general vigor. The piazzas which project over the lower story always make that less healthful than the upper story, especially for sleeping purposes. I have cured many cases of rheumatism by advising patients to leave bedrooms shaded by trees or piazzas and sleep in rooms constantly dried and purified by the direct rays of the sun.—*Dio Lewis' Journal*.

## DOMESTIC ECONOMY.

STEWED SHEEP TONGUES.—Soak for an hour in cold water; drain and cover with boiling water until you can peel off the skin. Do this over night and leave on ice until morning. Then split lengthwise into four pieces when you have trimmed them neatly. Put for each tongue a tablespoonful of chopped pork into a saucepan, a teaspoonful of minced parsley, half a dozen chopped mushrooms, salt and pepper to taste, and the juice of half a lemon for the whole number. Lay the split tongues on this prepared bed, pour in a cupful of skimmed gravy or weak broth, cold water if you have neither, and stew gently until tender. Thicken with browned flour; boil up and pour out. Your butcher will save the tongues for you at a small cost if you give him timely notice. A half-cup of stewed and strained tomatoes is an improvement to the stew.

SWEETBREAD CROQUETTES.—Chop fine and then pound to a pulp in a stoneware mortar the breast of a chicken. Have ready three sweetbreads which have been thoroughly cleaned and boiled about 20 minutes. Pound these also in the mortar and add to the chicken. Put over the fire in a small pan a large lump of fresh butter. Wet up a tablespoonful of corn-starch or arrowroot in a small cupful of rich cream. When the butter bubbles, add to it the thickened cream, and let it cook till done, stirring all the time. Pour it into the mass of meat and mix thoroughly, adding pepper, salt, nutmeg, a little mace and chopped parsley to taste. Mold with the hands into croquettes or rolls, and put away to get cold. When wanted to serve, dip each in beaten yolk of egg, then in bread-crumbs or cracker-crumbs, and fry like doughnuts in boiling lard. Garnish with sprigs of parsley.

WATER POUND CAKE.—One pound of butter, one pound of powdered sugar, four eggs, one cupful of boiling water, one pound of prepared flour, flavor with lemon. Beat butter, sugar and the yolks of the eggs to a cream, then add the boiling water, and stir gently till cold, then the pound of flour with the whites of the eggs which have been beaten to a stiff froth, the lemon last; bake one hour. This cake cannot be told from real pound cake, and it will keep two weeks.

LEMON MARMALADE.—Slice the lemons very thin, only taking out the seeds; add three pints of cold water to each pound of fruit after being cut into pieces; let it stand 24 hours; boil it until tender, pour into an earthen bowl until the following day, weigh it, and to every pound of boiled fruit add 1½ pounds of lump sugar; boil the whole together till the syrup jellies and the chips are rather transparent.

BUTTERED POTATOES.—Boil with the skins on, peel carefully, lay in a heated bake-dish, butter plentifully, pepper and salt; cover and set in the oven ten minutes, rolling them over in the melted butter several times. Remove with a split spoon to a hot deep dish; add half a cup of hot milk to the butter left in the bake-dish, stir well and pour boiling hot over the potatoes.

HARICOT MUTTON.—Make a good gravy by boiling the trimmings, seasoning it with pepper and salt. Strain and add carrots, parsnips and onions previously boiled tender. Slice them in, then pepper and salt the mutton, broil it brown; put it into the gravy along with the vegetables, and stew all together ten minutes.

## The Week.

People are naturally getting somewhat uneasy about the tardy opening of the rainy season, and the perfect weather which so delights city people and tourists is becoming somewhat monotonous to men who have sown and fear the need of resowing, or to those who are waiting for the rain before putting in the plows. It is beyond our power to make a season just as we would like it, but our experience is that a late opening is better than a heavy October or November rain and a long dry period following. Over much of the area of the State there has no appreciable rain yet fallen, and so far as we have heard, live-stock have kept in fair condition. If a rain should come this month and then a warm, growing winter should follow, the result would be

better than to have had growth started early, and then repressed by a long, cold drouth. Of course people who have much field work to do are injured by having it crowded into a short, hurried season, but as a rule, it seems to us it is still too early for anxiety. The elements still have plenty of time to arrange a splendid season for us, and it is more comfortable to trust they will yet do it than to be consumed by worry and doubt.

## The Stock Craze.

Once more, and for the first time in a number of years, the mining share market of San Francisco has gotten into one of its old-time tantrums. Though a mere flurry compared with the whirlwind of excitement that in former days swept over the community, the movement in shares has for a week or two past been decidedly breezy. This improvised market has not, to be sure, been attended with very heavy sales or extremely high prices; nevertheless, it has for a month or more past been quite active and still so remains, transactions having been confined mostly to Comstock shares. Having been preceded by no great strike in the mines, this stir in stocks came upon the community unawares. But this is the way these speculative cyclones frequently occur, there being no signal service to foretell their advent. They very often burst upon us from a clear sky, coming suddenly and when they are least expected. Though making their appearance so unannounced, they have not for this reason proved the less mischievously effective.—*Mining and Scientific Press.*

Man is a strange bundle of incongruities. The average man is extremely cautious in his trade and dealings, especially when his money represents hard hands and the beady drops of the brow. He must have an abstract of the title to the house and lot or piece of land he buys. The age and disposition of a horse is carefully examined before he opens his purse. He will often higgie and hesitate over the price of a hat, coat or a few pounds of beefsteak. And yet when the gambling craze smites a community, no such business caution founded on good sense, wisdom and experience is observed. Men will mortgage their homesteads, pawn their watches and jewelry, hypothecate their credit, and often tamper with trust funds, in order to get money to invest in stocks, upon no better assurance of success than the winks and nods of stock-sharps or the rumors and gossip of the street. Stocks are advancing, and that covers all the fortitudes of the case. Some one out of a thousand bought a block of shares the other day and made money by the venture. That is the A and Izzard of the stock-gambling logic, and upon it thousands peril their homes, business, honor and reputation.

Perhaps there has never been a stock boom in this State more absolutely fatuous than the present excitement. That bore more unmistakably the marks of a sharp effort to galvanize a malodorous cadaver into a fitful existence. There is clearly not one particle of merit in it. The whole thing is born of brag and bluster, tom-tom and gong. The most rampant bull, the most venal press, has not ventured the statement that there is any claim of reason in the present advance on the stock tape. In the language of the editor of the *Mining and Scientific Press*, "there remains still in the upper portions of these Comstock mines a great deal of low-grade ore, the most of which can be extracted and milled with a fair margin of profit. But that there exists there any more bonanzas is more than problematic, as they who hold to a contrary opinion will, if they proceed to act on the same, be very likely to find to their grief. During the earlier history of the Comstock mines, when the uncovering of a bonanza was a thing that might almost any day be looked for, the occurrence of a furor like that which is now running its course was an event that might be winked at, if not wholly pardoned. But that a craze of this kind should now be suffered to obtain is so without reason or excuse that its originators, aiders and abettors may justly be held amenable to public condemnation."

The present appreciation in Comstock shares is wholly based upon the rumor that a body of paying ore has been struck in the Consolidated Virginia. No precise statement of such a discovery has been anywhere made. The whole thing is a wild conjecture; and were there some little foundation for the rumor, this is no good reason why there should be a flurry along the whole line. It does not even justify confidence in an adjacent claim. Why should Best and Belcher, for instance, where no considerable body of ore has ever been found, or is likely to be, feel the thrill, and be selling at such an ad-

vanced fate? There would be just as much sense in getting up a furor over a lot of abandoned drifts, tunnels and holes in the ground 100 miles away. The whole thing is a craze, a return of the speculative measles, and after all the woe, sorrow and ruin of the past there are still hundreds of noodles, callow innocents, ready to go out on the street and catch the complaint. "Experience is a dear school, but fools will learn in no other," is an old adage.

We have just begun to emerge from the valley of hard times and sore tribulations. Many have made money, merchants have expanded their business, mechanics paid for their cozy homes, farmers lifted the mortgages from their fields, orchards and vineyards, and some of them may feel able to hazard a little money. The history of the past teaches us that the passion for gambling ventures of this kind is rarely ever cured till the infatuated victim is cast a wreck upon the rocks, or flies to the oblivion of suicide. But what cares the eager, feverish, expectant multitude we now see on the street and surging around the Stock Board for danger signals and red lights on the reef? They will venture to the edge of the beetling precipice, they will cruise around the maelstrom, and like many before them only come out of the horrible trance when ruined in fortune and honor. The result of this flurry will be as in the past, a few will come out successful, while the wail of despair and regret will come from the sad, desolate homes of thousands.

## Intemperance and Insanity.

Urging the importance of temperance upon what may be called sentimental grounds sometimes becomes trite and has little effect because of the familiarity which follows frequent appeals. To those who are not moved by such twice-told tales, there comes once in awhile an item of evidence concerning the value of temperance which must arrest attention and thought because of its startling character and its obvious truth. If people will not listen to the preachers and the lecturers and other agencies of temperance reform, possibly they will hearken to the doctor whose words can have no savor of sentiment or sensation, but who states calm and impressive facts. What could be stronger as an exhortation to temperance than this paragraph which we find in the report of Dr. W. H. Mays, superintendent of the Stockton asylum for the insane, of which we have just received a copy:

Insanity is, to a large extent, a preventable malady. It comes from an ignoring of the laws of health and sobriety. Without entering upon an enumeration of the many causes of insanity, I shall make a brief reference to one of the most prominent factors in the question—intemperance. All my observation goes to strengthen the belief that there is no greater mind-destroyer than this.

It is in the second generation that the evil works its most harm. One-half the insane—perhaps more—owe their derangement to hereditary influence, inheriting an ancestral taint or predisposition. But this hereditary taint—how had it its origin? Where the family history can be searched into, the starting point will often be found in a drunken progenitor. The damaging effects of the excessive use of alcohol upon the brain are more often manifested in the offspring than in the drinker himself. He may manage to keep out of the asylum, and even maintain a respectable place in society, but his children will often find it hard to do so. They inherit qualities that unfit them for the struggle for existence, and go down under the strain. The families of intemperate parents furnish the recruiting ground for insane asylums. These unfortunate children, if not idiots or epileptics, are liable to grow up with querulous, explosive tempers, with feeble powers of self-guidance, weak in temptation, unstable, self-indulgent, vicious, hysterical. They form the bulk of what are known as the defective classes.

One would think this would arrest the drunkard. Suppose he should care little for himself, can be deliberately consign his innocent children to lives of misery and to homes in the asylums of the country? Men will indulge in certain evil propensities and vices, and yet guard their children from a knowledge of their habits; but this is a matter in which there can be no concealment. Silently, and yet surely, the seeds of destruction and woe, planted in the very constitution of the child, will germinate and grow, and despite the most careful moral training and physical culture, the evil will pursue its way in some cases until its most deplorable end is reached. It is hardly necessary to commend such a matter as this to careful consideration.

**GRAIN RUINED BY SMOKE.**—Examination of several carloads of wheat just arrived at Winnipeg from Western Manitoba showed it to be so saturated with smoke, blown into fields of standing grain from prairie fires, as to give it an acrid taste and render it utterly useless.

## The Stockmen and the President.

To His Excellency Grover Cleveland, President of the United States: The time has come when that branch of the commercial interests of our country represented by the live-stock industry feels that it should no longer plead for, but demand, justice. I am empowered by the stockmen of the plains, who have more than \$600,000,000 invested in cattle alone, to respectfully invite the attention of your Excellency to the imminent danger threatening our herds by existence of contagious bovine diseases, which if once introduced to the open ranges of the West will sweep our entire interests from earth.

I feel that I am justified in asking that in your forthcoming message to Congress some suggestions may be made in the interest of legislation looking to the extermination of the contagious disease known as pleuro-pneumonia, and such sanitary regulations as will protect the cattle interests of the United States against the importation of cattle from known diseased centers of other countries.

I would further respectfully submit that, under the pooling system entered into by the transportation companies of the United States and the iniquitous favoritism of the rebate system, grievous wrongs are perpetrated on the producer of beef, and its consumer as well. That same combination which compels the millions who toil to pay an exorbitant price for one of the prime necessities of life compels the producer to accept for his products a price which has pressed the cattle-grower to the verge of ruin.

The bill now pending before Congress for the regulation of inter-state commerce, known as the "Reagan bill," is in the interest of justice and equity, and the cattle industry bespeaks for it such attention in your message as may meet your commendation. Respectfully,

R. G. HEAD,  
President Inter National Range Association.

Denver, Nov. 30, 1886.

This appeal should carry weight. Protection to the live-stock interest from the insidious and deadly foe, contagious disease, is perhaps just now the crowning need of our agricultural industry. It has been demonstrated that we have within our borders the most deadly plagues, and unless something effective is done our vast cattle interest will suffer in two ways, each in itself fatal. First, the very lives of all the beasts in the country are menaced. Second, the announcement that diseases are spreading unchecked in this country will lead all importing countries to pass prohibitory laws against the entrance of our meat products into their ports. Foreign governments are very sensitive upon the large money we are securing from them for meats canned and salted and smoked, and they only need such a pretext as protection of the health of their citizens to send our shipments adrift.

The experience with the outbreak of pleuro-pneumonia in Chicago, concerning which we have had items in the *RURAL*, shows that existing United States laws are inadequate to grapple with such outbreaks, and that ordinary State laws are ineffective. It is plainly an inter-state problem, and should be handled thoroughly by the General Government. Our whole live-stock interest, which of course includes the dairy and its adjuncts, is now seriously menaced. The Chicago case was handled gingerly, and great opportunity has remained for the dissemination of the plague. It is eminently proper that President Cleveland be appealed to, to urge Congress to do this winter what it left undone last winter, that is, to enact some laws which will give power to thoroughly crush and stamp out an outbreak of a malignant, contagious disease.

One has but to read the cattle history of the world to become convinced of such a need. These diseases are not new. Some of them have been known for centuries. Now and then they appear, and rage like the old plagues among mankind, almost sweeping from the infested parts all the kind of life which is subject to them. They have ruined poor men by destroying their main alliance; they have annihilated some of the finest bred herds upon which generations of owners have expended time and money, and the value of which, as agencies for the improvement of their kind, can hardly be overestimated. At present, when the herds are almost the corner-stone of the prosperity of the country, both in the older States and on the great plains, it is the highest folly for the Government to shut its eyes upon the experience of years all over the world.

The second part of the appeal to the President mentions the grievance of the cattle growers on the transportation question. The Reagan bill recalls the fact to Mr. Reagan is now a candidate for election to the United States Senate from Texas, a service he can do in that body in the way of forcing the needs of the country for fair rates upon the transportation companies will be the sincere hopes of the people for the regulation of the issue of his canvass of the Texas side of the matter. Mr. Reagan is not on the heels of the oleomargarine question, but is hereby value in other respects may elicit does not in this regard. The coming Senator who are promise to have any surplus monopoly interest in some way entangled in the matter, and the accession of producers of the body will be a real gain for the country.

## California-Grown Walnuts.

Those who have read the RURAL PRESS for the last 10 years or more know with what zeal and enterprise Mr. Felix Gillet, of Nevada City, has pursued the horticultural specialties to the understanding and distribution of which he has apparently devoted his life. The service he is rendering our horticulture has won him many friends and should entitle him to general esteem. This was our first thought when we received from him the other day a neat box with 15 English walnuts neatly arranged in it, and each one labeled, with the request that we keep it on exhibition in our editorial rooms, that any one interested in walnut growing might have opportunity to examine the characteristics of the different varieties exhibited. The matter seemed to us so interesting that we secured outline engravings of the nuts and present them to our readers upon this page.

Mr. Gillet will soon issue, as a supplement to his general catalogue, a pamphlet of 20 pages, the first half of which is chiefly devoted to a discussion of the newer and improved varieties of walnuts, chestnuts and filberts. We desire in this article to present a few leading points, which are claimed with reference to the walnut, and first of all the *proparturiens* walnut, which has been described and discussed in our columns during the last few years. The general fact that the *proparturiens* will bear early, as its name indicates, has been often mentioned. This seems to be, however, a fact, which admits degrees of truth, and in his latest writing Mr. Gillet lays especial stress upon the necessity of getting "second generation *proparturiens*," to order trees which will fruit very early. The idea is that one must have trees grown from the seed of the original *proparturiens* tree in order to transmit the precocity. If one grows seedlings from the nuts taken from a "second generation" tree, these seedlings become, according to Mr. Gillet's classification, "third generation *proparturiens*." The reason is that by propagation by the seed the tendency is to revert more and more to the original type, which is the common English or French walnut (*Juglans regia*). The result of this reversion is shown in the characteristic growth and form of the tree, and in its time of coming to bearing. Thus Mr. Gillet claims:

The second generation *proparturiens* have a great tendency to spread out, grow fruit ramifications, and go to bearing at once—all that, of course, at the expense of the top; and whenever it is desirable to have the trees to shoot up instead of spreading out, all that has to be done is to cut off those limbs that spread out so much, and that will force the tree to grow up. In this way we made our *proparturiens* shoot up to a height of 25 to 30 feet. But with third generation *proparturiens*, the trees mostly all shoot up and commence to spread out for good only about the time they are getting into bearing, which is at eight to nine years.

Mr. Gillet says that he has had third generation *proparturiens* bear at four years of age, but not more than 5 per cent of such trees will do that; while of the second generation from 80 to 90 per cent may be expected to bear at four years or younger. The character of the nut undergoes reversion toward the common type, being on the average smaller, but still a very desirable nut. The engravings on this page show the difference between the nuts of the second and third generation. The first six nuts are those borne upon trees grown from nuts from the "original" tree, and are therefore second generation. The next three nuts are from trees grown from nuts borne on second generation trees; thus making them third generation. These nuts are from trees grown by Mr. Gillet, which have just come into bearing at their eighth or ninth year—the nuts from which they grew having been placed where the trees now stand. The superiority of the second generation nuts, as shown in the engraving, is well borne out by samples which we have tested. They are soft-shelled, and with rich, sweet kernels. The shapes vary, as the engravings show.

After all this talk about the reversion and degeneration of seedling walnuts, the idea may occur to some, why not discard seedlings and grow trees true to the variety from buds or grafts? The reason lies in the difficulty of propagating that way. Although grafting may be successfully done in working over old trees, the grafting of small seedlings has too large a percentage of failure to induce tree-growers to adopt it. Mr. Gillet says that all his orders for grafted trees from France have been respectfully declined.

Besides the different classes of *proparturiens*, the engravings show individual nuts of five varieties, as named beneath the figures. All these, except Parisienne and Mayette, were grown upon trees in Mr. Gillet's orchard in Nevada City, and all have good points. The Franquette, Parisienne and Mayette are among the finest nuts grown for the French markets, having large size, fine shape and superior flavor,

growing even in parts where the common walnut of the State does not succeed. He finds that all the new varieties he has fruited are "perfect bloomers," that is, the male and female blossoms are in condition for fertilization at the same time instead of being, as is common with the ordinary kind, with pistillate bloom dormant until the staminate catkin has lost its power. They are also later in bloom-

Mesange.

OTHER LEADING FRENCH VARIETIES.

## FRENCH VARIETIES OF "ENGLISH WALNUT"—GROWN IN CALIFORNIA.

and should receive the attention of planters as well as the *proparturiens*. The Serotina is especially fine and promising. The variety seems to give quite a uniformity in the size of the nuts, and its shape is refined and high-bred—if we may apply a live-stock term to a fruit. The flavor of the kernel is exquisite, as we judge from a sample tested. The Mesange is a pretty nut with a medium shell and rich meat. It seems to have a tendency toward precocity, as Mr. Gillet informs us he has gathered several nuts from a six-year-old tree.

Mr. Gillet's chapter on nut-bearing trees, to which we have alluded, shows that he is becoming an enthusiast upon the subject of walnut

growing, so that they are less liable to be caught by frost. Upon this point we find an interesting experience given of grafting over a barren tree with the *proparturiens*. Mr. Gillet describes it as follows:

The most surprising yield of nuts that has come to our notice was from a 30-years-old tree, owned by Mr. L. Charonnat, near Nevada City. That tree, which is now the largest *proparturiens* to be found in California or the United States, was four years old when planted in 1860; it was then one of those common Los Angeles walnuts; it bore 17 nuts in 20 years, 11 nuts in 1 year; was grafted by us into our late *proparturiens* in the fall of 1880; in 1884, the tree completely transformed into a *proparturiens* bore 627 nuts, twice as many in 1885; but in 1886 the crop was so large that the long branches were bending down under the burden of the nuts, which

could be seen all over the tree in bunches of two to six. Over 6000 nuts were gathered from that tree this year, 1886. Mr. Charonnat has now to cut back some of the longest limbs for fear that next year the branches will break down under the heavy weight of the nuts. That tree is now 66 inches in circumference, 57 inches at six feet from the ground, 35 feet in height, with a top 30 feet in width. As a true *proparturiens*, it spreads out all round and bears enormous crops.

Of course, getting varieties which will extend the area suitable for walnut growing over a greater portion of the State will be a general benefit. There is every reason to believe that with the walnut, as with the almond, many regions have been set down as ill adapted to the nut, when, as a matter of fact, the trouble was in experimenting with a variety ill adapted to the conditions prevailing. If this is so, the sooner it is generally understood the better.

## Dynamiters and Socialists.

The recent discovery of three dynamite bombs fastened to the springs of one of the coaches on the Buffalo, Rochester & Pittsburg Railroad, and the threat of the socialists in Chicago to blow up the water-works and set the city on fire, may well serve to warn the people of this country who look so complacently upon the doings of the dynamiters of England, Austria and Russia, that similar methods may be at any time used here by desperadoes who want to get rid of individuals, or to be revenged on societies or corporations obnoxious to them. Men who would not commit a murder with pistol or dagger will not scruple to touch a button or pull a string. No one may be hurt by this or that attempt or threat, but this will not always be the case. The socialists, at least, are known to be terribly in earnest, though things wrought out in secret are peculiarly liable to miscarry. The people and press of this country have been too remiss in expressing their disapprobation of and horror at the doings of those who would make themselves infamous by assassination with a lethal agent which works widespread destruction even when it fails to attain the object at which it was directed. In this respect dynamite is a far more dastardly agent than any weapon used by the ordinary assassin. Some may cherish a lurking, smothered admiration for such a man as Rhud, who took his own life into his hand in order to smite unto death the betrayer of his country; for Judith, who nerved her womanhood to the slaughter of Holofernes; for Brutus, who struck down his best friend, as he thought, for the public good, or for Jael, who treacherously slew Sisera; but for the sneaking fiend who, from some hiding-place, explodes dynamite or nitro-glycerine in the center of a crowded city, risking the lives of thousands of his fellow-men and destroying their property, we can feel nothing but the most profound contempt and abhorrence. The threats of such brutal enemies of social order and government should be nipped in the bud, and their cowardly acts visited by the swiftest and most severe retributions of the law. They deliberately place themselves on the level with mad dogs and wild beasts, and should be exterminated as the enemies of civilization.

**A WISE EFFORT.**—An exchange mentions that Mrs. Housh is circulating a petition to editors and proprietors of daily papers, asking them to minify the records of crime and debauchery that they may gain space to magnify the world's good news; to reduce the records of pugilism so that of philanthropy may be extended, and that by these means the daily press may become the wise counselor and ally of the home in the work of renewing the life-blood of the State from sources of purity and patriotism.

**EXPORTING SALMON EGGS.**—The Redding Free Press mentions that the U. S. hatchery on the McLeod has lately received from Peru an order for 750,000 salmon eggs, which are now being prepared for shipment. The eggs are packed in moss, and then covered with ice, that they may be kept damp during the long trip. An order for 2,000,000 salmon eggs was lately filled for New Zealand. From a salmon about 3500 eggs are secured.

**WON'T DO WITHOUT THE RURAL.**—Mr. J. D. Phillips, of Potter Valley, being in San Francisco a few days since, called on us to pay up his subscription. During his stay he remarked that his wife says she "can't do without the RURAL PRESS; whatever paper has to be stopped it shan't be that one." Sensible woman!

## FORESTRY.

## Arbor Day Happily Inaugurated.

The first festival of Californian tree-planting was celebrated most auspiciously. The weather was delightful. From San Francisco and Oakland several steamers bore to Yerba Buena 2000 or 3000 people, old and young; and as the visitors, among whom ladies and school children outnumbered the voters, climbed the steep ascent from the landing to the summit of the island, their gaily-clad procession up the winding trail, led by the U. S. Infantry band, in brilliant uniforms and white-plumed helmets, was singularly picturesque and pleasing.

Upon the southern slope, just below the summit, a space in the shape of a cross, about 650x150 feet, had been cleared of brush, and hither, in advance of the rest, had come the Poet of the Sierras, and completed the preliminaries by marking off the ground with stakes and lines.

The military band played stirring music. Soon after 11 o'clock, the throng on the brow of the hill was called to order by G. D. Shadburne; and Joaquin Miller, poet of the day, read with feeling and effect the following verses:

## Arbor Day.

Against our golden orient dawns  
We lift a living light to-day,  
That shall outshine the splendid bronze  
That lords and lights that lesser bay.

Sweet Paradise was sown with trees,  
Thy very name, lorn Nazareth,  
Means woods, means sense of birds and bees  
And song of leaves with lisping breath.

God gave us mother earth, full blest  
With robes of green in healthful fold;  
We tore the green robes from her breast!  
We sold our mother's robes for gold!

We sold her garments fair, and she  
Lies shamed and naked at our feet!  
In penitence we plant a tree;  
We plant the cross and count it meet.

For this, where Balboa's waters toss,  
Here in this glorious Spanish bay,  
We plant the cross, the Christian cross,  
The Crusade Cross of Arbor Day.

Gen. Vallejo had not then reached the summit, and in his absence the address which he had written was read by F. M. Campbell.

## Gen. Vallejo's Address.

Ladies and Gentlemen and Scholars: This occasion brings us back to the year 1806, when a cadet from Texas was sent with a force of soldiers to recover some horses which had been stolen from the Mission Dolores by a tribe of Indians, a very numerous band of the name Tachayunes, whose headquarters were on the mainland of Tachayune, who possessed on this island a fishing station, and also a large Turkish bath, named by them Temescal, considered both a luxury and a sovereign remedy for all ailments. At this period the island bore the name of Yerba Buena, and on the founding of San Francisco, in 1835, it gave its name to the municipality. Up to 1836 San Francisco contained 8 to 10 houses, whose first occupants were Jacob P. Leese, M. Leidesdorff, John Fuller, Nathaniel Spear and others. The year previous Spear brought some goats from the Sandwich islands and made Fuller a present of a pair, which became so destructive to the flowers and garden-truck that the latter gentleman took them to this island, where they increased rapidly; hence the name of Goat island, which it now bears. In 1849 there were nearly 1000 goats here, but they were soon destroyed by the hosts of immigrants.

My hope is that the plantation we inaugurate to-day may result in a garden of the herb of which we heard in my theology in boyhood's days. It is pleasant to be here to-day surrounded by so many happy children, and I am glad I have the honor of being here on this occasion with Donna Chonita Fuller de Ramirez, the daughter of the original owner of this island. My words fail to express my delight with the contrast between this island to-day and what it was in the older days in the possession of the Tachayunes. Surely the wand of the higher civilization has passed over us, for all of which I have thanks. I thank also the committee of arrangements for their kindness in inviting me to be present.

## Adolph Sutro's Remarks.

Mr. Sutro, after observing that he fully appreciated the great honor conferred upon him of being permitted to plant the first tree, went on to say:

"In 100 years from to-day the people who then inhabit this fair western land will assemble on this island and celebrate the centennial of the inauguration of Arbor Day in California. None of the bright faces I see about me will then be here. Your grandchildren and great-grandchildren will do the honors of the day. They will bless you and speak with reverence of their forefathers who had the foresight to commence this good work. Let you children, here assembled, determine to continue tree-planting each year of your lives, and before you have well arrived at manhood or womanhood, you will already see small forests beautify what is now but barren land, and you will point with pride and satisfaction to the work in which you took part. You should mark your

tree with a slip of wood, bearing your name, so that you may be able to find it again."

## Trees from the University.

Among the plantings was a collection of trees sent by the College of Agriculture of the State University. They are such as have proved to be hardy in this part of the State, and are the following: Olive, cork oak, English oak, English laurel, black wattle acacia of Australia, fragrant eucalyptus (*Eucalyptus citriodora*), three species of pectisporum, white mulberry, Japanese ligustrum and *Juniperus procumbens*. These were planted in rows on each side of the foot of the cross. They will be taken especial care of and it is thought will grow up to be a distinctive ornament.

As to the other speeches and the actual setting of the treelets, we will allow a correspondent to tell her story below.

## At the Presidio and Fort Mason.

At the Presidio, also, a crowd variously estimated at 5000 to 10,000 assembled. A. J. Moulder, I. G. Hoitt and James Denman were present, representing the Board of Education. There was music, an address, a poem, and then some 3000 slips were carefully set out, the eagerness of the children to plant their seedlings being only equalled by the pleasure which the grown people appeared to take in gratifying them.

At Fort Mason about 1000 happy children from the Spring Valley grammar and primary and the North Cosmopolitan schools, with their teachers, were welcomed by Major Darling, and assisted in giving their arboreal pets a favorable outset. And so California's Arbor Day was auspiciously celebrated.

## On Yerba Buena.

[Written for the RURAL PRESS by E. S. B.]

How charming the sail to Yerba Buena; how merry the long scramble up the mountain-like slope; how warm the welcome from Gen. Howard as we reached the summit.

The band began its sweetest, softest strains, immediately; then "America" enthused us; then the minstrel, Joaquin Miller, gave us his lovely song notes. Gov. Perkins made a few remarks, and F. M. Campbell read Gen. Vallejo's address—the General's horse not having arrived to bear him up the steep ascent until after Col. Irish had begun to amuse and delight us with his speech and his account of the puffing tug which brought him up the slippery height. Gen. Howard's grand, inspiring words moved every heart. Adolph Sutro planted the first tree in his courtly, distinguished manner. Mrs. Ramirez dug and dug into the dry soil and amid the stones in determined fashion, as she planted her own and Gen. Vallejo's tree, looking up, with real feeling in her beautiful eyes, at the touching allusion to her beloved father, Mr. Fuller, the former owner of the island. Mr. Shadburne called for the poetess of California, Miss Coolbrith, and she planted her tree, while Mr. Shadburne continued to hold his darling-prized Norfolk Island pine to his heart, till he gracefully set it down at last in Yerba Buena soil to adorn the world.

San Francisco climate seems particularly suitable to that beautiful tree. The redwoods, too, grow easily from shoots, and should be set out on the island and the lumbermen forbidden to cut them down. The live-oak, madrone and native trees suited to the soil should be planted on our hills.

The Toyon's red berries were plentiful at Yerba Buena, and Prof. Rattan, the botanist, said he hoped the beautiful Indian name Toyon would be used instead of "California Holly," or the proper but too long botanical name *Heteromeles arbutifolia*. The large palm planted by Joaquin Miller, sent by his beautiful wife for their daughter Juanita, waved rejoicingly in the tropic sun. Among others, we saw the editor of the RURAL PRESS hard at work planting trees.

Of course, we all wish "Arbor Day" had been set in January, but the trees we planted are going to live and flourish, even if we do not have rain very soon. Did not our noble General, who "never sent a substitute," hasten off and bring to the island a chosen band and lead them up the toilsome slope, carrying a bucket of water himself on his left arm in order to preserve the lives of the young plantation?

Be sure, ye croakers, that what General Howard has shown love and tenderness and care for will never be left to perish. Yes, Arbor Day at Yerba Buena island was a grand success. Soon may our good State Legislators pass laws that will prevent the present horrible slaughter of California's noble forest trees!

## Preservation of the Forests.

The following is a copy of a concurrent resolution which has been prepared by the California State Board of Forestry, for presentation to the next Legislature. The vital importance of standing forests to the welfare of the State, and the immediate necessity of some means being taken to prevent the destruction of the State and Government timber tracts, is well understood, and it is the earnest desire of the Board that all will lend their aid and influence to the adoption of the resolution annexed:

WHEREAS, The interests of California, like those of all countries, necessitate the reservation of a cer-

tain portion of land in forest for the best interests of agriculture; and

Whereas, The proportion of land in the greater part of California in forest is already much less than is deemed essential by scientific men; and

Whereas, The land laws of the United States and of this State, applying to forest lands, are unsuited to the honestly conducted lumber trade, and fail totally to guard against waste or destruction by fire, and provide no protection for a future lumber and fuel supply, or for the preservation of the watersheds of our State; and

Whereas, When these laws are good, the absence of adequate machinery for their execution forms a bar to their utility, and thus fraud, dishonesty and waste are rife, and robbery of the timber of the general government and from the State school lands is common; and

Whereas, These practices and wrongs should cease; therefore, be it

Resolved, By the Senate and Assembly of California, that the Senators and Representatives of this State, in the Federal Congress, are hereby requested to use their utmost endeavors to improve the present land laws applying to timber lands, and especially to provide for an immediate withdrawal of all Government timber lands in California from sale, until a definitive survey shall have ascertained what portion of such lands should be reserved to secure a permanent and continuous supply of timber and fuel for our citizens, and to protect the agriculture of the State from injury and destruction by flood and drought.

## THE PUBLIC LANDS.

## Stopping the Land Steals.

At the banquet of the Iroquois Club in Chicago, Nov. 17th, Commissioner Sparks, of the General Land Office, in responding to the toast, "The Public Lands, the People's Heritage for Homes," gave his views upon the proper policy to be pursued by the Government in regard to each class of public lands. He held that while the obligations of the Government, so far as incurred, must be carried out, the effects of this doubtful and mistaken land-grant legislation must not be so magnified that, while requiring of the Government a strict compliance with its part of the contract, the corporations shall be allowed unlimited license to violate theirs. True, it takes two parties to make a bargain, and it is equally true that the failure of one party to the contract is a release of the obligations of the other. He was prepared to say that in grants amounting to 110,000,000 acres there has been no such compliance with the law by the companies as binds the Government to any legal obligation in respect to the granted lands. By the Northern Pacific Railroad alone nearly 40,000,000 acres of the people's heritage for homes was being unjustly withheld. An act should be passed declaring forfeitures of the grants, if only to the extent of portions of unconstructed roads, at the time fixed by law for their entire completion. Such an act, while a measure of partial justice only, would leave to the companies, at their average price of the lands, more than enough to meet the legitimate cost of the entire construction of their roads. The great land grants to private individuals, he said, were nearly all made for colonization purposes, and are not binding unless the conditions involved have been complied with. The Commissioner's characterization of these grants was almost as sweeping as that of the railroad lands. The manner in which existing laws operate in regard to swamp lands, pre-emptions, homesteads, timber-culture and desert lands, was unsparingly condemned by the speaker. Before resuming his seat Commissioner Sparks briefly reviewed his course in office, and declared that his efforts had been directed solely to the prevention of the illegal control of lands, the recovery of those fraudulently held to which the title had not yet been passed, and to the protection of lands for actual settlement and the benefit of actual inhabitants.

A STORY ABOUT PRESIDENT CLEVELAND.—It is telegraphed from Washington that an official of the Land Office tells an incident of the President that is worth recording. Commissioner Sparks made a decision that deprived a Pacific Coast farmer of his quarter section. He came to Washington to protest, but getting no satisfaction at the Land Office went to the White House to appeal to the President. The latter became interested in the man's story, and instead of sending him to the Secretary of the Interior, or advising him to go to the courts, ordered all the papers up from the Land Office and took up the case himself. After spending considerable time in the study of the evidence, the President, with his own hand, wrote a brief, in which he argued the man's claims with as much care and earnestness as he could have shown if he had been his legal representative, and sent it with the papers back to Commissioner Sparks.

THE AMERICAN MERCANTILE UNION is grounded upon the plan of selling for cash and at cost, to such persons only as hold memberships; in other words, members of the Union enjoy the advantages accruing from large cash purchases by skillful buyers in the cheapest markets. Those desirous of learning more about its principles and workings are invited to call on or address C. W. Gibson, 24 Ellis St., San Francisco.

## THE SYMPTOMS OF LIVER COMPLAINT

Are a bitter or bad taste in mouth, pain in the back, sides or joints, often mistaken for rheumatism; sour stomach, loss of appetite, bowels alternately constipated and lax, headache; loss of memory, with a painful sensation of having failed to do something which ought to have been done; debility, low spirits, a thick yellow appearance of the skin and eyes; a dry cough, often mistaken for Consumption.

Sometimes many of these symptoms attend the disease, at others very few; but the Liver, the largest organ in the body, is generally the seat of the disease, and if not regulated in time great suffering, wretchedness and death will ensue.

## The Baltimore Episcopal Methodist:

"Simmons' Liver Regulator is acknowledged to have no equal as a Liver medicine, containing those Southern roots and herbs which an all-wise Providence has placed in countries where Liver diseases prevail."

THE H. H. H. Horse Liniment puts new life into the antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windfalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per bottle.

For Sale by all Druggists.

## To Make Water-Proof Blacking.

A correspondent of the *Country Gentleman* writes to that paper as follows: Tallow, beeswax and castor oil are very good for leather, and would tend to keep the water out of boots, but I cannot see what good the rosin would do. Now I will give you a receipt for the manufacture of a water-proof blacking, that I got some years since from a manufacturer of water-proof boots in Liverpool, England. I have tried this receipt on my own boots, both in salt and fresh water; and my neighbors, that I have given some of my make to, are, like Oliver Twist, asking for more. I also use it on my harness, and I find it makes a very good blacking. Two days after it is applied to leather, the leather will receive a polish from ordinary blacking. My receipt is as follows: Take an old pair of India rubber shoes (boots or any old India rubber); cut them up and pull off the cloth lining; put the rubber in about a pint of neat's-foot oil, and set it on the stove until the rubber is entirely melted, stirring it once in awhile, and don't let it boil or burn. It will take about two days to melt the rubber. As soon as the rubber is melted, stir in one-half pound of beef or mutton tallow and one-half pound of beeswax. If it is not black enough you may add a little lamp-black, but I don't see any use in it.

Now to apply to the boots: Wash them clean of mud and blacking; when they are nearly dry, apply the water-proof all over them—if the weather is cold, work near the stove. The best thing to use in applying this blacking is one's hands and considerable elbow grease to rub it well into the leather.

Any one using this application to a pair of boots, and then having wet feet, had best give the boots away and buy a new pair, or send the old ones and have the seams attended to.

**GLANDERS NORTH AND SOUTH.**—As may be seen by an item in our Agricultural Notes this week, glanders is fearfully prevalent in Siskiyou county. We learn also that there are many cases in the valley of the Santa Ana. This terrible malady is gaining quite too wide a footing in California, and it may be well for the State authorities to take vigorous action, lest it assume the character and proportions of a pestilence. The peril to human life involved in the spread of this horrible disease among horses makes the situation very serious.

## A Fearful Leap

Into the abyss of poverty, over the precipice of short-sightedness is taken by thousands, who might become wealthy, if they availed themselves of their opportunities. Those who write to Hallett & Co., Portland, Maine, will be informed, free, how they can make from \$5 to \$25 a day and upwards. Some have made over \$50 in a day. You can do the work and live at home wherever you are located. Both sexes; all ages. All is new. You are started free. Capital not needed. Now is the time. Better not delay. Every worker can secure a snug little fortune.

**It Should Always be Borne in Mind** That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the "fittest"—the "DOMESTIC" SEWING MACHINE.

## Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huerfano ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, and is one of the most picturesque bodies of land in the State, and requires

## NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

## PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

## TITLE, U. S. PATENT.

## TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

## JACKSON'S IMPROVED IRON

## HARROW.

Cheapest and Best

PRICE, \$32.50

This Harrow was introduced to the farmers of the Pacific Coast, during the season of 1881. Since then, hundreds have been sold, giving entire satisfaction. I have made the malleable iron clamps heavier, and strengthened them, making this the **Best Iron Harrow**. The frame is indestructible, made entirely of iron and locked firmly together by the teeth passing through malleable iron clamps, and having screw-threaded shanks on their upper ends, which bolt the frame-work securely together. This mode of constructing a harrow frame dispenses with drilling or punching holes, thereby securing much greater strength and durability. **It is indestructible. No shrinking, swelling and rotting of frame-work.** It is constructed in narrow sections, each acting independently; will adapt itself to any uneven surface of the ground, and will cut the soil better and more evenly than any other Harrow. Constructed on correct mechanical principles; each section has a center draft, and each tooth cuts a separate track. No one tooth in line with another. The safety-hook prevents unhooking when turning round. Four different sizes to suit customers. **STRONGEST AND BEST HARROW MADE!**

## PRICE LIST.

	PRICE.
No. 1 has three sections, 45 1/2 steel teeth; cuts 9 feet wide. This is a light size for two horses. Weight, 168 pounds.....	\$25 00
No. 2 (represented in the cut) has four sections, 60 1/2 steel teeth; cuts 12 feet wide. This is my standard style for two horses (generally used). Weight, 230 pounds.....	\$2 50
No. 3 has five sections, 75 1/2 steel teeth; cuts 15 feet wide. This is my 3-horse harrow; can leave off one section and use two horses with the same draft-bar. Weight, 291 pounds.....	\$7 50
No. 4 has six sections, 90 1/2 steel teeth; cuts 18 feet. For this size I use four horses abreast, with two draft-bars coupled together at the ends; adapted for large farms. Weight, 336 pounds.....	48 00

"Your harrow is a good one."—M. MADDEN.  
"They give perfect satisfaction."—Jas. Cass & Co.  
"Your Iron Harrow is a good one and fully met my expectations."—Dr. L. F. MOULTON.  
"I like your Iron Harrow very well."—MILTON CARPENTER.  
"I tried your Iron Harrow the other day, and it beats them all. My manager says 'it is the boss.'"—D. FREEMAN.  
"We like your Iron Harrow very much."—STEELE BROS.

ADDRESS,

**BYRON JACKSON,**

625 to 631 Sixth St. { SAN FRANCISCO. } 149 to 169 Bluxome St.

# FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

## THE WATER RIGHTS,

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2 1/2 times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

## FRUIT MARKETING.

## Various Points on the Auction Method.

The New York *Market Journal*, of November 20th, gave several columns to interviews with New York fruit merchants concerning the auction method of disposing of Florida and California fruits. The great majority of the merchants warmly favored the plan and gave strong reasons for its probable success. We have not space to reproduce the article, but we have received an advance proof from the *Sacramento Weekly Union* of December 4th, in which Capt. H. Weinstock reviews the positions taken by those among the New York merchants who oppose the auction method. As this is the more interesting phase of the question, we give Capt. Weinstock's article as follows:

In the article in the New York *Market Journal* of the 20th inst., I find that, out of the 16 New York fruit-dealers interviewed by the representative of that journal, eight believe the auction plan the best for marketing California fruit in the East, six favor private sales through commission men, and two are neutral in their opinions. I desire to point out a number of fallacious arguments used by the six dealers who are opposed to auction sales, and who are anxious to perpetuate the present method of selling on commission at private sale—a method which, while it may be satisfactory to a few of the Eastern commission men, has thus far, as a rule, proven almost disastrous to the California as well as to the Florida grower.

In the article taken from the New York *Market Journal*, F. F. Cogrove & Sons, dealers in Florida oranges, say: "Frequent letters from our Florida correspondent state that our returns are from 15 to 20 per cent higher than auction sales of the same goods."

Against this statement permit me to quote the following, taken from the annual report of the Florida Fruit-growers' Exchange, which has just come to hand:

Last season was our first. We do not pretend to claim that we pleased everybody. We do not claim to have committed no errors, nor do we claim to have accomplished everything we hoped for. But we do claim to have netted the growers more money for the fruit handled than they received for the same quantity of fruit during the previous season.

In answer to the statement made in the same article by F. S. Maynard, who says: "I think good fruit will bring more sold by commission dealers, and poor fruit should be sent to auction," I would say that we have absolute proof, as certified to by Brown & Seecomb, the New York fruit auctioneers, and by Sgobel & Day, the largest Mediterranean consignees, that this season good Almeria grapes brought at auction from \$7.50 to \$9 per barrel alongside of thousands of barrels of inferior fruits, which sold at from \$1.50 to \$2.50. Could Mr. Maynard have secured better prices for the fine fruits at private sale? I think not.

J. Cromwell says, in his opinion, as the result of 20 years' experience in the fruit trade, that it will be vastly more to the interest of fruit-growers of both Florida and California to send their product to responsible commission houses here, as he thinks returns made by the latter will be in the future, as they have been in the past, more satisfactory than by any other disposition which can be made of them. I have this season handled 50 carloads of California grapes, and I do not believe that at auction these grapes would have netted two-thirds the prices I have been able to realize for my consignees.

In reply to the statement made by Mr. Cromwell, I would say that if California growers are content with this season's limited consumption of California fruits in New York and other extreme Eastern markets, then the system Mr. Cromwell advocates, of selling through a few commission houses at private sales, may be as good as any; but in that event California growers should cease planting and extending their acreage; in fact, should tear up a liberal proportion of trees and vines already planted. If our fruits are to be popularized in the New York market, it can never be done under Mr. Cromwell's plan. If we send to a few commission houses, the consumption, as was the case this season, must be limited. If we send to a great many commission houses, we bring about the condition which this year existed in Chicago and the West, where California fruit came into the fiercest competition with itself; where markets were continually glutted, and returns highly unsatisfactory. Hence, so far as the California grower is concerned, the returns in the past, Mr. Cromwell's statement to the contrary notwithstanding, have been far from satisfactory. As to the Florida grower, let him speak for himself, as he most emphatically does, in the following extracts taken from the first annual report of the Florida Fruit Exchange:

During past seasons no organized system was in force among the growers. Every grower shipped according to his own inclination, few, if any, having reliable information as to the condition of markets. The worst feature of this method was that the shipments were scattered indiscriminately all over the country in such a manner that the fruit was continually competing with itself. New York City, for instance, with from 100 to 200 commission merchants,

all receiving shipments direct from the growers, to be sold on commission. Of course, these commission men will never buy fruit so long as they can get it to sell on commission. They run no risks whatever in receiving fruit to sell for account of the growers. Again, not one fruit-grower out of every hundred is in a position to know or keep fully posted as to the reliability of the commission merchant to whom their fruit is shipped. Ignorance on this point alone has caused many to lose hundreds of dollars. Notwithstanding all this, the growers have persisted in following this hap-hazard policy year after year. Season after season, markets were glutted in the same old way, and as a natural consequence low prices ruled. Now, while the growers have been suffering through these disasters, the facts show that the commission men have not become discouraged. One fact alone proves that they have sustained no losses, and this is the continual increase in the number of soliciting agents sent to Florida every season, all eager to secure a share of the spoils for their respective houses. Now, as long as the Florida growers continue to supply commission men with fruit, the commission men will never buy, and just so long as the scatteration policy continues, just so long will success in the orange business be an uncertainty.

Mr. Merritt, of the Merritt Fruit Company, does not believe in auction sales. He avers that in his experience of over 20 years in handling fruit, he has been able to realize from 20 to 40 per cent above auction prices.

If for 20 years past fruit at private sale has realized from 20 to 40 per cent above auction prices, what are we to think of the Mediterranean growers who during all those years have clung so tenaciously to the auction plan? Are we to regard them as being so blinded to their own interests that they willfully ignore a method of sale which would bring them from 20 to 40 per cent more than they now realize? And what are we to think of the Florida growers, who, in the face of Mr. Merritt's statement, have so recently abandoned the method he advocates and are adopting the auction plan, as the following will show:

As soon as the Exchange became thoroughly organized, the officers immediately proceeded to investigate past methods, for the purpose of ascertaining the causes of the existing evils. They at once decided that the trouble lay in the indiscriminate distribution of the fruit, and that owing to this scatteration policy, the growers were continually competing with themselves. Our General Manager spent several weeks in the Eastern markets examining into the methods pursued in sales of foreign fruits. He found that this fruit was not scattered all over the country to be sold on commission like Florida fruit. On the contrary, it was handled by only a few dealers, and sold by one firm in each city, all sales being made by auction. By this means the commission men and fruit dealers are forced to buy the fruit outright, and they can get it only by buying it. Through this system the commission merchants and other fruit dealers are placed in active competition, and at these auction sales we see several hundred of them all trying to buy from one man.

Now, why do they buy this fruit? Simply because they can get it in no other way. Foreign fruit has been sold by this method for years, and it almost invariably realizes from 50 cents to \$1 per box net more than the Florida oranges. Seeing this, the officers of the Exchange concluded to place only one agent in each of the principal cities, and let these agents handle all the fruit that might be consigned to the Exchange. At present the Exchange has agents at the following places: New York, Boston, Philadelphia, Baltimore, Washington, Savannah, Macon, Ga., Cincinnati, O., Chicago, Ill., St. Louis, Mo., Peoria, Ill., Cleveland, O., Indianapolis, Ind., Kansas City, St. Paul, Minn., Minneapolis, Minn., and Louisville, Ky.

Mr. Palmer thinks, says the *Market Journal*, that domestic fruits would command better returns through commission houses than from auction sales, and would reach a much larger consumption. He says:

Commission dealers have been largely instrumental in creating and organizing the present trade in these fruits, and they are entitled to consideration. Established commission merchants do not, as a rule, buy goods; they are compelled to stick to their legitimate commission business. They now have close communication with dealers in adjoining States, and furnish them regular supplies. Sales exclusively by auction will largely dry up present avenues of distribution. Goods arriving from long distances require inspection and careful assorting to bring value. My Florida correspondents say the growers thoroughly tested the auction plan last season through the Florida Fruit Exchange, and they have found it unsatisfactory. The institution which was to remedy their difficulties has proved worse than the disease.

In reply to this statement, I deem it needless to again call attention to the fact that the experience of the past shows that fruits do not, as a rule, command better returns at private sale than at auction. That commission dealers have been largely instrumental in creating and organizing trade in fruits is to be conceded; that they are entitled to consideration is also to be conceded, provided the results are mutually satisfactory; but when the profits are all on the side of the commission man, and the risks and losses altogether on the side of the California shipper and grower, then the traffic ceases to be mutually profitable, and the commission man as such is no longer entitled to any consideration. Furthermore, who will dare affirm that in order that a few men may make liberal commissions, without assuming any risks, an industry like that of California fruit culture shall be choked and limited, and its markets either cramped by shipping to a few commission men, or overloaded and glutted by many commission men? With due respect to the commission men of the East, permit me to say that in my opinion the occupation of the commission dealer is largely a thing of the past. Future possibilities in California fruits are vast, not in

handling them on commission, but in buying and selling. Let the commission man in the East do as the commission man in California who ships East has done. Let him buy at the lowest price and sell at the highest. If our Eastern commission friend says it will not pay to come to California to buy fruits, our answer is that we propose to make such a journey unnecessary, we shall place our fruits at his doors, but if he wants them he must buy and pay for them and share our risks as well as our profits.

Mr. Palmer further says: "Sales extensively by auction will largely dry up present avenues of distribution."

So far as California fruits in the East are concerned, we have thus far very few avenues of distribution to dry up, as our fruits have hardly begun to make any impression east of Chicago. But even though our present avenues of distribution were numerous, the experience of the past would indicate that auction sales, instead of drying up distributing avenues, increase them with marvelous rapidity.

Imports of Almeria grapes have grown from a few hundred barrels a season to 175,000 barrels, equal to 37½ carloads, per week, the estimated receipts of this season at the port of New York City. They have penetrated into every town and hamlet in the East, West and Northwest, and are now consumed by millions of people, many of whom never get even a glimpse of California fruits. All this has been done under the auction system. Mr. Palmer must be well aware of these facts. How can he, therefore, state that the auction method dries up avenues of distribution?

Again, Mr. Palmer says: "My Florida correspondents say the growers thoroughly tested the auction plan last season, and they have found it unsatisfactory."

The statements made by Mr. Palmer's correspondents are, however, not supported by facts. From the information at hand it would appear that the Florida growers tested the auction plan in Boston last season, and the results were so satisfactory that arrangements were made for New York and elsewhere for this season, as the following statement of Mr. Day, of Sgobel & Day, clearly shows:

Mr. Day says:

It is my conviction, based upon experience, that the proper way to dispose of large quantities of oranges, lemons and grapes is by auction. Great numbers of new men throughout the country have, within the past few years, arranged to make regular and direct purchases from the auction house, personally and through their brokers here. I sincerely believe that before very long the entire fruit product of the country will be distributed at auction. It will be found necessary, and in full accord with the progressive spirit of commercial affairs. Our first sale of Florida oranges at auction, this season, took place on Thursday, and the prices obtained were fully equal to any made at private sale for the same grade of fruit. Returns to the shippers were made the next day.

In conclusion, permit me to quote still further from the annual report of the Florida Fruit Exchange. It says:

Our commission friends charged us with "breaking the markets." They seemed totally oblivious to the fact that, although the Exchange was not in existence during the previous season, yet the markets were never so badly demoralized as then. During the best part of the winter of 1884, oranges were selling at from 75 cents to \$1.25 per box gross. What must have been the net average? At present we see no better plan than the Florida Fruit Exchange plan, which, though operated only for one winter, and the worst winter Florida has ever known at that, kept up the prices of oranges through December, the worst month, fully \$1 per box more than we got last year.

Nowhere in the world is a valuable agricultural crop sent to market in such hap-hazard manner as the Florida orange crop. Three million boxes of Mediterranean fruit—all that comes to our shores—are handled by one firm in New York; and this tasteless, sour, ugly fruit actually brings more than our beautiful, high-flavored Florida fruit, simply because it is handled by one house who control the market, rendering gluts impossible. Mr. W. K. Lente, the founder of Seville and a prominent orange-grower, pertinently asks: "How is it with us, and our crop?" We ship it all over the country; we ship it to small towns to retail grocers. Now a man in an interior town who formerly bought 50 boxes a week during the season, is afraid to buy more than a few boxes at a time, lest some retail dealer should get a consignment or commission direct from Florida, and, by selling low, make the former wholesale dealer lose money. Formerly the "50-box man" was the local wholesale dealer who went to New York, attended auction sales, and supplied the retail dealers with a box at a time; now his business is ruined. The retail dealer, if he knew prices would be kept up, would prefer to buy his fruit outright, and he could make more money than if he received consignments direct from Florida at 10 per cent commission. A retail merchant cannot afford to sell oranges at 10 per cent commission, as, for instance, 35 cents on \$3.50. A terrible temptation is placed in the hands of all these men to "knock off" 25 cents. Commission men may kick at this, but while I do not state that all do it, I do emphatically state, and can prove, that some do, especially if, by being diligent workers, they have received a much higher price than the quotations would lead shippers to expect. Let me cite another case. A well-known buyer came to town for oranges. He wanted a carload—250 boxes. The fruit commission merchant offered him a carload at \$3.50. While thinking over the matter, another commission man came in and cut under the first man 25 cents. It is literally true that, at last, the buyer bought at \$2.25, and even then got so frightened at the underbidders that he only bought 50 boxes, fearing that some of his neighbors might buy at \$1.75 and make him lose money.

Officers of the Exchange have witnessed sales of from 20,000 to 30,000 boxes of foreign fruit in New York City at one time, all sold by one man at auc-

tion, and realized splendid prices, the entire lot being disposed of within two or three hours.

Now, 10,000 boxes of Florida fruit shipped in the old, indiscriminate style into the New York market at one time, will create a ruinous glut, and the fruit will sell at from 50 cents to \$1 per box. Why is this? Simply because the fruit is sent to every dealer in the city to be sold on commission. So many dealers get it to sell on commission, that there are scarcely any buyers to be found. Nine men out of every 10 want to sell. Fruit-growers, think of it! for it is you who suffer.

If, with the 500,000 to 1,000,000 boxes shipped during each season for the past three years, markets have been ruinously glutted, how do you suppose they will stand 5,000,000 to 10,000,000 boxes, five or 10 years hence, if the old hap-hazard method of shipping continues, that old method which in the past has practically arrayed the produce of one grower against that of another.

H. WEINSTOCK.

## Arbor Day.

Oh, ye hills, scarred with mines, desolated!

Oh, ye vast shadeless valleys of wheat!

Hear ye not the great words of the poet?

Western winds, speed away, and repeat

To the bared wasted slopes of Sierra—

"Ye shall yet in your children be blessed;

For the signals of love will be lifted

On the mist-laden hills of the West."

Arbor Day! Arbor Day! God be with us!

I see the green banners draw near,

And the rivers long hid in the mountains

In their old stony pathways appear.

Arbor Day on the old Eldorados!

Whose birthright of beauty was sold

When the forests that leaned to the rivers

Made way for the triumphs of gold.

Arbor Day in the wide, rolling valleys!

Where the rivers run silent and deep;

Where the sway of the conquering plowshare

The grove and the hedge-row will keep.

Arbor Day on the hills looking seaward!

Arbor Day by the shimmering bay!

And the forest-bound heights by the ocean

The breath of the tempest will stay.

Arbor Day for land of my childhood!

Let the child-arms their offerings lend;

For down the green paths of the future

I see the fair children descend.

Shout aloud, all ye long barren ridges!

Sing for joy, oh, my desolate plain!

'Tis the chant of the South Wind proclaiming

The longing and love of the rain!

—Lillian H. Shney, in *Golden Era*.

[An account of Arbor Day exercises on Goat Island may be found on page 470.—EDS. PRESS.]

## Stockton Notes.

[Written for the *RURAL PRESS* by MRS. W. D. A.]

Thanksgiving made brisk times in the turkey trade, but did not give farmers' wives the pocket money expected, 10 and 12 cents being the highest paid, but this brought turkey within the means of the poor.

Three light rains have fallen, the last on the 20th, which set flowers growing on sandy land. Black soil is not wet enough yet, and frosty nights with warm days dry fast. Summer-fallow 10 miles north of the city is up so that the fields look green. Many are plowing and putting in.

Seers of ill-omen note similarity to the drouth season of 1864, yet two years ago Christmas brought the first heavy rain, and several times the new year has inaugurated the first down-pour. Wheat has advanced to \$1.42½ per cental, and if it still rises, land which is down at bedrock will rise also. Nowhere else can a better chance be found to buy a home or the best vineyard land.

Taxes are lower than in any other county but one—only one cent on the dollar. The waters of the Mokelumne are sure to be brought down before many years to moisten the northern part of the county, and with a reservoir, furnish the city with pure, cold water; and the tunnel begun on the Stanislaus will be continued to carry the waters into Littlejohn's creek and over the southern part of the county. Many have already had the foresight to set out vineyards. Many Italians have bought from 6 to 20 acres sloping southeastward, and in four years fine peaches are ready for market, vineyards bearing and vegetables bringing the dimes. Even with present irrigation and the low price of wheat, farmers should be independent of peddlers' carts. Their own ground should be a wholesome factor in the home supply instead of tiring the traveler with garden-less homes, and orchards whose scrawny fruit can hardly stretch over the pit.

It has been said that a locality is in better times when times are hard than when flush, for people go to work and save some of their earnings, instead of throwing out on the prosperous tide, and that if the wealth of the world was divided among each man, woman and child, each would have 50 cents per day; but it is held by the few, and three-fourths of us must work, and the sooner each householder and farmer goes to the bottom of things and becomes self-dependent, the sooner will prosperity begin.

Stockton, Nov. 23, 1886.

CHOICE GRAPE-CUTTINGS.—Vine planters should not overlook the announcement of cuttings of various rare and desirable grapes from the vineyards of J. B. J. Portal, whose advertisement we publish on another page.

## The Citrus Fair.

## The Revised Premium List.

According to program the Central California Citrus Fair will open in Sacramento, on Monday, Dec. 13th. At a meeting of the Executive Committee, held Nov. 29th, it appeared that arrangements for the fair were nearly complete. The railroad company has agreed to send the exhibit to Chicago, free of charge, after the fair at Sacramento.

The premium list is not yet complete, but so far decided upon, the following awards will be made:

County Exhibits.—Best exhibit of citrus and other semi-tropic fruit, and including wine and brandy, first-class diploma; second best exhibit of citrus and other semi-tropic fruit, including wine and brandy, second-class diploma; third best exhibit of citrus and semi-tropic fruit, including wine and brandy, third-class diploma.

Oranges.—Best individual exhibit of oranges, Garland range, donated by L. L. Lewis & Co., valued at \$150, or a gold medal; second best individual exhibit of oranges, a fine two-horse wagon, valued at \$125, donated by Baker & Hamilton; third best individual exhibit of oranges, silver water pitcher, valued at \$30; fourth to fifteenth exhibits, special prizes, according to merit. Best oranges, raised by one person, special prize; second best, special prize; third, special prize; fourth, special prize; fifth, special prize. Best cluster of oranges, special prize; second, special prize; third, special prize; fourth, special prize; fifth, special prize. Best exhibit of budded oranges, special prize; second, special prize; third, special prize.

Shaddocks.—Best exhibit of shaddocks or pumalos, special prize; second best, special prize; third best, special prize.

Lemons.—Best individual exhibit of lemons, gold medal; second best, silver medal; third best, special prize. Best individual exhibit of Sicily lemons, special prize; second best, special prize; third best, special prize.

Limes.—Best individual exhibit of limes, special prize; second best, special prize; third best, special prize.

Olives.—Best individual exhibit of olives, gold medal; second best, silver medal; third best, special prize. Best exhibit of olive oil, special prize; second best, special prize; third best, special prize.

Persimmons.—Best individual exhibit of persimmons, special prize; second best, special prize; third best, special prize.

Apples.—Best individual exhibit of apples, special prize; second best, special prize; third best, special prize.

Winter Pears.—Best individual exhibit of winter pears, special prize; second best, special prize; third best, special prize.

Pomegranates.—Best individual exhibit of pomegranates, special prize; second best, special prize; third best, special prize.

Sun-dried Fruits.—Best individual exhibit of sun-dried fruits (other than raisins, figs, and prunes), gold medal; second best, silver medal; third best, special prize.

Evaporated Fruits.—Best individual exhibit of evaporated fruits (other than raisins, figs, and prunes), gold medal; second best, silver medal; third best, special prize.

Raisins.—Best individual exhibit of raisins, elegant mirror, valued at \$100, donated by Whittier & Fuller, or gold medal; second best, raisin press, donated by H. S. Crocker & Co., valued at \$40; third best, special prize.

Wines.—Best individual exhibit of red wine, gold medal; second best, silver medal; third best, special prize. Best individual exhibit of white wine, gold medal; second best, silver medal; third best, special prize. Best sherry wine, special prize; second best, special prize; third best, special prize. Best exhibit of sweet wine, special prize; second best, special prize; third best, special prize.

Brandies.—Best individual exhibit of brandy, gold medal; second best, silver medal; third best, special prize.

Figs.—Best individual exhibit of dried figs, gold medal; second best, silver medal; third best, special prize.

Prunes.—Best individual exhibit of dried prunes, gold medal; second best, silver medal; third best, special prize.

Nuts.—Best individual exhibit of nuts, special prize, valued at \$100; second best, special prize; third best, special prize.

Crystallized Fruits.—Best exhibit of glace or crystallized fruit, special prize; second best, special prize; third best, special prize.

Licorice.—Best exhibit of licorice root grown in California, special prize.

**LOSS OF A VALUABLE BULL.**—We regret to learn by a letter from Moses Wick, of Sündale, Butte county, of the death of his imported Shorthorn bull Mazurka Bell Duke 57079. He was a fine breeder and pure Mazurka bull, and his loss will be much regretted. Mr. Wick fortunately has some very fine calves of his get. Mr. Wick writes that it is still very dry in his section—wheat sown six weeks ago is un-sprouted; pastures are very bare and there is nothing green, and yet live-stock is doing very well. A good rain will be very welcome.

**SERIOUSLY ILL.**—We hear with regret that Col. A. H. Webb, secretary of the State Board of Horticulture, is quite ill at his home in Oakland. We saw that Col. Webb was quite out of sorts during the Sacramento convention, but he kept up well and attended to his work in the city after his return, perhaps longer than he should. We are not aware of the nature of his complaint, and hope it will be only of short duration.

**THERE** has been cut, so far, in the mountains adjacent to Fresno City, somewhere in the neighborhood of 5,000,000 feet of pine lumber and about 900,000 to 1,000,000 pine shakes.

## The Diffusion Process in Sugar-Making.

The experiment of making sugar by the diffusion process at Fort Scott, Kansas, has been concluded. From what can be learned, the whole of the operations were attended with unusual difficulties and many that ought not to have been permitted to occur, chief of which was the scarcity and inferior character of the water. It appears also that the machinery was defective in its construction and inefficient in its operation; nevertheless the result has conclusively proved that by the diffusion process it is practicable to extract nearly the whole of the saccharine material from the cane. This diffusion apparatus was set up at Fort Scott, Kan., to operate on sorghum, and in order to get any experiments with true sugar-cane it had to be sent there from Louisiana, that used having been cut from the Iberville plantations of Hon. E. J. Gay. The diffusion method, which is used specifically for extracting the juice from the cane, consists, in brief, in slicing the cane into chips, and then in vessels designed for the purpose, exposing these chips to the action of steam and hot water. After the juice has been extracted in a diluted form it is passed through the processes of concentration and purification necessary to reduce it to syrup, when it is converted to sugar by usual methods. The diffusion process is in use in Europe for extracting the sugar from the beet, and the completeness with which its work was done recommended it as superior to the crushing or rolling mills heretofore used in this country for cane, but which failed to extract all the sugar, leaving, indeed, a large proportion which was always lost.

The great cheapness of the European beet product has had the effect to depress the cane-sugar industry of tropical America to a point where disaster stares all cane-planters in the face. The necessity which now forces itself upon them is by the use of more perfect methods for the extraction of the cane juice and thorough system in the operating of central sugar works to so increase the product and reduce the expenses of production that our sugar may compete in cheapness with any that can be placed in the market. This is the problem, and it is possible that it may be solved satisfactorily to a large extent by a proper use of the diffusion process. This seems to be indicated by the news from the Kansas Station.—N. O. Picayune.

LUTHER BURBANK'S catalogue of the fruit and shade trees, ornamental plants and roses, which he raises and has for sale at his Santa Rosa nurseries, comes to us tastefully printed, neatly illustrated, conveniently indexed and accompanied by wholesale price list, and terse directions for transplanting and training.

THE great stone drydock at Mare island, so many years in course of construction, has been completed, and the old receiving ship *Independence* (built in 1812) has been docked and repaired in it.

## Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

## Dewey &amp; Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

## 33d } STOCKTON NURSERY. { 33d YEAR. } WHITE ADRIATIC, { YEAR. SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Praparturians, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

#### TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

Stockton, Cal., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District.  
JOS. HALE, County Commissioner of Horticulture.

# PANSIES. COX'S PRIZE STRAIN FOR 1887

It has been our ambition for years to supply our customers with a superior strain of these lovely flowers, which, on account of their many varieties and charming shades, are especially desirable for the Garden. We have this season obtained from a noted grower in Belgium, seed of all of his exhibition Flowers, including almost every shade of color, exquisitely spotted and blotched, flamed and fancy varieties, a strain so beautiful that no description or praise can do it justice. In Europe these fancy varieties are grown under glass for exhibition in the fairs, but in California they can be grown in the open garden the same as the common varieties.

We offer this season in packets of 150 Seeds at 50 Cents per packet, postpaid.

Our New Catalogue for 1887, mailed free on application, contains description and price of VEGETABLE, FLOWER, GRASS, CLOVER, TREE and FIELD SEEDS; AUSTRALIAN TREE and SHRUB SEEDS; native California TREE and FLOWER SEEDS, FRUIT TREES, and many new novelties introduced in Europe and the United States.

THOS. A. COX & CO., 411, 413, 415 Sansome St., San Francisco.

# SEEDS! SEEDS! SEEDS!

For 1886 and 1887.

FRESH STOCK OF

# GARDEN AND FIELD SEEDS!

All of this year's growth, for sale at the GEO. F. SYLVESTER SEED WAREHOUSE, Nos. 315 and 317 WASHINGTON STREET, SAN FRANCISCO. SAMUEL BRECK, Proprietor.

# PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

# TREES! TREES! TREES!

BY THE DOZEN, 100, 1000, or 100,000.

Our Stock this Season Cannot be Excelled on the Coast, Neither in quantity, quality, varieties, size of trees, nor for health and vigor of same. We offer \$1 each for every scale bug found on our nursery trees.

OUR PRICES ARE VERY LOW THIS YEAR.

Send for our new and beautiful lithograph-cover Tree and Seed Catalogue. See in it description of

OUR NEW TRAGADA PRUNE,

The very earliest, good shipping Plum. There are fortunes in it. Also our new and fancy

# AGENTS WANTED to sell the MISSOURI STEAM WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DUNN, JR., Normal, Ill.: The best machine ever invented by man. H. H. DUBANT, Cottageville, S. C.: Everybody likes them and everybody wants them. S. B. ADAMS, Ashton, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another. MRS. JOSEPH SWIFT, Nears, Centon, Iowa: The most useful article about the kitchen. ANN RAMSEY, Mazon, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts, gives entire satisfaction. ST. CLAIR DEXTER, JR., Kent, Washington: The only self-feed and can not be spoken of too highly. JOHN DETTIN, Brigham City, Utah: Have given it several severe tests and it came out triumphant every time. JNO. B. WHEELER, Kansas City, Mo.: They have proved themselves to the families who sought them. A. P. SHIVELEY, Toano, N.Y.: Give entire satisfaction. Rather handle the Washer than anything I have seen. E. M. MARSH, Leesport, Texas: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Stratford, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one every hour. MRS. M. C. DORRINS, Galloway, N. J.: Give perfect satisfaction. I do my washing alone in some time I used to with hired help. MRS. M. MOORE, New York, N.Y.: Will do more than it says, especially washing damels. MRS. F. G. SINDEN, Sherman, N. Y.: Would not take \$20 for mine if I could not get another. Washer quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, Hartwood, Va.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, Rockville, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VALE, Patuxent, Md.: Saved me \$200 per year for 18 months I've had it. MRS. C. W. TALMOTT, Northridge, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Watrous, Mich.: I had rather give up my Jersey cow than part with my Washer. I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

## K. W. JONES' IMPROVED LAND ROLLER.

PATENTED MAY 13, 1884. No. 293,475.

By this peculiar coupling of rear and front rollers the team is allowed to  
turn to a one-fourth circle on a pivot with front roller, and the rear is allowed  
to remain standing still, and as the team moves forward it turns the rear rollers  
with a center draft, which does away with the laborious side-draft in turning.

Orders will be filled by  
applying to

**K. W. JONES,**

## MAD AS A WET HEN!

How mad is a Hen when THOROUGHLY  
WET? This is a question which must be  
investigated, and we call upon some  
ENTERPRISING and INTELLIGENT FARMER to  
study up this matter and report to us.  
We would suggest that a number of  
farmers do this and then results can be  
compared.

BY THE WAY, if water is scarce on the  
place, a "CYCLONE" Windmill will give  
plenty for this and all other purposes.

## The Orange-Eater.

The orange has a peculiar charm for the average youth—at least those in upper latitudes. We well remember our boyish longing for the fruit and the incredulity with which we received the statement from a wise elder that boys in the South would be glad to give a whole apron full of oranges for a single apple. In California the preference for either one or the other cannot be so well marked, because California youth can have plenty either of apples or oranges, as both these fruits grow here and there over most of the area of the State. It was long the opinion that the apple did not do well in Southern California, but the experience of the last few years has shown that in favoring situations at the South, certain varieties of apples can be grown of unsurpassed excellence, and the fact is now gaining wider acceptance that in suitable situations at the North the orange does admirably. It is therefore quite true to claim for the California boy that he can choose between the two fruits, and thus has the advantage of most boys in other parts of the world.

Our artist has given us the picture of a handsome boy just entering upon the discussion of the internal economy of an orange. He is a handsome young chap. Although we apprehend that the artist made his study on the shore of the Mediterranean, the picture suits well to adorn an edition of the RURAL which is to honor the Citrus Fair at Sacramento, because we have just as handsome boys in California, and no doubt many of them, as we write, are watching with keen interest the packing up of fruit in a dozen counties of the State to be sent to Sacramento for exhibition next week. No doubt some kind-hearted fruit-grower will toss some of the surplus fruit to the boys, and then we shall have the model which the artist chose reproduced on California soil.

Those who are mindful of the youth's delights in oranges should not forget to take the young people to Sacramento with them next week. The fair will be a scene fit to fill the youthful mind with great joy. There will be oranges and lemons, in clusters, in pyramids, in boxes—in short, in every conceivable shape which is calculated to impress the beholder

THE ORANGE EATER—A STUDY FOR CITRUS FAIR WEEK.

with the beauty and profusion of the fruit. Let the young people attend, and when they return, let them each plant a tree in the best place they can find for rich soil and warm exposure, and in the years to come they will have exhibits to make from trees of their own

planting. Those who have no trees can surely get the seed, and with the youngsters with whom time is no particular consideration, a growth from the very starting point will be the more prized, and they may like later to bud with some choice variety.

## The Citrus Fair.

As we stated last week, all indications favor a grand success at the exhibition of the Central California Citrus Fair Association, which will open in Sacramento on Monday, Dec. 13. The premium list, which we published as far as prepared last week, is being extended by the offering of a host of special premiums by outside parties who take an interest in making this part of the State better known. For example, Dr. Obed Harvey, of Galt, Sacramento county, sends word that he will give as a premium, to be used as the management sees fit, a lot in Galt worth \$200. J. A. Parker, of Sacramento, will give as sweepstakes premium two lots in the town of Kirkwood, Tehama county, worth \$125 and \$100 respectively. Kirkwood is on the railroad, in the midst of one of the finest, most fertile sections of California. There will probably be a number of other similar premiums offered during the present week, and they will all add interest to the fair by enlarging the competition for awards.

On the other hand, there appears to be the most gratifying activity in a number of counties in gathering county displays. On Monday of this week there was a large meeting at Newcastle, Placer county, and the reports declare that the growers of that county propose to capture the leading award if effort and good fruit will do it. Yuba county has been at work for some time and the exhibit is progressing finely. In Napa a meeting was held last Saturday and a disposition manifested to make a strong effort for the first place in certain products. Other counties are also at work, and we fully believe that a far greater surprise awaits the populace this year than they experienced at the hastily collected exhibit of last January. The way to be convinced of the truth of this is to go to the capital city next week.

The fair will be held in a large building on the north side of J street, between Second and Third. This location is quite near the railway and horse cars. The building is now being put in good shape, the interior lined with white cloth and graced with evergreen and patriotic decorations. It is designed to give the whole interior a very beautiful appearance, to better consort with the beauty of the products shown.

## THE FIELD.

## Vitality of Seeds.

EDITORS PRESS:—The germinating power of many seeds seems to be well-nigh unlimited, while in others it is very limited. Some even improve in vitality by age, such as cucumber, melon, squash, pumpkin, and kindred seeds. On the contrary, onion seed, and some few other kinds of seed, are nearly worthless after one or two years. Hence the practice of quite too many seedsmen of mixing all their old unsold seeds with fresh ones and labeling them as fresh seeds cannot be too highly condemned. Several instances of seeds retaining their vitality for a number of years have come under my own observation. I once kept turnip seed in the house for 15 years, and it was just as good the fifteenth year as the first. In the spring of 1825 my father had a piece of bottom land in Michigan cleared off and sown to turnips of the white flat Dutch variety. They were not all gathered in the autumn, and the heavy fall of snow, which came early, preserved those left from freezing. In the spring, these sprouted up and went to seed. The ground was seeded to herdsgrass, and remained in pasture and meadow for 25 years, when it was plowed up and planted to corn. Soon a multitude of turnips made their appearance, and a very good crop was raised among the corn. The next year the ground was plowed and sown to oats, and plenty of turnips appeared again. I have no doubt that if the same piece of ground should be plowed now, after the lapse of over 60 years, turnips would again appear.

A similar occurrence took place on the Michigan Agricultural College Farm. The first president of the college, Joseph R. Williams, had the boys clear off a small patch for turnips. Not being a practical agriculturist, he ordered three pounds of seed sown to the acre! Of course, turnips came up nearly as thick as "hair on a dog," but the crop was a failure. President Williams observed: "Boys, we have made a mistake, but mistakes sometimes teach as valuable lessons as successes; but be very careful not to make such a mistake as this again." This plot of ground was seeded to grass, and lay in grass for nine years. Having charge of the farm at that time, I ordered the piece plowed up and planted to corn. Soon the irrepressible turnip made its appearance, and we harvested a much better crop than was grown nine years previously.

Some 40 years ago I engaged some men to dig a well. After going down about 20 feet, they came to a fine white, dry sand. They threw out 25 feet of this sand and bored 15 feet into it without finding water, and then abandoned the job. This pile of sand remained exposed to the rains, warmth and light for several weeks, when it became covered with a growth of weeds, different in every respect from anything of the kind in the vicinity. The seeds of weeds, especially, seem to be covered with a sort of varnish which renders them well-nigh indestructible. This is the reason why locust seed requires to be soaked in scalding water before it will germinate. It is a good plan to pour scalding water on onion seed before sowing it.

Thistle seed requires much heat to melt this resinous coating before it will sprout. After fires have run over woodland, thistles and mullein usually make their appearance at the East. The soil is now pretty well stocked to a great depth with seeds of harmful plants, and it is not wise to let any more weeds go to seed to add to the present abundant stock on hand.

Santa Rita, Nov., 1886.

## Soil Cultivation—No. 2.

EDITORS PRESS:—In this article I treat more especially of free or natural fertilization and the growth of plants.

As long as the surface soil remains compact, the fertilizing gases are excluded; but as soon as broken up, ammonia, carbonic acid gas and other matters are absorbed, the amount absorbed depending upon the length of time, the depth broken and the larger amount of surface that is exposed to sun and air. Moderately small lumps of earth would probably present the largest area of surface. Cultivation toward this end is, of course, to be done when there is no crop on the land. In the dry season deep plowing of annual crops would destroy the shallow roots.

## Summer-fallow.

If land soon after harvest could be broken up, it would be fertilized nearly as well as summer-fallow, and thus raise a crop every year. This, though, would require stronger implements and more teams; but with the improved chisel cultivator it can be accomplished.

Here in March or April, near the close of the rainy season, it is too cold to plant corn or beans and seeds that require a high temperature to grow. Then as it grows warmer the surface gets too dry, to vegetate the seed unless in perfect tith; thus it sometimes happens that three or four days' time causes a failure.

Most of our improvement in plants and animals has been obtained by bettering the conditions of growth. First, by the eternal progress

of universal nature, and second, by the intelligent guidance of man. Each and every variety of animal plant has its period of time to mature its seed. If hurried for the want of moisture, sometimes a part of the embryo seeds will stop and die and the balance develop fully. Sometimes all will be shrunken.

There may be two ways of rapid growth of plants—one by evaporation of large quantities of water, poor in the elements of plant food, the other with less water, rich in plant food. The real growth of plants is little during showers and rain, when the plant revives and seems to enlarge, but greater when evaporation is going on in sun and wind. Portions of plant food are carried downward into the earth at every rain, to return again to the surface when evaporation begins, there to remain (if the soil is crusted and hard), useless to the present growing crops.

It is not possible or at least difficult to determine the exact proportion of the elements absorbed by plants directly from the air; but enough is known to say the larger portion (except carbonic acid) passes up through the roots in solution.

With every fire kindled, every plant that decays, every animal that expires, solid material is converted into imponderable gases, to be again reorganized in the mountain forest or plants of the valley. If the farmer burns his refuse he gives to his rich neighbor value he might retain by burying it in his own soil. Thus does chemical science show the errors of ancient practice and ideas that fire is the purifying element. Fire does not restore the equilibrium, but merely sends most of the elements abroad in the gaseous form.

Malarious districts become healthy as the land is plowed and rapid-growing crops planted.

Though the atmospheric elements may be unlimited, the soil's capacity to store it appears limited.

It appears necessary or at least of great benefit to have the air permeate the ground about the plant during the whole time of its growth. Decayed vegetable matter, mixed with poor soil, appears to increase its capacity to store from the air.

From the foregoing it will be seen that land constantly irrigated has but small chance to obtain fertility from the air. C. P. SCRANTON.

Lower Lake, Cal.

## THE STOCK YARD.

## Value of Thoroughbreds and High Grades.

EDITORS PRESS:—How is it that so many people are ready enough to acknowledge the good effect of careful breeding in the matter of raising horses, hogs and poultry, but deny it to the same extent as regards cattle? At least, it seems to me that so far as practice goes, they do so. Hardly any one will deny that in horse breeding to get a trotter, the wisest course to pursue is to breed from trotting-bred ancestors—the purer bred the better; and for draft, use Clydesdale, Norman or some other stock that has been carefully bred for the purpose wanted. So of hogs, the pure bred Berkshires or the pure bred of some other breed are the best, although I sometimes hear it said that, we will say for example, Essex crossed with Poland China make good hogs. And so they may, but I think that those that have that kind would prize the pure bred higher if they had them. And when it comes to fowls, nearly every one acknowledges that the purer the blood the better fowl we have.

A few days ago I killed a pure bred Berkshire pig, a little less than four months old, the dressed weight of which was 76 pounds. I do not believe it would have weighed as much had it been crossed with any other breed of hogs nor fattened any better on the same food.

If these things be so, will not the same rule hold good in regard to cattle? The fact is we do not examine closely enough as to the results of our work in breeding.

Several years ago I used, for one season, a half bred Jersey bull, obtained by crossing a pure bred Jersey bull on a high grade Durham cow, and the result was far from satisfactory. I still have some cows that show what I call a taint of Jersey blood. Those cows do not please me as well for dairy purposes as pure bred or high grade Durhams, and for beef they are decidedly inferior.

Recently I sold several calves to the butchers, all sired by the same Shorthorn bull. One of the calves had a little Jersey in its make-up and showed that little quite plainly. At six months old its dressed weight was 152 pounds. Another calf at nine months weighed 315 pounds, but the dam is a good grade Durham cow. The other calves had no Jersey blood and their weights varied from 250 to 275 pounds, and their ages from six and one-half to eight months. I do not give these figures as showing what calves at their ages may be made to weigh, as they were all fed alike and fed no better than those I kept intending to raise to maturity.

I notice that others are experimenting with cross of Jersey, Holstein or Hereford, as the case may be, on grade Durham cows, but I do not expect to hear of a case where the cross has proved satisfactory. It may be in a measure satisfying until a better way is tried. Lately I was looking at some cattle. The cows

were but three in number, but all pretty well bred and nearly alike. I noticed two calves that showed a marked difference. One was good, well worth raising, and as to the other, I should say in these times, the sooner it was disposed of the less loss there would be. "Yes," said my friend, "there is a difference in the stock. The good one was sired by a Short-horn bull, the other by a grade."

My idea is that the nearer we can come to purity of blood in any breed of cattle the better will be the result. But they must be bred and fed for the purpose for which they are to be used.

Centerville, Cal.

[These points are very suggestive. Will not our live-stock breeders discuss them in the columns of the RURAL? We don't hear half enough from those in the animal industry.—EDS. PRESS.]

## The Government and Cattle Diseases.

We had an article last week on the need of thorough Government work with cattle diseases. We notice that in his report to the President, of which an outline is telegraphed, Commissioner Colman, in commenting on the work of the Bureau of Animal Industry, describes the spread of pleuro-pneumonia and says:

"Every effort possible under the existing laws has been made to locate the diseased animals and isolate all that have been exposed. It would have been most fortunate if every animal exposed to the disease and liable to contract it could have been summarily slaughtered and the contagion thus eradicated. With a disease of this character at Chicago, it has been truly said that the cattle industry of this country has reached a crisis. There can be no doubt that it will be soon widely disseminated unless prompt and effective action can be instituted for its speedy suppression. Even now it may have been scattered to some extent in the West, and investigations during next year will probably bring other outbreaks to light. The matter is a most important one, overshadowing in urgency all others affecting our agricultural population and of vital interest to almost every consumer of beef, of milk, of butter and of cheese. To prevent the spread of this scourge, which has already greatly affected our foreign and interstate commerce, additional legislation by Congress is now essential.

"Much valuable work has already been done in Maryland, and the danger of disseminating the contagion from that State has been greatly lessened. No work has been done in the State of New York, because it was evident that the appropriation was not sufficient to secure any favorable results. The disease also exists in New Jersey, Pennsylvania and Virginia, but the authorities of those States have not yet accepted the rules and regulations of the department for co-operation.

"I greatly regret the necessity of announcing the existence of this dangerous disease over such a wide area, but the serious results to be apprehended from it make it imperative that the truth should be known in order that such legislative action may be taken as is required by the emergency."

## Railroad Rates on Stock and Meats

The letter of the president of the Consolidated Cattlemen to the President of the United States we published last week. In the matter of transportation charges on live and dead stock, the following resolutions were adopted at the meeting of the Consolidated Cattle-growers' Association in Chicago last month:

WHEREAS, The pool of railroads running east from Chicago put in effect March 1, 1886, a new tariff of freight rates on live-stock and dressed meats;

And Whereas, By the new tariff of March 1, 1886, the rates of freight were advanced:

On live cattle 100 lbs. equal to . . . \$20 a car  
On dressed beef 21 1/4 c 100 lbs. equal to . . 43 a car  
On live sheep 20 c 100 lbs. equal to . . . 40 a car  
On dressed sheep 45 c 100 lbs. equal to . . 90 a car

Be it therefore

Resolved, That the action of the railroad companies in advancing rates on live-stock and dressed meats to such unreasonable figures is in direct opposition to the interests of all cattle-growers, farmers and feeders of the West, and is an extortion which should not be longer endured.

Resolved, That we emphatically protest against the said advances in rates on live-stock and dressed meats, and we hereby respectfully ask the railroads forming the eastbound pool from Chicago that they reconsider the aforesaid tariff of March 1st, and make rates that will not so unjustly discriminate against the cattle interests of the West.

Resolved, That this convention respectfully request the different live-stock exchanges, and all who are interested in the live-stock industry, to join us in this protest and use their utmost endeavors to secure a reduction in the present unreasonable rates.

Resolved, That in consideration of the unjust discrimination of rates, as set forth in the foregoing preamble, we would earnestly call the attention of our several State legislatures, as well as our members of Congress, to the fact that suitable legislation should be adopted to abate the oppression.

THE BOBOLINKS NORTH AND SOUTH.—There are likely to be some new views current in regard to the bobolink, if the ornithological reports from Washington are accepted. It is said that this little feathered glory costs the country between \$3,000,000 and \$4,000,000, that being the estimated damage he does to the rice crop in the Southern States. Part of the damage is in harm done to the crop, part in wages paid to large numbers of persons employed to protect the crop from the birds. In the North, on the contrary, he does no harm.

## THE VINEYARD.

## A Fresno Vineyard and Home.

EDITORS PRESS:—In the rounds of a recent tour in the neighborhood of Fresno city in company with J. H. Braley, we had the pleasure of a drive through the grounds of Mr. Braley's residence and vineyard, and also the advantage of his remarks on varieties and peculiarities of plants, trees and vines growing there.

The place is laid off on a very liberal scale. The front is ample, is beautifully designed, has a fine, wide-sweeping driveway, and is set with some of the most effective ornamental as well as useful trees. Within a large semicircle to the eastward are, among other trees, quite a number of very thrifty-looking white Adriatic fig trees. These were planted out in the spring of 1885, now being of two years' growth. We stopped and measured three of these trees, and found them 16 inches in circumference. Some others looked about as large. Most of them bore this year, and fairly, considering age. There are on the place 100 of this variety. Mr. B. is highly pleased with it, and prefers it to any other variety tried in this country, and pronounces it at his place a success.

Among the trees are olives which we believe are of the Mission variety, in bearing this year and only four years old next spring. A brook of water passes through the place—always running, never stagnant.

Some 50 yards to the west is a magnificent grape arbor, which is one of the most remarkable features in landscape gardening in all this country. It is 200 feet in length by 70 in breadth. The vines are 8 feet apart, trained 8 feet high, each supported by a small redwood post. On top of the posts, running with the rows and extending from post to post, lengthways of the arbor, are fastened Oregon pine boards, 4 inches wide and 1 inch thick, nailed down edgewise. These support cross slats 2 inches wide and 1 inch thick, set on edge and 2 feet apart.

There are some 40 varieties of grapes in the arbor. Over all this framework the vines have run until a complete arbor is formed, and which in the summer and fall makes a luxuriant display of leaf and fruit in great variety.

The varieties proven here most suitable for the arbor are the Rose of Italy, Emperor, Cornichon, Purple Damascus, Tokay, Jura Muscat, Olivet, Niobe, Golden Chasselas. The excellence of these is exhibited in both vine and fruit. Mrs. Martha Braley (wife of J. H. B.) pronounces the Jura Muscat as her favorite grape, and it is said to be most highly esteemed by visitors. It is purple, of medium size, very sweet, a beautiful and highly flavored grape. The Cornichon is one of the most attractive as well as one of the very best—a very dark purple, almost black; oblong, large and sweet, having flavor of very high character.

The arbor is a beautiful home resort for family and visiting friends, and during the warm days of late summer and early autumn a most delightful place for taking family lunch. A table and some rustic seats are provided for this and for purposes of recreation and amusement. Such a scene as is here afforded would form a picture worth remembering in the mind of any one who can appreciate the shade afforded by the broad green leaves overhead and the gracefully-falling vines at the arbor sides and ends, together with the many-colored, large and perfect bunches of ripe and luscious grapes hanging from the roof in every direction overhead.

Back of all this we come to the Martha vineyard, of this place, named for Mrs. Braley (by her first name above given). There are 70 acres in the vineyard, grown exclusively to raisin grapes, all of the Muscatelle variety, which Mr. B. considers the best raisin grape for this country. This remark is understood to cover the Muscat, which he considers so near the same with the Muscatelle that in descriptions he would remove all practical distinctions. Three acres were planted with rooted vines in 1883, and from these were this year taken a little over six tons of raisins—two tons per acre. The remaining 67 acres were planted in 1884, from which there would be gathered this year, at the very lowest estimate, 70 tons, making total, for 70 acres, at least 80 tons raisins. At the time of this interview the figures were not fully known. The foreman informed us that 45 tons had already been sent away, and thought there would be as many more yet to send off; but Mr. B. was anxious not to over-estimate the remainder not yet weighed.

We wish to note one thing with reference to Mr. Braley's dwelling-house. He has a basement extending some six feet, we believe, above ground. This places their living room, and other apartments usually occupied, several feet above ground, and he claims by this means protection from any malarial atmosphere that may prevail here during some seasons, and believes that if all families would adopt such a precautionary measure, our community might be comparatively free from malarial influences. His family have here been quite healthy. The kitchen is kept under the living room, and to the warmth ascending from it, through the floor, and its drying influences, he attributes healthful results.

Fresno Co.

## THE DAIRY.

## The Milk Supply of San Francisco.

We have received a pamphlet published in this city, entitled "The Milk Supply of San Francisco." It contains matters of much interest and importance. The authority for the facts set forth and the way in which they were obtained is stated in this manner:

A few gentlemen of means, having some knowledge of the true condition of the milk supply, and believing that thousands of lives have been lost through the use of impure and poisonous milk, have, at their own expense, employed Prof. E. J. Swift, an expert in the business, to collect full and complete statistics in relation to the milk business in this city and suburbs. After months of persistent application and perseverance, he has now completed a full report, which is, no doubt, nearly correct, notwithstanding the innumerable obstacles placed in his way to prevent personal examinations.

It would have been better to have made a franker statement of the authority under which the work was done, but possibly the gentlemen aforesaid did not care to face the opposition which might come from people whose misdeeds are set forth. The publication is evidently in the interest of pure milk, and pure country milk at that, as contrasted with the fluid which is produced from ill-kept city dairies, and, as our interest and belief is rested in pure milk, we must express sympathy for and approval of the object which it aims to serve. We therefore give space to many of the statements made, hoping they will serve a good purpose. We quote as follows:

The report shows that the milk used in this city is far more dangerous than expected; but when the fact is known that there is no supervision whatever over the production and sale of milk in the city, by competent authority, and that more than half of the milk sold comes from dairies that are conducted by uncleanly, ignorant, and unscrupulous foreigners, that care not for the life or death of any one outside of their own filthy yards, it can be readily understood that the business would rapidly degenerate, until the filthy and poisonous compound would become so notoriously obnoxious as to create a general and widespread panic.

The total milk supply of San Francisco was found to be 7338 cans of three gallons each, of which only about 1300 cans came from country dairies.

One hundred and forty-nine dairies were found within the city limits, containing 6932 cows, besides numerous small dairies, from which no reports are given.

Four thousand five hundred and twenty-nine cows, that gave 11,247 gallons of milk daily, were fed on brewers' slops mainly.

Five thousand six hundred and four gallons of milk were furnished daily from dairies that used very bad water for their cows to drink, and to adulterate their milk with.

Four thousand one hundred and thirty-two gallons of milk were sold daily from 1585 poor, sickly cows.

Five thousand and forty gallons of milk came daily from outrageously filthy barns and yards.

Four thousand five hundred and eighty-six cows are watered from surface wells.

Two thousand six hundred and seventy-seven cows were housed in old, dilapidated barns and sheds.

There are about 50 small dairies, of from two to eight cows each, in addition to the 149 scattered throughout the populous portions of the city, but hidden from sight by high board fences, sheds, etc.

These small dairies—the worst of all—do a flourishing business in furnishing one cow's milk to invalids and children.

These cows are fed on the cheapest material that can be found on the wharves and way places, such as damaged hay, straw-grain, potatoes, cabbages, beets, turnips, etc., in fact anything that cows will eat.

To this class belongs the dairy that lately lost two cows suddenly by death, and supposed to be poisoned, and from whose milk two children became sick and nearly died. This dairy was visited by Judge Swift after the death of the two cows, and he found two more, out of three cows remaining, that were sick also, and likely to die at any time; and his judgment was that those cows became diseased from their feed and surroundings and from being cooped up over a bed of filth.

Out of perhaps 200 dairies only some half a dozen have any pasture or range for their cattle. Nearly all are crowded upon small city lots and generally in small valleys, ravines or sinks, where surface water can be secured cheaply, or where there is a hole or pond.

The result is that the drainage from hundreds of tons of excremental matter deposited about the premises by diseased cows and others escapes into the wells or pools from which the cattle drink, and from which, perhaps, water is obtained to adulterate their milk and wash their milk utensils with.

Nearly half the city cows are housed, fed and milked in old, dilapidated barns, through which the ocean winds are whistling, bringing clouds of dust from the grounds surrounding these filthy places and emptying disease and death, in the shape of deadly bacteria, constantly into the pails, pans and cans of these milkers—those cans and pans, left open for the milk to cool and cream to rise, getting more than the

average amount of filth by being exposed the longest.

These things have been seen and noted by Judge Swift and located on a complete map of the city, and numbered for reference, so that the Board of Health can be directed to the exact places wherein all of this abhorrent filth and poisonous food can be seen, if they will only take the trouble to look at it.

The stench alone, with an uneducated nose, will be quite sufficient to ferret out most of these places.

Many of these barns are situated directly over malarious pools, and sinks of putrid water and matter, and are appropriately the fountain head of the zymotic or filth diseases.

## Brewers' Slops.

Nearly two-thirds of the milk supplied the city comes mainly from brewers' slops or leavings. This food has been condemned time and time again by scientific men, as being extremely dangerous. Its rapid decomposition directly after it leaves the mash tubs, with its myriads of disease germs, makes it a very unsafe food, especially when fed in large quantities, as is done here.

The New York State Dairy Commissioner sent out 450 circulars in relation to the production of milk and its use the last year, and those having a knowledge of the effect of brewers' slops on milk answered "That milk from cows fed on brewers' grains could not be used to make butter, cheese or condensed milk."

This fact is well known here, and any surplus milk from this source or from distillery slops, that cannot be sold for fresh-milk purposes, must be fed to hogs or thrown away, as the butter or cheese made from it cannot be sold; and yet two-thirds of the people of San Francisco are now using this kind of milk.

Brewers' slops decompose so rapidly that it is almost impossible to use them before they become rotten. They are hauled through the streets of the city from the breweries on large wagons, with tight boxes; but the drippings along the streets give out an unmistakable odor, that parents, hoping to rear their young babes, may well be alarmed at.

These slops are stored in vats at the brewery, as well as the milk yard, being drawn from and replenished occasionally, thus affording an opportunity for disease germs to accumulate in the corners and about the vats, where the slops are not disturbed, as well as in the boxes where the cows are fed. The odor arising from these slops, when known to the senses, will never be forgotten.

Many milkmen, having conscientious scruples about using these or distillery slops, knowing their dangerous qualities, would prefer not to use them; but they are perforce compelled to do so, because milk can be made from slops for less than half the cost of milk from sound food, and they must either go out of the milk business or use the cheaper material, such as most of the milkmen do.

## Polluted Water.

It appears from Judge Swift's report that 4586 cows in this city are watered from surface wells and stagnant pools, located in many instances in the midst of the cow yards at the lowest points, and receiving, without doubt, the drainage from the accumulated filth of the yards. In other words, the suburbs of the city are being drained into the wells and pools, and from these, through the medium of cows and their milk, into the stomachs of our people.

The fatal epidemics that have appeared in various places from time to time show the importance of having pure and undefiled water for both animals and mankind.

## Official Supervision.

The Board of Health of San Francisco have full power under the present laws to exercise complete supervision over the milk business. The present fund and official force, except that a veterinarian might be employed in place of one of the present inspectors, would, no doubt, answer present purposes, and all of the cow yards in the county might be thoroughly examined within 30 days.

The country dairies, having no opportunity to use slops and decayed vegetable matter, cannot be a source of great danger; but in order to assure the public that there is, in fact, but little danger from well-regulated country dairies, they, no doubt, would be pleased to have a continual inspection of their premises and stock as well, as it would clearly be to their interest to do so.

One honest, industrious man, educated to the business, could easily supervise the milk supply of this city, and, considering the great importance and necessity of its being done, and well done, no citizen could complain of the necessary expense.

## Country Milk.

In the absence of official supervision, it is difficult for the average consumer to ascertain which is country and which is city milk that is offered for sale. To read the names on the milk wagons, it would appear that all were from the country, when it is now known that only one-seventh of the supply comes from the country.

If the appearance of the driver and his wagon is taken as proof of the purity and cleanliness of his milk, the delusion is more complete, as Prof. Swift reports that the very worst dairies in the city have the brightest painted wagons, and the best dressed and most elegant drivers. Many persons judge by personal appearances only, and much of the milk trade is controlled

by servant girls, who prefer having spruce and well-dressed young men about. Many young men that are especially qualified by their good looks, suave manner, and silvery tongues, find it profitable in buying and selling the lowest priced city milk.

San Francisco is, perhaps, the only city in the world where more than three-fourths of the milk supply comes from cows within the city limits. Nearly all of the country milk comes from San Mateo county, where the cows have a large range of pasture, among rolling hills and thousands of living springs, and where the ocean fogs give unceasing life and verdure to the perennial grasses that abound in that section. These living springs, from out the rocks of this range, furnish purer and better water to the dairies than what is furnished for household use in this city. Such crystal water, with rich and wholesome hay, grain and grass, makes a milk on which the old and young may thrive, and live their natural time.

But few can expect to get milk from the old established dairies of San Mateo county—the proportions they now supply being about one-seventh of the whole. Only one person in seven can hope to secure an article of milk now that is safe to use—and perhaps not all pure at that. There is ample space and good land enough in the country, immediately around San Francisco, to produce all of the milk required for the city; and there is no excuse whatever on the part of the Board of Health or Board of Supervisors in allowing the congregation of so many cows in the city.

If all the dairies were situated outside of the city limits, it would be unprofitable then to feed cows upon city slops, and the question of obtaining wholesome milk would be much simplified; and if this is not done, the supply of good country milk will not increase, and will not be used except for invalids and families that have a care for what they use, and are willing to pay a larger price than slop milk is sold at.

Such well-established country dairies as the Jersey Farm, Milbrae, San Mateo Ranch, XL and San Pedro, are now working to their full capacity, and cannot be expected to furnish but little more milk than they have supplied in the past. Consequently, relief from impure milk must come from the establishment of new country dairies, or from the removal of the city dairies to the country.

There will be no encouragement in the matter of starting new country dairies until milk can be sold at from 10 to 15 per cent higher than city milk is now sold at, in proof of which it may be said that there has been a constant decrease in the country-milk supply for the last 20 years.

The impure and poisonous milk now being sold in San Francisco is a constant menace to the lives, health, happiness and general prosperity of nearly 300,000 people; and no officer connected with the municipal affairs of the city can expect her citizens to withstand such a cruel and criminal imposition much longer.

[We have quoted nearly all of the pamphlet which refers directly to San Francisco. There is much other matter in the publication concerning the precautions to secure pure milk taken in Eastern and foreign cities, and many instances given of the danger to the public health from impure milk. The whole subject is of the greatest importance.—EDS. PRESS.]

## THE STABLE.

## Care in Horse-Breeding.

We find in an Eastern exchange some suggestions on horse-breeding which may be interesting to our readers: The breeding of horses rests upon the same general principles that the breeding of cattle does, though as a rule it is more practicable to obtain good mares than it sometimes is to procure good cows. It may not be always best to sacrifice an entire herd of poor cows for the purpose of replacing them with better ones. It is often better, and perhaps we might say generally wiser, to use such cows as we have and breed up. Usually, however, there are but few, sometimes but one mare on the farm to breed, and it is frequently the case that they or she could be replaced with practically better breeding stock at inconsiderable expense. Suppose, for instance, the mare is not very valuable from whatever standpoint she may be looked at, but that she is diseased or vicious. It can hardly pay to breed from such an animal. It is dangerous in the first place to do so, and then we might really find better breeders that could be purchased at a very low figure. Through a prevailing unaccountable carelessness in breeding horses, a carelessness that is never found in other lines of intelligent breeding, the laws of heredity are largely disregarded. If the mare is good for nothing else she is too often considered good enough for breeding purposes. If she is too vicious to handle with safety, she still may be considered useful as a breeder. Now, heredity is a stern fact, and its operation is frequently wonderful, going sometimes to an extent that is almost incredible; and the possibility of the mare producing her like even to the slightest defect should always be considered. We have known very valuable mares that had become diseased and were still used as breeders. In

such case such a course might be admissible. There is a chance—a bare chance—that the colt might escape the operation of hereditary laws, for a number of years at least, and have all the merits of the dam without her defects. But if there is nothing peculiarly valuable about such a mare, it is folly to breed from her. And a vicious animal should never be used for breeding. It does not pay to have a vicious animal on the farm, and it certainly does not pay to attempt to multiply such animals.

It is a trite saying that like produces like, and that as nearly as practicable we should select for breeding such a mare as suits us in all particulars. Then with a carefully selected sire we shall substantially get our idea of perfection every time. But it is a common thing to use our small native mares and a horse of one of the draft breeds. This is proper enough, provided the mare is not too small. We should not advise the use of a heavy draft stallion upon an unusually small mare. But the average common mare, if she is sound and of good disposition, may be used and ought to be used for the purposes of breeding up. There is more, however, in the selection of the stallion than there is in the selection of the mare. It would be a valuable piece of legislation if we could have a law making it a serious offense to represent a horse other than what he really is. The country is full of horses that ought never to be used for service. They are nothing but scrubs, and yet, with bogus pedigrees, they are represented to be first-class horses. Such stallions have been a great hindrance to the development of our horse interests. Men who have desired to improve their stock have been induced to use horses like these, and of course have been disappointed with the result, and perhaps have given up all further effort in that line. Thus they and the country at large have been damaged, and nobody has gained anything except the owner of the worthless horse. It is not always possible to command the service of a thoroughbred or just such a horse as we fancy; and in such case the only thing that remains for us to do is to do the best we can. But we should not be careless in the selection of a stallion. This is the point that we desire to bring prominently before our readers. There is no good reason why we should not be just as careful in breeding horses as we are in breeding cattle or other stock; and yet it is a fact that taking us as a whole we have not been. There is a steady demand for good horses of every breed. There is not much demand and never has been for poor horses. Noticing the advertisements in our daily papers, we shall find at this time of year, when many in our cities wish to get rid of their horses, horses advertised so cheap that you can buy a barnful for a few hundred dollars. Inspect such horses and they will be found to be scrub horses. But the good horse cannot be bought for nothing, and he cannot be had at a low price. Good roadsters are selling at Chicago for about \$250, and that is considered cheap in many cases; and we desire to repeat in this connection what we have frequently said, that there is a very large demand for good coach horses. Perhaps the best demand for horses is the demand for the draft and the coach. There is, of course, a steady demand for the lighter horses, the roadsters, but it may be fairly stated that the draft and coach are in the best demand. No good draft horse need go begging for a purchaser, and there has been so much care in the selection of importations by draft-horse men that those who desire draft horses have a broad and most excellent field to select from.

In some respects all our breeds can be improved upon, and we recently referred to one important needed improvement—a faster walking gait. In the item we published in reference to the matter the writer said that he had developed a Percheron family that were excellent walkers. It may be said that every breed can be made good walkers. It is a matter of both training and breeding. Right here again we should regard the laws of heredity. A fast walker will be much more apt to produce a fast walker than a slow walker. Hence we must train our horses to a better walking gait, and then be careful to breed from our best walkers. There is money in rapid walkers. If we use them ourselves the gait will be money in our pockets; for if we have a team that, in consequence of being good walkers, will do twice the plowing and other work in a day that a slower team will do, it will cost us 50 per cent less to do our team work. We shall save the expense of one team, the salary of one driver, and the wear and tear of machinery that the extra team would necessitate. If we are breeding to sell, the good walker will still be an extra profit maker, for a horse that will walk 50 per cent faster than the ordinary walking gait will bring more money than the slow walker. In a word, let us breed just the best we know how, or can learn how, and breed for high development not only in one particular, but in all particulars. Breed a good looking, large and sound horse, and one of good disposition. Such a horse will always be good property. Still, we would say nothing detrimental of those who are breeding small horses. All we mean to say to such is, breed the best, and there will always be people who will want your stock.

THE SWEDEN-DENMARK TUNNEL is still seriously talked of. The depth of water in the channel under which it is proposed to tunnel does not exceed 60 feet. The Swedish ports on the sound have only shallow water, and much difficulty arises in the shipment of goods,

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Yuba City Grange Anniversary.

"Granger" furnishes the following for publication in the *PRESS* and *Patron*:

Last Saturday was a gala day for Yuba City Grange and their guests, being the 19th anniversary of the institution of the Order.

The members met promptly at 10 A. M., and conferred the third and fourth degrees. Then the doors were opened to the invited and all filed into the banquet hall, where two long tables were spread with the choicest productions of Sutter county farms. In this particular our sisters seem bound to behave in a manner altogether impossible to be described, at least by this feeble scribe; hence I shall not attempt it. Suffice it to say, the time was 1 o'clock, the appetite sharp, the crowd large, and the onslaught furious, but it had no perceptible effect on the supply. Two hours of music, speaking and recitations followed, giving pleasure to one of the largest turnouts ever assembled in our Grange hall.

Among those present from a distance were Bro. A. L. Chandler and wife, of South Sutter Grange; Sister L. Keyes, of Wheatland Grange; Bro. M. Sprague and H. M. La Rue, of Sacramento Grange; and Bro. Clark, of North Butte Grange.

The literary exercises were varied and excellent, and the music, both vocal and instrumental, could hardly be excelled. Three more applicants were elected, and they still come knocking for admission. Remarks were made by Senator Chandler, ex-Speaker La Rue, Sisters H. S. Jones, W. P. Smith, W. H. Lee, Mrs. B. F. Walters, George Ohleyer, W. J. Hardy and others; and the juveniles did themselves great credit by their selections and rehearsals.

The weather was perfect, the roads excellent and free from dust, and all felt that it was a day well spent. The election of officers had to be deferred in consequence of the other exercises, and will take place on Saturday, Dec. 18th, at 1 P. M., when we hope to have a large attendance and spirited contest.

## Grange Gathering in the Granite State.

Sincere and earnest in devotion to our beloved Order must be New England Patrons, to rally as they do from near and far, in spite of wintry weather; and very pleasant was the recent meeting of Merrimack County Pomona Grange, at New London, N. H.—the home of its Worthy Master and Ceres, Brother and Sister Shepherd. "E. V. T.," who was present, gives a long report in the *Cincinnati Bulletin*, from which we borrow a minor portion:

If you have ever traveled a long distance through storm to reach home, you can appreciate our situation on alighting at the door of the town hall, the interior of which was in striking contrast to the snowstorm raging without—warmth everywhere; in the large hall, in the ante-rooms, and in the dining-hall above; but most and best in the welcome of our truly fraternal entertainers.

Those who were at the forenoon meeting arrived before the storm commenced. There were present Patrons from Heniker, Hopkinton, Warner, East Andover and Springfield. Some must have come 20 miles with a team; Sutton and Wilmot, nearer neighbors, six or eight miles away. Worthy State Deputy Hutchinson, of Milford, rode eight miles from the railroad station, arriving in season for the private evening meeting at New London Grange hall, where among other excellent remarks he advocated the taking of Grange papers.

The exercises at the public meeting included a very warm discussion of the question: "Can co-operative labor unions benefit the laboring classes?"

The evening program embraced essays, readings and songs, and remarks by Patrons. There were present 85 of the home Grange and 23 visitors.

Bro. McDaniel, Master of Montcalm and Overseer of the State Grange, took Bro. Hutchinson to his home in Springfield. Bro. and Sister Shepherd's generous hospitality was tendered Patrons from a distance, and others were urged to remain for the night at Worthy Master Gay's.

Those who went home enjoyed a moonlight ride and moderate weather after the storm.

**ELECTIONS AND INSTALLATIONS.**—All Patrons should be wide awake in attending their Grange meetings, at this season of the year especially. Much depends on the action of the last and the first meetings of the year. No common hindrance will justify the absence of the true and faithful Granger from election and installation meetings. Make a lively start for the new year, fellow-Patrons, and you will find the work will go on better the year round. One of the best available methods of awakening and keeping up an interest in local Granges is that of furnishing the news of your meetings to the local, agricultural and Grange papers. Do not fail to send us prompt reports of your undertakings and accomplishments, brothers and sisters from all parts of the State.

TEMESCAL GRANGE meets at 2 P. M. on Saturday of next week. "Legislative Needs of California" will be the special subject for discussion. A good attendance of members and visiting Patrons is desired.

## Grange Work and Progress.

[By MORTIMER WHITEHEAD, National Lecturer.]

At the Twentieth Annual Session of the National Grange held in Philadelphia, Nov. 10 to 13, 1886, the Lecturer was directed "to prepare each week, at least, one column of printed matter, giving the latest and best Grange work and progress in all parts of the country. These to be sent to any and all Grange and agricultural papers recommended by the Masters of the several State Granges, and sent in such manner that they may all be published simultaneously."

The Grange is now 20 years old. It has stood the test of time. It has been "weighed in the balance and (not) found wanting." It is one of the largest organizations of any kind now in the country. The Twentieth Annual Session, just held in Philadelphia, was one of the largest and best ever held. Every State but four was represented and good work and progress was reported from nearly all sections.

The Grange passed its period of reaction seven or eight years ago. It passed its experimental age and settled down to solid work. Each succeeding year shows an increase of new Granges and growth in membership when the whole field is looked over.

Ninety new Granges were organized in 1885, and ninety-one in 1886; of these Connecticut reports 15; Pennsylvania, 14.

The Master of the National Grange, Put Darden, of Mississippi, in his annual address at the opening of this meeting, said: "We meet to-day, as an Order, after an existence of 20 years, under encouraging auspices and with flattering prospects. The Grange has been on trial during this long period of time, has successfully combated the strongest opposition, has passed the experimental age and been established as one of the permanent and staple institutions of the country. Notwithstanding its large membership—scattered over this broad land in nearly every county, parish, State and Territory—it has never disturbed the peace of the country, or done anything hostile to the general welfare. Opposed to all class antagonisms, its tendency has ever been to development and improvement. It offers to the American farmer the only well-grounded hope for protecting and advancing his interests."

The very best class of farmers are now uniting with the Grange. Those who have been willing to labor and give the management, even of their own affairs, into the hands of those who have stood ready to take the results of their labor, are at last awakening from their long sleep to find themselves living lives of isolation, without business habits and with few social advantages. They are asking why we should not assist each other, why may we not co-operate and secure for our labor better returns? Shall we not break up this isolation and meet where our families may have a season of enjoyment and recreation?

Not for many long years did Congress and State Legislatures so well give ear and heed to the just and proper demands of the farmers of our country as during the past year. Important matters in which every farmer and his family are interested will come before Congress this winter. Will our farmers be organized enough to speak and be heard with no uncertain sound?

Among the reports adopted at the late session of the National Grange was one suggesting that the Lecturers of the Subordinate Granges gather the best thoughts and written words of their members and send them to the Lecturer of their Pomona or State Grange. The Lecturer of the State Grange, in turn, to select, condense and compile the best thoughts thus coming to him from his State and send them to the Lecturer of the National Grange, who will thus be brought in contact with the best minds of our whole Order, and be prepared in turn to give our best thoughts national circulation through the printed page and by the spoken words of a corps of National Lecturers.

The State Granges of Alabama, Delaware, Georgia, Indiana, Iowa, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, North Carolina, Ohio, Pennsylvania and Wisconsin will commence their regular annual sessions on Tuesday, Dec. 14th, and Vermont on Wednesday, Dec. 15th.

"I think I can see in every direction evidences that the Grange heaven is working. It appears to me that the times are propitious. Many of the old political issues, which have so long divided and distracted the people, seem now to be questions of the past; and the political parties of the country, for want of these issues, will be compelled to take notice of questions of material interest to every good citizen."—J. H. BRIGHAM, Master Ohio State Grange.

The Grange offers to the farmers of the United States a means of combination, of harmony of action, such as they have never before possessed. It offers them the means of expressing their views and wishes as a body and of enforcing them.

The first plank in the Grange platform is "to develop a better and higher manhood and womanhood among ourselves." Thousands of men and women have been made better by the Grange. Who can point out a single person that it has made worse?

"Reading Circles" are growing in favor with the Granges of several States. "Joe English Grange," at New Boston, New Hampshire, has taken up the study of ancient history, etiquette and a work on the farm.

A question for Subordinate Granges, "How and in what way did I expect to be benefited by joining the Grange, and have I received any of those benefits?"

Brothers of the plow!

In calm and quiet night,

You've waited long and patiently

For what was yours by right—

A fair reward for toil,

A free and open field,

An honest share for wife and home,

Of what your harvests yield.

GRASS VALLEY GRANGE.—Brother Ohleyer, in last week's *Farmer*, tells about an interesting fraternal visit which he made to Grass Valley Grange the Saturday previous. He says the attendance was not large, but what it lacked in numbers it more than made up in earnestness and enthusiasm. Bro. J. W. DeGolia is Master, and right ably did he preside

over the assemblage. The first and second degrees were conferred on two sisters in a creditable manner. We missed the music that adds so much to the beauty of the degree work. This was merely an omission, as the musicians were unavoidably absent, which, we were told, seldom occurs. We discovered in the general discussion under the head of "Good of the Order" that partisan politics had not entered the Grange, and that the members pulled together for the good of all. We can truly tell the people of Nevada county that they can place their county affairs in no safer hands than those of their Grangers, for it is impossible for a Granger to benefit himself without strewing the good to all. The questions discussed were handled with consummate ability, and all the brothers participated, showing thought and familiarity with public affairs that gave us several pointers. Other and larger Granges might learn a lesson from this mountain Grange. Bro. Davis and the writer had something to say to encourage the brothers and sisters on their way, and now beg leave to thank them all for the many kind acts extended to these two "strays from the valley," especially to Mr. and Mrs. Peterson, Mr. and Mrs. DeGolia and Mr. Henderson. Long life and prosperity to all.

## Grange Elections.\*

LODI GRANGE.—Elected Dec. 1: C. W. Norton, M.; T. C. Shaw, O.; Sister C. P. Allison, L.; S. Ferdun, S.; R. Pixley, A. S.; A. A. Guernsey, C.; O. O. Norton, T.; J. D. Huffman, Sec.; H. Witte, G. K.; Sister Mary Fowler, Pomona; Sister R. Pixley, Flora; Sister H. Witte, Ceres; Sister Nellie Norton, L. A. S. The installation of officers was fixed for the first Wednesday in January, 1887, at 1 o'clock P. M. sharp, the installation to be public, and the Worthy P. M. of California State Grange, Bro. Flint, was selected to install the officers.

J. D. HUFFMAN, Sec.

TEMESCAL GRANGE, No. 35, Oakland.—Elected Dec. 3d: A. T. Dewey, M.; Walter Renwick, O.; Mrs. S. H. Dewey, L.; N. Sewell, S.; S. Goodenough, A. S.; Mrs. E. E. Kelsey, C.; L. Frink, T.; Mrs. Nellie G. Babcock, Sec'y; E. Kelsey, G. K.; Miss Jessie Weed, Ceres; Mrs. Eliza Brooks, P.; Miss Anita M. Dewey, F.; Mrs. W. Renwick, L. A. S. Bro. Paine, Trustee. Installation, Jan. 1, 1887.

\*Secretaries, or other officers, are invited to send us lists of officers elected, date of installations, and any other interesting matter for publication.

**LEGISLATIVE NEEDS.**—It behooves the farmers of this State to be "on deck" in season at the "sailing in" of the new Legislature. There are not a few legislative acts needed which should be justly enacted in their interest, some specially so, and others in common with other industrial interests. A change is desired in our tax and educational laws. Our Legislature should voice the sentiments of the great mass of our people by urging Congress to establish a postal telegraph system. Our probable laws should be so amended as to give married women and widows more rights and privileges. Many a member of our legislative bodies would do better service if more fully advised of the intelligent opinions and wants of their numerous constituents. Let the people be more communicative to their representatives. Discuss legislative matters in the Grange. Call public meetings for conference in localities where necessary, and, as far as possible, brace up the honorable members to do their work intelligently and honestly. As there will be an unusual number of farmers in the coming Legislature, let all try to secure better work than formerly. We should be glad to have our thinking farmers write their opinions for the *RURAL PRESS*.

## Grange Items.

We learn from the *Patron* that Tulare Grange conferred the first and second degrees on three new members November 27th.... W. L. Flint visited South Sutter Grange the same day and found a goodly number in attendance, including Senator-elect and Mrs. Chandler and District Lecturer Frisbie and wife. The third and fourth degrees were conferred on two brothers and two sisters, and they had a lively social time.... There is a movement on foot to revive Saratoga Grange.

A SOCIAL PARTY at the Sierra Nevada hotel, Coloma, has been announced for the evening of Friday, Dec. 10th, for the benefit of Bro. F. J. Veerkamp, W. M. of Sutter Mill Grange, whose house was destroyed by fire at Granite Hill.

## Congress Meets.

Congress reassembled at Washington on the 6th, with an uncommonly large attendance of members. All the representatives of this State but Henley were in their places. A. P. Williams was sworn in as Senator from California.

The President in his message says that race prejudice and competition of labor cannot justify the oppression of strangers whose safety is guaranteed by our treaty with China equally with the most favored nations. In opening our vast domains to alien elements, the purpose of our law-givers was to invite assimilation, and not to provide an arena of endless antagonisms. The paramount duty of maintaining public order and defending the interests of our own people may require the adoption of measures of

restriction, but they should not tolerate the oppression of individuals of a special race.

He favors the extension for seven years of existing treaty stipulations with Hawaii, and the negotiation with Mexico of a new and enlarged treaty of commerce and navigation.

In respect to the farmers, he says: Those who from the soil produce the things consumed by all, are perhaps more directly and plainly concerned than any other of our citizens in a just and careful system of Federal taxation. Those actually engaged in and more remotely connected with this kind of work number nearly one-half of our population, and none labor harder or more continuously than they. No enactments limit their hours of toil and no interposition of the Government enhances, to any great extent, the value of their products; and yet for many of the necessities and comforts of life which the most scrupulous economy enables them to bring into their homes, and for their implements of husbandry, they are obliged to pay a price largely increased by an unnatural profit, which, by the action of the Government, is given to the more favored manufacturer.

As to the public domain, the recommendations of the Secretary of the Interior and of the Commissioner of the General Land Office, looking to the better protection of public lands, and of the public surveys; the preservation of national forests, the adjudication of grants to States and corporations, and of private land claims, and the increased efficiency of the public service, are commended to the attention of Congress.

The President advises the repeal of the Preemption and Timber Culture Acts and that the Homestead laws be so amended as to better secure compliance with, and cultivation for the period of five years from date of entry, without commutation or provision for speculative relinquishment; also, the repeal of the Desert Land laws, unless it shall be the pleasure of Congress to so amend these laws as to render them less liable to abuse.

## Government Lands for Fruit-Growing.

The territory of the Citrus Fair Association, whose exhibition comes off next week at Sacramento, includes considerable tracts of Government land, whereon the cultivation of the orange would probably be more or less rewarded. The counties recognized in the choice of directors lie mostly in the Sacramento basin and adjacent foothills.

Looking through the carefully prepared description of this region, published last year by the Immigration Association of California, we note that in the southern part of Shasta county (where the Sacramento valley proper may be said to commence) occurs a foothill district of nearly half a million acres, the southwest portion of which is a succession of rounded hills, rising from 50 to 200 feet above the valley. The central and southern portions consist of tablelands, from 500 to 700 feet above sea level, east of which there is a gradual ascent to the higher foothills of the Sierras. Here there are many fine valleys and plateaus, and of Government land open to settlers there are, in Secretary Street's judgment at the date of our writing, 75,000 to 100,000 acres on which oranges might be grown more or less. That is to say, there is that amount of land on which homesteads of 160 acres might be made, having from 30 to 100 acres in each case available for citrus culture.

Moving southward, among the Government lands still open for settlement in Tehama county, there are perhaps 20,000 to 30,000 acres more or less suitable for orange-growing under similar limitations. In Colusa there are 5000 to 10,000 acres; in Butte, 20,000 to 30,000; in Placer, 10,000; and in Yuba, El Dorado, Amador and Calaveras counties, each about 5000 acres, of which the same may be said.

Almost all the land referred to is situated in the thermal belt of foothills and plateaus. The predominating soil of these districts is a red loam, often gravelly, with here and there a stiffening of clay. On such ground the fine Placer county oranges have been raised. It is suitable for figs, pomegranates, almonds and walnuts, as well as the common fruits of the temperate zone.

Outside the above limits, but within the counties named, there are much larger areas of Government land adapted for the cultivation of core and stone fruits; say in Shasta 500,000, in Tehama 100,000, in Colusa 50,000, in Butte 100,000, in Yuba 20,000, in Placer 100,000, in El Dorado 50,000, and in Amador and Calaveras about 60,000 acres each.

In Nevada, Sonoma and Yolo counties, while there is no Government land promising for citrus culture, some 100,000, 50,000 and 5000 acres respectively might be added to the latter list.

The foregoing estimates refer only to public lands, now open to entry by actual settlers, on application to the Registers or Receivers of the U. S. Local Land Office at Shasta, Marysville, Stockton or Sacramento, and take no account of such precincts as have already passed under the control of private parties.

REDWOOD TIMBER FOR LONDON.—The British bark *Windhover* left this port about a month ago with a cargo of redwood for London. They are just beginning to appreciate the value of our redwood in England, and there will probably be an extensive demand for it there in the near future. The bark also takes a small invoice of California wines.

AGRICULTURAL NOTES.

CALIFORNIA.

El Dorado.

CLARKSVILLE ITEMS.—Cor. *Republican*, Nov. 26: The return of our mountain neighbors has revived business in this end of the county. Their produce—beef, butter, mutton and wool—finds ready markets at good living rates, and thereby we have the proof that the dairy and stock business is profitable in the foothills of El Dorado county. The scarcity of rain is being felt by our stockmen on account of inconvenience in watering their animals. The farmers are plowing and sowing some grain.

Fresno.

FOOTHILL APPLES.—*Republican*: Some of the fruit stores are now supplied with apples, grown in the mountains in the vicinity of Fresno flats. They are equal to the best shipped from Oregon or from the East, and the report of large yields of such excellent fruit proves conclusively that apple-growing is destined to be an extensive and profitable industry in the foothills of this county. Apples at 5 cts. per lb. will pay our foothill ranchers better than hogs at 2 cts.

FINE ORANGES.—*Republican*, Dec. 3: The best oranges now to be had in this market are Fresno oranges. They are beauties—bright-colored, solid and as good as they look. They are fully equal to Riverside oranges, and as good as the earth produces. Fresno county presents first-class advantages for the production of oranges and lemons. In many of the valleys in the foothills there is a supply of water for the irrigation of land now lying idle or used only for grazing, and in many of these sheltered valleys a damaging frost is unknown. The writer recently made a short trip in the foothills directly east of Fresno, and found on Fancher creek, some six miles above where it empties on the plains, that there has been no frost this season, although for a month past it has been freezing nearly every night in the valley. Here are tomato plants two or three years old, growing during the winter without any protection from frost. It is in this warm, frostless, fogless belt that oranges and lemons grow to perfection.

Inyo.

HEREFORDS IN OWENS VALLEY.—*Independent*, Nov. 27: Last Wednesday Mr. W. J. Marsh arrived in the valley with a carload of full-blooded Hereford cattle from his ranch at Fort Churchill, Nevada. The lot included bulls and heifers. Two of the bulls were for Mr. Rawson. The price of these two animals is said to be \$2200.

Los Angeles.

WESTMINSTER SQUASHES.—*L. A. Times*: William A. Beckett reports three vines of a watermelon-squash that yielded respectively 184, 110 and 90 squashes, averaging 20 pounds each. The largest vine measured 70 feet across, and in one place the squashes grew three deep for want of room on the ground! And Mr. Beckett is a reliable man.

San Joaquin.

MR. BOYCE'S BARN.—*Lodi Cyclone*, Nov. 25: Mr. Robert Boyce, near Woodbridge, has built a new barn, which is a model and the finest in the county. Its dimensions are 52x60 feet and 61 feet high to the weather vane, a horse. It is placed on a solid brick foundation, and earth has been filled in and thoroughly tamped down to the level of the sills, which rest on the brick foundation. The stable-room, taken from the south side of the building, is 17 feet deep and will accommodate 22 head of horses. A hall running the whole length of the barn and parallel with the stables is seven feet wide. This enables the man feeding the stock to take the grain from the hopper, or the hay from the slide, and fill the mangers without going into the stable-room. Above the stable a good tight floor of surfaced flooring is laid, which makes a fine large hall, suitable for storing grain in the sack or bulk. The granary constructed near the top of the barn, and connected with the lower floor by a spout or slide, will hold about 300 sacks of ground feed. All parts of the framework are put together with joint bolts, at an extra cost of over \$50, and nails were used only in putting on the shingles and weather boards. A lately improved track, with block and tackle, enables them to unload a rack of hay in a very few minutes. The openings are all provided with double doors, an inner door made of slats to give proper ventilation and to keep the poultry out. Take it all in all, this is a model farm, and our other ranchers should take pattern after it, and thus enhance the wealth of our agricultural district.

San Bernardino.

HOLSTEINS.—*Ontario Record*: T. D. Cheney, who lives a short distance northwest of Norfolk, is the owner of the Holstein stock that carried off nearly all the premiums on that variety at the last county fair. Many of them were lying about with all the docility of pet kittens, and we felt that here was just the cow we wanted; and when we learned that one of them made an average of nine gallons of milk a day on green alfalfa alone, our want increased. But then the price! \$200 or \$300 for a calf and more hundreds for a cow. They are certainly the ideal cow, without the deer-like appearance of the Alderney, nor the vicious traits of the Jersey; of fair size and gentle. Mr. Cheney keeps a large herd of ordinary cows of superior grade, having just selected ten of the least

valuable and sold them, averaging \$85 apiece, Santa Barbara.

EDITORS PRESS:—In most parts of Santa Barbara county this year, fruits have, from some as yet unexplained cause, been almost a failure. Other crops are fair, so we do not feel disposed to complain much, especially when we complacently view our fast-approaching railroad. That, in conjunction with other causes, has produced a boom in real estate—somewhat crazy it may be; but when we consider our attractions; when we reflect upon our charming scenery of ocean, islands, mountains; when we behold our inviting canyons and groves and sylvan retreats; our beautiful drives in every direction; the charming beach and the rose-embowered country seats; the city itself, a mixture of palaces and trees, cottages and flowers and green lawns; when we contemplate our peerless and health-giving climate—when all these things and more throng upon our minds and kindle our imaginations, we cry from the fullness of our pent-up souls, Santa Barbara may have her equal; her superior, never.—S. P. SNOW, *Santa Barbara Co.*, Dec. 3, 1886.

Sutter.

MOUNTAIN MUTTON MARKETING.—*Farmer*, Dec. 3: W. H. Phillips, our enterprising drover, has been dealing in sheep to some purpose. He purchased last spring in Eastern Oregon 5560 head of select mutton sheep. They were kept in the mountains during the summer, and for the past two months have made their way by easy stages to this vicinity. In this way they have been kept growing and fattening, and arrived in the best possible condition. Mr. Phillips sold them on arrival to San Francisco butchers at \$3.50 per head, which is the best evidence of their size and quality. About 1000 per week are delivered, are driven to Sacramento and thence shipped to the bay. About 2000 of the sheep passed through town last Wednesday, and we can truly say that we never saw finer and better-conditioned mutton sheep in the State. Mr. P. is making a handsome thing in this venture, and deserves it, too, for his enterprise and pluck.

Santa Clara.

QUINCES.—*Merced Argus*: We have received from Mr. and Mrs. C. M. Merriam a box containing over 50 pounds of the largest and most deliciously-flavored quinces we ever saw or tasted. They were raised on their place near Saratoga, Santa Clara Co.

Shasta.

GARDEN AND ORCHARD NOTES.—*Free Press*, Dec. 4: To-day D. N. Honn received from Chas. Camden, of the Tower House, English walnuts, Japanese walnuts, California black walnuts, common black walnuts, butternuts and English filberts—all fine, fresh-looking nuts, this year's growth.... In J. M. Gleaves' door-yard can be found a variety of roses and other flowers in full bloom.... Judge Bush showed us yesterday a large and beautiful orange tree loaded with fine oranges, grown with no irrigation and scarcely any cultivation—proof positive that oranges can be grown on the red uplands and foothills of Shasta county.... On an orange tree of three years' growth in Lee Fader's yard there are 15 oranges that measure on an average 9½ inches each in circumference. In the same yard a lemon tree of two years' growth has attained a height of 10 feet. All kinds of flowers are now in bloom, and the green grass is 10 inches long. Can any locality beat this for December 4th?

Sierra.

WELL-BORING.—*E. J. Wood*, in *Reno Gazette*, Nov. 24: I send you data and extracts from the report of the secretary of the West Side Well-boring Company. Their outfit consists of a set of hydraulic jetting tools, total cost in complete running order, about \$90,000. It is divided and owned in 16 individual shares, and its operations have been confined almost exclusively to the west side, having crossed the tubes but once in boring a well for Keys at Loyalton. They have bored during the season, from April 15th up to the present time, 30 wells, and in 26 cases obtained flowing water running from three to 90 gallons per minute, and from 230 to 940 feet in depth, the largest wells being obtained at a depth of about 700 feet, although some very good ones have been struck at 400 feet. The wells range in temperature from 40° to 130°. In all cases the water has proven to be good and palatable, both for drinking and culinary purposes, and much superior to any surface water for washing. Cattle and horses invariably drink of it with great avidity. Some wells appear to be slightly impregnated with sulphur, and others with iron, but no alkali. The hottest well obtained thus far, that of Wm. A. Sperry, is 190° in temperature. I am confident it possesses rare medicinal qualities for the cure of dyspepsia and rheumatism. To give an idea of its temperature, it can only be drank as one would sip the very hottest tea. It tastes perfectly fresh and sweet with the exception of having a barely perceptible taste of iron, and quenches thirst better than ice water. If there is any virtue in hot water cures, Mr. Sperry certainly has a valuable sanitarium. The outpour of the above 26 wells amounts in the aggregate to 533 gallons per minute, or 756,520 gallons every 24 hours. The most expeditious work done was the sinking of three 600-foot wells in one week. The deepest single line of casing driven was 193 feet, in sand the entire distance. The material used for casing is common 2, 3, or 4-inch gas pipe, 5-16 of an inch in thickness. The large majority of the wells have required but one piece of

18 or 20 feet in length. During the last season and this, there have been four other machines in operation here, portions of the time, and one other, the Wilson machine, was in constant operation last season and this, so that the above estimates will but barely include 1-5 of the work which has been done. The West Side Company have been fortunate in securing the services of James Rector, a careful and experienced expert, he having followed the business for a number of years in the State of Illinois.

Sonoma.

ORCHARD DRAINAGE.—*Democrat*: In the 42-acre orchard of Hon. John Markley, near Santa Rosa, there are about 4600 trees from one year to three years old, comprising apple, prune, apricot, pear, persimmon and fig, besides several varieties of nut and ornamental trees. The land is in a high state of cultivation. Mr. Markley has made an experiment, or, rather, has put to valuable account the experiments heretofore made, in the matter of drainage. Looking over his orchard, one may see extensive depressions, in which an excess of water destroyed the young trees in their first or second year's growth, but which being drained by tilting joints leading throughout their extent, terminating in a main drainage canal, have been restored to an equally productive capacity with more elevated portions. Fresh trees planted after putting in the drainage tubes, in place of those drowned out, are as healthy in appearance as the most favored in the orchard. While other parts of the State need irrigation, that which the valley lands of Sonoma county most need is thorough drainage. It is a common supposition that these valley lands are of too low a temperature for the production of fruits; but, properly drained, they prove to be unsurpassed in productive capacity, as regards both quantity and quality.

EVICTING THE VARMINTS.—Between 60 and 70 pelts and scalps of wildcats and foxes have been received at the County Clerk's office during the past week. Most of the animals from which the pelts were taken were killed in the mountains around Cloverdale. Sheep-raisers in that neighborhood say that the bounty ordinance has been the means of insuring to their sheep and lambs a longer lease of life.

Tulare.

VERTEBRATE VERMIN.—*Register*: Tulare county is not a little pestered by fowls of the air and beasts of the field. The coyote is too numerous and makes havoc in poultry yards and among young pigs. Squirrels and gophers need to have unceasing war waged against them. Geese and blackbirds destroy enough wheat every year to fill a warehouse. And there is the jack-rabbit, worse than the plague of frogs and locusts sent upon Egypt. No organized effort at riddance of these pests has yet been made in Tulare, but it is time something were done. The supervisors have authorized a bounty of \$2 for coyote scalps, and our young Nimrods would do well to measure wits with this cunning pest. We believe there is a bounty of two cents on squirrel scalps, but if neighborhoods would join forces it would pay to poison these fellows even were there no bounty. There is no law against poisoning birds except around public parks and cemeteries. The jack-rabbit will have to be fenced out, poisoned or shot, without aid from the county. If the farmers and fruit-growers could only unite and work together for a few days in each year, these pests could be kept in check; but unless some concerted action is taken, the damage to growing crops, young vineyards and orchards will aggregate many thousands of dollars annually, and will increase rather than diminish.

NEVADA.

CATTLE ON THE MEADOWS.—*J. F. Triplett*, Inspector of the Nevada Live-stock Association, has furnished the *Sagebrush Stockman* with a detailed statement showing 10,250 cattle now at pasture on the Meadows. At this time last year, adds the *Stockman*, there were over 14,000 head of cattle on the Meadows, and the decrease this year is accounted for by the fact that most of the hay harvested in the valley has been disposed of to stockmen already here, and other stockmen are deterred from coming for that reason. As it is, the cattle now here will be shipped below much earlier than was anticipated.

THE STOCK RANGES.—*Reno Gazette*, Nov. 29: All kinds of live-stock are doing well on the ranges throughout the State and at the North. The recent storms were not nearly so severe on cattle as the early fall rains of last winter. Cattlemen are feeling quite easy, and go into the winter confident that the predicted hard weather will not prove so disastrous to stock as was at first feared.

Matthew Cooke's Work.

We were glad to see at the recent Fruit-growers' Convention in Sacramento that Matthew Cooke, who has rendered such valuable services in the war against injurious insects, was able to be present and participate in the discussion of the subjects in which he is especially interested. Mr. Cooke has suffered severely from rheumatism for the last year or more, and has not at present the strength he once had, and yet he is working on with vigor and interest in the line he chose when the codlin moth began to bore into the prospects of his box factory. Mr. Cooke is now publishing a handy and neat series of bulletins on entomo-

logical subjects, which he calls "Golden Drops," and which he sends to those who subscribe to the support of his "Bureau of Information." The "Golden Drops" have the latest information about insects and their destruction, and we doubt not that all who feel disposed to aid Mr. Cooke in his work will consider themselves well repaid by the information they receive, beside enjoying the consciousness of helping an energetic and devoted man to carry on a valuable work. Fuller knowledge of this work can be had by writing to Mr. Cooke at Sacramento.

Rain Table for Sacramento, Prepared to 1884 by the late Dr. T. M. Logan and the late Dr. F. W. Hatch, and since 1884 by Sergt. J. A. Barwick. Arranged according to seasons, showing the amount in inches of each month, during thirty-four years, and for each rainy season, to Dec. 1, 1886; also the quantity for every month, and the annual amount of rain.

BETTER.—Col. Webb, secretary of the State Board of Horticulture, is happily relieved of his late gastric affliction, and we are glad to find him again at his office.

### If, Some Day.

[Original—By M. JOSEPH PAGE.]

If, some day, you and I should meet by chance  
Along some crowded street or busy mart,  
How would we grasp each other's eager hands!  
While tears would spring from overflowing hearts,  
And drawing thence, from out the listening throng,  
We two would choose some secluded way,  
Where, in communion low, for one brief hour  
We would recall those forgotten days.

I know 'twould be to me a sad, sweet joy,  
Thus to sit, face to face, in converse low,  
Reviewing all the past and vanished years—  
Sunshine and shadow, with their ebb and flow;  
Recounting vanished joys—for there were joys—  
Albeit so fast, on gilded wings they sped;  
Sorrows and misfortunes that have cast  
Dark shadows o'er the heart, ere they, too, fled.

And softly we would speak of those we loved,  
With the low tremor of the soul's deep flow;  
And dreams and hopes that burnished life's dark  
hours

With the swift splendor of their transient flow.  
Brief meetings, and sad partings that have touched  
Our lives with sweet or painful circumstance;  
The burdened years, with all their memories, dear  
friend,

If, some day, you and I should meet by chance.

Oh! 'tis not, "depth of wave, nor space of earth"  
That severs friends, so long and truly tried;  
But fate, relentless, that with stern decree,  
Two restless lives has rudely sundered wide—  
Here must I pause—must be the song I'd sing,  
Only know this: *I'll ever think of thee!*  
Hast thou no burden thought for friendship's offering  
Across the gulf of silence? *Answer me!*

### A Detestable Old Hen.

"Bab!" There is no reply to the sharp call, and the woman standing in the doorway of the Browns' farmhouse shaded her eyes with her hand as she looked despairingly up and down the road. "That child will be the death of me if she stays long," she murmured, stepping out on the broad stone step. "Never since the first day she came has she been within sight or sound when I wanted her! Exactly like her mother for all the world, always a dancin' and laughin' and happy, when, so far as I could make out, there was nothing to be so gay about!" Perhaps the sharp gray eyes had never looked for the bright things of life that made her niece so happy. It is hard to judge others' thoughts and feelings justly without a glimpse into their hearts, and few ever try to look deeper than the surface to form their judgments.

Again the shrill voice called impatiently: "Barbara! Barbara Grey! O, you're comin', are you? Well, jest run 'round the corner of the house and drive that pestering guinea hen out of the yard! Its everlasting 'potrack, potrack' is enough to drive one wild."

"But where shall I drive it, Aunt Bess?" queried the sweet voice breathlessly, as the girl paused at the gate, swinging her big calico sun-bonnet on her arm by the strings.

"Land's sake, Barbara, haven't you drove it out often enough to know it belongs to Mr. Berry at the next farm?"

"Berry?" repeated the girl, laughing; "is he the old man with the horrible temper, of whom you speak so often? Is he home from Europe? Suppose he should see me and come after me, Aunt Bess?"

"Don't be a fool, Barbara Grey," said her aunt sharply. "Go along and do as I tell you. These are my grounds, and I ain't goin' to have anybody's guinea hens asquawkin' 'round fit to wake the dead!"

"I thought the grounds belonged to Uncle Tom," the girl said mischievously, as she disappeared around the corner of the house in pursuit of their next neighbor's noisy hen.

"Sauce-box!" exclaimed Mrs. Tom Brown, as she turned back into the big kitchen and went on kneading bread; but there was a suspicious twitching around the stern lips as she said half aloud, burying her hands deep in the dough, "If the old bear meets her, she won't get the worst of it."

Barbara Grey was a city girl of 16 summers, with plenty of money to do as she pleased, and being the only child of indulgent parents, she had much her own way. She was a dear little girl, however, with a warm, generous heart, and an impulsive but sweet disposition. Having grown tired of fashionable summer resorts, she decided to spend the summer and fall with her mother's sister, Elizabeth Brown, who lived on a large farm among the Connecticut hills, where she tormented the good-natured farmer and bothered his wife until she often declared she would be the death of her. With light feet Barbara hastened after the speckled hen, waving the big sunbonnet to frighten it away. Such a screaming as the creature set up! It seemed hardly possible that one small hen could raise such a commotion. With flapping wings

and ungainly gait she rushed back and forth, to and fro, blindly, wildly, almost provokingly, while breathless Bab made frantic endeavors to induce her to go out the wide-open gate. But that little bit of flesh and blood, a guinea hen, is the most aggravating creature in existence. Go out that gate it would not, and all Bab's chasing and racing and "shooing" could not make it see the sensible side of the argument. "You hateful, detestable old hen! I wish your owner'd keep his chickens at home, where they belong! Oh, you horrid biped! Wait till I catch you, *won't* you get a shaking!" Evidently the hen intended to "wait," and Miss Bab grew frantic. "I'll pull all your feathers out, see if I don't! I'll cut your wings off; I'll choke you, you detestable old hen!" Still the hen did not take kindly to these promises. Perhaps she did not believe them, for she still drew Bab in hot pursuit.

Finally, tired out and panting, she ran blindly into the blackberry hedge, and perhaps thinking, as the proverbial ostrich does when its head is hidden, no one can see it, the hen paused, and with a last desperate gathering of her remaining strength, Barbara clutched it and flung it over the hedge straight in the face of the next neighbor!

"There, you detestable old hen!"

"Confound you!"

A pause. With wide frightened eyes Barbara Grey stood, sunbonnet in hand, staring into the angry face of the terrible neighbor beyond the hedge.

"Well, Miss, I suppose you are satisfied!"

The voice was cold as ice, and the blue eyes flashed straight down into her soul, Bab thought. But she neither faltered nor fled, but stood bravely in the broad sunlight, motionless, breathless.

"Are you avenged? Have the sins of that detestable hen been wiped out in my face?"

Bab flushed and paled, but her brown eyes met his steadily.

"I beg your pardon," she said gravely, suppressing her inclination to laugh, "but the noise of the hen troubled Aunt Bess and I tried to drive it away. Were you there all the while?"

"I was reading in the garden when I caught the sound of battle and could not well help witnessing the encounter, novel as it was."

He was laughing at her! Barbara drew herself up proudly. "At least the hen did not know any better!" she said.

"And you did?" queried her tormentor.

"Well, let me congratulate the victor, at any rate."

She gave the extended hand a freezing look, and turned away toward the house. "I don't wonder your hens act so detestably!" she flashed.

"Neither do I, with such a pretty neighbor!" was the reply.

"It's a wonder you don't eat them up, you're such a bear!" called Bab, vanishing around the corner and bounding into the sunny kitchen. "I've seen him, Aunt Bess, I've seen him!" she exclaimed, breathlessly, dropping into a chair, and fanning herself vigorously.

"Seen who? What is the matter, child?" and Mrs. Brown actually dropped several specks of flour on the floor in her astonishment. And Bab told her.

They saw no more of the "horrid neighbor" for a whole week, but never a guinea hen found its way over the garden hedge. And one day a grinning black servant delivered at the farmhouse door a basket of exquisite fruit. "For the young lady with the big eyes," he announced. And buried among the luscious grapes and white peaches was a note of apology "for the rudeness offered to her that day when she was so tormented by that detestable hen of his." After awhile that neighbor of the Browns got in the habit of going over to the big farmhouse very often, and one day Barbara told her aunt confidentially:

"He isn't old at all, Aunt Bess! He told me last night he was only 29. And he is real nice looking when he doesn't frown and frighten one half to death." And before she went home, late that fall, she promised to return ere another year passed, and see that Aunt Bess was never again bothered by her husband's "detestable old hens."—*New England Homestead.*

**LOTTERY FRAUDS.**—Our attention has been called to a deception practiced here in the interest of the Louisiana lottery, which shows to what extremes this great fraud will go to gull the people. It was lately found out that a dairyman near San Rafael had drawn a prize of \$1200, and been paid the money, and a man was found who claimed that he was the lucky one, and he treated his friends far and wide on the strength of his good fortune. But it turns out that no such prize was drawn here, and the money for treats, and perhaps a little more, was furnished by those interested in the lottery, merely as an advertising scheme. It is said that San Rafael pays \$500 to \$600 monthly for these worthless tickets, and many of the buyers are not able to pay their honest bills.—*Marin Co. Journal.*

"CATO," says Mrs. Harriet Beecher Stowe to a negro man, whitewashing on her Florida plantation, "now that you are free and can vote, I hope you will use your influence with the colored people, and get me the ballot." "Lor! Mis' Beecher," says Cato, rolling up his eyes, while an incredulous grin broadened his kind-hearted, honest face, "duz you reely belebe that women is got sense nuff to know to vote?"

### Woman Suffrage.

**EDITORS PRESS:**—Have we, as intelligent beings, pursued such a course toward each other, individually and collectively, as to promote the greatest happiness and content in the world? We have the opportunity from the dawn of our education to draw from the treasures of learning of past generations. We have had given us the ability to choose the good and refuse the bad. We have had men and women of wisdom and nobility of soul standing on the outposts of civilization, doing battle in the front rank for truth and justice against a foe almost invincible; and to-day what is the outlook for a better time coming? Is there loosing of the bonds of oppression and wrong throughout the world? Are creeds, dogmas and superstition beginning to lift their dark pall from the human soul? Does woman begin to look with hope for a brighter day, when she shall be utterly and perfectly free as a man is free? When that most unreasonable and obnoxious clause shall be stricken out of the marriage ceremony—"to love, honor and obey?"—no qualifying conditions, no modifying phrase of right or wrong—simply a despotic command to obey! Instead of that should be written mutual love, mutual honor and mutual agreement.

A woman said to her friend: "I am very unhappy. I agreed before the priest to obey him; at the time I was not aware of the import of the vow, but I have learned by sad experience. I have no liberty, no friends permitted except he invites them; clothing made and food cooked to his order." No flowers, no decorations, no pictures, nothing to suit the taste of a woman for the beautiful, but all severely plain, all dictated by the domestic tyrant. All history proves that woman, to right her wrongs, must have some power more potent than she has hitherto possessed. That power we conceive to be contained in universal suffrage. Liberty and the ballot are the heaven that will lighten the whole world. As woman is the crowning glory of the world, for beauty, for virtue and accomplishments, we might look for a mighty change when all the weight of her influence was thrown on the side of justice and humanity. What might we reasonably expect in the course of time but a more homogeneous world, a Congress of all nations, universal language, universal decimal coinage, universal arbitration of all difficulties between nations and individuals, universal disarmament of all armies, and universal peace? The way is preparing by the continual increase of communication between all nations. Who can compute the cycle of time since the dawn of organized beings on earth? Age on age has passed away, bringing the world by slow progress through unlimited changes to our present state of civilization. We look for the time when liberty and equality will be established facts, when no unjust discriminations will be made against woman.

The first result of putting the ballot in her hand would be to teach her to think. Freedom to the blacks compelled them to think and act. Cheap postage made us a thinking people, and the ballot would lead woman by degrees to ask herself: "What can I do with this great power intrusted to me?"

She no doubt would at once become a reformer of many abuses and wrong methods. She would call to her aid all the wisest and best of her own sex and the good and progressive of the other. She could hold conventions to consult on the best laws and the best means of removing all discrimination against herself in regard to ownership of property, making of wills and possession of her children. She would be able to assist in making laws to crush out those dens of pollution that destroy her husband and children. She would cause an utter and radical change in the present mode of conducting political campaigns and elections. The great motive powers that to-day carry our elections are money, whisky and lying. Patriotism is almost extinct. Elections are held in saloons, contrary to law, 9 out of 10 drinking at the bar—many so drunk that their tickets are made and chosen for them, and they led up to vote. She could have laws enacted to secure her home-stead from all mortgages, trust deeds and executions. If she had committed crimes she could be tried by a jury of her peers. She would benefit herself and men in reducing taxes, by reducing the cause of taxation. Whence come the criminal prosecutions and vast expense of court machinery? Whence comes that continually augmenting host of insane, paupers, beggars and tramps? Remove the cause of men being in that condition and taxes will be reduced in proportion. That can only be done by the ballot in the hand of woman, waging determined war on all debasing dens of iniquity.

Who can tell where her almost divine mission would end? Legislation she could use to secure to herself a just share of all clerkships and pay of office. By diplomacy she could assist in modifying the almost hopeless condition of woman in foreign lands. Men respect power from whatever source. The ballot would give her power which would be felt at all times; she could say to the domestic tyrant: "This is my home; I have as much right here as you."

I must hasten to a close. I have been able only to sketch the outlines of this great subject, but I must not forget to thank the Grange for introducing into the Order the free and perfect equality of woman in all its privileges; and I must also thank all the noble band of workers

who seek to elevate woman—for the same power that would improve woman's condition would also improve man's.

MONTGOMERY PIKE.

Routiers, November, 1886.

### Crimes Against Women.

Crimes against women are becoming disagreeably frequent. Almost every day we have the thrilling news of assaults, murders or suicides committed from the revenge of disappointed love. This is, however, a misstatement of the case. It may be pride, or vanity, or passion, or envy, or revenge, but it is never love, which is always a purely unselfish emotion. But the most alarming feature of these cases is the fact that woman is about to be deprived of her ancient privilege to freely dispose of her affections. There was a time when the declaration of an offer of marriage or tender addresses was regarded as a feminine prerogative, which no man ever thought of resenting. It was the one inalienable right that the usages of society had not taken from her. No doubt it required a considerable effort to sustain a cheerful demeanor after receiving the mitten, but a resilient nature would laugh at it as a good joke, while others would persist in renewing the suit, hoping to soften the obdurate heart by persistence. Now and then a mariner on the sea of life would keep his eye fixed upon one single star, and when that ceased to shine, would let go the rudder and fling himself overboard. But a new shape of reprisal is coming into vogue at an alarmingly rapid rate. Disappointed love, as it is called; seeks to drown its passion in the blood of the adored one or the favored rival. The pistol is used to enforce the love-letter. Instead of persistent wooing the hot bullet is sent whizzing through the brain of the inspiring cause of the ecstatic craze. Hopeless love, in all ages, has often sought rest in a suicide's grave, and its sorrows have been embalmed in song and poetry; but who ever dreamed that an era of murder would come in as a solace for pining hearts?

A young man may avail himself of a social opportunity to pay his respects to a young lady who may kindly receive his calls and courtesies in politeness to the friend of a brother or as a pleasant acquaintance, but with no thought of a more tender feeling. It is his privilege to ask her to become his wife. It is her privilege to accept or decline the offer. And yet it has come to pass that the rejected suitor whips out his little pistol and shoots the idol of his heart for not reciprocating the flame that devours him. It is an appalling state of things when a woman is denied the right to refuse what she does not want. What assurance of safety has a single woman from a circle of acquaintances admitted to her home on a friendly footing? She is liable to be menaced by the haunting fear that there may be some pining crank or brutal fool among the number, who, if he cannot possess, will not allow another to enjoy, her charms. The increasing frequency of suicide or murder in courtship is one of the problems that the alienist and social philosopher may well study.

### Advice to Country Girls.

City life is not all that it is painted. It has its pleasures and conveniences, but it also has its serious drawbacks. Before making the plunge into life in the city, country girls should ask themselves what is really to be gained by it.

Perhaps in their quiet, rural homes some stray advertisement has reached them, promising to young women high salaries for light work. Hundreds of these advertisements are framed for the very purpose of deceiving the unwary. They accomplish their purpose, however, and large numbers of young girls rush up to the city, dazzled by the generous profusion of promises.

A girl from the farm answers one of these advertisements. Life may have been slow at home, but there was always good food and in plenty, and there was someone to care for in the old farmhouse. When she goes to the big city she finds that the "light work" consists in working all day in a badly lighted and ill-smelling work-shop, where scores of other girls and women are employed at wages hardly high enough to keep body and soul together.

We know what often comes next. The girl has left home, she is ashamed and unwilling to return, and she must take the consequences, oftentimes one of two things—shame or suffering. Many a girl finds first in the frivolities and next in the iniquity of the streets that excitement by which regrets and remorse may be deadened. If she is too strong in principle, too pure and elevated in tone thus to sink down to one of the pitiable women of the street, she may find herself in some cold garret, lonely, overworked, despondent and miserable.

Better remain at home than risk the failure which attends so many girls who go to the city in pursuit of high pay for light work. It is the saddest of all ventures, forsaking a country home for the illusions and deceptions of a large town.—*Reading (Pa.) Times.*

"SAY (hic), Miss Blanche, shall I sing 'Coming Thro' the Rye?'"

"No, thank you, Captain Biler; at least, not until you get over the effects of it."

## Temperance Instruction in Public Schools.

Nothing so good has ever before happened to the children of America as that they are to be taught about themselves—the greatest empire over which they will be obliged to rule. The wisdom of beginning with the beginners is the crowning wisdom of the plan, and will increase beyond all computation the sum of human happiness. How to be well is no small part of that other problem—how to be good. I would rather teach the primaries than the high-school class, for thus I should be certain of the largest interest on the capital invested.

First of all, I would treat the subject broadly. Hygiene, "system of principles or rules designed for the promotion of health," should be my theme. If possible, I would place a large photograph of Thorwaldsen's Hebe upon the wall behind my desk, and make it my text for many a brief talk. The children should know the myth of Hygeia and get something of the Greek spirit from their study. If I could do no better, they should see and understand a little about the picture opposite her name in the unabridged dictionary. Then I would know as much more than they as might be practicable.

Experiment should enter largely into my plans. I would try to develop a health conscience in my pupils, showing them the sacredness of the temple in which their spirits dwell, and the painless, happy way in which they might live if obedient to God's law, made for their highest good and written in their members. I would organize them into a health club and try to arouse a genuine enthusiasm in them for wholesome, cleanly ways of living. In all respects I would diligently try to be an example to the flock in my own daily life, asking nothing of them in respect to dress, diet, exercise, etc., that I did not myself observe. I would request my pupils to tell me of illustrations noted by them in which the laws of health were violated, and I would try to show them the relation of a sound body to a sound mind and a good conscience. The gospel of purity in word and deed should be discreetly taught, and every effort to impress the motto, "Keep Thyself Pure." In the higher grades I would circulate the white-cross literature, which is singularly exalted in tone and free from hackneyed or technical expressions.

I would teach the unscientific nature of such expressions as, "he drank too much," "he smoked too freely," "he was a moderate drinker," "he indulged to excess," showing that since alcohol and nicotine are the attractive ingredients in all use of intoxicating liquors and tobacco, any use of these things is harmful because both are poisons, notoriously injurious to the tissues of the body and the temper of the soul.

Besides the regular text-books, I would study "The Man Wonderful in the House Beautiful," by Dr. Allen; the lectures of Dr. Benjamin Ward Richardson, and Dr. William B. Carpenter; and "A Study of the Drink Question," by Axel Gustafson. I would write to the *Union Signal*, Chicago, for a bulletin of its publications, and study the juvenile lessons there furnished—all this for the sake of amplitude in fact and illustration.—*Frances E. Willard.*

## A Girl's Idea of a Man.

The following conversation was overheard in a hotel at Weldon, N. C., during the Civil War.

Two young girls were chatting on a sofa, unconsciously drawing the attention of the crowd in the room to their conversation. Said one: "Selina is going to marry Lieutenant F., after all. You know she had broken her engagement with him. But he lost his leg at the battle of Manassas, and what does she do but take the hero into her favor again. I could not marry any one who was not a whole man, could you?"

"Yes," exclaimed the other; "if there was just enough of his body left to hold his soul, I'd marry him if I loved him!"

The applause that followed this speech was tremendous. The soldiers sprang to their feet and vented their feelings in loud huzzas, while the landlord and attendants rushed into the room to see if the "Yankees were whipped."—*Chicago Ledger.*

**THE CALIFORNIAN SHEEP.**—California wool always reminds me of the time when the gold diggings were first discovered in California. At Oxford it used to be the custom at Christmas-time for the butchers to exhibit the prize sheep which they had bred and purchased. One butcher procured a very fine sheep, dyed its wool purple, gilded its hoofs, and exhibited it as a Californian sheep. It seems hardly credible, but numbers of persons went away in the firm belief that all Californian sheep had purple wool and golden hoofs.—*Longman's Magazine.*

**WHAT MAKES VINEGAR SHARP.**—George Adams, in 1747, said that some people have imagined that the sharpness of vinegar is occasioned by the eels striking their pointed tails against the tongue and palate; but it is very certain that the sourest vinegar has none of those eels, and that its pungency is entirely owing to the pointed figure of its salts, which float therein.

## YOUNG FOLKS' COLUMN.

### Tabby's Ride.

For Our Younger Readers.

Tabby was a great traveler. She knew every spot about the house—from attic to cellar—and just where everything that she liked was kept. There was hardly a rat or mouse on the place that could hide from her. She crawled into every dark corner of the barn, could tell the number of eggs in each hen's nest, and often she took long walks through the fields, creeping through every hole in the fence that was as big as her body.

Beside all this, she rode about the farm-yard a great many times. She had merry rides with little Harry in his baby carriage, with Johnny and Fred as horses; she had lain curled up on the great load of hay when Mr. Dorr and the men drove in from the fields, and she had traveled ever so many miles in the empty wagon, when the boys played it was a train of cars. She liked this railroad journey best, but Fred always waked her up at every station by his loud Too-oo-oo-t! At other times she did not know that they were moving, even when Fred said they were dashing along at a terrible rate!

But such a ride as the one I shall tell about, she never had had before in all her life! Indeed, she would never have taken it—but she could not help it. Ponto made her go. You see, Ponto and Tabby were good friends. They lived and ate together; they ran races and played all sorts of nice games; and they liked each other very much. Sometimes they had little quarrels; but they soon forgot their anger and were friends again.

Every evening, when Ponto came into the yard, the two friends would run down one little hill from the house and up another little hill to the barn where Mary was milking. Ponto would keep the pigs out of the yard, and Tabby would watch every hole in the barn floor for a rat or a mouse. Then, when Mary was done milking, she would pour some fresh milk into a pan for Tabby to drink.

But, after awhile, there came a long rain-storm. Ponto had to stay in the yard for two or three days. Tabby did nothing but doze! It seemed as if it never would stop raining! But it did at last; and when Ponto and Tabby ran down the hill again, they saw at the bottom—a pond deep enough to drown them both!

Tabby did not know what to do. In all her travels she had never crossed a pond of water. She was frightened, and would have gone back to the house, but she looked toward the barn, and saw Mary and the pan of milk waiting for her beside the door.

Ponto did not care for the water, for he could swim. So when they came to the edge of the pond, he plunged in and was soon across. Then he looked back to see what had become of Tabby. He thought she would be at his heels.

But no! There she was on the bank where he had left her. Her back was curled up till it looked as if it were broken, and her tail waving over it! What in the world was the matter? She never looked so except when she was angry.

Now, Ponto thought Tabby was a wonderful cat. He had seen her catch rats, and he knew that she could do some things that even he could not. "Surely she can cross that pond," thought he. He did not know what to make of it.

He called to her, with a bark, to "jump in and swim across." But she only replied with a cross "meow," which he did not hear. Then he said again, "It's easy to swim across—come on!"

"As easy as for you to climb a tree," said Tabby in an angry way.

This was too much for Ponto! He could not climb a tree, and Tabby knew it. When he was too rough in his play, she would run up into the apple tree, and there she was safe. So this reply made him angry. Tabby should not have said it—but then, she wanted the milk!

"It is so easy that I can swim across and carry you, too," thought Ponto, and then he plunged into the water again. When he reached the shore, he seized Tabby by the back of the neck with his teeth, and rushed back into the water. Poor Tabby! She thought she certainly would be drowned.

But Ponto knew better. He held his head so high that the water hardly touched her pretty little paws. So she kept quiet and did not struggle. It was not so bad, after all! And besides, there was the milk!

When they landed, Tabby had a stiff neck for awhile, and Ponto had to shake his great shaggy sides until they were dry. Then they ran up the hill as fast as they could go, and into the barn, and almost into the milk-pail before they could stop.

Tabby was very thankful to Ponto for this ride. She said to herself that she would help him to climb a tree the next time that he tried. But as she drank her milk, she was glad that they both could follow Mary home by the long path through the orchard.

Tabby did not forget her strange ride. But she has never taught Ponto how to climb a tree! She has not even helped him up to the lowest limb. Do you think she ever will?

## GOOD HEALTH.

### Insanity in California.

We have received the 34th annual report of the superintendent of the Stockton Insane Asylum, in which we find some interesting facts in regard to insanity in this State, as compared with that disease in other communities. We copy as follows:

Has our State more than its share of insane? There is a prevailing impression that mental disease is spreading among us at an unusual rate; indeed, I have heard the phenomenon explained on climatic and atmospheric as well as other grounds. A few considerations may here be presented to show that this impeachment of the mental stability of our people is unfounded.

First, let it be remembered that the aggregate number of the insane must ever be on the increase in any prosperous, growing community. So plainly is this so that the demand for additional asylum accommodation may generally be taken as an index of the advancement of a State, and a proof of its material and social development. But the repetition of these demands, with the frequent attraction of public attention to the subject, conveys to some the belief that insanity is inordinately active here. California, absorbing a large immigration yearly, yet with capabilities for great future numerical expansion, must expect to be called on to erect a new asylum every nine or ten years for perhaps the next half century.

No definite conclusion as to the prevalence of insanity in a community can be reached except on the basis of population. But what is the present population of California? The Federal census of 1880 placed it at 864,686. A comparison of this with former censuses fortifies the claim upon which most estimates of our numbers are now made, namely, that the State has for many years been steadily increasing at the rate of 100,000 every three years. Accepting this count as probably near the truth, the present population would be something over a million.

On this basis the proportion of insane here is not in excess of that of many other States. There are now 2922 inmates in our asylums, which gives us 1 to every 360 inhabitants. The ratio in New York is 1 in 365; in Massachusetts, 1 in 350; in Australia, 1 in 375; in Great Britain, 1 in 345; in France, 1 in 400; in United States, 1 in 545, excluding idiots, 1 in 300, including idiots.

Again, there is a gradual decrease in the number of persons annually sent to the asylum, in proportion to the population. The number of those attacked with insanity is proportionately less now than it was three years ago, and three years ago it was less than it was six years ago. This progressive diminution in the ratio of those committed proves in the clearest manner the steady decline of insanity in our midst.

While, therefore, it cannot be said that California has a higher insanity rate than ordinary, there are certain peculiar and incidental conditions that tend to keep the rate higher than it would otherwise be. Foremost among them is our unusually large foreign-born population.

It is well known that Europeans coming to this country are much more subject to mental disorder than our native-born citizens. The reasons for this are various. The shock of separation and transplantation, the uprooting of old associations and habits of life, the homesickness, the inability in those who have hitherto always lived in the vicinity where they were born, to adapt themselves and find mental anchorage in new phases of existence—these are some of the explanations that have been offered. The fact was placed in a startling light by the census of 1880. It was found that while one-seventh of the whole population were foreign, of the insane, not one-seventh, as might have been expected, but one-third, were of foreign birth. Thus it appeared that while but one in every 662 of the native population was insane, the ratio among the foreign-born was one in every 250.

Turning to our own State, we find this significant showing repeated and intensified. No State in the Union has so large a proportion of foreign-born, except the neighboring State of Nevada. Over a third of the population of California, in 1880, were born outside of the United States. The number returned as insane in that year was 2503, of whom 1618, or two-thirds, were of foreign nativity. That is to say, one-third of our population (the foreign-born) produced two-thirds of our insane. Or, stated in another form, while one in every 646 of our native-born is insane, the ratio among our foreign-born is one in every 180. Giving these remarkable figures their weight, it will be seen that a low rate of insanity in our State would, under present circumstances, be akin to a miracle.

Another point closely affecting our insanity statistics may be found in the wide scope formerly embraced in the peopling of this asylum. Founded in 1850, it was for many years the only receptacle for the insane on the Pacific Slope. In the absence of other places for their reception, the insane of the Territories north and east of us naturally gravitated to Stockton, where they are to be found, many of them, to this day. They help to swell the large class of chronic insane who have accumulated in our wards, and who, carried on our books from year

to-year, contribute toward giving a wrong impression as to the prevalence of acute insanity in the State.

Idiocy, etc., in California.

Another fact should be considered in this connection. While in other States, imbeciles, dotards, simpletons, fools, etc., are kept in separate institutions, here they are all consigned to the insane asylums and counted in the reports as insane—another source of error into which many, not acquainted with the facts, naturally fall. When these classes of patients are separated, the statistics show that our proportion of idiots, etc., is far below that of other States, but the exact figures are not given in the report before us.

## DOMESTIC ECONOMY.

**TOM THUMB OMELETTES.**—Eight eggs, half-cup of rich milk, salt and pepper, tablespoonful of cheese; beat the eggs light, season, stir in the milk, the grated cheese. Half fill eight patty pans, buttered, and set in a dripping pan with half an inch of boiling water in it; shut up in a quick oven, and as soon as they are "set" turn out on a hot dish. You may vary the dish by substituting minced parsley and thyme for the grated cheese, and, when dished, pour drawn butter over the omelettes. They make a pretty show when garnished with curled parsley, a tiny sprig being stuck in the middle of each mold.

**BOSTON BROWN BREAD.**—Mix two cups of rye flour and one cup of yellow cornmeal. Add one teaspoonful of salt, one heaping teaspoonful of soda dissolved in nearly a cup of molasses; add cold water, and stir and beat very thoroughly till you have a medium stiff batter—not too stiff, as the meals swell, and the bread would come out hard and unsatisfactory. Put in a buttered pan, smooth the top of the loaf, and steam at least four hours; then dry off in the oven for 20 minutes. This amount makes one good-sized loaf. Unbolted rye is the best, but when not obtainable, the rye flour is a fair substitute.

**APPLE PUDDING.**—A good apple pudding can be made by dipping eight thick slices of stale bread in cold water, buttering them, lining the sides of a buttered two-quart dish with the bread, filling the dish with sliced apples, sprinkling a cupful of sugar, one teaspoonful of ground cinnamon and half a cupful of water into the dish, covering the dish with a large plate, and baking in a very moderate oven for three hours. Let it cool for half an hour; then turn out on a warm dish, and serve with sugar and cream.

**PLAIN RICE PUDDING.**—Wash half a cupful of rice in three waters and soak it in cold water for two hours. Drain off the water, and add a level teaspoonful of salt, a slight grating of nutmeg, two tablespoonfuls of sugar, half a cupful of stoned raisins and one quart of milk. Cook in a very moderate oven for two hours, stirring twice in the first half hour. At the end of two hours, add half a pint of cold milk; stir well, and cook for an hour longer. Serve in the dish in which it is cooked.

**JELLIED CHICKEN.**—Boil a chicken till tender, take off skin, cut the meat into small pieces, taking out the bones; skim all the grease off the liquor in a pot; mix a tablespoon of corn starch with a little water, rub smooth and let it boil up good; season well with salt and pepper. Boil eggs hard, peel and slice, lining the bottom and sides of a crock with them, then pour into this the prepared chicken, and set in a cold place to harden. Turn out when cold.

**BROWN BETTY.**—Lay in a pudding dish, first, a layer of finely-sliced apples, sugared to taste, and dusted over with powdered cinnamon; next, a layer of coarsely-crumbled bread, buttered at intervals. Alternate these layers until the dish is full. Let the last layer consist of apples cut in eighths. Pour on sufficient water to moisten the whole. Cover and set in the oven. When the apples on top are tender, remove the cover and cook until brown. Serve hot without sauce.

**FLAKY SODA BISCUIT.**—Mix together a quart of very dry flour, a teaspoonful of baking soda, two of cream of tartar and a saltspoonful of salt; pass through a sieve, then chop in two ounces of butter or lard, and mix quickly with milk to make a very soft dough. Flour the board well, roll out, sprinkle with flour, double it over and roll out again; cut into biscuits half an inch thick. Bake in a very hot oven about 15 minutes.

**APPLE FRITTERS** are easily prepared. One cup of sifted flour, one teaspoonful of Royal baking powder, one pinch of salt, two eggs, one cup of milk. Sift flour, salt and powder together, add the eggs, beaten, the milk, one-half pint of chopped apples and nutmeg to taste. Mix into a batter as for griddle cakes, and drop spoonfuls into lard made hot for the purpose. When a delicate brown, remove. Serve with sugar.

**BISCUIT.**—Sift together three times one quart flour, one tablespoonful corn starch and one teaspoonful good baking powder. Add one tablespoonful of lard, a pinch of salt and a cupful of cold water; mix and bake in a quick oven. This will make eight or nine good-sized biscuits.

## The Week.

The rain has come. It fell gently amid a still air at first, and the croakers called it but a delusive shower, but it has improved with age and the south wind found its voice and its legs and started forth over the country in true wintry style. As we write on Wednesday the rain area has spread well over the upper half of the State, and if usual signs avail anything, we shall get as much water from this storm as any one needs for immediate use. The rain will brighten up business affairs, give the farmer a chance to hitch up his idle teams, increase the wives' and children's Christmas portions and make every one happier. Befitting the opening of the season we give on another page the table of rainfall at Sacramento since 1849, which is an interesting study.

We give considerable space this week to citrus fruit matters, and we shall have more in the future. On pages 490 and 491 may be found an interesting essay on orange-growing and the discussion drawn out by it. Sketches of the amounts of Government lands still avail-

able for fruit and the progress which is being made in peopling them are pertinent to the display next week at Sacramento. We are always glad to see any part of the State awakening to a consciousness of its own resources and possibilities. California roses were not born to blush unseen.

## The Rural Press.

We are printing an extra edition this week for distribution at the Sacramento Citrus Fair, as we wish to bring our paper to the attention of all who are engaged in the development of the resources of the State. It is to such work that our publication has been devoted since its establishment 17 years ago, and it is acknowledged to have been an important factor in the advancement which has been attained. We have endeavored to serve the extension of the agricultural interest faithfully by bringing forward, for the use of all, the soundest and most successful local practice which has been adopted by our most intelligent farmers as the result of their experience in this State. By presenting such valuable experience as a guide for newcomers, the RURAL PRESS becomes a handbook of California agriculture, and serves the new-comer to this peculiar State as no distant publication can.

We are not much addicted to indulging in platitudes about the glorious soil and climate, etc., which are well enough in their way, but do not prove of any great advantage to people after they come here and desire to know how to get a living out of the soil and under these delightful skies. We aim to do such people good service, and to give practical advice, which is of value in individual cases. This is rather a humbler field than that in which poetry and rhetoric can be freely used in glorifying the State, but we conceive it to be of more value to a new-comer, who really wants to know what to do after he has cast his lot with us.

In addition to this practical work we endeavor to send out each week a clean paper free from demoralizing sensations, free from disguised exhortations to evil, and full of hopeful and helpful suggestion, ennobling sentiments and innocent entertainment. We believe that any one who desires to labor earnestly and intelligently in California agriculture, who longs to keep his home pure and happy, who yearns for the elevation of his chosen calling, and for a proper recognition of its claims and services in public places, will find in the RURAL PRESS a friend and helper which he can trust and support as a worker with him toward such ends. We have succeeded well in obtaining such a position in the hearts and minds of those who know us best, and we ask each one who looks over our pages for the first time to give the RURAL a trial, though it be but for a short period. All we need is the introduction to your attention—after that the paper week by week pleads its own cause, and seldom fails of a victory.

**VALUE OF THIS YEAR'S WHEAT CROP.**—Despite the lower prices, California tillers of the soil this year will be better off than ever before by larger crops. There will be 70,000,000 bushels of wheat for export this year, which will give an income of at least \$54,600,000, against \$28,000,000 last year. "Our barley crop," says the San Francisco Record, "of 18,000,000 cents will bring in \$16,000,000, as against \$9,000,000 last year. In these two items alone we will have \$72,000,000 where we had in 1885 only \$47,000,000, an increase of over \$35,000,000, or nearly double that of 1885, while the area sown was only a fraction larger. When California became a State, statesmen indulged in the prediction that, being almost wholly auriferous, it would never be able to support a large population because it had no head producing capacity. She is the greatest grain-producer of any."

## Speculation.

We used to be noted for our dash and daring in business and speculation, and we had begun to hope an era of more legitimate and conservative methods had come in. But the present flurry in mining stocks indicates that the taste for this sort of gambling still lingers, like the remains of the dog or savage in civilized nature, as evidenced by the interest taken in slugging and other brutal sports. One of our city papers says: "We think that an era of healthy speculation would be of benefit to San Francisco." That depends on what is meant by "healthy speculation." To purchase with the expectation of a probable advance, and a consequent sale at a profit, is done every day. In this sense, all business may be said to have a speculative element in it. We have a fair example of this sort of dealing in the case of Joseph in Egypt during the seven years of plenty preparing for a famine by buying up all the grain in the land and selling out at an advanced price. He made a fortune out of the necessities of the people, it is true, but he rendered a very good equivalent by furnishing them with food when it was not to be had elsewhere at any cost.

A writer in the North American Review, speaking of the periodical "stock boom," says: "The millions are made by taking them from the pockets of the general public. It is the public on one side and the great operator on the other. The public is an ass. That is, it is an ass sometimes. When it is in the humor to be fooled, the men are there to fool it to the top of its bent. It wants to buy and it will swallow anything they offer, and believe any story about the value of the article it is buying, however preposterous. Woe to the man who rises then to warn the people of their madness! They will tear up the stones of the street to cast at him. The only consolation he has is the reflection that in a little while they will be cursing the men who deluded them into buying securities at twice their value, or securities rotten and valueless altogether." And so we have seen the people of this State in their periodical crazy fits invest in stocks, buying when the prices were rising, buying most freely at the top, while the stock-sharps who had bought before at zero, and started the boom by tricks known to the initiated, were quietly unloading and laughing in their sleeves at the silliness of their victims. Surely it is not this kind of speculation our contemporary hankers after. Why, it is worse than gambling. It is swindling. In gambling, two sharps sit opposite each other to measure luck in a game of chance. They closely watch each other's movements, and are content when fairly beaten. But the thing usually called speculation is where a sharp or ring of sharps take advantage of an unsuspecting public to get up a corner on wheat, pork or lard or mining shares, setting a trap to catch those who have "sold short" and slaughter them mercilessly without rendering any substantial equivalent to the community for what they receive. The less we have of this kind of speculation the better.

Those who raise bees know there are such mean little scamps as thieving bees that do not care to go away into the meadows in quest of honey, but invade their neighbor's hives and steal and carry away the honey to their own cells. The owner of these bees is no better off than before. He has the same amount of honey, only it has been taken from one hive and stowed in another. This is exactly parallel to much that is called speculation. It is property shifted from one hand to another, but there is no more property in the community than before. It has gone from one side of the street to the other, from the vaults of one bank to the vaults of another. One man or ring of men have made a fortune, but the community is no richer. They have not added a penny to its taxable property. It was simply put up to a grand raffle and a few lucky fellows won it all. The bulls bellowed and the bears fought. The "longs" and the "shorts" wrestled in the arena. And this alternation of property from one hand to another, this tumbling up and tumbling down, is what is called speculation, a sort of financial gaming which no morality can justify, no political economy approve, for the apparent reason that it adds no equivalent value to the productive industry of the country, demoralizes legitimate business by getting up a feverish excitement, love of venture and daring risks, and deteriorates character by producing

a morbid desire for sudden wealth which tramples down all scruples and would pawn conscience and the hope of immortality to the devil on a venture.

## Agricultural Experiment Stations.

Prof. Hilgard hands us some circulars he has received from the East, indicating that an active effort is to be put forth this winter to secure the passage by Congress of the bill establishing agricultural experiment stations in connection with the colleges of agriculture. This measure has been popular with California farmers ever since it was first proposed. The California State Grange for the last three sessions has passed resolutions approving the measure. The idea seems to be generally approved, but because there seems to be no interested parties to go to Washington to clamor for the bill it is put aside for other less important matters.

It appears that the present condition of the bill before Congress is this:

Hon. W. W. Hatch, of Missouri, introduced at the first session of the Forty-ninth Congress a measure with this title: "A bill to establish agricultural experiment stations in connection with the colleges established in the several States under the provisions of an act approved July 2, 1862, and of the acts supplementary thereto." This bill is on the House record as No. 2933, report No. 848. On January 7, 1886, it was read twice, referred to the Committee on Agriculture, and ordered to be printed. On March 3d it was reported with amendments, committed to the committee of the whole house on the State of Union, and ordered to be reprinted. On May 6th it was ordered to be reprinted. It was also introduced into the Senate, where it was discussed shortly prior to adjournment, and laid over until the next session.

Thus it is seen that the bill is in good shape to become a law if popular interest enough is shown to cause it to be taken up and pushed forward. If all who have friends in Congress will write asking their attention to the matter, or write to their local representatives to this effect: if all agricultural secretaries will adopt resolutions on the subject and forward them to Mr. Hatch who introduced the bill, it will be made apparent that the people desire to have this much done for experimental agriculture. We are already enjoying the benefits of systematic work of this kind as provided for by legislative appropriation at the State University. But the work should be extended and taken up by the United States Government on a system which will include the whole country. Let those who desire this work ask Congress for it.

## Thanksgiving Grapes in New York.

One of the fruit-packers at R. B. Blowers' vineyard in Woodland put a "few lines" in one of the packages which was destined for Eastern shipment and signed his name thereto. A few days ago a postal card was received in Woodland bearing these words:

Your basket with lines "to a pretty girl," dated Oct. 19, 1886, filled with luscious grapes, was received by me this 25th of November (Thanksgiving Day). Although not received by a "pretty girl," they were eaten with grateful remembrance.—Mrs. A. J., New York, Nov. 25th.

Aside from the death of sentiment which the note announced, the reply shows something of more value, perhaps, than if the message had reached a willing maiden and the affair had resulted as such things usually do. It shows that the grapes were picked October 19th and eaten in New York in good order on November 25th, five weeks afterward. The shipment was by slow freight to Chicago, thence probably by fast freight to New York. It shows what good packing will do and what good shipping grapes will stand. We are not sure what variety of grape was sent—perhaps it was the Emperor; if not, will Mr. Blowers tell us?

**DEATH OF J. F. OSBORNE.**—We regret to announce to the many acquaintances whom he has made in the course of his business, the death of Mr. J. F. Osborne, who has for the last seven years been engaged on this paper in the advertising branch. Mr. Osborne's death is supposed to have been caused by fatty degeneration of the heart, and the event was sudden, while he was alone in his room at his hotel at East Oakland. Mr. Osborne was of English birth and has parents still resident there. He was about 45 years old and unmarried. He was energetic in business, easy in address and successful in his chosen line of work. The funeral services were held in Oakland on Thursday afternoon, Rev. Dr. W. W. McKaig officiating.

## Parry's Native Jujube or Lote Tree (Zizyphus Parryi).

[Written for the RURAL PRESS by DR. A. KELLOGG, of the State Board of Forestry.]

"The trees around them all their food produce,  
Lotus their name divine—nectareous juice!  
Hence Lotophagi called, which whoso tastes  
Insatiate riots in their sweet repasts.  
Nor other home, nor other care intends,  
But quits his house, his country and his friends."  
Homer's Odyssey.

Although mention is made of this native fruit in the State Forestry catalogue of trees and shrubs desirable for culture, nevertheless such a compiled list must needs be very brief to come within due limits assigned; hence further details may become desirable from time to time.

Common perception recognizes the truism that where native families, genera and species of trees, shrubs and plants abound, they furnish the best basis of presumptive evidence—if not always proof—that other kindred and choicer sorts will suit similar situations, climatic conditions and soils, often vastly widening in their range.

With our intelligent culturists and nurserymen, it seems needless to urge that the almost universally preferred practice is to resort to the wilds for the strongest seedlings as stocks for propagating purposes. Therefore, with this in view, as in duty bound by our forestry relations, we offer a short description, with pen and ink sketch, of our own native *Lotus*, in order to facilitate ready recognition and to designate the best-known localities for procurement of the home seed supply. Withal summary suggestions of a few foreign sorts that might well supersede the native *Jujube*, and here and there intersperse a practical hint or so to profit, or of economic and commercial value.

Parry's *Lotus* is a zigzag, branching, thorny bush or small tree, 4 to 16 feet high, seldom over 4 to 6 inches in diameter. The leafy spines are long, stout and straight, leaves entire and small—less than one inch—blunt or notched at the top, wedge-narrowing into a slender, short leaf-stem, 1 to 3-flowered, recurved in fruit, and this 1 to 3-seeded, mealy and nearly dry, oval, one-half to three-fourths of an inch long, apex short-pointed on a curved stem of one-half an inch or so. Mostly a shrub well suited for more eminently useful hedges; abounds in gravelly ravines near San Felipe, San Diego county, also at Rock House Summit, of the same region, and east of San Bernardino.

Before inviting specific attention to the most commendable species for culture it seems requisite to make a few concise remarks on jujubes in general; for out of half a hundred or more we can now only refer to a few, but, if deemed desirable, others may be noticed hereafter.

Jujubes are among the most feasible, if not the best, of fruits in the world for jellies and various preserves, or dried, and for a sort of bread or cakes, pies, or served as desserts like dates and figs; in short, one way or another they are eatable and mostly excellent. It would be safe to say that 400 to 500 trees to the acre—of almost any soil—could be planted, that at two or three years old would yield five to ten pounds to each bush. With any market at all, the fresh fruit would be cheap at a dime a pound for jelling in the rural way; they would thrive well with less care than a common corn-patch—would double, quadruple and quintuple in four or five years at the furthest, and thence onward for ages; would pay better than strawberries, with half the labor and not a tithe of the trouble in harvesting, nor risk of loss; would even utilize the worst land; have the world for a market, of the dried fruit and jelly, with other uses to be noted further on.

Classic Lote Tree (*Z. lotus*). This is a small tree common to Persia, Africa, Sicily and Spain, and is now cultivated in all regions of the olive, the vine and the fig. Tunis was the ancient land of the renowned people known as *Lotophagi*. This sweet fruit is of the size of sloes, with large stones, and is borne on every part of the plant like gooseberries, purple-tinged; the farinaceous pulp—separated from the pits and sun-dried—is set aside for winter use; has the flavor of dates and figs. A kind of wine or beer-drink is made by expression, diluted with a little water, but will keep only a few days; doubtless immoderately appropriated together in this or some similar way may have led to a devoted dissipation akin to the poet's conception.

It should be observed, in a general way, that

this and all the species are eminently adapted to the borders of desert—delight in arid sands, gravelly ravine-sides, and rocky ridges—would preserve embankments and prevent fearful washouts without serious obstruction to railroads or casting a length of blighting shadows; but they will grow in any soil—fruit described of delicious taste in the fresh state; also, after exposure to the sun a few days, they are pounded and made into bread. These paste-cakes are only sun-dried so as to well evaporate the little moisture used in making; it resembles, both in color and taste, what we designate as "gingerbread," noted as excellent food for long journeys.

From the horrent, thorny nature of the *Loti* one might well wonder how the fruit could be collected with facility; but as it is neither tender nor watery and somewhat farinaceous and leathery-like, and the shrub hardiest of the hardy with tough and elastic twigs, a cloth is spread on the ground and the bush beaten with a stick.

This *Lotus* of the *Lotophagi* must not be confounded with the Egyptian *lotus* (*Nymphaea lotus*), nor with the *Lotus* of Homer and Dioscorides, which is a species of (*amatory*?)

PARRY'S NATIVE JUJUBE OR LOTE TREE (*Zizyphus Parryi*.)

*Trifolium*, inciting, if not causing, a similar infatuation, as the one eaten by the natives of the Pacific in their season; nor with the *Lotus* of Hippocrates (*Celtis australis*), nor with the Italian (*Diospyrus lotis*).

Common Jujube (*Z. vulgaris*). This is a small tree of 20 feet, fruit blood-red or saffron, with a sweet granular pulp. In the south of Europe it is mostly served up in the dried state, as a choice sweetmeat of the winter season, known as *Jujube*. The Turks plant these with other trees in front of their coffee-houses that they may enjoy shade, shelter and fruit together.

East Indian Jujube Tree (*Z. jujuba*). Also a small tree of 16 to 20 feet, cultivated in China and Cochin-China, bears fruit of the size of a large cherry, smooth and yellow when ripe. There is, however, a variety of this or perhaps another species that produces an excellent fruit of oblong form, of the size of a hen's egg, known by the name of *Narikellekool*.

Pear-wood Jujube (*Z. xylopyrus*). This tree abounds everywhere in the forests of Coromandel. Cattle eat the leaves, young twigs and fruit; the kernel has the fine flavor of filberts, of which the natives are very fond. The timber of the largest trees is also highly esteemed, is of yellow orange color, very hard and durable, and withal very light. Most timbers combining such rare qualities for many uses prove too heavy.

A kindred shrub (*Palurus*) or one of this genus both equally common in Judea, The Christ Thorn (*Z. Spina-Christi*). Former, cap or crown-fruited; the latter, doubly-thorned with fruit like a *Sloe*. Rival authors refer to the plausible pliability of their exceedingly flexible

twigs—being readily wrought into any form—as having been the one put upon the head of our Savior. But in the light of this New Age would it not be wiser, more worthy, and much more magnanimous to inquire if the evil and the false alike in us, and all mankind, were not wont now—as ever of old—to crown the good and the true with thorns?

Lote trees may be multiplied by cuttings from roots or ripe twigs, with care, from layers and root slips, suckers and seeds. These budded or grafted from a few choice foreign parent trees would soon yield a progeny of many millions, adding to the wealth of the Pacific, and an annual income to California alike counted by unnumbered millions.

Our readers would do well to consult the enterprising Chairman of the State Board of Forestry, of Santa Monica (A. Kinney), himself a cultivator and manufacturer of the fruit product for the market. It is to be hoped the public may also hear from so competent a writer furthermore on this or some kindred topic.

Our pen picture is from a specimen contributed by Dr. Parry, whose name it bears, and by the liberality of the California Academy of

repeat that when an imperative demand is sent up from the farm to our legislative halls, calling for common-sense legislation on this point, that demand will be heard; but so long as farmers hold their peace, just so long will they be plucked and shorn by oily-tongued villains.

## Economy in the Public Schools.

If there is one thing more than another over which the average American is complacent, it is our system of education. One has only to name the common school to make him feel that here, at least, is safe and solid ground for a good deal of Yankee Doodle glorification. And yet it is a peculiar fact that in the United States, teaching does not hold a high rank. The instructor wields a little narrow authority in his school, but outside he is not ranked with the clergyman, doctor or lawyer. Why there should be any distinctions or classes in a democracy is not easy to see, but they exist, and it is plain that instructors do not occupy the rank they should. In a country whose commonplace boast is that education has always been its chief corner-stone, this state of things is not a little surprising. And yet it is true that this profession, which stands at the portals of the temple of thought and shapes the intellectual consciousness of the nation, does not rank with the other learned professions. The State goes to the expense of building costly and elegant structures, handsomely endowed and well appointed for the education of teachers, but 90 per cent of the students never enter the profession, and most of those who do, merely regard the school as a temporary bridge to something else.

Undoubtedly one cause of this unpleasant state of things is the insufficient salaries paid to public instructors. It cannot be expected that a man of ambition, energy and ripe culture will remain in the service when there are so many avenues of business that are more remunerative. He will stay in it until he can find something better, and no longer, and while in it, he will probably be constantly endeavoring to get out of it. In the subordinate positions the salary is too low to enable a married man to bring up a family in a respectable style. This is why the teaching art has so generally fallen into the hands of females, as it is generally assumed that unmarried women can live on very little. A sewing machine woman can earn, as a rule, as much as the average school mistress, fresh from the Normal School, with a first-class certificate, and many a laundry woman can earn more. And yet, the female teacher is expected to possess a fine education, dress well, and move in, at least, a tolerably elevated social stratum. While applications are numerous, there is a great complaint among the school boards of the scarcity of efficient female teachers. It is not strange. Drawing, painting, modeling, copying and other artistic employments draw many of the most gifted; light literary labors take others; some prefer the counter, telegraph office or sewing machine to the thankless wear and tear of nerves in a schoolroom, on a mere pittance at that. But this is not all. Even that meager sum is uncertain, and the teachers are in constant trepidation lest the school board should take one of its periodical fits of reduction. The salary of the preacher may be small, but it is sure, and he is expected to take a good long vacation, too. The income of the lawyer or doctor is what he can make it, and this is a perennial inspiration to hope and effort; but the teacher, with the most ample equipments, scholarship and experience, can only expect to make a bare living, and that little ever and anon liable to be pinched and tolled by close-fisted economists.

LAWLESS HYDRAULICKERS.—The grand jury of Sacramento county, whose report is just published, have this to say about the debris-dumping industry: We have been credibly informed that hydraulic mining is being carried on upon the Cosumnes and American rivers, in this county, in violation of law; and, believing that all classes of citizens alike should be law-abiding, therefore call the attention of the Board of Supervisors to these rumors, and respectfully suggest that the matter be at once investigated, and, if found true, such steps be taken as shall punish all engaged therein, to the full extent of the law.

A GERMAN colony of a large number of families is soon to locate near Kingsburg, Fresno county.

Sciences, this picture is furnished the patrons of the RURAL PRESS.

## Beware How You Sign!

We have repeatedly warned our rural readers to decline putting their names to any documents (however innocuous-looking) presented to them by smooth-seeming strangers. The last number of *Farm and Fireside*, published at Springfield, O., speaks to the same effect under the head of "Fraudulent Notes":

A Tennessee subscriber asks: If a farmer signs his name to a note unknowingly, and can prove that the signature was obtained fraudulently, will he have to pay the note if it is held by an innocent party?

To which we answer yes; and a more flagrant instance of the perversion of justice it would be difficult to find. It is said that this interpretation of the law depends simply upon the decision of some Dogberry of a judge, who held that the "innocent" purchaser of a note obtained by fraud must be protected at any cost. This "innocent" purchaser is in most cases a professional note broker, who has the best of opportunities for ascertaining whether the notes offered him have been honestly obtained, and who seldom fails to improve the opportunity to make a heavy shave upon doubtful notes. These fraudulent notes are obtained in a multitude of ways. A sleek "agent" comes along and offers a farmer the privilege of trying some piece of machinery, if the farmer will but sign his name to a piece of paper to serve as an address; or a pretended State functionary is collecting agricultural statistics, to which he asks the farmer to sign his name as an assurance of their correctness; or a fellow comes into a neighborhood very anxious to buy a farm, and gets the farmer's name to an agreement to sell—these are a few of the traps; but in all cases the farmer's signature comes back to him at the bottom of a promissory note calling for some hundreds or thousands of dollars. Now we

## The Orange In California.

### Its Growth Both North and South.

An Essay by James Bettner, of Riverside,  
With Discussion by Other Growers.

At the recent Fruit-growers' Convention in Sacramento, one afternoon was devoted to the culture of citrus fruits. We take from the forthcoming stenographic report of the State Board of Horticulture, a full account of these matters as specially appropriate to the Citrus Fair edition of the RURAL PRESS:

Mr. Bettner's Essay.

It is difficult at this time to write an article on orange culture in California that shall contain very much original matter, but as the growing of this, the king of fruits, is now attracting more attention than ever before, as new men in new fields are entering upon it, a paper upon the subject may be of interest, though much in it must necessarily be substantially but a repetition of what has been said and written before. To one desiring to grow his own orange trees, from the start, the first step to be taken is to procure good seed—the next to prepare a suitable seed bed.

The seed of the Tahiti orange has generally been used in Southern California, and the plants from it make good stock either for seedlings or to bud upon.

It is important in case the grower should design to plant his orchard, or any part of it, in seedlings, that he should take care to procure pure unhybridized seed.

For the purpose of propagating seedling trees the seed from our California orchards would be improper to be used; limes and lemons are found in or near all our orchards, and multitudes of bees intermix the pollen of the different flowers.

Some worthless "hybrid" therefore might result from the use of native seed.

The seed of the orange must never be allowed to dry before planting. It may be most readily and cheaply obtained by buying a quantity of decaying Tahiti or Mexican fruit from some of the San Francisco commission-houses.

This fruit can be crushed in a tub or convenient receptacle and the seed washed out.

The sour orange of Florida is very hardy and is said to make an excellent stock. Seeds can be had from Florida packed in damp moss.

A quite small piece of ground suffices for a seed-bed; in a space say 12x12, thousands of young plants can be grown.

The ground should be thoroughly spaded, pulverized and moderately enriched with perfectly well-rotted manure. It should be located in a warm and sheltered spot, easily watered, preferably by sprinkling.

The bed should be inclosed with boards 16 or 18 inches high, set on edge, with a cloth covering arranged on a roller. Covering should be utilized to protect the young plants from the hot midday sun, and also at night, when the temperature is likely to fall near the frost point. The seed should be planted thickly and broadcast, and covered from one to two inches. The best season for planting is in the spring, after the ground has become well warmed and all danger from frost is over—about mid-April in Southern California. The ground should be kept constantly moist, but not too wet.

In a year the young plants will be ready for transplanting in nursery rows.

These rows should be far enough apart to admit of a cultivator working between them, say four feet; the plants may be set 15 or 18 inches apart in the rows. The nursery should be lightly manured yearly, and irrigated by running small streams on each side of each row once a month, from the time the plants are transplanted until the succeeding fall. The first three irrigations had better be made at intervals of a fortnight.

In the spring following the transplanting into the nursery, if everything has progressed favorably the young trees may be budded. The earlier the buds can be set after the sap flows freely and the bark of the young seedlings will "peel" readily, the better. These conditions will be quite certain to obtain early in April.

All nursery trees should be protected in winter by building a sufficient "staging" over them to support a good, thick covering of cypress or other evergreen brush, which brush should be securely laid on in such a manner as not to be easily displaced by wind.

Buds a year old (from the bud) and seedlings three years old (from the seed) may be placed in orchard form. Two-year-old buds—but no older—are preferable to one-year-old for this purpose. It is not desirable to plant any trees whose roots are over four years old.

Buds may be set at from 20 to 25 feet apart each way; seedlings from 25 to 30 feet apart. The earlier in the season nursery trees are moved into the orchard (after danger of serious frost is over) the better.

Trees will generally begin to put forth their first growth from the middle of February to the early part of March. When the young shoots of this growth have attained a length of about one inch, is in my judgment the best time for transplanting. Light subsequent frosts will not be injurious, and severe ones later in the season are rare in most parts of the State at all adapted to orange culture. The young trees should be taken up with as large a ball of earth as may be without danger of the earth breaking off and carrying with it the fibrous roots. For

this reason better have your nursery in somewhat tenacious soil. If moving with a ball be impracticable, be careful to preserve as many of the fibrous roots as possible in digging, and if the trees are to be moved any distance, "puddle" them at once on taking up, viz., have ready a thick muddy paste into which dip the roots, and have damp straw or moss in your wagon-bed to pack closely about them.

Have your holes ready dug of more than sufficient size. Previous to digging these, it will be best to run a furrow down your rows the way they will irrigate, and directly on the line the trees will stand.

Your trees being set in the holes on one of these lines, turn a small stream of water down the furrow. It will run in the holes and settle the earth solidly about the newly-planted tree, at the same time thoroughly wetting the ball of old earth, which it is important to do and cannot well be accomplished in any other way. If your trees have been moved without balls, care must be taken to spread out the roots; in either case the ends of the larger of these should be cut off smoothly with a sharp knife. Do not move your trees unless you are prepared to water them directly on planting. A delay of even one day in watering should be avoided.

I think it well to set the trees a little deeper than they stood in the nursery, but an inch, or even half an inch, is enough.

The young orchard should be irrigated fortnightly for three irrigations, subsequently once a month during the first season.

It will be sufficient for the first year to run one furrow each side of the trees, close to them, and allow a small stream to run by for 10 or 12 hours at each watering.

The second season less irrigation will be needed. The same number of furrows will answer, and it will be sufficient to water once every six weeks, or even two months.

For the third year about the same amount of water will be used as for the second.

Beyond this, as the trees increase in size, it will be found necessary to gradually increase the number of furrows between the rows, until eventually when the trees attain the age of 10 or 12 years and are producing good crops, your furrows should be run through the whole space at intervals of about three feet. The water should be run longer after the first season, from 2 to 24 hours, according to the nature of your soil as to porousness, after it has reached the end of each row. The amount of water needed for trees 12 years of age, in good bearing, will not be less than three times the quantity required by the same trees during their second and third years in the orchard.

I have hitherto spoken of but one way of irrigation, the best in my judgment for most conditions, viz., the method by small streams in furrows. Two others are, however, practiced. One of these methods is to run a considerable head of water broadcast down each several row, shifting it from one to another as soon as the stream has run through.

To use this method your ground ought to be quite level, or serious washing is likely to ensue, and your soil ought also to be of rather a porous character.

Another way is to divide your ground into "checks"—squares proportioned in size to that of the trees—with raised sides, the tree being in the center and the soil drawn up the trunk to prevent the water from coming in direct contact with the bark, which might cause "scalding."

These "checks" are connected by a furrow down which you run the water to fill them. Begin with the lowest "check"; close the furrow leading into it. The check next above will then fill, and so on to the top of the row.

This method is a good one, as it economizes water, and completely saves all fertilizing matter the water may contain.

It involves, however, considerable hand labor, though a good part of the work of making the "checks" can be done with the plow. In whatever way you irrigate, the ground should be thoroughly stirred as soon as dry enough, and before it has at all baked.

#### Pruning.

The heads of trees should be formed in the nursery at about three feet from the ground. The first season after placing in the orchard it may be well to let the sprouts that will form on the trunks remain as a protection from the hot sun. The next spring these should be removed, and thereafter all suckers and sprouts should be kept off. This may readily be done by going over the orchard and rubbing them off three times a year, say in May, July and September or October. Beyond this, little pruning will be required for several years. What is done should be confined to the removal of crossing limbs and the shortening of branches that project or "lop over" excessively. In the early years of bearing the lower limbs will produce well, but later will lose their usefulness, and the height of the trunk may gradually be raised by removing them. The inner twigs and small limbs that will die as the tree advances in age should be removed, and the interior of the tree kept sufficiently open to admit light and air freely. Very much lateral shortening in of the branches will be followed by a corresponding loss of fruit. If practiced on young trees, the period of bearing will be delayed (excessive pruning in any direction will have the same effect). If on older ones, the crop will be lessened. The orange bears for the most part on the outer part of the tree.

#### Fertilizing.

It is well to manure nursery stock in order to

obtain good thrifty trees to start with. An orange tree has remarkable vitality, but there is a vast difference—other things being equal—between the results to be obtained by planting an orchard with healthy, vigorous young trees, and poor and sickly ones. The latter will be found dear at any price.

After placing in the orchard, very little, if any, fertilizing is needed in any ordinarily good California soil until after the bearing age has been reached; after that time it will be found judicious, except on very fertile land, to apply a light dressing of manure once a year, preferably in the fall before the rains.

Sheep manure is excellent where it can be had. Common stable manure is good. If applied yearly, a good horse-load of sheep manure will answer to every 12 trees, one of stable manure to every six or eight. All manure should be applied broadcast.

Deep plowing in an orange orchard I consider to be of doubtful expedience. The orange is a surface feeder and fills the upper soil with fine roots. Too many of these are destroyed by deep plowing. Still, repeated irrigations followed by repeated cultivations at a uniform depth will, in many soils, cause a hardpan to form just below the point the cultivator reaches. In time this hardpan may become so hard that water will hardly penetrate it. At intervals, then, it may become necessary to break this crust, which may be done by deep plowing or running a subsoiler through the orchard, but it will be advisable to keep either tool at some distance from the trees to avoid injury to the main roots at least.

#### Protection from Frost.

It will be wise to provide some protection against frost for young trees, particularly buds, for the first two or three years in the orchard. Cypresslimbs may be arranged about the tree held at the base by mounding up the earth a little and by tying at the top and at one or two intermediate points with bale rope; or corn may be planted between the rows of trees and dry cornstalks be used in the same manner. The covering should be put on carefully and securely, but not so tightly as to smother the tree.

I have up to this point endeavored to give briefly an outline of the methods to be pursued in the planting and management of a young orange orchard, necessarily omitting many details. There are some other matters that remain to be considered before entering upon this branch of fruit-growing as a business.

As to varieties; as to general conditions essential to success; as to packing, markets and marketing.

The leading budded varieties now grown in California are in the order of their generally admitted excellence: 1st. The Riverside, or Washington, Navel; 2d. The Australian Navel; 3d. The Malta Blood; 4th. The Paper-rind St. Michael; 5th. The Mediterranean Sweet; 6th. The Large St. Michael; 7th. The Konah.

Besides these there are the fancy small varieties—the Tangerine and Mandler; also a considerable number of standard-size oranges, as the Acapulco, Chuchupilla, etc. There is also a new variety called the Rivers, which promises to be of value as a late orange. The Riverside Navel orange has repeatedly carried off the premium "for the best orange" at the annual California citrus fairs held at Riverside. It is everywhere admitted to be the best orange grown. It is seedless, high colored, sweet and a fine fruit in every respect. The only point that can be urged against it is that it is a rather early fruit and will not hang well on the trees much after March 1st. The tree is healthy and reasonably vigorous, but after bearing begins, its annual growth becomes retarded, and I believe it will never attain very great size.

At present this variety commands a price in the market very considerably above that of any other (except the Australian Navel and Malta Blood); this is probably caused in part by the limited supply. Recent plantings have been made very largely of this kind, and it is likely the margin in difference of price will diminish with increased production in future years.

Second on the list I have placed the Australian Navel, only because at present little discrimination as to price is shown in the market as between it and the Riverside Navel. It is later in ripening than the last named, but inferior in appearance. The tree is a thrifty, strong grower—one of the strongest among the buds—but an unreliable bearer. I would not recommend its propagation.

The Malta Blood is a fine orange, and on account of its high color, fine, smooth appearance and excellent flavor, brings about the same price as the Navel. The tree is of somewhat poor habit and lacks vigor. It bears well in my orchard, and elsewhere as far as I know.

I consider the Paper-rind St. Michael a very desirable orange. It is of small to medium size, from 300 down to 150 in a box (200 to 225 is the size in largest demand in the East), of rather pale color, very smooth, thin skin, uniformly round in shape, sweet, juicy and piquant in flavor, and an excellent carrier. It hangs well and can be shipped as late as June, and even July 1st, to advantage. The tree is a strong grower and a heavy, regular bearer in every locality that I know of, and is one of the few kinds that will carry a heavy crop and at the same time make a good wood growth.

The Mediterranean Sweet is valuable as a good to heavy bearer as well as for being not only a good orange, but the latest-keeping one we have (save perhaps the Rivers, of which

I have spoken). The quality is a little irregular, in some years being finer than in others. The fruit is generally of high color, good shape and flavor, of medium thickness of skin, and contains very few seeds. It reaches its prime here in May or June, after other kinds, excepting the Paper-rind St. Michael and Rivers, are getting overripe, and is a good shipping orange all summer. The tree is of bushy habit, needing more lateral pruning and more removal of lower limbs than other kinds to force it to something of tree form. The large St. Michael is a good orange, but has no special merit.

Some Florida varieties have been fruited at Riverside and elsewhere, notably the Homosassa and Magnum Bonum. These ranked a few years ago as the leading kinds in Florida. In California they have no special qualities to recommend them, and could hardly be distinguished from seedlings grown here.

Other Florida varieties are now being introduced—the Pineapple and Parson Brown among them—kinds very highly esteemed in Florida, but whether likely to be of equal value here may be doubted, judging from our experience with the Homosassa and Magnum Bonum. I should hesitate to plant largely of them to the exclusion of our own tested standard kinds.

To sum up, in setting out a budded orchard to-day, I should plant Riverside Navels, Malta Bloods, Paper-rind St. Michaels and Mediterranean Sweets in about equal proportions. I would not plant Navels exclusively, for two reasons: First, they have been very largely planted of late; and second, they must be marketed comparatively early in the season.

There has been considerable discussion in the past as to the relative value of seedling and budded orchards, and the partisans of the seedling side of the question still maintain their position. They urge that the seedling makes a larger, finer and longer lived tree; that it is much hardier and will endure a much lower temperature than the bud; that it is a prolific bearer; that though the market price of its fruit is below that of some of the budded varieties, the much greater yield in a given number of years will much more than offset the difference; and finally, that many pronounce its fruit of as fine, if not of a more delicate, flavor than that of any of the budded kinds.

On the other hand, it is urged that buds bear earlier; that the fruit is more uniform in appearance and quality; that it sells at a higher price; and finally, that it ships better.

There is truth in all these arguments pro and con. The tendency is undoubtedly in favor of setting out budded orchards, and rightly so, I think. The seedling orange ripens early in the season and ships well until about May 1st; it then begins to lose its firmness, becomes over-ripe and often "puffy," and is liable to considerable shrinkage in shipping long distances. This is the main objection to the seedling fruit; but as there is likely to be no very considerable number of seedling trees planted in future, the supply of this fruit will probably always be in demand for the earlier shipments, and I consider a good-bearing seedling orchard of equal value with any orange property.

#### General Conditions Necessary for Success.

The first of these is a suitable soil and location. Nearly all soils that will grow fair crops of any kind will support the orange. The red soil of the mesas and foothills has proved one of the best. A rich, sandy loam is perhaps quite as good.

It is desirable to consider the working quality of the land, and to avoid, on the one hand, that which is too stiff as likely to bake, unless worked at precisely such a time; and, on the other, that which is too light and porous as requiring too much water and fertilization.

It will be well to examine the subsoil. Lime hardpan is not particularly objectionable, the main fault to be found with it being that it is almost impervious to water, and if within a moderate depth from the surface, your ground will soon dry out and frequent irrigation be necessary. Other hardpans ought to be avoided. Your soil should be well drained and no surface water found nearer the surface than 16 feet. Groves in Florida planted on land with water near the surface are said to be subject to "die back."

There should be a moderate slope to your land to allow of easy irrigation; avoid too much, as running water will wash it or put you to considerable expense to avoid this result. Six inches in 100 feet is slope enough; less will answer. One foot in 100 ought not to be exceeded, viz.: if you expect to irrigate in furrows.

By using checks you can manage side hills of considerable slant, as well as quite level land (by running water enough). On level land you can also use the flooding system.

Your location must be free from killing frosts. I should condemn any spot as unsuitable for orange culture where ice forms once or more in the majority of winters much over one-fourth of an inch in thickness. I remember last winter, after the great Florida freeze, that some cranks down there published an article the drift of which was that the cold snap was rather a good thing, and that by a succession of such the orange might gradually be brought to become a hardy deciduous tree, losing its leaves every winter and coming out in the spring refreshed by its winter rest. This article was copied in all seriousness by some of our leading California papers, and thus given a wide circulation, it is to be hoped to no one's loss. No idea could be more fallacious or mischievous if innocent people be led to act upon it.

Granting that by some process of acclimatiza-

tion a semi-tropical evergreen could be transformed into a deciduous tree of the temperate zones, what would become of the fruit meanwhile? As it is, the fruit of the orange will perish, and must always do so, under a degree of cold much less than will cause any permanent, if indeed hardly any injurious effect whatever on the tree itself. Once I have seen in Southern California a large part of the crop quite ruined by frost while the trees themselves showed hardly a trace of its effect.

Remember this fact, that your climate must not only be free enough from frost to grow the orange tree, but it must also not be cold enough to freeze the fruit. One night in a winter will do it. Do not plant orange trees where ice half an inch thick is known, as a general rule, to form once in a winter. Besides having a location secure from liability to freezing cold, you must select one that enjoys a sufficient degree of heat. The climate of California in the neighborhood of the coast is for this reason unsuitable for orange culture. Water is an essential that I do not think can be dispensed with anywhere in this State in cultivating the orange for profit. Without it you may be able to get some kind of a tree and perhaps some fruit of some kind, but you will, in my judgment, never pay the expenses of working your grove.

Remember that the orange tree, with its dense foliage and heavy crop of fruit which it requires almost the whole year to mature, is constantly drawing heavily on the soil for water. In spring you will find the soil of a deciduous orchard full of moisture containing all, or nearly all, that has fallen during the winter; but in the orange grove a great part of the rainfall at a corresponding time has already been drawn upon by the tree.

The deciduous tree ripens its fruit in comparatively a short season, most kinds before the hottest summer weather. In August and September the orange is drawing most heavily upon the soil to supply the water it must have to develop the fruit. Many localities in Southern California produce the finest crops of deciduous fruits and of grapes without irrigation, and this on dry mesa lands. But nowhere that I know of can a profitable crop of oranges be grown without irrigation. How much water is needed is a question whose answer must indeed vary as to conditions of soil, rainfall, etc. For a bearing orchard I should place the safe minimum of supply at one inch per 10 acres. This, where there is an annual rainfall of 15 inches or more, and your soil is not of too porous a character. I should place the necessary maximum at not less than one inch to five acres; this, where the annual rainfall is under 10 inches and in the hot, dry air remote from the coast.

In speaking of an inch, the quantity produced by a stream flowing constantly through an aperture 1 inch square for the 365 days of the year under a mean pressure of 4 inches, is meant. But it must be borne in mind that this water cannot be used pro rata through the year, but that almost all of it will be required in the six months from April 1 to October 1. If you have not reservoirs to store up the waste winter flow, the figures I have given should be doubled. Successful orange-growing requires intelligent and constant care and watchfulness. The introduction of insect pests must be guarded against. If you obtain your young trees otherwise than by growing them yourself, take care that you do not buy with them the red or cottony cushion scale. If you should discover either of these pests in your orchard, confined to a few trees, use no half-way measures, but burn the infected trees where they stand. If either of these scales becomes scattered through the orchard, you must then make up your mind to wage a systematic warfare upon them. By spraying your trees three times a year you will be able to keep them well in subjection; but so far as present experience goes to show, you can hardly hope to exterminate them.

Mr. Bettner closed his essay with suggestions concerning marketing of oranges which will be published in full in the Report of the State Board.

#### The Discussion.

Mr. Hatch, of Solano: It seems to me that this question of the growing of oranges should especially interest the people of this part of the country, as they surprised themselves last year and intend to do it again at the Citrus Fair next month; doing so much better than they supposed was possible for them to do, they waked up to the fact that it was possible for them to produce oranges in this and in many parts of Northern California.

Mr. Wilcox, of Santa Clara: It is true the California orange was exhibited at the World's Fair and there took the highest premium; but there was no fruit of this kind that was so exhibited that was free from insect pests. It is not strictly true that the orange will not grow north of a certain thermal line. I recollect of reading in the history of the sugar-cane nearly 30 years ago, in *Harper's*, the statement that the sugar-cane grown on the Mississippi river was taken there from the West Indies. There is no doubt that a tree grown in a very hot climate where the weather is extremely warm will suffer greatly when it becomes extremely cold; yet I believe the orange will grow north of Riverside. In Los Gatos, in my county, you can see the orange tree and the oak shake hands across the street; oranges have been grown there for 20 years. You will see now on the trees some green, some ripe. I am bound in a candid spirit to say that there is something in this acclimating of trees so that they may be grown further north than is stated. It is true that in Florida the cold destroy-

ed their trees and the crop; that only proves that those trees had been accustomed to a very hot climate, though all the evidence we have got here in the last five or ten years shows that the orange bud will not freeze at the degree of temperature that it was formerly supposed it would.

Mr. Hatch: In reference to acclimating of trees, it has been found that in planting there has been more success in a colder climate than in the climate from which that seed came. I have found that so in almonds. I take the seed and plant them, and the trees that grow from those seeds are more sure to raise their crops than the parent tree; so might it work even with trees not deciduous, that trees which grow from the seeds would stand more frost than the tree from which the seed was taken.

Mr. Milton Thomas, of Los Angeles: I do not think it is absolutely necessary, where there is good, strong, rich soil, to irrigate orange trees until they come to bearing. I refer to Dr. O. H. Conger, of Pasadena, who raises very fine oranges on mesa land, some 60 feet to water. He did not irrigate his orchard for many years. He only irrigated a little, and for some four or five years he did not irrigate at all. About the time they commenced to bear, then he irrigated once or twice a year. I think the principal thing in orange culture is how to cultivate. I remember a man in Pasadena five or six years ago who planted his trees, plowed his land and never irrigated at all, and the second year he obtained fruit from them; and I think if you plow deep and cultivate thoroughly they will need but very little irrigation until they commence to bear. It is the same with all other kinds of fruit. I am opposed to irrigation, although I have irrigated. The trees I planted last spring I do not irrigate at all. One thing I want to criticize in regard to the Riverside name of oranges. Suppose Sacramento, a few years ago, sent to Washington to obtain a few buds. You might just as well call it Sacramento or Red Bluff, or any other place. The proper name for that orange is the Washington Navel, and that gentleman wants to tack on the name Riverside. I do not approve it and do not believe there is one that does outside of that place.

Mr. Klee: I suppose that Mr. Bettner's remarks on the subject of irrigation of the orange were written from a Riverside standpoint. The rainfall varies so much all over the State that it is almost impossible to lay down any rule as to how much we shall irrigate. There is a fact well known to a good many, I think, that orange trees have been growing without irrigation in a number of places in this State. Your attention has been called to a certain orange orchard at Los Gatos; I think the one to which Mr. Wilcox referred is the only one of any size in that section of the country. I have visited that orange orchard once or twice, and I know from my personal knowledge that it never received any irrigation until it came into bearing; whether it has received any since or not I do not know. The trees are growing on rolling land, on rather a stiff soil on some hills above Los Gatos. I think there is something like 15 acres of them, and they have been thoroughly cultivated; the trees are good-sized and very healthy in their appearance. I think that last year they bore quite considerable of a crop, and in fact they must be considered quite a success for that section of the country.

#### Irrigation and Fertilization.

Mr. A. S. Chapman, of Los Angeles: On our ranch near San Gabriel we mix sheep manure and run it in with the water on our trees. There is considerable fall to our land and plenty of water, and the water is run into basins which are arranged around the trees so that when the basins are full we have from 6 to 12 inches of water in them. As to cultivation, I do not plow all summer; but I plow in the winter and spring after the growth is somewhat matured.

Mr. Cooper: I should like to ask Mr. Chapman whether he thinks it is necessary to irrigate?

Mr. Chapman: It is absolutely necessary to irrigate on our land; ours is gravelly soil. We could not begin to irrigate in the way that Mr. Bettner does—running water in a furrow; that would require less water, but he would find that a sufficient flow of water would wash the soil away, and a small stream would run right into the ground like a sieve; so it becomes necessary to irrigate with a large head of water. If my soil was very sandy and I would run clear water on it, it is my idea that I would wash away clear beyond the reach of the plant; so I think that the system that is pursued in Riverside would be detrimental.

Mr. Cooper: Do I understand you that you make a sort of an emulsion of sheep manure and water?

Mr. Chapman: Yes, sir.

Mr. Cooper: You make a basin throughout the orchard?

Mr. Chapman: Every tree has its basin. The stream runs right in the middle of the rows, each way, and the basins are filled from this stream. Plowing as I do, I believe that a hardpan will never form. I have observed an orchard where they plow after every irrigation and a hardpan has formed there, and I have seen an orchard next to it where the owner would let the weeds grow and plow only occasionally. There the trees are more healthy than where they took so much care to keep the orchard perfectly clean. This is a question that we have discussed at great length. My idea is that you have to supply the vegetable matter

to the soil. It is a well-known fact with soil that has been cultivated for several years, that if you then wet it, it will run to rock; that is my idea of what produces a hardpan, and I know of no other reason.

Mr. B. M. Le Long, of Los Angeles: Mr. Chapman spoke of an orchard that is never cultivated as Mr. Bettner recommends, but where the weeds are allowed to grow for awhile. I know this to be a fact; two years ago it produced a larger crop than any in its neighborhood, and the reason is that the land became better fertilized than any of the others. Now, I know another orchard next to Governor Stoneman's that produced absolutely nothing; the growth of the trees was checked. The result was, that there was comparatively no vegetation whatever. Mr. Graves manured it heavily and did so for four years. Last year the trees that once were stunted and small have made a very large growth, and there were about 2200 boxes taken off of 1200 trees. This year there were over 5000 boxes from those same trees, and it is now considered the healthiest orchard in San Gabriel valley. One thing about Riverside: Riverside has a different kind of a soil. In one part it is hard, in other parts it is gravelly, and in other parts it is of a sandy loam. They run a furrow that the water flows down, and by the time that they get to the end, the trees at the end get too much water. The others do not get enough. The plan adopted by Mr. Chapman at San Gabriel seems to work better because each tree appears to get just so much. The water being conducted to this basin, it gets so much and with the fertilizer at the same time. Another thing, the water will also carry soil from the head of the orchard to the lower end. I know of one instance in this Graves orchard in San Gabriel, where the trees were buried at the lower end for four feet. When this was stopped it was necessary to clear away this soil right under the tree; because they were covered with soil they would not grow. They were dying, and those trees are the only ones that show any difference in appearance on account of this moving of the soil. Now you plant a small orchard. For 4 or 5 years it grows very nicely. The roots seem to be very healthy, and it takes up so much moisture from the ground, it does not require so much fertilization nor so much irrigation; but when it is grown up these roots get up into a solid mass, and you can plow only in the center of the row when they are planted 24 feet apart. In Riverside they trim the tree very high and plant right up to the trunk of the tree, and that cuts all these little fibrous roots, and the tree loses strength in a short time by taking them away. In San Gabriel they leave their limbs right close to the ground. In irrigating them in basins after the tree gets so much, they use a fork under the tree instead of hoeing them. The trees are never plowed near the trunk (I do not believe they are plowed nearer than four feet), and in that way they require less irrigation; that is, the limbs reaching down close to the ground keep the soil moist, and they require less irrigation and look better than any others there. Where they plow near the tree and the limbs run up high, the sun bakes the ground, the roots will plow up and the tree suffers, and wherever the orchard is raised in that way you will see yellow trees.

Gen. M. J. Vallejo, of Sonoma: Nearly 50 years ago I planted in the Sonoma valley the first trees that were raised in this State, from seeds that were brought from Acapulco, and succeeded in getting about 15 or 20 trees. I planted them at my residence near the old plaza. For four years they were very small; I then transplanted them. At nine years old the trunk was about three inches thick and they commenced to bear nice and very sweet fruit; I do not say better than from other localities, but very fine oranges, for which I have had premiums awarded at fairs in Marysville, San Jose, Sonoma valley and San Francisco. For nine years the trees growing slowly, the main root grew deep and several branches quite thick like wood, but after nine years they began to create a kind of a blanket of roots, which was very thick. Before that you do not need any irrigation. After they begin to get so very thick it is necessary to dig and clean away and cut out that mass of small roots, and then you begin to put some water there. I have had experience for years; I have some 200 or 300 trees that I planted for experiment so as to get an idea of what we can grow in this section of the country. In our localities here in the north our climate is good enough in general, but not so even as San Diego and the more tropical regions where they make a business of oranges. I think it would be better for us to let them have their oranges there, and plant other kind of trees.

Mr. Shinn: The claim has been and is made by the growers in the northern part of the State that they cannot grow the citrus fruits, as it is said it would not do to attempt to grow oranges where there may be ice once during the winter half an inch thick. I suspect, as Mr. Wilcox said, that the general climate of a country has much to do with that question. We know that in Florida last year, and about every 10 or 15 years, they have a very severe winter, with ice half an inch thick, or perhaps more, that destroys the trees almost entirely. That is probably because during the remainder of the year the climate is so warm that the tree is too tender and not prepared to resist a frost. In Alameda county, where I reside, some 15 years ago I planted some orange trees. They were from Tahiti, and after they grew to be several years of age some of them were grafted and budded with several varieties from Riverside,

Washington Navel as well as others, and they have been exposed to all the frost we have had there. The location is some three or four miles from San Francisco bay, and about 30 miles from that city, and at an elevation of not more than 15 or 20 feet above the bay. The frost has never injured them; they would be green and bright all along, and many of them have borne fruit for four or five years, yet I have seen frost and ice in my water troughs a good deal nearer an inch than a half an inch more than one winter. I suspect that where trees grow in a climate that is not so extremely warm all the year round they are better prepared to stand more frost in winter. I had one year some seedling orange trees that were growing very rapidly and grew very thick, and we had a very sudden frost, and while it did not affect the other trees I have been speaking of, it cut the tops off of these seedling trees, I think because they had a very rapid growth.

Mr. Le Long: I want to say one word more. Some people take and cultivate trees, irrigate them and keep on irrigating them all through the fall, but very little is done all through the spring and summer. In that way the tree is forced out in the fall and certainly does not thrive so well. In regard to the variety, Mr. Bettner refers to several varieties there; now I have been very well posted in regard to varieties and those that stood the highest test and those that stood the best in the market and stand more transportation, and I would not recommend anything more than the Washington Navel and Mediterranean Sweet. The Washington Navel is what Mr. Bettner refers to as the Riverside Navel; there is no such thing as the Riverside Navel. The Valencia late, though next to the Washington Navel, is not considered much, because the tree does not come into bearing soon enough. The Homosassa, I simply refer to that as another orange, if a person desires to set out other varieties; the Malta Blood there are several varieties of; the Satsuma is an early orange, it will ripen in November; is ripe now. There is one man who has grown it extensively. The Tangrine, you all know, I would not plant them myself nor would not advise them to be planted. They are dwarfs; if a person wants a dwarf, they are the trees to plant.

Mr. Peck, of Placer county: In regard to this question of irrigation, I think it all depends upon location and soil, and while we may learn from each other, we have got to depend upon our own judgment and experience in growing oranges as well as all other kinds of trees. The first orange that ever ripened in Placer county, ripened upon my place. I planted the seed in the fall of 1861, never expecting to hear from it again. I gathered fruit from it in 1872 and every year since. It has had plenty of irrigation, and the frost has never harmed that tree yet. I have never protected them from the frost, in Placer county.

Mr. W. H. Aiken, of Santa Clara county: There is one matter in connection with orange-growing that I have some knowledge of; the orange orchard at Los Gatos in Santa Clara county is very peculiarly situated; it is in the mouth of a canyon where the air never rests, there is a continual draft, and frosts of course cannot settle at all. Very often it is not the latitude nor the longitude, but it is the peculiar location which affects temperature. The characteristics of location, the soil and the climate must be considered.

Mr. Hatch: The same rule which Mr. Aiken has just mentioned, holds good in the beautiful South. I remember of being there three years ago last March, when in many localities they were digging up their lime hedges, their lemon trees had been killed by frost; in other special spots it was not so and the lime trees were all right, their lemon trees were all right, and their orange trees; but in the majority of places in the beautiful sunny South that year their oranges were caught, and their lemon and lime trees were dying or dead.

Mr. Peck: I want to say a word about the frost. I came to California and lived for awhile in Los Angeles, that beautiful city, and in the month of December, 1855, I saw as thick ice in Los Angeles as I have ever seen in the town of Ophir, Placer county.

Gen. Vallejo: The gentleman spoke a moment ago of Santa Cruz. I was born 15 miles from Santa Cruz, and I have been in California 79 years, and have been in every locality from San Diego to Shasta. I have studied every ravine, every river, every lake, and I am familiar with the climate. I have had experience in my place in Sonoma over 50 years, and I tell you if you get good soil not exposed too much to the north wind, only sheltered a little bit, they grow everywhere. Perhaps on the flats they will not do very well where wind strikes them, but I have lemons on my little place equal to those they grow anywhere, and oranges as sweet as any.

Mr. Le Long: I do not believe that any of us deny that we have had frost in Los Angeles; but there are parts of Los Angeles county where there has never been frost. There is also a difference in the soil. There seems to be a difference at the lower part of the valley; for instance at Duarte, in Los Angeles county, there is no frost, and then you see some frost down the valley toward Colton. It is the same way in the San Luis Obispo valley. You see frost in some places every year. I have seen one orchard where the trees on one part of the orchard were planted on high ground and the trees of another part planted on lower ground. Those planted on the lower ground are subject to frost mostly every year, and so throughout

the county. In reference to protecting the trees from frost, I believe that it is essential to treat the tree so that it will stand through the winter—that is, cultivate it through the spring and summer. In the fall and winter do not do it, but simply cultivate them with a fork. If you cultivate them spring, summer, winter and fall, you will have new shoots that cannot bear the cold. There are also winds. Once in awhile we have a wind; of course we do not have much of it, though at Riverside they do—a wind that takes the leaves off of the young shoots. If you take the leaves off, it may make them die back.

Mr. G. M. Gray: I do not know anything about raising oranges, but I want some one to say a word for Oroville; there they are raising very fine oranges with very little irrigation; they are on high ground and not troubled with frost, and, as the last speaker said, the frost settles on the lower ground.

Mr. Williamson, of Sacramento: The facts stated by Mr. Hatch are true—that there are certain parts of Los Angeles where it is unsafe to grow them, and there are other places where it is quite safe to grow them. As to Oroville, I do not live there, though I have been there frequently, and I have been all over the southern counties and at Riverside, and I have never seen a grander success of finer oranges than I have seen at Oroville. So in Placer county and all our foothills here for a distance of 300 miles, at an altitude of 600 to 1200 feet oranges can be grown successfully on the right land. As to irrigation, I have had little experience with the orange tree, but I know at our orange orchard, at Penryn, I have killed some trees by irrigating them too much, and I tried others without irrigation. I find my experience is that an orange tree wants a deep, loose, rich, kind soil, and if you want to get the best results you want to give it a moderate amount of moisture, but not too much. As to the name: I understand that there are two Navel oranges cultivated in this State; one came from Australia, afterward another came from the city of Washington, sent out here by the Department of Agriculture; hence the name Washington Navel, and that one coming from Washington is the superior of the two in quality and size and bears larger crops than the other.

#### Hunting Trophies at the London Exhibition.

An agreeable feature of the American Exhibition in London (May to October, 1887) will be the loan collection of American hunting trophies contributed by English gentlemen as an evidence of friendly interest. As generally known, there are large numbers of fine heads of the larger American game animals and many specimens of birds in England, in the hands of sportsmen who have hunted in the Rocky mountains and other parts of America.

A committee of these Nimrods has undertaken to secure and take charge of a loan exhibit of these trophies, and a collection has been secured that will probably prove the finest ever brought together.

The movement is in the hands of the following gentlemen: Gerald Buxton, Esq., Knighton, Buckhurst Hill; E. N. Buxton, Esq., M. P., chairman London School Board; A. Penardarves Vivian, Esq., James street, Buckingham Gate; H. Seton Karr, Esq., M. P., No. 11 Queen's Gardens; Moreton Frewen, Esq., M. P., No. 19 Chapel street, Mayfair; W. Baillie Grohman, Esq., Belgrave Mansions, S. W.; and J. E. Harting, Esq., Natural History Museum, South Kensington.

These gentlemen have issued a circular letter asking for contributions, in which they express the hope that the collection may be enriched by fine examples from this country. American sportsmen willing to loan their trophies can obtain further information by addressing Burnet Landreth, Esq., United States Director American Exhibition, No. 702 Chestnut street, Philadelphia, Pa.

#### Orange-Cleaner in Chicago.

Fortunately California oranges do not all require cleaning, for their pure, bright color is everything that could be desired; but there are some who have to market smutty fruit or else polish off the fungus. On some accounts, no doubt, it will be better to subject such fruits to treatment after shipment overland, and we note with interest the introduction of adequate cleaning contrivances in Eastern fruit houses. Amory Bigelow, jobber and commission merchant at 105 South Water St., Chicago, writes us that he has had constructed in his storehouse an improved apparatus for cleaning smutty oranges and lemons the coming season. He claims that it does the work effectually, without the least injury to the keeping quality of the fruit, and will add fully one dollar per box to its market value. This cleaner has a capacity for treating two carloads per day, and the fruit may be shipped in bulk or barrels (as is done with a great deal of that from Florida), which is a considerable saving in freight, and the consignee supplies the boxes at 15 cents each, and the grading and packing are done by expert hands in his employ.

#### Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

#### A New Railroad Era in California.

There is just at this time a most unusual degree of activity in railroad building in this State. At no time since the completion of the Southern overland line has there been such an unwonted degree of activity. Railroads are being constructed in both the northern and southern sections of the State, and in the central coast portion as well. Many roads are also in active contemplation. It is estimated that during the present and next two years fully 30 per cent will be added to the total mileage of the State. These improvements will also add vastly to the value of property. The Southern Pacific is especially active in this work, not only in its own proper locality, but in the northern counties as well.

There is now a gap of only 90 miles between the Oregon and California lines of road, and a heavy force is actively engaged in closing up this space; but as the work is very heavy it is expected that about 18 months will be required to make the connection—after which time the iron horse will have full sweep from San Diego to the Columbia. In the mean time the Southern Pacific Coast line is being rapidly extended southward from Soledad via San Luis Obispo, Santa Barbara and Ventura, and thence eastward to Newhall on the present line of road. About 90 miles of this road has already been completed since work was commenced upon it in July last. This road will fork at San Miguel, the eastern branch starting from San Miguel will push its way eastward over the Coast Range into Kern county and strike the main southern road at Lerdo. Crossing that, it will pass on still further to the eastward and open up the rich agricultural country to the north and east of Bakersfield.

These roads, both north and south, will open up to convenient and rapid communication immense regions of country, which have hitherto been of little value on account of their isolated conditions. All this land will be fully or more than doubled in value by this improvement. The road from Soledad and its eastern branch will be about 360 miles in length.

Still other roads are projected in this central portion of the State—the San Joaquin valley. A road 145 miles in length will be started and probably completed during the coming year along the west side of the San Joaquin valley, from Tracy, on the main line, southward to Huron, in Fresno county, at or near which point it will again connect with the main line. This branch will develop a valuable grain country. Another road will be constructed on the east side of the main road, and paralleling the same for a distance of 30 or 40 miles. Several other feeders are in contemplation in that region running to and skirting along the foothills. It is the determination of the railroad people to open up the entire San Joaquin valley to good railroad facilities.

Other roads have also been projected and independent companies organized to construct needed railroads in Solano, Colusa and Lake counties. One of these roads will reach the timber regions of Mendocino county; Humboldt county will also soon be placed in railroad communication with the rest of the State, and Klamath, Tehama, Modoc and Lassen counties all come within the scope of projected railroads.

Los Angeles county is especially active in railroad extensions and new lines. The Atchison & Topeka road has entered upon quite an extensive line reaching from their main line at San Bernardino to the sea coast, via the San Gabriel valley and Los Angeles. The coast will be reached at the new harbor now in process of construction at La Ballona. Another road will be built in another year for Colton via Riverside, the Temescal mountains to Anaheim. The Anaheim road will be extended at an early day along the coast to San Diego. It is estimated that at least 1000 miles of new road will be built in California within the next three years. The railroad people evidently see good times ahead in the near future, for this State, and are determined to be ready to do the increased business of transportation which is sure to come. In their improvements not less than \$20,000,000 will be distributed in California alone for railroad material and labor—itsself a bonanza for the State.

#### How to Make Money.

No matter in what part you are located, you should write to Hallett & Co., Portland, Maine, and receive, free, information about work you can do and live at home, at a profit of from \$5 to \$25 and upward daily. Some have made over \$50 in a day. All is new. Capital not needed; Hallett & Co. will start you. Either sex; all ages. Those who commence at once will make sure of snug little fortunes. Write and see for yourselves.

#### It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the "fittest"—the "DOMESTIC" SEWING MACHINE.

#### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

#### Reasons why Sherwood's Steel Harness is the Best and should and will be Universally Used:

- 1.—It is a common sense Harness.
- 2.—It is made of material that will last a lifetime.
- 3.—In plowing, dragging, logging and scraping there are no whiffletrees.
- 4.—In all farm work you can change from plow to wagon quick.
- 5.—In plowing in the orchard, you can't bark fruit trees.
- 6.—In plowing and cultivating hops it has no equal.
- 7.—In plowing along the fences you can get two furrows closer.
- 8.—Horses cannot step over the traces, or balk themselves.
- 9.—A small boy will handle plow readily.
- 10.—There is no weight on plow beam.
- 11.—Team works one-third easier.
- 12.—There is no chafing, crowding or fretting of team.
- 13.—For man and team it has no equal.

WRITE FOR PRICES.

The work done by this Gang exceeds any plowing that can possibly be done with a hand plow. It will do good work where the ground is so hard that a hand plow cannot work. It works splendidly in trashy ground without clogging.

## BUY THE BEST:

It has a break attachment for lifting the plows out of the ground, which we prefer on Gangs, they being heavier than Sulkies. With this device they are handled with the greatest ease.  
We have lately added a Lever, by which the Pole is moved to the right or left, for the purpose of giving the plow more or less width of furrow, as may be desired. It can be operated by the driver while the plow is in motion. For plowing around circular corners or curved furrows of irregularly shaped lands, it works to perfection.  
We also make a jointed pole, which allows a free up and down play of same, and does away with any pressure upon the horses' necks, that might otherwise occur in plowing over uneven surfaces. They are guaranteed to do as good work as can possibly be done by any gang plow in existence.

IS UNEXCELLED.

—IT IS—

LIGHT,  
SIMPLE,  
DURABLE, and  
FLEXIBLE.

THOUSANDS IN USE,  
GIVING ENTIRE SATISFACTION.

Points of Superiority in which it excels:

It will do better work.  
It is MUCH easier for the team.  
It is easier to manage.  
It has a LEVER to change the angle.  
It is not heavy on the horses' necks.  
It has no side draft.  
It leaves no ridge at the center.  
It has self-feeding oil cups.  
It has a wrought iron frame.  
Its chilled bearings cause it to wear longer and work easier.  
It is easier to ride.  
It conforms to uneven surfaces perfectly.  
It can be made rigid if desired.  
Its journals are protected from dirt.  
Send for prices and descriptive circular of same.

**OUR  
SUPERIOR GRAIN DRILL**  
Beats anything of its kind yet invented,  
it being the only Drill in the world  
that will not crack the wheat.

## JACKSON'S IMPROVED IRON HARROW.

Cheapest and Best

Four Sections Complete.

PRICE, \$32.50

This Harrow was introduced to the farmers of the Pacific Coast, during the season of 1881. Since then, hundreds have been sold, giving entire satisfaction. I have made the malleable iron clamps heavier, and strengthened them, making this the **Best Iron Harrow**. The frame is indestructible, made entirely of iron and locked firmly together by the teeth passing through malleable iron clamps, and having screw-threaded shanks on their upper ends, which bolt the frame-work securely together. This mode of constructing a harrow frame dispenses with drilling or punching holes, thereby securing much greater strength and durability. **It is indestructible. No shrinking, swelling and rotting of frame-work.** It is constructed in narrow sections, each acting independently; will adapt itself to any uneven surface of the ground, and will cut the soil better and more evenly than any other Harrow. Constructed on correct mechanical principles; each section has a center draft, and each tooth cuts a separate track. No one tooth in line with another. The safety-hook prevents unhooking when turning round. Four different sizes to suit customers. **STRONGEST AND BEST HARROW MADE!**

## PRICE LIST.

	PRICE.
No. 1 has three sections, 45 $\frac{1}{2}$ steel teeth; cuts 9 feet wide. This is a light size for two horses. Weight, 168 pounds.....	\$25 00
No. 2 (represented in the cut) has four sections, 60 $\frac{1}{2}$ steel teeth; cuts 12 feet wide. This is my standard style for two horses (generally used). Weight, 230 pounds.....	32 50
No. 3 has five sections, 75 $\frac{1}{2}$ steel teeth; cuts 15 feet wide. This is my 3-horse harrow; can leave off one section and use two horses with the same draft-bar. Weight, 291 pounds.....	37 50
No. 4 has six sections, 90 $\frac{1}{2}$ steel teeth; cuts 18 feet. For this size I use four horses abreast, with two draft-bars coupled together at the ends; adapted for large farms. Weight, 336 pounds.....	48 00

"Your harrow is a good one."—M. MADDEN.  
"They give perfect satisfaction."—JAS. CASS & Co.  
"Your Iron Harrow is a good one and fully met my expectations."—DR. L. F. MOULTON.

## POULTRY YARD.

## Notes on Care of Fowls.

"Robin Railroad" continues his notes on raising chickens in the Los Angeles Mirror as follows:

I know of no better way to show new beginners how to care for their young poultry than to give them a little of my experience. I raised 200 one fall, winter and spring, when I divided my time between them and my vineyard and orchard, and I certainly could have raised 100 more if I had had the spare time. I did it thusly: I made a dozen nest boxes of inch boards, about a foot square and a foot high, roofed like a house, with back gable closed up so that the rain could not blow in on the setting hens; left the front open half way down so that the hen could get in and out easily, so as not to break her eggs by jumping down on them; put in bottom of nest a gallon of dirt, hollowed into a good nest, and covered with straw. I put 13 eggs in when I found a hen wanted to set. At night I took up the nest gently and set it outside the poultry yard, and that prevented the other hens from molesting the setting hen. I made this a standing rule, because the other hens will be most sure to lay in with the setting hen, if it is a possible thing. I gave those setting all the corn and water they would eat, because corn is the best feed to keep up the heat of the setting hen, which will enable her to hatch 24 hours sooner than a hen half-fed on poor diet, and her chicks are much stouter than those of a hen half cared for. I found out by experience that there were two advantages in doing this in the fall, winter and early spring instead of summer. The chicks will thrive and grow faster than they will in the hot weather in summer-time, and next fall, when eggs are the best price of all the year, my early pullets would be in full laying. In the winter-time I was not troubled with vermin. Water is death on hen lice; so is kerosene oil; so is sulphur or grease. In the summer-time, when I undertook to raise chicks, I did just as I have stated here, but I watched the nest closely, and if I saw signs of vermin on the eggs or hen I got a new nest, washed the eggs in warm water and put them in the new nest, after wiping them dry with a cloth, set the new nest where the old one sat, and threw the old one into water, which in a day or so cleansed it of vermin and their eggs. The nests being exactly alike, I found no difficulty in getting the hen to set in the new nest just the same as she had in the first one. I have done this thing twice before the hen would hatch, but her chicks came out all right. But I have been defeated at other times. The vermin sucked so much of the blood and life out of the poor hen that the setting fever was all gone and she would leave the nest and quit clucking.

To take good care of the chicks after they were hatched was the next thing in order. To do this I built a dozen makee coops, after this fashion: I took four boards, two feet long and one wide, nailed two of them together with a lath, put the top together at right angles, and nailed them tight, sided up the back part with shakes or thin boards, so the rain could not blow on the young chicks; nailed on these laths in front and next to the ground, far enough apart for the chicks to pass in and out till they were as large as quail, and from then up made it as tight as I could, so that rain would not blow in from that side. I had one awful long fight with rats, polecats and skunks about that time. Killed 33 polecats and four skunks, but the rats were too many for me and I fought them in another way. I took two boards, a foot wide each, and sawed them off about one inch shorter than the coop was long, and over this I placed the coop, which answered two purposes; the ends of the coop extended over the floor; so that if it rained ever so hard the water dripped on the ground and the floor kept dry. I set up a board in front as high as the open slats, and that kept out rats and polecats. After I had devised that little floor business I lost no more chicks by rats or polecats. If I wanted to let the hen scratch and flutter in the dust, I raised the coop just a little and walked her off on the ground, and then washed off the floor, and at night walked her back again, and thus I kept the coop sweet and clean, which is very necessary for the health of the chicks. When a hen hatched I put her into a coop and kept her there for six weeks. Then she couldn't draggle her chicks in the wet alfalfa, and her chicks never had the "gapes." This looks to me at first like sacrificing a hen, but it didn't do any such thing.

The best feed I found for chicks is milk curd mixed with scalded crushed corn or barley. Next to that is cornbread crumbs; but as soon as the chicks are big enough to eat wheat they need no other feed, besides that which they find in vineyard or orchard. I never put my chicks in the poultry yard till they were big enough to roost in the trees, but set their coops near the house so that we could care for them easily.

I made it a rule never to keep a hen till she is two years old, except for setting hens. We could see when hens were gentle and kind to little chicks the first time they brought off a brood, and those hens we kept; but the ill-natured, fighting hens went to market. A hen does her best laying the first year and a quarter of her life, as a general thing, so I found it to my advantage never to sell any pullets; but

young roosters and last year's hens go as soon as they are fit for market. It may seem rather expensive to prepare so many nests and coops, and yet it is not, for they will last many years if taken care of when not in use. When prepared in this way with plenty of nests and coops, new beginners will save themselves a great deal of trouble in caring for their young chicks early on dewy mornings or when it rains. Where my lady friends have a large run for their fowls, and when they can keep more than four dozen hens, they will be obliged to prepare more nests and coops than I used.

**DURING DOGS WITH A HUMBLED HARE.**—There has been some talk among owners of greyhounds in the vicinity, says the Record-Union, about procuring one of the imitation hares recently used so successfully at the Bay, and having some dog-races at Agricultural Park. The "bogus hare" is described as a new contrivance, got up to swindle honest dogs and amuse sporting men. A long wire is stretched across a field, to which is fastened a stuffed hare, with a wiggle attachment for a tail, and a propelling power, by means of another wire and windlass, that snatches the little deception over the course with the velocity of the wind. Perched upon the springy wire, the dummy takes the natural jump of a live hare, and deceives the dogs. When everything is in readiness the dogs are allowed to sight what they suppose is a live hare; the word is given and the race begins. The speed of the dummy is too great for the dogs, but the one that passes first under the wire drawn across the track, at the close, wins the race. Old coursing men claim that while there is lots of fun it will ruin the dogs for genuine coursing; but there is little danger from one or two trials of speed, and they are very interesting, as the dogs run a quarter of a mile at a terrific gait.

**CAPPING ARTESIAN WELLS.**—In charging the grand jury at San Jose on the 29th ult., Judge Belden said: There is a law on the statute-books intended to prevent the waste of artesian waters. It requires that wells be capped and defines waste. In a large measure the law is obeyed, most of those who have such wells having conformed to its requirements. Some, however, do not obey it, and those who do respect the law are thus partially thwarted in their purpose of preventing waste. No man desires to invite the ill-will of his neighbors, and hence those who obey the law are slow to lay information against those who infract it, feeling a delicacy as to presenting such matters to the attention of the court. The actions of the grand jury are secret, and therefore the matter may be handled without embarrassment. The law should operate uniformly, if at all. The jury may proceed by information or indictment—a summary process that is not to be commended—or it may recommend that the district attorney take such action as will constrain obedience to the law.

## THE SYMPTOMS OF LIVER COMPLAINT

Are a bitter or bad taste in mouth, pain in the back, sides or joints, often mistaken for Rheumatism; sour stomach, loss of appetite, bowels alternately costive and lax, headache; loss of memory, with a painful sensation of having failed to do something which ought to have been done; debility, low spirits, a thick yellow appearance of the skin and eyes; a dry cough, often mistaken for Consumption.

Sometimes many of these symptoms attend the disease, at others very few; but the Liver, the largest organ in the body, is generally the seat of the disease, and if not regulated in time great suffering, wretchedness and death will ensue.

## The Baltimore Episcopal Methodist:

"Simmons' Liver Regulator is acknowledged to have no equal as a Liver medicine, containing those Southern roots and herbs which an all-wise Providence has placed in countries where Liver diseases prevail."

## A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$30 to \$39 per acre. **INTERNATIONAL IMMIGRANT UNION,** 401 California St., San Francisco.

## \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one-half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

**S. C. OSBORN,**  
Applegate, Placer Co., Cal.

## I CURE FITS!

When I say I cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send in once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 123 Pearl St., New York.

## KEYSTONE 2-LEVER DISC HARROW.

THE KEYSTONE DISC HARROW has met with wonderful favor since its introduction. It is made with two levers to set the cutters at different angles while the machine is in motion, and to relieve it from clogging by throwing either gang back. It is the only Harrow made with flexible frame so the cutters can adapt themselves to the uneven surface of the ground. The discs are made of steel. The boxes are chilled-hardened to prevent cutting on the axle. It has revolving scrapers, which not only keep themselves clean, but clean the discs.

We have had a special Size made for Orchard and Vineyard Work (viz., 5 feet), which suits the purpose for which it is intended better than any implement of its kind in the market.

## LIGHTNING HAY KNIVES

WEYMOUTH'S PATENT.

This Knife is the BEST IN USE for cutting down hay and straw in mow and stack, cutting fine feed from bale, corn stalks for feed, cutting peat and ditching marshes. The blade is Best Cast Steel, spring temper, easily sharpened, and is giving UNIVERSAL SATISFACTION.

A few moments' trial will show its merits, and parties once using it are unwilling to do without it. Its sales are fast increasing for export as well as home trade; and it seems destined to take the place of all other Hay Knives. They are nicely packed in boxes, 1 dozen each of 60 pounds weight, suitable for shipping to any part of the world. Manufactured only by

**HIRAM HOLT & CO.**

EAST WILTON, FRANKLIN CO., MAINE.

For sale by the Hardware trade generally.

warned of our rights, and the public are cautioned against purchasing any Hay Knives made as described above, which are not of our manufacture. EAST WILTON, Sept. 1, 1886.

### CAUTION.

We are informed that various parties are infringing upon the widely-known Letters Patent granted originally to GEORGE F. WEYMOUTH for an improved Hay Knife. The invention patented by him is a sword-shaped blade provided with operating handles, the edge of the sword-blade being furnished with knife-edged serrations or teeth. It is our purpose to PROSECUTE ALL INFRINGEMENTS, and to hold responsible to the full extent of the law, all parties who manufacture any knife infringing upon the patent, or who deal in the same. Several suits are now pending in the U. S. Courts. All manufacturers and dealers are hereby

### "PERFECT" Gang Plows

ARE THE ONLY BEAM GANG PLOWS OF THE BENCH BEAM SERIES OF PLOWS THAT WILL NOT CLOG IN HEAVY STUBBLE OR WEEDY LAND.

They are so constructed that there is ample space under the beams and between the bottoms to let the stubble and weeds freely pass through.

MOLDBOARD VIEW OF "PERFECT" GANG PLOW.

THESE PLOWS ARE NOW MADE WITH BOTH LEVERS ON THE LEFT, OR LANDSIDE SIDE OF PLOW, AND THE 4-GANG ARE MADE SO THEY CAN BE CHANGED TO A 3-GANG BY TAKING OFF THE REAR PLOW.

#### PRICE LIST:

No. 1-3 Gang, 8 inch, with set extra shares.....	\$75 00
No. 2-3 Gang, 10 inch, with set extra shares.....	80 00
No. 3-4 Gang, 8 inch, with set extra shares.....	80 00
No. 4-4 Gang, 10 inch, with set extra shares.....	90 00

"Perfect" Gang Plows are made with three or four bottoms or plows, each cutting eight or ten inches, securely ganged together, making a Gang Plow unequalled for lightness of draft, strength, durability, and good plowing qualities, and is in reality a "Perfect" Gang Plow.

The "Perfect" Gang Plow will plow in any soil, as the bottoms are shaped after patterns that have been found to work equally well in adobe and free soils. The moldboards are made of the best iron center steel, chemically hardened, and well polished.

Hubs and Boxes of carrying wheels are detachable, and when worn out can easily be removed to put new ones in their place.

Each carrying wheel is provided with its own Regulating Lever, by which the driver can easily adjust either side of the plow to make it run level and true.

The Regulating Levers are very long and securely bolted to the steel frame of the plow, and coupled to the crank axles by a heavy piece of round iron, which is adjustable to the regulating levers at three different holes, enabling the driver to adjust his plow so that he can handle it with the greatest ease.

The "Perfect" Gang Plow is also provided with a long Land Gauge Lever, by which the driver can adjust his plow to take more or less land as he may desire.

There is no danger of breaking the crank axles of the "Perfect" Gang Plows, as they are made of heavy 1 1/2-inch round iron, and are fastened to the frame by wrought iron brackets.

If you contemplate purchasing a Gang Plow, don't fail to call and see the "Perfect" Gang before you purchase.

### IMPROVED GRANGER GANG PLOWS.

Simplicity, Durability and Cheapness Combined. All Parts are Made Interchangeable, Indispensable to the Economical Farmer—Making Every Man His Own Blacksmith.

SANSOME STREET,

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50

PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS, Proprietors.

## FRESNO COUNTY.

### BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

#### THE WATER RIGHTS,

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2 1/2 times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

## Immigration Association of California.

The annual meeting of the Immigration Association of California was held at its office, in this city, Tuesday, Dec. 7th.

The president, Arthur R. Briggs, said in his report: The association has now closed its fifth year, and its work may be regarded as an established feature in the development of the State. The experimental period in promoting immigration and in the usefulness of this organization has passed. Thousands of new homes have been established on Government land that before was regarded as valueless for general agricultural purposes; large private holdings have been subdivided and improved; new railroads have been built and new towns have been established.

As illustrating the growth throughout the State, the report mentioned that 71 new post-offices had been established in less than a year, viz.: from December 1, 1885, to September 29, 1886. These were distributed with reference to counties as follows: San Diego 9, Los Angeles 6, Fresno 5, Modoc, Tehama, Shasta, San Bernardino and Humboldt, 3 each; San Luis Obispo, Kern, Tulare, Santa Barbara, Contra Costa, Sacramento, Placer, Butte, Mendocino and Sonoma, 2 each. The others were scattered largely in the northern portion of the State. The population of the State was now 1,000,000 persons, exclusive of Chinese. This indicated an increase since 1881 of 175,000. Growth had been more marked in some of the extreme southern counties of the State than in other districts, as the mere mention of Southern California was suggestive of orange groves and a semi-tropical climate, while in the minds of Eastern people, ice and snow were associated with the term northern. The raisin crops in the Sacramento valley and the citrus fruits that grew in that section, however, afforded practical proof that the northern counties were not seriously affected by frosty rigors.

As a demonstration of the rapid growth of the State during the past five years, figures were given showing that on August 1, 1882, the assessed value of property, real and personal, in the State, was placed at \$645,471,066, while the assessed value for this year was \$810,478,634, a gain of \$165,016,568.

The number of acres of land filed on and entered during the year aggregated 1,862,917 acres. Making due allowance for entries for speculative purposes, and for such as were not for actual settlement, there still remains sufficient acreage to establish the fact that the association had accomplished a good work.

The counties which, according to the report, exhibit the most rapid growth among those reached from the office of the association are San Luis Obispo, Monterey, Shasta, Placer, Santa Cruz, Fresno, Tulare, Tehama, Mendocino, Lake and Humboldt. The most striking of all, perhaps, were the settlement of lower Monterey and San Luis Obispo counties. Three new towns, viz., San Miguel, Paso de Robles and Templeton, had within a few months been located along the extension of the S. P. C.'s line, south of Soledad. A few years ago this district was thought to be suitable only for grazing. Now the population was estimated at between 5000 and 6000, and the production of wheat last season aggregated about 1,000,000 bushels, and of barley about 400,000 bushels.

In conclusion, the report called attention to the fact that the acreage of desirable Government land convenient to railroads is growing less each year. There is still a great deal of unoccupied Government land suitable for agricultural purposes, but situated at a long distance from the railroads and transportation lines, and it was difficult to obtain settlers for it. During the last few months there had been a great demand for improved farms in the neighborhood of schools and churches, and the people desirous of settling upon such lands were of a most desirable class. A large immigration into Santa Clara, Santa Cruz, Marin, Alameda, Contra Costa, Sonoma, Napa, Sacramento, Solano, Yuba, Placer counties and others can only be stimulated and promoted by furnishing information in respect to improved lands, and measures for effecting this end were suggested and recommended.

The report urged the necessity of a wise and equitable distribution of the waters of the State for the purpose of irrigation, without which 15,000,000 acres of land must remain to a great extent unproductive.

The report was adopted.

Secretary Street's report showed that the association had been instrumental in settling about 3,000,000 of the 5,000,000 acres filed upon and entered during the past five years. There remains about 38,000,000 acres unentered, of which 13,000,000 is suitable for agricultural purposes, 15,000,000 for mining and lumbering industries and 10,000,000 in lakes, bays and lands steep, rocky, or otherwise unproductive.

Merchants, bankers and others had contributed \$5645.55, and the sum of \$2387.18 had been given to the association by the S. P. R. R. Co. The disbursements during the year amounted to \$8670.63, and there was a cash balance on hand of \$1871.29.

During the year there were 3063 homestead and 4832 pre-emptions filed, embracing 1,182,962 acres, one-third of which was probably for speculation.

The secretary's report was adopted.

Resolutions offered by J. R. Kelly looking to the enlargement of the association's activity as suggested by the President, and by Captain

Merry favoring the restriction of Chinese immigration, were adopted. The election of the directors for the ensuing year was postponed until the next meeting, which will be held on Wednesday, the 15th inst.

## Plows and Plowing.

The coming of a wide-reaching rainstorm will bring in the general plowing season. Although there is hardly a week in the year in which plows are not running in California soil, the heavy plowing follows the first drenching rain. The enterprising manufacturers and agents who offer the farmer the latest-improved plows are alert to the opening of the season, and bring upon our pages this week very attractive advertisements of the designs they offer and which they are prepared to advocate with satisfactory testimonials of those who use them. It is impossible for all men to agree on the question of superiority in plows. There are many men of many minds, and to meet this condition of the human intellect there are good plows of many kinds. Those who offer good plows for sale recognize this fact, and so they are enterprising enough to use the advertising pages of the RURAL, and thus call the attention of plow-buyers to their implements.

In this issue there are four large advertisements of plows. The largest is that of the Oliver Chilled Plow Works, at 37 Market St., S. F. They offer the Casaday sulky and gang plows and a full line of single plows, for which the Oliver Works have achieved a world-wide reputation. The catalogue of the Oliver Chilled Plow Works is a very interesting pamphlet which gives full description of the manufacture of these implements and the materials used.

Half-page advertisements are filled by Baker & Hamilton, the Hawley Hardware Company and Truman, Isham & Hooker, all well-known firms of this city. The intending purchaser should carefully examine all these statements and learn as far as possible which pattern is best adapted to his peculiar soils, for there is much in that in selecting plows. We have heard good reports of all the implements advertised by these firms. If you have time to come to the city and carefully look over the different patterns, it will be well; if not, these firms have a reputation for fair dealing which would make it very probable that full satisfaction can be had on orders by mail.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

MEDITERRANEAN SWEETS FROM BUTTE.—We saw at the rooms of the Immigration Association Tuesday afternoon a score of large, handsome, deep-hued Mediterranean Sweet oranges, grown at Oroville. (They were sent by E. Tucker, but we could not learn whether or not they were grown by him.) Of the 5000 trees set by the Citrus Association and individual citizens last spring, Mr. Tucker writes that not five per cent were lost, and all those alive are growing nicely. They expect to put out 10,000 to 15,000 more the coming season.

## Never Open Your Mouth

Except to put something to eat into it, is an excellent motto for the gossip and the sufferer from catarrh. But while the gossip is practically incurable, there is no excuse for any one's suffering longer from catarrh. Dr. Sage's Catarrh Remedy is an unfailing cure for that offensive disease. It heals the diseased membrane, and removes the dull and depressed sensations which always attend catarrh. A short trial of this valuable preparation will make the sufferer feel like a new being.

Don't take that "cocktail in the morning" if you have a "swelled head," nauseated stomach, and unstrung nerves resulting from the "convivial party last night." The sure and safe way, to clear the cobwebs from the brain, recover zest for food, and tone up the nervous system, is to use Dr. Pierce's "Pleasant Purgative Pellets." Sold by all druggists.

The only reliable cure for catarrh is Dr. Sage's Catarrh Remedy.

## RED POLLED CATTLE.

For Milk, Butter and Beef; of a beautiful red color; no horns for mischief; just the Cattle for the Farm, the Dairy and the Family.

Imported, bred and for sale by L. F. ROSS, Iowa City, Iowa.

- 23.—Architecture Simplified, 60 pages..... .15
- 24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, \$1.00..... .75
- Beautiful Poetic Review, entertaining and instructive 35 pages (a handsome and pleasing present)..... .25

NOTE.—The cash must accompany all orders. Address this office, No. 252 Market St., S. F.

Inform your neighbors about our offers and paper. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for any further information desired.

12 Lovely Hidden Name Cards, with name covered by hands holding flowers, etc., IMPORTED FROM GERMANY, for 15 cts. 12 extra fine Gold Bevel Edge Cards, with name, 15 cts. Agents' Outfit sent free with each order from this ad. provided you cut out and return me the ad. and agree to act as my agent. G. W. TUTTLE, Pasadena, Cal.

Ligent husbandman and rural household in the Pacific States. The subscription is low at \$3 a year for so large, clean, attractive and reliable a publication. Its painstaking market reports are a profitable feature to all its readers. Mailed on trial for any term desired at 25 cents per month, postpaid. Six back Nos. mailed to any address, as samples, for 25 cents. Office, 252 Market St., San Francisco, Cal. DEWEY & CO., Publishers.

**PRICES:**

8-ft. wheel.....\$25 00  
10-ft. wheel..... 30 00  
12-ft. wheel..... 35 00  
14-ft. wheel..... 40 00

**PUMPS.**

2-Inch.....\$15 00  
2 1/2-Inch..... 15 50  
3-Inch..... 16 50  
3 1/2-Inch..... 17 50  
4-Inch..... 20 00

These Pumps are complete and will work in wells of any depth and force water to any height. TOWER, complete, \$15 00.

**BONDS' PRICE, \$25.**

**ECONOMY WINDMILL**

Is the cheapest ever offered to the trade, and as efficient and durable as the most elaborate self-regulators. It is intended to run constantly, and turns on the stand facing the wind, from whatever direction.

The wearing parts are few and cheaply replaced. Requires little or no attention. Will raise 25 per cent. more water than any "self-regulator" of same diameter of wheel. Anyone can put it up.

Write for Circulars to

**BYRON JACKSON 625 6TH STREET SAN FRANCISCO.**

**THE JACKSON VINEYARD HARROW**

Rotates either way, at the will of the driver, and by driving the slow side next to the vine or tree, there is no danger of hurting it, as the Harrow will roll gently around the tree or vine.

It has half-inch steel teeth, and is made to rotate either way by simply changing the cast-iron weight from one side to the other. The Harrow weighs 170 lbs., and can be taken down and packed closely for shipment.

**STEAM ENGINES, STATIONARY ENGINES, Upright and Horizontal.**

**PORTABLE & TRACTION ENGINES.**

**IRRIGATING MACHINERY A SPECIALTY.**

Pumps for Irrigation and Reclamation.

**HARVESTING MACHINERY, WINDMILLS, HAY STACKERS and RAKES, IRON HARROWS, Etc.**

**WRITE FOR CIRCULARS TO BYRON JACKSON, SAN FRANCISCO.**

### The New Cast AJAX TINNERS' SHEARS

(Patent applied for) at the extremely low price of 50 cents each; postage, 16 cents. Length of cutting edges, 2 inches. Carefully made, well finished, very serviceable, edges dull and hard as steel, equal to the best steel goods in cutting qualities. OSBORN & ALEXANDER, Mechanics' Tools, Hardware and Machinery, 628 Market St., San Francisco

### SHEEP AND SHEEPWASH.

Calvert's Carbolic SHEEP WASH  
\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast

### LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
\$1.25  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

### Powdered Potash & Caustic Soda

KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to T. W. JACKSON & CO., 304 California St., S. F.

Union Islands, and L.A.'s Mineral Springs stages. The  
most desirable location in the city. Refurnished and refit-  
ted in the best style for the accommodation of the public.

CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,  
by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE  
STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with  
roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.  
In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder  
not strong enough.

For particulars how to use the same, apply to

WEST COAST LAND CO.

SAN LUIS OBISPO, CAL.

Incorporated March 27, 1886.

CAPITAL, \$500,000.

DIRECTORS.  
GEO. C. PERKINS,  
JOHN L. HOWARD,  
ISAAC GOLDTREE,  
R. E. JACK,  
C. H. PHILLIPS.

OFFICERS.  
JOHN L. HOWARD, President.  
ISAAC GOLDTREE, Vice-Pres't.  
R. E. JACK, Treasurer.  
C. H. PHILLIPS,  
Secretary and Manager.

THE PASO ROBLES, SANTA YSABEL, and  
EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in sub-  
divisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch,  
belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact  
body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea  
coast. It is covered with white and live oak timber, is one of the most picturesque bodies  
of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good  
water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21  
inches, exceeding by six inches that of Santa Clara county, one of the most prosperous  
counties in the State.

The extension of the Southern Pacific Railway from Soledad  
southward traverses these lands for 15 miles throughout their  
entire length, placing the property within eight hours of San  
Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest  
cultivation. In salubrity of climate, productiveness of soil and location as to market, they  
are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200  
and upward; and as to price and terms, offer the best inducements to those seeking homes  
on any part of the Pacific Coast. The survey of the

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on  
application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles  
from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been  
held by the same party for over 30 years, has never before been offered for sale. It consists  
exclusively of land of the choicest character, and is second to none in the State for the pro-  
duction of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent  
per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent  
net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,  
West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

"ACME" PULVERIZING HARROW

CRUSHER AND LEVELER

AGENTS WANTED

BEST SELLING TOOL ON EARTH

The "ACME" subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting,  
Lifting, Turning process of double gangs of CAST-STEEL COULTERS, the peculiar shape and arrange-  
ment of which give immense cutting power. Thus the three operations of crushing lumps, leveling  
off the ground, and thoroughly pulverizing the soil are performed at the same time. The entire ab-  
sence of Spikes or Spring Teeth avoids pulling up rubbish. It is especially adapted to inverted sod and  
hard clay, where other Harrows utterly fail; works perfectly on light soil, and is the only Harrow that cuts over  
the entire surface of the ground. We make a variety of sizes, 3 to 15 feet wide.

The "ACME" is in practical use in nearly every Agricultural County on the Pacific Coast, and has proved  
itself to be just the tool for use in VINEYARDS, ORCHARDS and GRAIN FIELDS.

Send for Pamphlet containing Thousands of Testimonials from 48 different

CYPRESS AND GUM TREES.

All fresh, hardy, stocky trees. Monterey Cypress, 8 to  
12 inches high, transplanted in boxes of 70 trees each, at  
\$2 per box or \$25 per 1000; 12 to 15 inches, of 50 trees  
per box, at \$4 per 100 or \$35 per 1000. Seedlings, 3 to 4  
inches, at \$5 per 1000. Blue Gums, 8 to 12 inches, of 100  
per box, at \$1.50 per 100 or \$14 per 1000; 12 to 18, of 70  
per box, at \$1.50, or \$20 per 1000; 18 to 24 inches, 50 per  
box, at \$1.75, or \$30 per 1000. Large, straight sanded or  
bulked Gums or Pines shipped only after the roots have  
sprouted through sacking. Blue, 4 to 6 feet, at \$15 per  
100; 6 to 8 feet at \$20 per 100; 8 to 10 at \$25 per 100.  
Red or Round Leaved Gums, 4 to 6 feet, at \$20 per 100;  
6 to 8 feet at \$25 per 100. Pines, 2 to 3 feet, at \$20 per  
100. Acacias, 2 to 3 feet, of 30 trees per box, or 3 to 4  
feet of 20 trees per box, at \$2 per box. Also fresh-  
gathered, strong-growing seeds of the Monterey or  
Italian Cypress, Blue, Red or Iron Bark Gum or Acacia  
in variety at lowest rates. Postage Stamps taken for  
orders not exceeding \$2. No other than the best of  
stock will be sent from this nursery, as we desire to  
make a friend of every cash customer.

Depot, 317 Washington St., San Francisco.

### B. V. CUTTINGS.

#### Bordeaux Varieties.

I OFFER FOR SALE, AT \$10 PER M. 200,000 CUTTINGS of the following renowned varieties, tube-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portat-Ploussard, Mendocino, Petite Sirah and Grosse Blue. Also from \$2.50 to \$5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

J. B. J. PORTAL,  
Box 627. San Jose, Santa Clara Co., Cal.

## 33d YEAR. STOCKTON NURSERY. 33d YEAR. WHITE ADRIATIC, SAN PEDRO, SMYRNA, and ENDRICH FIGS.

Preparituriens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobalan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

### TRY THE PERSIAN MULBERRY.

NO SCALE—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.  
Stockton, Cal., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District,  
JOS. HALE, County Commissioner of Horticulture.

## Don't Buy SEEDS

without writing for our Catalogue. You want THE BEST. Guaranteed, in good condition, and SEEDS are PURE, TESTED, RELIABLE. FREE CATALOGUE, invaluable to all—of 64, 125 pages, including ROSES, PLANTS, VINES, SHRUBS, TREES, FRUITS. THE RAREST NEW. THE CHEAPEST OLD. 3rd Year. 700 Acres. 21 large greenhouses. THE STORRS & HARRISON CO., PAINESVILLE, LAKE CO., OHIO.

## PEPPER'S NURSERIES.

ESTABLISHED IN 1868.

Apricot, Plum, Prune and Peach on Myrobalan Plum stocks. Bartlett, Winter Nelis, B. Clairgeau, B. Hardy and other varieties, 1 and 2 years. A full stock of 1 and 2-year-old Apple Trees, Peach on Peach, Nectarine, Quince, Fig, Grape, Currants, Gooseberries, Almonds, Walnuts, Chestnuts, etc. Prices reasonably low. No scale bug. Also Myrobalan Plum and Pear Seedlings, home grown. Address W. H. PEPPER, Petaluma, Cal.

## ALFALFA SEED.

In carload or smaller lots. Fresh, clean, and free of foul seed. Also all varieties of Grass, Clover, Garden, Flower, and Field Seeds. Send for Catalogue and special quotations on large orders. W. R. STRONG & CO., Sacramento, Cal.

## Trees! Trees! Trees!

Fine assortment of the leading varieties at the following reduced prices, to the trade:  
2000 Apples.....5 to 10c. 3500 Pears.....5 to 10c.  
6700 Apricots.....4 to 8c. 7500 Cherries.....5 to 10c.  
7700 Prunes.....4 to 8c. 2050 Peaches.....4 to 8c.  
4600 Plums.....4 to 8c. 1000 Japan Plums.....5 to 12c.

ALAMEDA NURSERY.

A. Cleveland, Alameda, Cal.

## Home-Grown RYE GRASS SEED.

In Lots of Half a Ton, at 10 cents per pound.

JOHN W. FERRIS,  
Black Point, Marin Co., Cal.

SOW EARLY. 30 lbs. to the acre.

## DEL MONTE VINEYARD NURSERY, FRESNO, CAL.

For Sale—White Adriatic Fig Cuttings of my own importation. Grape Roots and Cuttings of Carignan, Mataro Grenache, Teinturier, Trousseau, Carbenet Sauvignon, Malbec and Muscat Frontignac, etc.

M. DENICKE.

## SEEDS. LONG ISLAND SEEDS

ARE THE VERY BEST! WHOLESALE PRICE LISTS FOR THE TRADE ONLY FREE, upon application to FRANCIS BRILL, RIVERHEAD, LONG ISLAND, N. Y.

J. N. KNOWLES, Manager. EDWIN L. GRIFFITH, Secretary.  
**ARCTIC OIL WORKS,**

**Sperm Whale, Elephant and Fish Oils.**  
**WHALE OIL SOAP,**  
STRONGEST MADE ON PACIFIC COAST.  
Especially adapted for Vineyards and Fruit Orchards. OFFICE—28 California St., San Francisco.

**PANSIES. COX'S PRIZE STRAIN FOR 1887**

It has been our ambition for years to supply our customers with a superior strain of these lovely flowers, which, on account of their many varieties and charming shades, are especially desirable for the Garden. We have this season obtained from a noted grower in Belgium, seed of all of his exhibition Flowers, including almost every shade of color, exquisitely spotted and blotched, flamed and fancy varieties, a strain so beautiful that no description or praise can do it justice. In Europe these fancy varieties are grown under glass for exhibition in the fairs, but in California they can be grown in the open garden the same as the common varieties.

We offer this season in packets of 150 Seeds at 50 Cents per packet, postpaid.

Our New CATALOGUE for 1887, mailed free on application, contains description and price of VEGETABLE, FLOWER, GRASS, CLOVER, TREE and FIELD SEEDS; AUSTRALIAN TREE and SHRUB SEEDS; native California TREE and FLOWER SEEDS, FRUIT TREES, and many new novelties introduced in Europe and the United States.

THOS. A. COX & CO., 411, 413, 415 Sansome St., San Francisco.

**Fancher Creek Nursery,**  
FRESNO, CALIFORNIA,  
Offers this Season a Large Assortment of Healthy and Well-Grown  
**Fruit-Trees and Ornamental Plants.**

OUR SPECIALTIES THIS SEASON ARE:

Valuable and New Peaches, Nectarines, Apricots, Prunes,  
ALMONDS, FIGS, OLIVES, POMEGRANATES, MULBERRIES,  
Japan Fruits, Grapes, Texas Umbrella Trees,  
ROSES, OLEANDERS, HEDGE PLANTS AND ORNAMENTAL PLANTS.

OUR STOCK OF  
**ADRIATIC FIGS, NEW OLIVES & SABALKANSKY GRAPES**  
IS THE FINEST AND LARGEST IN THE STATE.

New Catalogue, containing full descriptions and guide for Amateur Rose-Growers now ready. Address

**300,000 TREES. 1,000,000 ROOTED VINES.**

**FOR THE SEASON OF 1886-7.**

Apples, Pears, Peaches, Apricots, Nectarines, French and Hungarian Prunes, Plums, Figs and Cherries. Cypress, Gums, Acacias, Ornamental Shrubs, Greenhouse Plants.  
**8,000 WHITE ADRIATIC FIGS**—The fig of commerce, home grown, for sale the coming season. Sixty varieties of Grapes, rooted and cuttings, including all the best Wine and Raisin varieties. Catalogue free.

**W. M. WILLIAMS,**  
P. O. BOX 175. Fresno, California.

All Trees warranted FREE from Scale or Aphids.

Kieffer's Hybrid, Le Conte and P. Barry Pears, at Reasonable Prices.

**PRICE'S EXCELSIOR SEED SOWER**

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

**TREES! TREES! TREES!**  
BY THE DOZEN, 100, 1000, or 100,000.

Our Stock this Season Cannot be Excelled on the Coast, Neither in quantity, quality, varieties, size of trees, nor for health and vigor of same. We offer \$1 each for every scale bug found on our nursery trees.

**OUR PRICES ARE VERY LOW THIS YEAR.**

Send for our new and beautiful lithograph-cover Tree and Seed Catalogue. See in it description of

**OUR NEW TRAGADA PRUNE,**  
The very earliest, good shipping Plum. There are fortunes in it. Also our new and fancy  
**JAPANESE ORANGES, CAMPHOR TREES, TEA PLANTS.**

And other novelties. Our Seed Store carries an immense stock of Seeds of every variety at bottom figures, both wholesale and retail.

Send for Catalogue; it is the finest in the State—an ornament to any parlor table. See our Stock, if POSSIBLE, or write to us. Address

Single Copies, 10 Cts.

## A Fine Stallion.

There is, perhaps, at the present time no subject more fully discussed among the breeders of fine horses than the question of superiority between the two contending trotting families,

of our breeders are more fortunate than others, having a compound of both the strains of vaunted blood; they are almost sure to win.

In presenting the cut on this page we give to our readers a type of the combined pedigrees referred to, in a true likeness of a fine horse,

ed throughout all his parts. His owner has wisely deferred training him while so young, on account of his size, but like his near relations on both sides, he is a natural trotter, and without any track-culture can show a high rate of speed on the road. His

*Tempest* was sired by Carr's Mambrino, by Mambrino Patchen, by Mambrino Chief, by Mambrino Paymaster by Mambrino, and he by Imp. Messenger. *Tempest's* first dam was Bluegrass, by Rysdyke's Hambletonian, by Abdallah, by Mambrino by Imp. Messenger. His second

TEMPEST (Foaled May 5, 1882)—PROPERTY OF CAPT. BEN E. HARRIS, OF SAN FRANCISCO.

Mambrinos and Hambletonians. There are many able writers and advocates on either side, and certainly both parties are well supplied with abundant material for debate, and in the event of a final verdict for either, the defeated can boast of a well-fought battle, and patiently await the performance of some of their promising equine stars, which may then change the statistical record and turn the scale of superiority in their favor. In this respect some

by our well-known artist, Mr. E. Wyttenbach, whose autograph is considered a sufficient guarantee of its correctness. It represents the four-year-old stallion *Tempest*, raised and owned by Capt. Ben E. Harris, of San Francisco. In color, he is a rich mahogany-brown, without white, standing 17 hands, and turning the scale at 1300 pounds. In point of form, finish and style, he is indeed a grand horse, with immense bone and muscle proportionately distrib-

wonderful style and long-sweeping trotting action render him a model carriage horse.

Farmers and stock-raisers in this country have long felt the need of just such a sire, and with his breeding and symmetrical form he cannot fail to prove his value in the production of a class of all round horses, and when he shall have attained the proper age for work, barring accidents, we predict for him a bright future and great popularity.

dam was by Grayfoot, a thoroughbred son of imported Grayfoot.

THE Immigration Association reports the arrival in the State, last week, of 735 immigrants, most of whom came to this city. Parties will be sent to Monterey, San Luis Obispo, Tehama, and Shasta counties. A number of families, having considerable money among them, are expected shortly from Texas.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Napa County Notes.

**EDITORS PRESS:**—Much seed sown soon after the light showers of four or five weeks ago, still unspouted, awaits heavier rainfall, promises of which, though not a few, have not been fulfilled. A good heavy downpour is desired by farmers and others, though much work is being prosecuted on farms that rain would interfere with. Feed in pastures is now very short, and stock have to be fed in order to keep them in good condition. A longer continuance of the dry weather would cause hay—of which there is a large quantity stored in this county—to appreciate in price, and other farm products as well—circumstances devoutly wished for by many who have considerable produce to sell just now. [We presume the late rains have settled matters somewhat.—EDS. PRESS.]

Pruning was begun in some vineyards last month not a great while after the second crop of grapes was harvested. Since the days when our farmers raised nothing but wheat or barley, they have not so much leisure time as formerly, as, where mixed crops are raised, something or other demands the husbandman's attention during every month of the year. There is no idle season; odds and ends have to be attended to after the main crops are harvested, and preparation made for the next season. Not only are our climate, soil and products like those of Palestine of old, but upon us descend, yearly, the blessings vouchsafed that land in olden time, when the thrashing reached unto the vintage, the vintage until sowing time.

## Under-draining.

Of late years increased attention has been paid to under-draining, excellent tile for this purpose being made in Napa City. Vineyardists some years ago became aware of the great benefits resulting from properly draining the low places in their vineyards, and in not a few vineyards miles of tile have been laid with the best results. There is much land here, as in many portions of our State, that would be greatly benefited by draining. Year by year the advisability of thus improving low land is becoming more apparent, though it will be many years before our farmers pay as much attention to draining as do their Eastern brethren.

## Planting More Fruit.

Evidently there will be many fruit trees planted in this county this season, as well as grapevines, of the finest varieties. Already our local nurserymen and those from abroad are preparing for the demand they are sure to have, and have already taken many orders. From present appearances olive culture will, at no distant day, become a prominent industry here, as at the present time a large number of trees, some of them four or five years of age or more, are rapidly growing. This tree seems to do very well in our county, and, it being hardy, flourishes where other fruit trees would make poor growth. Olive trees have fruited here, in a few places, for many years, excellent oil having been made, in a crude way and on a very small scale, eight or ten years ago. The demand for good California olive oil, excellent now, will certainly continue for long years to come.

## Citrus Fruits.

Gradually it is dawning upon the minds of residents in this portion of the State that many semi-tropical fruits will flourish here as well as in the southern counties. This new awakening is due, in a great measure, to the citrus fairs inaugurated at Sacramento last year, the second one to open at an early date, at the same place, preparations for which are now being made by several of our citizens. A committee, composed of fruit-growers and others interested in our county's progress, has been appointed, and they will doubtless see that Napa county's exhibit will be a creditable one. Though oranges and nuts are not extensively raised here, it has been demonstrated that they will thrive and be a source of profit, especially within the confines of the thermal belt that extends along the hillsides of Napa valley, at an elevation of a few hundred feet, and in the smaller and warmer valleys of the county. Here excellent fruit is raised, and the trees bear at an early age.

On the asylum farm, oranges and olives thrive. The success attending their growth will induce Dr. Wilkins, the resident physician, to plant more in the future. The portion of the premises where these trees do the best is near the hills that constitute a part of the farm. The entire farm is carried on in a systematic, scientific and profitable manner, every detail of which is carefully studied by the resident physician. Large quantities of vegetables—of a score or more varieties—fruit from orchard and vineyard, as well as the smaller fruits; beets for the cows and swine, hay for the cattle, and other produce, comprise some of the returns of this successful husbandry. Most of the labor is performed by patients, under the direct supervision of capable attendants. The dairy, the poultry yard and other departments are models in their way. A thorough inspection of the farm would surprise many and interest all.

## A Horse Disease.

For some time past horses throughout the county have been troubled with a distemper or

influenza that has become an epidemic, and accounts from other counties in the State show that this affliction is widespread. In fact, like reports come to us from the East. The horse loses his appetite, becomes dumpy, matter forms in and issues from the nasal passages, and often a large abscess forms under the lower jaw. If this breaks, the horse is at once relieved and quickly recovers; but if the poison in the system does not thus, or in some other way, find an outlet, the animal fares badly and sometimes succumbs to the disease. Poulticing the throat; burning coal tar under the nose; a thorough course of physic, followed by appropriate tonics—these and other remedies are used with success. Yet sometimes it is the case that horses that receive no definite treatment get along nicely, and if the matter gathers in an abscess and escapes therefrom, recovery is almost sure to follow.

## New Railroads

There is always some railroad talk in one portion or another of our county, though, to our disappointment, some projected lines are only talked of, even when their construction seems assured. Thus it is with the line from Rutherford to Lake county via some of the smaller valleys of this county. Several miles were graded at considerable expense, and there the matter ended—apparently. Now, there is the possibility of a railroad connecting Sonoma and Napa counties, joining the C. P. at or near Napa Junction. This will be a much-needed outlet for Sonoma county, as over it fruit, wines and other produce can be shipped to the East without rehandling. Running along the edge of the tule land bordering Napa county on the south, this road will, if constructed, cause contiguous farms to appreciate in value. Residents of Sonoma seem to be in earnest in this matter, and probably another year will see the final consummation of the scheme.

## Growth of Napa City.

The many and varied improvements that have been made in Napa City during the last year indicate the prosperity of the whole county, for, indeed, substantial improvement is confined to no one particular locality. Farmers, manufacturers, mechanics, and in fact all classes of our population, look for and anticipate a prosperous season the coming year. Fruit-growers are especially confident, new life having been infused into this industry of late. Grape-growing is on a substantial footing, manufactures are increasing or enlarging, especially in Napa City, which, by reason of its favorable location, is destined in coming years to be noted far and wide for its varied and successful industries. Desirable real estate—city lots and fertile farms—is offered for sale in different portions of the county, transfers of which are frequently made. Not a few of the purchasers are persons from the far-away East, the rigorous climate of which section loses its charm for most any one who spends a few months, especially those of winter, in our favored county. The spirit of improvement is discernible, go where one may, in this county, and a notable fact is that it assuredly is permanent. To persons from the East seeking temporary or permanent homes in our State, and there are many such within our borders now, or will be in the next few months, we, as residents of one of the loveliest portions of the State, extend cordial greeting. The hospitality of our people is well known far and near, which the Knights Templar and the Grand Army of the Republic take pride in praising in no feeble manner. R. Napa, Dec. 6, 1886.

## Yolo County Notes.

**EDITORS PRESS:**—It has been a long time since I have attempted to write for your valuable paper. I say valuable, for so it is to me. I get many a useful hint on horticulture, which many times pays the subscription price. I never expect to be too old to learn.

Well, we have gathered another harvest. The cereals promised finely in the early part of the season, but a heavy norther shelled the grain badly and farmers generally bought too many sacks. Peaches and apricots were a light crop. Prunes and plums did well. Grapes did finely and the crop is about packed and shipped. The clear, dry weather this fall has greatly facilitated the curing of raisins, and if the output is not good to choice the fault can be charged to the management.

Fruit trees of every description that show blossom buds in the fall give promise of a heavy crop next year, as they are budded very full. The season has been a long, hot one, but the heavy rainfall of last winter so saturated the ground that the trees held their foliage till frost, which ripened the fruit buds finely.

Many are pruning now, which will do well enough for young orchards, but old ones of peach and apricot should have been pruned in September, especially if they are in bearing. From what I have seen, winter pruning produces heavy growth the following year, while fall pruning ripens the fruit buds and produces fruit on the peach and apricot—of other varieties I know but little. Of course I do not claim a patent on the idea, as it has long been practiced upon in Vacca and Pleasant valleys; but I think it is a matter that cannot be too often repeated, seeing there is such a hap-hazard way in orchard culture, one trimming in summer, another in fall, another in the winter and another next to none at all. What we want is

an intelligent understanding of the matter, and a unanimity of action, which alone can secure us success.

It is very satisfactory to hear of the demand for California raisins in the East, and it is to be hoped that the producer can be made to see that it is to his or her interest to properly cure, grade and pack their fruit, in order to hold what we have gained in the Eastern markets. The writer tried raisin-making this fall on a small scale. Am not prepared to report yet, as I shipped to the East and my returns have not come. I learned many things by chance and from others. I did not pick my raisins until they were fully ripe, till the skin that was exposed had turned a little yellow. I was not aware that it made any difference till I had them dried and compared with others, and then I found that it did. One man told me he learned that when it was too late for this year, and that he was not going to put his name on the boxes, but ship and sell for what they would bring; that he would know better next year.

I think mixed farming in the fruit business is commendable, for several reasons: One is that by so doing we can furnish ourselves employment for the whole summer. We should have peaches that run from June to October; apricots for June and July; prunes and plums for July, August, and September if possible; and shipping and raising grapes for the fall months, planting in such proportions that one or two men can take care of the whole, if on a small scale; or if on a large scale so that the hired hands will have an all-summer job—which will go a great way toward solving the labor problem on this coast.

I might add to the list Bartlett and Winter Nelis pears for summer and fall. They are all good if the locality is suitable to all kinds.

Such beautiful weather as we are now having is unknown east of the Rockies. I work every day out of doors without coat or vest. A coat is very comfortable in the morning, but the sun soon warms the air, so it is not needed. The usual blizzard has made its appearance in the East, and all we can do for our cousins there is to sympathize with them. It makes me shiver to think of that cold. Here what cold we have is regular, and so it does not inconvenience us as it does there.

Farmers are doing a good deal of dry plowing for volunteer to catch the early rain. Stock is looking well on the dry feed, as the little rain we had did not destroy the feed in the fields. More anon. J. R. SPRINGER. Woodland, Cal., Nov. 29, 1886.

## THE APIARY.

## Pollen.

**EDITORS PRESS:**—Pollen is a dust-like substance, produced by those parts of a flower called the anthers, which are borne by the stamens. It serves to fertilize the seed germs, and to effect this it must come in contact with and adhere to the central part of the flower, the pistil. This is accomplished in many different ways, often by the wind, but most frequently by insects, and principally by the honey bees. As no flower-bearing plant can produce fruit without this fertilization, Nature has provided two distinct inducements for the bees to aid in its accomplishment; first, by secreting in the flowers honey for the sustenance of the bees themselves; secondly, by making pollen necessary in the preparation of food for the brood. It will be observed that a pollen-gathering bee generally confines herself to one kind of flowers while she is making up a load, and to avoid in and in breeding and thus insure sound and healthy fruit the bee unavoidably deposits some pollen of one flower on the pistil of another, and thereby unconsciously carries out Nature's design.

While the majority of plants contain in their flowers both the male and female elements, in some the pollen-bearing anthers do not mature at the same time as the pistil, so that it is absolutely necessary that each flower becomes fertilized by the pollen from another flower. Some flowers are so constructed that it is impossible for the pollen to reach the pistil without the aid of insects. Certain plants, as the corn, the willows, etc., have distinct male and female flowers, while still others, as the palms and some of the strawberry plants, have each sex of flower assigned to different individuals. Many and extensive experiments have been conducted to ascertain the real benefit of bees and other insects in the fertilization of flowers. I quote from the *American Bee Journal* of 1884, p. 389: "In the course of the late Darwin's numerous and valuable experiments, he found that 100 heads of red clover, when grown in the open air in the usual way, produced 2700 seeds; but the same number of heads, when protected from bees, did not produce so much as a single seed." Harbison mentions in his book on bee culture a hot-house in Russia, where the peach trees, although thrifty and bearing numerous flowers, never produced fruit until a hive of bees was placed within the house. After that there was an abundance of peaches. In New Zealand the red clover never produced seed until humble bees were imported for that very purpose.

## Color of Pollen.

Pollen from different plants is of various colors, such as white, red, brown, blue and

green, and of different shades, but yellow is the prevailing color. This has, no doubt, originated the erroneous idea, entertained by many who have seen the bees carry something yellow on their legs, that they gathered wax from the flowers.

## The Pollen Basket.

The worker bee has on the middle joint of the hind legs a spoon-shaped cavity, surrounded by long, stiff, and curved hairs. This is called the pollen basket. Neither the queen bee nor the drones have this development. If you closely observe a bee, when she is gathering pollen, you will notice that after she has left the flower she hovers for a moment near it, and with the front and middle feet she transfers the pollen from her mouth to the pollen baskets, where it accumulates, until it forms two balls or pellets, about the size of the bee's head. The front and middle feet appear, under this operation, to be curved in under the body, and move with such exceeding rapidity that the eye can hardly follow them. As soon as the pollen is transferred to the pollen baskets the bee darts off to another flower. Just why she should confine herself to one particular kind of flowers while gathering a load of pollen is not well understood, but it has been suggested that perhaps pollen from different plants does not pack well together.

## Storing the Pollen.

By means of an observatory hive containing a single comb, with glass on both sides, I have seen repeatedly a worker bee enter laden with pollen. At first she runs over the comb in all directions, putting her head into different cells, as if undecided where to deposit her load, until she finally stops at a cell which perhaps contains some pollen of the same kind as that which she has brought. (In breaking up old combs it is, however, frequently found that a cell contains several layers of different-colored pollen.) Having found the cell suitable, the bee now puts both hind legs into the cell, and rubbing them together pushes off the two pellets in the pollen baskets. She then brushes off any pollen which may adhere to other parts of her body, and having also pushed this into the cell, she leaves the hive in search of another load. One of the young bees who attend to the interior management of the hive now puts her head into the cell, remaining there for some time, and when she finally withdraws, the loose pollen left there by the other bee will be seen to be nicely packed up against the bottom of the cell or against the pollen previously deposited there. When the cell is nearly full and the pollen not wanted for immediate use, a little honey is placed over it to exclude the air and the cell is then sealed. When pollen is stored in the hive it is frequently called "bee-bread."

## Use of Pollen.

Pollen, in conjunction with honey and water, is taken in by the nurse bees and partly digested, forming a thick, milky-white substance, chyle, which is disgorged and fed to the brood in the larval state. Without pollen or its equivalent, no brood can be reared. In cold climates, where it is desirable to have the bees breed up in time for the first honey harvest, and where there are in early spring no flowers from which the bees can gather natural pollen, bee-keepers are in the habit of placing meal of different grains, principally rye and oats, in some sunny, sheltered place, where the bees can help themselves to it. But as soon as the flowers appear in sufficient quantity, the bees leave the meal and confine themselves to gathering pollen from the flowers.

WM. MUTH-RASMUSSEN.

Independence, Cal.

## THE FIELD.

## The Wheat Yield for 1886.

The latest Government estimate of the wheat yield of the United States for 1886 is set down at a total of 80,000,000 bushels in excess of the last year's yield. With the three exceptional years of '80, '82 and '84, the present year has produced, in the United States, the largest crop of wheat in our history, while circumstances seem to render it probable that it will be a fairly profitable year to the wheat-grower. The National Bureau of Agriculture estimates that this year's yield amounts to about 457,000,000 bushels, or 100,000,000 more than last year. From 1870 to 1880 the average annual yield of the country was 31,052,728 bushels, and since then the yield has been as follows:

	Bushels.	Bushels.
1880	438,449,865	512,793,900
1881	380,280,196	357,112,000
1882	504,186,470	457,000,000
1883	421,086,160	

To the yield of the present year should be added the amount of surplus wheat and flour—reduced to bushels—brought forward from last year, amounting to 70,000,000 bushels, which makes the total quantity available for 1886, 527,000,000 bushels. The price of wheat has advanced of late, and almost coincident with this, though beginning a little earlier, has come a largely increased demand from abroad.

It will be interesting to estimate the amount which we can spare to supply the foreign demand, made larger by crop failures, war preparations and an almost settled belief that troubles times are impending in Europe. We need more wheat ourselves this year than last, on

account of an estimated increase of 1,700,000, at the average rate of growth, in our population. To supply this home demand it is thought 270,000,000 bushels will suffice, to which add 59,000,000 bushels for seedling, making a total of 329,000,000 bushels needed at home. Subtract this from 527,000,000 bushels and we find available for export 198,000,000 bushels. We will not probably have much of a surplus to carry forward.

The Bureau of Statistics reports that in July, August and September, when wheat prices were about five per cent less than the same time in 1885, the value of our exports of breadstuffs of all kinds, chiefly wheat and flour, was \$40,967,033, against \$25,439,474 in the same period of 1885. In September exports were \$14,282,528, against \$9,007,013 in September, 1885. The advance in the market has taken place since these figures were issued, and if it is remembered that the heavy increase of exports was at a time when prices were less than during the period compared with last year, some idea may be formed of the rapidity and extent of the growth of our export trade in wheat and flour. There is little fear of a surplus production at any time to cause material embarrassment. As our product increases, so does our population and the foreign demand, and it is a safe assumption that the two latter will usually equalize the former. From whatever standpoint it is viewed, either for this year alone or in the near future, our wheat and flour outlook is very satisfactory.

### Corn is King.

Notwithstanding the immensity of the wheat yield of the country, corn is king among the cereals. The corn crop will aggregate nearly or quite 2,000,000,000 bushels. These figures are of great significance. Such a crop of that cereal which is indigenous to American soil, and is nowhere else in the world grown in such perfection as in our Northwestern States, is a fact which means much. It means plentiful and well-conditioned beef and pork for home use and foreign trade. If only a tenth of the crop is moved to the seaboard, it means 6,000,000 tons of freight for our land and water carriers. Estimating the value of the crop on the farms at only 30 cents a bushel, it adds \$600,000,000 to the wealth of the country. If a tenth part of the crop be shipped, it will pay to the carriers \$20,000,000. Sent abroad, it will be one of the greatest items of our export trade. Other nations may crowd us in the wheat market, but the growing demand for corn, America alone can supply. Corn is not yet king of our export trade; cotton still holds that regal post; but in total value at home and abroad, corn is the great crop. The figures given indicate an early return of business prosperity. All wealth comes from the soil, and the country cannot prosper when the earth withholds her increase. But, on the other hand, the country cannot fail to prosper when the earth yields such a bounty as this greatest of all corn crops. The farmers are everywhere happy, and the commercial outlook is propitious. If the world does not need any one of our crops, or is unwilling to pay our price for the same, we have others to offer, which generally they must have, and we can hold on to the one not wanted until another year comes round. We have the broad expanse of a continent with all the varied soils and climates of the world, and a far more diversified system of agriculture than can be realized in any other country. We can furnish the markets of the world with wheat, corn, cotton, fruit, beef and gold.

California is only slightly interested in corn. It is grown in some of the southern counties, but our soil is so much better adapted to wheat and fruit that it is hardly likely that corn will ever become one of our staple products. Considerably over one-half of the total corn crop of the country is raised in the great Mississippi valley of the interior, viz., in the five States of Illinois, Iowa, Missouri, Kansas and Nebraska. The value of the corn raised in these States is greater than that of all the wheat grown in the United States, and very much greater than the total value of the cotton crop. But the great bulk of it—say 94 per cent of the whole—is consumed at home, only about six per cent of the crop being exported. Thus, in the tables of our foreign trade, corn cuts a much less prominent figure than the real value of the crop would lead one to expect.

When the sod was first broken in the five States above named it was not unusual to harvest a crop of 60 bushels of corn to the acre. This product has now been reduced to an average of 22 bushels. If the yield continues to diminish the price must rise, and populations which now live on cornbread will begin to consume a larger proportion of wheat in flour. This, again, will tend to reduce our surplus of wheat available for export. Whichever way we look at it, the conclusion is inevitable that at no very distant day in the future the agricultural lands of the United States will be taxed to feed the American people and will have little to spare for the foreign world.

NEW-COMERS from the East are flocking into the State, and many land sales in small lots are reported from San Bernardino, Los Angeles, San Luis Obispo, Sacramento, Placer, and other counties.

## SWINE YARD.

### Home-Made Products.

An Ohio woman tells, in the *National Stockman*, how she manages these by-products of the farm-slaughtered pigs as follows:

In making sausage we make use of most of the lean of pork, adding some beef if we have it. We like them best in casings, which have to be well cleaned, and turned and scraped with a dull knife, and soaked three days in salt water, changing it every day. Stuff with the prepared meat—which every one seasons to suit themselves—using a tin stuffer, and pricking with the fork to let out the air. Make them in links by taking a twist in the casing every 8 or 10 inches. Pack them in a keg and pour brine over and they will keep until warm weather.

Another way, which some will like better, is to make casings of cloth, in which the meat is stuffed, making them about three inches in diameter. When wanted for use the cloth is peeled off and the sausage cut in slices; these are nice, but will not keep unless packed and covered with lard. Still another way is to pack the meat in jars and run lard over them.

Head cheese may be made as follows: Take a hog's head, split open, remove the eyes, brain, etc., chop off the snout and part of the jaw bones containing the teeth, and clean thoroughly; soak in salt water an hour or two to remove the blood. Boil these together until the bones drop out. Chop all fine in a wooden bowl, carefully removing all bits of bone. No definite rule can be given in regard to seasoning, as some like it more highly seasoned than others. Dip out into crocks (milk crocks are the best, as they are handy to slice out of when cold) and press down with a heavy weight. Those not wanted for immediate use may have lard run over them and set away in a cool place. When wanted for table, slice and fry a light brown or eat cold.

Cut off the lower part of the pig's feet, scrape and singe them well, and boil until tender, adding a little salt and pepper. They are good this way when cold or when pickled together with the tongue, which is prepared by boiling whole in salt water, then peeling off the thick skin which covers it, and pouring cold vinegar either spiced or plain over them.

Before I stop I will tell you my way of baking sparerib. I take half a rib, chopped through the center, so I can double it together. This leaves a space between them which I fill with dressing, the same as I would with any fowl. Then tie together so it can be turned in the baking pan several times. Sprinkle with salt and pepper, and, if you like, sage; dredge with flour and bake an hour or so, according to the thickness of the rib.

### Home-Cured Bacon.

A few weeks ago the *Modesto Daily Republican* had a long editorial on the blue outlook for hog-raisers in the central and southern portion of the State, on account of the low prices ruling for pork. The editor advanced no suggestion toward meeting the crisis, and our attention was called to this item by a visit from John Burton, of the Norris ranch, in San Ramon valley, who was in town Sunday. A few years ago Norris & Luelling went extensively into the pork business, and stocked the ranch, comprising nearly 3000 acres, with porkers; expensive sheds, etc., were erected, and operations were conducted on an extensive scale. They had fully 1500 hogs as a starter, but after awhile it soon became apparent that the experiment was a failure, so far as raising hogs to be sold to the butcher was concerned. The cholera soon after carried off fully 600. Then they studied over the subject, and at last concluded to kill the hogs on the ranch and cure their own bacon. It is well known that country-cured bacon is worth a cent more a pound than city-cured, and being in possession of a valuable receipt for sugar-curing bacon, they at once prepared suitable quarters for their new departure, and are now capable of disposing of 50 hogs a day. The expense attached to it is trifling, and there is every reason to believe that it is the true solution of the pork question on this coast, and is a business that will pay any farmer, for there is an unlimited market for California bacon. Besides the pork business Messrs. Norris & Luelling are extensive cattle-raisers, and only lately shipped a large number of fine young mules from Texas. They are fully aware that to depend entirely on farming would before many seasons nearly swamp them, but with two adjuncts, like stock-raising and the bacon business, they will undoubtedly realize handsome returns.—*Haywards Journal*.

### Hogs at the Chicago Show.

EDITORS PRESS:—A careful study of the hogs exhibited at the late American Fat Stock Show proved very conclusively that light jowled hogs are not necessarily narrow on the back nor light in ham. The judges on live hogs preferred, as a rule, other things being equal, those having the least jowl or throatiness; but when it came to awarding the carcass prizes, another set of

judges gave the preference to the heavy jowled hogs.

Breeders are therefore still in doubt as to what is most certain to win at a fat stock show. If all markets were alike the butchers would doubtless more nearly agree, and the awards would seem less like riddles than now. The practical breeder and feeder may, however, rest assured that a well-hammed hog with good back and side and a medium jowl will find ready sale at a fair profit if rightly fed and fattened, since there is not the universal demand for jowl meat that there is for good hams and sides.

Springfield, Ill.

PHIL THURFON.

## FLORICULTURE.

### Pruning Roses.

EDITORS PRESS:—I was gratified to have you receive my note of inquiry so kindly, and espouse the cause of floriculture with such earnestness.

In a recent issue of the *PRESS*, Helen Conant, of Santa Cruz, brings up the question of pruning roses. I submit the following clipping: "Roses must be pruned back with a lavish hand, cutting out all the old wood and weak branches, so as to increase the shoots from the roots, and to encourage the number of flowering shoots. Last season, says an enthusiast in the *Springfield Republican*, an old moss rose was cut back most vigorously because the previous year it had bloomed very sparsely. The effect was soon seen in the strong shoots sent up from the ground, and the clusters of mossy buds were very numerous. This season all the old growth has been cut out and only last year's shoots left to flower, and the shoots from the roots are now very luxuriant and filled with buds."

"Hybrid perpetuals will bloom in great beauty in September if all the old wood is cut out after June flowering, and no flowers left to bloom upon the bushes and exhaust their strength by going to seed. Cut back most of the shoots but those springing from the roots, and let new wood form, upon which large clusters of buds will appear in due season."

"Monthly roses cannot endure quite as much pruning as their stronger sisters, yet they will respond in fresh buds and flowers if the scissors are used to clip off all the branches that have borne roses and the weak shoots, and thereby stimulate fresh shoots to put forth in renewed beauty."

May there not have been some other cause for the failing of the bushes? In an English book on flower culture I find the following on the

### Fertilizing of Fuchsias.

"They grow freely in a mixture of vegetable earth or peat, sandy loam, and a little well-rotted manure, which must be kept moist, but by no means sodden."

Your correspondent in Ventura county said nothing of fixing a standard of value which would insure mutual satisfaction in the exchange of the seeds, etc. Would it not be necessary? *San Mateo, Cal.* MRS. G. W. PHELPS.

[Standards of value in free exchanges must be left to each one participating. Let each one state what she will give and the rest of the arrangement must be made by direct correspondence.—EDS. PRESS.]

### The Asphodel.

EDITORS PRESS:—I am much pleased with your kind offer in the *PACIFIC RURAL PRESS* of December 4th, in response to M. W. Mason's communication. For one, I am anxious to lend a hand in the cheap distribution of flowers, and, to that end, submit my list of what few varieties I have accumulated in a year's residence here. [List is given under Exchanges. Correspondents will please write the "exchange lists" on separate pieces of paper, so they can be easily grouped.—EDS. PRESS.]

Can any one give me information regarding the "Asphodel"? Years ago, through the kindness of my valued friend, Thomas Meehan, of the *Gardeners' Monthly*, I became the possessor of a bulb, but in some unaccountable manner it disappeared ere a bloom rewarded my longing eyes.

Sutter Creek, Amador Co.

C. MILLIKAN.

### Exchanges.

Mrs. L. M. Brandt, Fish Rock, Mendocino county, Cal., has White Polyanthus, Narcissus and Campernel or great Jonquils; single and double fuchsias and geraniums of several varieties of each; to exchange for Marechal Niel and other nice rose slips, begonias or abutilons.

C. Millikan, Sutter Creek, Amador county, Cal.—Callas, perhaps 50 small bulbs; Chinese chrysanthemums, pale straw color and pink; Pompon chrysanthemums, pink, bronze and white; Japanese chrysanthemums, bronze and pink, from "Peter Henderson's."

KEROSENE OIL STAINS.—Kerosene oil spilled upon the carpet will often entirely disappear if the room is kept free from dust. If the spot still remains, a thick coating of powdered French chalk put over the spot and occasionally heated by laying a piece of brown paper upon it and passing a hot iron over it will generally remove the oil.

## THE STOCK YARD.

### The Cattlemen and the Railways.

We have printed the action of the Cattlemen's Association with reference to the freight rates on cattle shipped East. It seems that in Nevada there is an issue between the stock-growers and the railways which is exciting much interest. The *Sagebrush Stockman* of December 8th, alluding to a letter of W. H. Mills, land agent of the C. P. R. R. (which it says was recently published, but which did not come to our notice), says:

The letter of Mr. Mills admitted of but one interpretation, and that is that an endeavor will be made by the railroad company to have laws enacted which will prove disastrous to our leading industry. There should be no half-way measures adopted in the fight to be made, but every man engaged in the stock business, as well as those who have the welfare of the State at heart, should at once put forth his strongest endeavors to defeat the deep-laid scheme of the insatiate monopoly which is, and has been, sucking the life-blood of the State ever since the scream of the locomotive was first heard within her borders.

The herd law will not do for Nevada. Wherever such a law has been put in operation it has proved a failure, of benefit to a few and to the detriment of the many. According to Mr. Mills, it is the great desire of the railroad management to populate the State, and in order to effect that desired end a no-fence law is essentially necessary. Such an effort would be commendable, if in earnest, but we have yet to hear of an instance where the company has endeavored in any way to benefit Nevada, except where its own interests were paramount. If the railroad would establish reasonable passenger and freight rates, instead of the exorbitant toll now demanded, we might put some faith in the ingeniously-worded promises Mr. Mills has embodied in the communication referred to, and not until then.

The coming Legislature must either allow the question to remain in *statu quo* or enact a fence law, or capital will be driven out of the country and our now great industry reduced to nothing. As an agricultural country it has been demonstrated that Nevada can never have any claim; as a stock country it is without a peer on the American continent. Blot out this industry and Nevada will be reduced to such a condition that the revenue derived from taxation would be totally inadequate to carry on the State Government.

### Mr. Crutcher's Letter.

E. W. Crutcher, president of the Nevada Livestock Association, has a communication in the *Winnemucca Silver State*, from which we excerpt the following:

I inclose you a letter from Robert Beverly, president of the Farmers' National Congress, which adjourned at St. Paul about the 30th of August last subject to the call of the president. I having been appointed by his Excellency, Gov. Adams, as one of the delegates from this State, is the cause, perhaps, of my receiving this communication. Having received the report of this convention at St. Paul, I observe they passed some resolutions on subjects which we of this State are vitally interested in, and which our legislators should take cognizance of when they meet the coming January. Among them are these:

That the Congress of the United States pass an act creating the office of Secretary of Agriculture; that the Government extend the benefits of the Signal Service to all stations or portions of the United States accessible by telegraph for the benefit of agriculture; that the Congress of the United States appropriate the necessary amount of money for the stamping out of all contagious diseases among domestic animals; and that the Legislatures of the several States be requested to enact such laws as are necessary in supplementing the acts of Congress for the extinction of contagious diseases.

Now, Mr. Editor, in connection with the above, I wish to say one thing more to Nevada stockmen in reference to our fight against the railroad company—I mean the herd-law scheme. Such a law would utterly ruin the State. It would blot out the stock industry and give nothing in return, and I am surprised to see so little attention paid to it by our local papers; seemingly, this is not their kettle of fish. If we intend to be heard and respected, it is time we were showing our teeth. Our legislators must understand that we will not have the railroad company dictate to us the laws they wish enacted. We must combine and stand together as one man in defense of our interests, and not be driven under the crack of the whip in the hands of a monopoly that is seeking its own selfish ends.

Another matter of vital importance to the cattle industry is a law prohibiting the importation of diseased cattle. Pleuro-pneumonia is not a scare. It is a living reality, and we do not want it. I am informed that there are two small herds being quarantined in Montana on the range, they having come in contact with a shipment in Dakota, which subsequently have been slaughtered. I hope our cattlemen will be on hand when the Legislature meets and devise and enact such laws as will guarantee security in the future.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Woman's Legal Right to Vote.

The current number of the *Forum* contains a rather unique and forceful article on the legal right of woman to vote. That the right exists by virtue of her being a federal citizen. The writer states the question as follows: "My proposition is, that in the United States, and under the Federal Constitution, suffrage, whether for men or women, is an attribute of their federal citizenship; that it is one of the essential privileges of a citizen of the United States, inhering in the status or condition of such citizenship." That, "inasmuch as, by the Fourteenth Amendment of the Constitution, 'all persons born or naturalized in the United States and subject to the jurisdiction thereof, are citizens of the United States, and of the State wherein they reside,' then it follows as an unanswerable logical sequence that 'As all native or naturalized persons are declared by the Amendment to be citizens regardless of sex, the same are necessarily suffragists, regardless of sex.' In that case 'women citizens of the United States, who are now disfranchised by State laws, legally have the right to vote for federal officers, because they are federal citizens.'"

This proposition was directly submitted to the Supreme Court of the United States, in the well-known case of *Minor vs. Happersett*, 21 Wallace, S. C. Rep. The Court said: "The Constitution does not define the privileges and immunities of citizens. In this case we need not determine what they are, but only whether suffrage is necessarily one of them. It is certainly nowhere made so in express terms. The United States has no voters of its own creation. The elective officers of the United States are all elected directly or indirectly by State voters." This decision is the only existing bar to woman suffrage, at least the right to vote for federal officials. But in this case the Court admitted that "if the right of suffrage is one of the necessary privileges of a citizen of the United States," then the Constitution and laws of a State confining it to men are in "violation of the Constitution of the United States, as amended, and consequently void." Now it is well known that this tribunal is not infallible. Its path is strewn with absurd and contradictory opinions. This is clearly one of them, and the Court should reconsider its decision for consistency sake. It is in direct conflict with the decision rendered in the celebrated *Slaughter-house Cases*, 16 Wallace Rep. In that case the Court held that "the negro, having, by the Fourteenth Amendment, been declared to be a citizen of the United States, is thus made a voter in every State of the Union." Now the reader will notice that in this decision the United States citizenship of the negro makes him a voter in every State of the Union, while in the former case the United States citizenship of a woman is of no avail. Here is a palpable conflict of opinion. The Court blows hot and cold, giving the suffrage to one class of citizens and taking it away from another.

The dictum of the Supreme Court, that "the United States has no voters of its own creation," is contrary to fact. Mr. Madison says, in the 52d number of the *Federalist*: "The definition of the right of suffrage is very justly regarded as a fundamental article of a republican government. It was incumbent on the convention, therefore, to define and establish this right in the Constitution. To have left it open for the occasional regulation of Congress would be improper, for the reason just mentioned. To have submitted it to the legislative discretion of the States would have been improper, for the same reason, and for the additional reason that it would have rendered too dependent on the State Governments that branch of the Federal Government which ought to be dependent on the people."

But this is not all. That special clause of the Federal Constitution in which, Mr. Madison says, the right of suffrage is established, is as follows: "The House of Representatives shall be composed of members chosen every second year by the people of the several States; \* \* \* and the electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature." In connection with this clause, it is well to remember that the Supreme Court in the case of *Scott v. Sanford*, 19 Howard Rep., decided that the words "people of the United States" and "citizens" are synonymous terms and mean the same thing. That "every citizen is one of this people, and a constituent member of this sovereignty." The conclusion inevitably follows that the right to vote, so far as the members of the House of Representatives are concerned, is established by the Constitution and not turned over to the States, and that every citizen is a voter.

A remarkable case was tried in the Circuit Court of the United States for the southern district of Illinois, in June, 1882, before Judge Harlan. The style of the case is "*United States v. Kellar*." The defendant was indicted for violating a federal law, in voting without having a lawful right. He and his mother

were both aliens by birth, natives of Prussia. The mother came to the United States and married a naturalized citizen. Her son was a minor when she came. "Having become a citizen of the United States, she transmits federal citizenship to her son, and the citizenship thus transmitted carries with it the right to vote. Thus, the mother transmits a right which she herself does not possess, while the effect of her naturalization is declared to be retroactive, enfranchising a child who was born when she was an alien. Here, then, is a case of federal citizenship and federal suffrage, pure and simple, with which the State had nothing whatever to do. If the mother can do this for one child, why not for another? Why not for a daughter, as well as a son? Why does she not possess the right herself? The clause of the Federal Constitution establishing suffrage has not a word about the sex of the electors."

## Anniversary Day at Sacramento.

EDITORS PRESS:—Sacramento Grange observed the anniversary of the Order at their hall, and performed some work with exercises suitable for the occasion. Members of sister Granges mingled with us, making the day one of social as well as intellectual enjoyment. Bro. and Sister Johnston with their daughter graced our meeting with their presence, having arrived that morning from the session of the National Grange, all in good health, and glad to reach their home. The Grange conferred the third and fourth degrees on a class of three sisters. Then the ladies chose their partners and all marched into and filled the banquet-hall, where an hour passed in free conversation, making all hearts happy, as one family of Patrons on our anniversary day.

Having performed the duties of strengthening the inner man, all were better fitted for the intellectual exercises of the afternoon. The W. M.'s gavel fell and he made a few introductory remarks pertinent to the day, and read the first toast: "Our National Grange—The medium through which the hatred of the South and the animosities of the North were turned to fraternal affection and love."

Responded to by W. M. S. G., Wm. Johnston, who spoke of the sessions of the National Grange. As they grow older, each passes a notch higher, and the last goes far in advance of the previous one. Members were at first raw, requiring training to smooth off the rough edges and polish thoughts, which, when brought about, makes the business of the day run in an easy manner. The school of training in the Grange has brought many to the front, and now no Order can show a finer class of men than the husbandmen of our land.

In his varied remarks he referred to the pleasure had in greeting so many, gathered from scattered parts of the Union, now interlocked in links of brotherly love, and bringing forward such business thought as will work to the greatest good of the Order at large. He spoke of the sadness of links broken, the vacant space left silent, and the silver tongues no more heard in the sessions to give words of cheer and endearment to their brothers and sisters; also, of the parting, when the business had been brought to a close—the last grip, expressions of face and word; the good-by and God bless you—all returning to their homes, north, south, east and west—some, perhaps, never to meet again.

The brother referred to the fine farms he had had the pleasure of seeing. Among all he had ever seen, those in the Cumberland valley, Penn., took his eye and were pronounced the finest in the U. S., with stock, improvements and manner of farming. He said California doesn't know what hard times are. Eastern farmers are not looking for fortunes as their brethren do here. If they make ends meet they are contented and happy, but their social relations surpass ours. Being so thickly settled, many Grangers come together during the winter and pass the evenings to their good and derive benefits thereby. He stated that the California Granges were farther ahead in the work than any others in the Union, which is quite a compliment.

Sister Johnston was called, and made some pleasing remarks in regard to the California exhibit of fruits which the W. M. gathered to present the N. G. She had the entire charge of them there, labeled them by numbers, from whom, where grown, and devoted most of her time to explaining and telling all that was of interest to those who sought information. The exhibit proved a success, and she trusted a more extended display may be furnished by the next Master. Referred to the four oldest Grangers of the Order present—one, Bro. Thompson—and the finest giving of the sixth degree of any session. The sister was welcomed back by her many friends.

Second toast: "Our State Grange—The farmers' high school, where manly and matronly worth is manifested and fraternal ties grow into affection, and where the best Steele has been made brighter by contact with our polished and shining Flint."

In response, W. S. L., Daniel Flint, spoke of the advantages of the Grange, complimented the W. M. and lady, and took Education in the Grange for his theme.

Third toast: "Our Sister Granges—May they increase in numbers, in membership, happiness and prosperity." Bro. M. Toomy, of Enterprise Grange, reviewed each Grange,

commencing with the first organized in the county, and made some happy hits.

Fourth toast: "Our Order—May the noble precepts of our Order be introduced into every household, and may it be strengthened and enlarged until we become a power in the land." W. O., Walter Greer, spoke of the National Grange, Washington, its growth, declaration of purposes and so forth. The Order is equal to any other in point of education, and advanced beyond others by the admission of the sisters. We appeal to the young members. Our brother was in his happiest mood, and considered by its members the Cicero of the Grange.

Fifth toast: "Our fair Sisters—God's best gift to man. May His richest blessings ever rest upon them, and may man ever appreciate them at their true worth." Response by W. L., E. F. Aiken.

Sixth toast: "Our Brothers—May they always continue to speak words of endearment to their better halves, and be prompt in keeping their purses well filled." Responded to by Sister D. D. Hull.

Then followed an instrumental solo by Sister Stevens and remarks by Sisters Ewing and Jones, of Pilot Hill Grange, Brothers Krull and Wilson, Enterprise Grange, and Brothers Hull, Welty and Flint, Sacto. Grange.

The day was happily spent, and all left hoping for many more such, to the entertainment of all good Patrons.

G. T. R.  
Sacramento, Cal.

## Swindlers.

A couple of weeks ago a man came to Wheatland and remained at the hotel for a week or so. He made a great many inquiries about people and their property, and after gaining all the information he could, he rented the vacant store next to Bennett's jewelry store, and put on exhibition an arrangement which he denominated a hydro-carbon burner. He told all who inquired regarding it that it was cheaper than wood, and that it was an arrangement for burning water and oil. The first man was joined by another in a few days, and soon the king pin of all, Thos. E. Hall, came to town. Hall was exorbitantly pretty, and seemed to know it, too. He always looked into the glass doors and windows as he went by to see his reflection, and had a newspaper put behind the glass door in the store they had rented, and would pose opposite it whenever he had the time, and oblivious of all that was going on, would admire his shadow therein. Hall made numerous trips to the country, and visited several farmers to induce them to accept the agency of his burner. Among those he induced to act as agents were C. W. Beilby and Mr. Woodworth. He got them to sign four papers, and said they were contracts for the protection of all concerned. Mr. Beilby said he signed one and Hall pushed it up and told him to sign the other. Beilby asked him if they were all the same and he said they were. He signed the balance of them, as did Mr. Woodworth, and a number of persons whom we do not remember now. One of the four papers turned out to be a note for \$300 payable next September, at 10 per cent interest, which Hall cashed at the Farmers' Bank at a discount. Beilby and Woodworth were in town on Monday and this was the first they knew of the note. They admitted their signatures, and are willing to pay the \$600 to the bank, the managers of which will, no doubt, give the notes back for what they paid for them. Hall and his confederates skipped as soon as they got the cash. We hope our exchanges will warn their readers of this gang.—*Wheatland Graphic*.

## Grange Elections.

ALHAMBRA GRANGE.—Elected Dec. 4: Dr. J. Strentzel, M.; E. B. Smith, O.; B. R. Holliday, L.; E. B. Barber, S.; James Kelly, A. S.; T. A. Griffin, C.; H. Raap, T.; Mrs. M. B. Lander, Sec.; George W. Bailey, G. K.; Miss Mary Bartola, P.; Miss Sarah Young, F.; Mrs. E. B. Smith, Ceres; Mrs. A. Boss, L. A. S.; L. C. Wittenmeyer, Trustee.

SACRAMENTO GRANGE.—Elected Dec. 11: W. Walter Greer, M.; Jos. Holmes, O.; Alice Greenlaw, L.; Chas. E. Mack, Jr., S.; J. H. Beach, A. S.; Mrs. Phoebe Johnson, C.; George Rich, T.; Frankie M. Stevens, Sec.; Daniel Flint, G. K.; Lizzie Aiken, P.; Ida Flint, F.; Nettie Klotz, Ceres; Lulu Rich, L. A. S.; M. Sprague, Trustee; Gussie Wilcox, Org.

SANTA ROSA GRANGE, No. 17.—Elected Dec. 11: E. W. Davis, M.; Mrs. M. S. Saxton, O.; Chas. Gamble, L.; J. Copius, S.; C. D. Bonner, A. S.; John Strong, T.; Miss Martha Lumsden, Sec'y; Mrs. E. A. Rogers, C.; Will Rogers, G. K.; Miss B. Dena Lottman, P.; Mrs. S. T. Coulter, Ceres; Mrs. E. J. Wright, F.; Miss Emma Mills, L. A. S.

TWO ROCK GRANGE.—Elected: H. Andrews, M.; A. P. Martin, O.; S. Q. Barlow, L.; C. Nason, S.; J. R. Doss, A. S.; Sister L. E. Barlow, C.; W. D. Freeman, T.; J. C. Parvine, Sec.; S. M. Martin, G. K.; Sister M. A. Doss, P.; Sister Celia J. Parvine, F.; Sister N. M. Martin, Ceres; Sister M. L. Hinshaw, L. A. S.; E. O. Hinshaw, Trustee.

JOINT INSTALLATION.—Eden Grange has invited Temescal to participate in a joint installation of officers, at Haywards, on Saturday, Jan. 8, 1887.

## December 4th, in Alhambra Grange.

December 4th, 10 o'clock A. M., found Alhambra Patrons on their way to their hall, not only to choose their banner-bearers for the ensuing year, but to celebrate the twentieth birthday of our Order. Fraternal ties hold in closest bonds our Eastern brothers and sisters, and our hearts go out to them in commiseration and regret that we cannot, on this day at least, give them, from our plentiful sunshine and genial warmth, enough to dissolve the snowy wrappings that muffle and envelop not only person but surroundings. Nature smiled on us, not even veiling her sunlit face with the faintest gauzy veil, though her breath was sharpened with frost-crystals, thus making the warm stove the center of attraction.

We of California pride ourselves on climate, fruit and flowers; forgetting that not many years ago this now favored land was to us, as it is now to our Eastern friends, a country of almost oriental fabulousness; and in bursts of thankfulness for our own happy translation, we are apt to commiserate our (as we think) less favored neighbors. However, Grangers amid the snow and ice of the Atlantic seaboard, and Grangers amid the sunshine, fruit and flowers of the Pacific Coast, clasp hands across the continent, and in the light and promise of hope and perseverance, work for the same great principles that on December 4th, two decades since, took root in our National Capital, and now bloom in keeping with our liberty tree, its fragrance wafted upon the wings of the west winds, even through the canyons and valleys of the high Sierras.

As usual, I ramble; but come back with me to Alhambra's Grange-room. Worthy Master Strentzel sounded the gavel about 11 o'clock, gave the first and second degrees to two young ladies, or rather Worthy Master Loucks, of Valley Grange, did, for our Master was really not able to preside, after which came the usual harvest-feast. Our zest for this duty, namely, eating, seems as unflagging as is our zeal in sowing and reaping.

Election of officers passed off in all harmony with several changes in the count, enough, we hope, to spur those left in the traces to quicker steps of progress. Installation Jan. 15th; meet 10 o'clock, with lunch. Grangers will be cordially welcomed, as they always are.

Contra Costa stands firm in the Grange line, and although in our last county election Granger was pitted against Granger, so that Grangers were elected and perforce Grangers were left, still Grange-room harmony is intact and her politics still aim at the "greatest good of the greatest number."

Even as I write, Walnut Creek and Valley Granges are counting their newly elected officers, and so the good work goes on. "So mote it be." Fraternally,

MRS. MARIA B. LANDER,  
Secretary of Alhambra Grange.  
Martinez, Dec. 11, 1886.

OHIO TO CALIFORNIA.—The *American Grange Bulletin* sends this greeting to the Grangers of the Golden State: The farmers of California are to be congratulated upon their noble struggle at the late election. They send a number of farmers to the Legislature—from all parties, but true, honest and tried farmers. This work must go on until, as farmers, we have such a representation in Congress and Legislatures as our numbers and interests demand.

BRO. CHESTER, of the *Patron*, was confined at home for several days by an attack of sciatica; but we were glad to find him on Wednesday sufficiently relieved from the painful affection to be at his desk again.

## A Hint to Our Friends.

Last week a lady in Stanislaus county wrote us this friendly note, inclosing the addresses of three of her neighbors:

EDITORS PRESS:—I take the liberty of sending you several names of persons to whom sample copies of the *RURAL PRESS* might be advantageously sent. And not altogether in the interest of the *PRESS*, but because I am sure the persons themselves would be greatly benefited thereby.

A few days ago, Mr. — (her husband), having business with Mr. J., put in his pocket the *PRESS* for Nov. 20th, as he wished him—Mr. J.—to read your market report on hay. He told me Mrs. J. became quite absorbed in the paper, so that she did little else but read during his stay of several hours.

Mrs. J. was one of those whose addresses were inclosed. Now, friends of the *RURAL*, if you have neighbors who you think would find our paper helpful and pleasant in their homes, why not go and do likewise yourself? It would be a kindness all around.

OROVILLE ORANGES.—Thos. A. Garey, the veteran nurseryman of Los Angeles, made us a call the other day. He had been reconnoitering a few days in Central California, and was homeward bound. He took from his pocket a fine specimen of Mediterranean Sweet orange, which he had cut with his own hand from a tree in Oroville, and says that they not only can, but do, raise fine oranges in the northern half of the State, and no mistake.

SAN DIEGO IMMIGRANTS.—It is claimed that the arrivals in San Diego, for the 11 months ending Nov. 30th, exceed the departures by nearly 11,000, and quite one-half of these people have settled in the interior.

## PUBLIC AFFAIRS.

## Regulation of Railways.

We noted, two weeks ago, that Mr. Reagan, of Texas, who has achieved a national reputation for his efforts at Government regulation of railways, was a candidate for election to the U. S. Senate from his State. It appears by the Washington dispatches that some progress is being made toward legislation of the sort proposed. The following account of the progress of the measure came by telegraph just after last week's RURAL went to press:

The conferees upon the interstate commerce measures, popularly known as the Reagan and Cullom bills, reached an agreement December 9th upon the differences between the Senate and House. The report of the conference committee will be presented as soon as it can be prepared and signed and its adoption will be asked at an early date. The bills passed by the Senate and House propose different plans for the regulation of the interstate traffic of the country. Both prohibit unjust discrimination between persons and places, the giving of special rates, preferences, etc., as well as certain other practices which are declared to be unlawful. Both bills require the railroads to publish their rates and to adhere to them when published. They did not differ materially in the penalty provided for a violation of their general provisions, but they differed widely in the methods proposed for securing their enforcement.

The House bill gives every shipper with a grievance the right of action in the State and United States courts on his motion, and in his own behalf to recover damages that he may have sustained, with a provision that a reasonable attorney fee should be allowed in every case of recovery.

The Senate bill did not preclude shippers from instituting suits in their own behalf, but it provided for the creation of a commission required to investigate all complaints made and to settle them by arbitration, if possible, and if not to prosecute the cases in the courts when they find that the shippers are entitled to redress.

By the compromise which has been agreed upon the conferees proposed to put both these plans of regulation into operation and to retain the remedial features of both bills. They will recommend that the House agree to the commission system as it stands in the Senate bill, and that the Senate agree to the provision allowing such shippers as may elect to do so to prosecute suits for recovery of damages in the United States courts in their own behalf, with the provision that they shall not have the right to pursue their remedy in the courts and through the commission in the same case. On the vexed and much-debated question of long and short hauls a compromise has been agreed upon.

The House bill absolutely prohibited a greater charge for a shorter than for a long distance, which includes the shorter upon any one railroad. The provision in the Senate bill prohibited a greater charge for the shorter than for the longer distance, under substantially similar circumstances and conditions, over the same line in the same direction and from the same original point of departure, or to same point of arrival. It also authorized the commission to make an exception to this general rule in special cases where it seemed proper.

The substitute section agreed to by the conferees makes it unlawful for any railroad to charge more for transportation of passengers and of a like kind of property under substantially similar circumstances and conditions for a shorter than for a longer distance, over the same line and in the same direction, the shorter being included within the longer, with a proviso that in special cases, upon application and after investigating, the commission may prescribe to the extent which such railroad shall be relieved from the operation of this section.

The House bill contained an absolute prohibition of pooling, while the Senate bill provided for an immediate investigation by the commission of the necessity of legislation upon the subject. Upon this point the Senate conferees have yielded and accepted the provision of the House bill. Following is the provision in full:

That it shall be unlawful for any common carrier subject to the provisions of this act to enter into any contract, agreement or combination with any other common carrier or carriers for the pooling of freights of different and competing railroads, so as to divide between them the aggregate or net proceeds of the earnings of such railroads, or any portion thereof; and in any case of agreement for pooling freight, as aforesaid, each day of its continuance shall be deemed a separate offense.

Upon the question of publicity of rates there was no difference of opinion. The House bill required each railroad to publish and to adhere to its rates between points upon its own line. The Senate bill made it the duty of the commission to also enforce the publication of such through rates as it might be found possible to publish. To this a substitute has been agreed upon by which each railroad is required to print and keep in every depot for inspection the public rates it may establish between points upon its own line. They are also required to file with the commission copies of all joint tariffs of through rates to which they may be a party, and the commission is required to se-

cure the publication of such through rates as far as may be found practicable.

Other modifications of minor importance have been made, but these are the principal ones on which a difference of opinion existed.

When the substitute bill has been printed, the committee will go over it carefully and may find it necessary to make some change, but they have substantially agreed upon their recommendations.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**LEMONS.**—*Irving Reporter*, Dec. 11: Our town will be represented at the Citrus Fair at Sacramento by a box of lemons sent in by our neighbor, Mr. H. Crowell. These lemons were picked by Mr. Crowell from a tree in his orchard surrounding his home, in our town. They are certainly very beautiful specimens of the citrus family, and we expect to see them receive a premium; and at the fair they will be an excellent advertisement of our semi-tropical climate.

## Fresno.

**SWEDISH SETTLERS.**—*Expositor*: A colony of some 50 or 60 families of Swedes from Michigan have been induced to locate near Kingsburg. Four or five families have already arrived, and the rest will follow as soon as they can dispose of their property in Michigan. Those who are here have purchased a tract of land for the colony and had it subdivided into 20-acre lots. The colonists will enter principally into the cultivation of fruit and raisins. They will bring with them in the neighborhood of \$5000 each, which will enable them to fully improve their places at once. They will be a valuable acquisition to Kingsburg, and their enterprise will do wonders toward developing the fruit-growing industry in this section.

## Inyo.

**AGRICULTURAL ASSOCIATION.**—*Independent*: At Bishop Creek an Agricultural Association has already been formed, in anticipation of the enactment by the Legislature of a law for the formation of a new agricultural district to include the counties of Alpine, Mono and Inyo.

## Lassen.

**ARTESIAN WATER.**—*Shasta Democrat*, Dec. 8: James Woodman, who has been sinking an artesian well in Big Valley, near Bieber, several days ago struck an underground stream at a depth of 400 feet, and the bottom of the well dropped into it. The current is said to be terrific. The well was sunk on a knoll and the water rose to within six feet of the top. He has water enough to flood the country, and will run a tunnel into the hill to tap the well.

## Los Angeles.

**SHIPPING ORANGES.**—*Telegram*, Dec. 9: The good effect of the Orange-growers' Protective Union is shown by the first two sales of the season. One car of Duarte seedling oranges will be shipped on Saturday from San Gabriel, which sold for \$2.50 per box on the cars. Another car of Los Angeles seedling oranges brought \$2 per box. These will be shipped on Monday and go East.

**UNDERDRAINING.**—*Florence Cor. Times*: The low, wet place on Mr. Bell's ranch, in time past considered of but little value, save for hogs to wallow in, has, by a system of drainage, been made valuable for producing alfalfa, etc. About 3000 feet of lumber has been used for deep underground fluming. Forty-three boiling springs were found on about one acre of the land, some of which were tintured strongly with sulphur. Owners of considerable low, marshy land southward, seeing the advantages derived from this system of drainage, contemplate the same kind of improvement.

**WALNUTS AND CORN.**—*Mr. J. H. Martin*, of Los Nietos, exhibited in the *Herald* office some specimens of corn, besides a large quantity of English walnuts. The corn consisted of three varieties—a few ears of White Sonora, 14 inches long, containing 782 grains to the ear; also White Flint, 13 inches long, with 700 grains to the ear; Large Yellow, 14 inches, with 800 grains to the ear. Mr. Martin showed walnuts from eight-year-old trees which measured eight inches around. They were all raised on Mr. Martin's place, a mile north of Fulton Wells, and show the good quality of the land in this, one of the garden spots of Southern California.

**ANAHEIM OSTRICH FARM.**—*Gazette*, Dec. 11: The owners of the ostriches having decided to abandon the present location of the farm, the work of removal is now energetically going on. The new location is in North Anaheim, immediately north of what is known as the Fithian tract. The birds will have a fine range on the hillside, and as the quality of the soil and the climate is very different from where they have been kept, it is believed that the birds will be greatly improved thereby. The new farm is susceptible of the highest cultivation, and will soon be an admirable feature of that charming region.

## Mendocino.

**ROUND VALLEY.**—*Cor. Ukiah Press*, Dec. 5: Stock of every description is doing well; in fact, feed was never better at this season of the year than it is now, and as we had good feed the past summer, stock came down from the summer ranges in good condition.

**SHEEP AND COYOTES.**—There are not as many sheep in Round Valley township by probably

30,000 as there were three years ago, notwithstanding the fact that we have never had in succession three more favorable years, so far as feed and the elements were concerned, since the first sheep were brought to this part of the county. We have great hopes that the Board of Supervisors at their January meeting will give us the scalp law again. We see no good reason why sheep should not be protected. They are of the most useful domestic animals we have, and are the prey of every carnivorous animal and bird in the country. Bears, panthers, coyotes, wildcats, dogs, eagles, etc., prey on them. Yet we are willing to protect ourselves against all except the coyote, and many sheep-owners are willing to add to the bounty for any that may be caught on their ranges. The Government deems it right, and justly, too, to protect wool from foreign competition by a tariff; and does it not look a little inconsistent that the local authorities do not protect as far as possible the life of the little animal which bears it?

## Placer.

**A CITRUS POSTER.**—*Record-Union*: One of the prettiest sights in Placer county at this time is the orange grove of P. Norbourg, about one-half mile north of Penryn. His trees, heavily loaded with the finest quality of budded fruit, attract general attention, and being directly alongside the railroad constitute a standard advertisement for Central and Northern California. Mr. Norbourg has had as high as 25 visitors at his place in one day. He is justly proud of his orchard. His trees are seven years old.

**SHELTERING ORANGE TREES.**—*Republican*: There is a considerable difference of opinion among parties planting citrus trees as to the protection needed. James Curry and Andrew Ryder have their young trees well wrapped in straw or cornstalks, but many think that this will freeze and so injure the trees. J. H. Hoffman and J. R. Johnson have driven four stakes forming a square around the tree, distant 12 to 18 inches, and drawn sacks over the stakes, and on cold nights they lay sacks on top. J. J. Morrison has a three-year-old tree in his yard that has never been protected, and on the strength of this he last spring set out 100 new trees and is not covering them at all. Out of the 100 set out, 99 lived and the other one was injured in transportation. W. G. Williams has two flourishing trees set out two years ago last spring and not protected. One has 49 oranges on it and the other one 20.

## Sacramento.

**THE EARLY BIRD.**—*Record-Union*, Dec. 9: Robins have already made their appearance in this vicinity, which is several weeks ahead of their usual advent. This may be a sign of an early spring.

## San Diego.

**A COUNTRY HOME.**—*National City Record*: On Sunday last we visited "The Glens," J. C. Pelton's country home, and what we saw could be expatiated on with both profit and interest, as showing the capabilities of our sunny clime. Here we saw broad acres and plenty of them, of deep and richest soil, mellow as an ash-heap and from two to six feet deep; green Egyptian corn, which has been growing all summer without one drop of artificial irrigation; watermelons ripe and unripe on green vines; orange trees, set out last March, in blossom, and bearing large, green oranges; vines, three to six feet long, from cuttings set seven months ago; green barley and wheat, the former in bloom, and buckwheat just springing from the ground, cherry, peach, fig, plum, apricot, and pear trees with green foliage (December 5); not least, a reservoir costing within \$200, to contain 2,000,000 gallons of water. We were royally entertained by Mr. Pelton and lady, and came home the better for having been there.

## San Joaquin.

**POTATOES.**—*Independent*: Arthur Thornton, of New Hope, is the lucky owner of about 50,000 sacks of excellent potatoes raised on 500 acres of land. Last year the price of spuds was so low that many people lost money on their crops, but this year the price is about 85 cents per sack. No man in this country deserves more spuds and better prices than Mr. Thornton.

## San Mateo.

**A HIDDEN PIT.**—*Times and Gazette*, Dec. 11: At Half Moon Bay, last week, Mr. John Meyer came near losing a pair of fine horses. He was plowing on the old Johnston place, when his horses sank through the ground. Upon investigation, an old well, 60 feet deep, was discovered, which many years ago had been in use and had simply been boarded over; the boards becoming rotten had given way. The spot had been plowed over for many years.

## Santa Barbara.

**JERUSALEM ARTICHOKE.**—*Lompoc Record*, Dec. 11: J. W. Shoults brought to our office yesterday a Jerusalem artichoke, weighing two and one-half pounds, grown on his ranch near town. He has about a quarter of an acre of them. They are excellent for hogs, and will yield tons to the acre.

## Santa Cruz.

**STRAWBERRIES.**—*Pajaronian*: Most of the Pajaro valley strawberry-growers will set out many plants this season. Many of the old plants have been taken out and are to be replaced, while a few growers intend increasing their acreage of berries. Thurber & Co. will set out 20 acres, R. W. Eaton will put out 5 acres, A. McNeely is to put in 8 acres, and J. W. Ostrander will plant 10 acres. Waters & Brewington have received a large lot of plants from

the East, and will set them out on their berry farm.

## Solano.

**DAMAGED BY DROUTH.**—*Denverton Cor. Republican*, Dec. 7: Summer-fallowed ground that was sown some time ago will, in all probability, have to be resowed, as the light showers caused a portion of the seed to sprout, only to be withered and its vitality destroyed by the dry weather that followed. An 80-acre field belonging to Zach Bethell, which was sowed with wheat more than six weeks ago, has been so damaged by the drouth that he intends to resow it with barley.

## Sonoma.

**PRUNES.**—*Democrat*, Dec. 11: H. W. Smith brought 600 pounds of prunes into town Thursday morning, which were grown in his orchard of one-half acre. On the half acre he raised 1140 pounds of prunes dried. Those which he brought in were all of a uniform size and averaged 40 to the pound, while the marketable average of the French prune is 80 to the pound. They were compared with a sample of the French imported prune, much to the depreciation of the latter. While the latter were much smaller and wrinkled and dry, the Sonoma county prunes were large, full, and devoid of that leathery appearance so often seen in dried fruits.

**MESQUIT GRASS.**—*Petaluma Courier*: A large number of the farmers along the coast, who formerly raised potatoes, are gradually drifting into the dairy business, and the question of the best grasses for stock-feed is one of great interest to them. Henry Lawrence and some others have for several years been stocking their farms with the Texas mesquit grass, and are so far pleased with the result. It is a hardy grass, keeps green all the year, and does well all along the coast. While not so sweet as some other grasses, stock soon become fond of it and thrive well upon it. It forms a heavy sod and yields in feed largely to the acre.

## Tulare.

**PLOWING AND SEEDING BRISKLY.**—*Times*, Dec. 9: G. S. Berry is putting in 4000 acres, John Tuohy is at work on his 3000 or 4000 acres, John A. Patterson has a large number of teams plowing 6000 acres, E. Jacob is putting in his lake lands, Dan Spangler is making the dust fly on Kings River, and so it goes in every section of the county. There will be more ground plowed and seeded to grain before the rains this year than at any previous time in the history of Tulare county.

**ORANGES.**—There is on exhibition at Nancawen's a short twig containing nine oranges, from the ranch of S. Z. Curtis, nine miles northeast of Visalia. Mr. Curtis has about 30 trees on his place, growing and fruiting out on the plains without any protection whatever. Only 15 or 16 bore this year, but what fruit he has is of large size, without any sign of rust, and of a sweeter flavor than those received here from the Los Angeles orchards. The frost has nipped some of his trees, but they start out again from the roots and do well, though no more care is bestowed on them than would be on a peach orchard. The grove is only plowed once a year.

## Ventura.

**BEANS AND CORNS.**—*Republican*: We are informed by many farmers of veracity that the corn and bean crops in the valley, just harvested, are among the heaviest ever raised in this county, corn yielding from 3000 to 4500 pounds, shelled, and beans, Limas and small whites, averaging about one ton to the acre. Some crops of beans have actually yielded over 2500 pounds to the acre, and they have all been secured without injury by the rains.

## NEVADA.

**BLACK WALNUTS.**—*Reno Gazette*: A black walnut tree at the Adams residence, Virginia City, has borne a fine crop of nuts this year. It is a thrifty tree, 12 years old and six or eight inches in diameter. It has borne quite a lot of nuts in past seasons, but not so plentiful and good as this season.

## WASHINGTON.

**SAGEBRUSH, MELONS AND PEANUTS.**—*Willamette Farmer*: Capt. Will Gray has made a home near Pasco, the place of transfer from the N. P. R. R. to the Cascade branch. The country through which this road passes is nearly all of this character—endless fields of sagebrush and shifting sand. This land, sterile as it looks, is nearly all taken up by actual settlers, but to show productive qualities we will tell of Capt. Gray's melon patch. He measured off 100 feet square of land and planted it in watermelon seed. It was not irrigated, though the land was kept stirred. Capt. Gray sold from that patch \$110 worth of melons—big ones, too. He gave away two wagon-loads, fed four loads to the hogs, and stored two loads in the earth cellar. Though the weather was cool, yet the melons we ate of were luscious. This big yield was on land that looks barren and desolate. The captain raised some peanuts also, and seems to think that they could be made a profitable crop in that section, from the success he had in his experiment. The loose, pliable earth is adapted to their cultivation. He explained that as the flowers opened and perfected on the lower branches, sand must be sifted gently over the blossoms; then, again, as the upper branches come into bloom, they also must be covered. The nut forms and ripens under the sandy covering.

### The Boat That Never Went to Sea.

It lies forsaken on the sand,  
Forgotten on the lonely beach,  
A thing of neither sea nor land,  
Beyond the waves' incessant reach.  
The tide may fall, the tide may rise,  
The wind may whistle joyfully,  
It has no fiber that replies—  
The boat that never went to sea.

Ah! happier were the derelict  
That tosses with the tireless waves,  
Where currents of the sea conflict  
Above the calm of deep sea caves:  
It had its part of storm and shine,  
It bore its colors valiantly,  
Its keel has cleft the bitter brine,  
Its sails were set, it went to sea.

And happier even were the wreck  
When masts are snapped and sails are torn,  
And waters meet upon the deck,  
Than this poor boat, untired, forlorn,  
That never, driven by the wind  
And blind with foam, ran desperately  
With rocks before and storms behind—  
This boat that never went to sea.

The wild convolvulus sows its seeds  
And blooms above the sun-warped planks  
That never met the water weeds  
And passed between their parted ranks;  
The rudder, that remembers not  
A hand to guide it steadily  
Through warning waves, must waste with rot—  
The boat will never go to sea.

—E. Cavazza in Portland (Me.), Transcript.

### A Snip of This, and a Pinch of That.

[Written for the RURAL PRESS by MRS. RANCHER.]

Quite awhile ago there appeared an inquiry in the RURAL PRESS for a good receipt for making cornbread, which elicited numerous replies. At the time I was prompted to send my own; not that it was better than many of the others, but that it seemed to me more explicit.

But the theme passed, and others were introduced to the attention of housekeepers, so that I forgot the subject, except as some receipt, more indefinite than usual, gave me a feeling of pity for the inexperienced cook who might strive to follow it. Lately a similar inquiry was sent by a little English girl to the post-office box of *Harper's Young People*; and the answers to this letter remind me once more of the necessity for exactness in such directions.

A good many years ago, when I began house-keeping, I was much in the habit of depending on my judgment in cooking. This may do in some cases, as, for instance, in making bread with potato yeast; a little yeast more or less making no particular difference.

Without doubt, too, some persons have greater natural tact in this, as in all other sciences. The minds, however, that can depend on native talent, without the aid of thorough study, are rare indeed.

Does the mechanic cast aside his rule and compass because his eye is quick to perceive variations? Or can the musician disregard the rules of time and harmony because of the correctness of his ear?

And what woman among us would hold that taste in arranging and draping is sufficient to take the place of thoroughness in sewing and fitting? So in the culinary art, exactness will render those whose natural abilities are quick more constant in their success, while to the lacking ones it is indispensable. Surely we do err if we consider this subject so humble as to be unworthy our strict attention.

With great regularity the many families of our land gather about the table three times daily. With the majority, it is the principal time for social intercourse.

Now, if the bread is light and nutritious, the butter fresh and firm, the meats tender and juicy, the vegetables well cooked but not watery, the dessert sweet and toothsome, mankind in general will smilingly tell stories, and laugh and joke in a manner most conducive to digestion; while the same dispositions sitting down to sour and heavy bread, to butter strong or oily, to meat tough and dry, to greasy, water-soaked vegetables, and sweetmeats that would give colic to an ostrich, will gloomily try this and that, will grumble or leave the table in disgust, and the whole family, if the fare is not bettered, will suffer from moroseness of spirits, or grow to be chronic grumblers. Any matter, therefore, which so affects our dispositions, cannot be of inferior importance.

The necessity for exactness was most forcibly brought home to me about six years ago by a young Italian girl, who came to do general housework in our family. She had told me at the outset that she did not understand American cooking, though, as we afterward found, she could prepare macaroni in a savory or delicate manner, according to your taste. I found

her unusually nice in washing, ironing and cleaning.

"You can learn to cook, Camilla," I said. "If you have patience to teach me, yes," she replied.

At the time my sleep was much broken into by a teething baby, and I was anxious she should learn to get breakfast by herself.

"I could do well enough," she said to me one day, "if I knew how to make those corn-breads and breakfast gems you like so well."

"They are very simple," I answered, "nothing but buttermilk and soda, salt, and white or graham flour for the gems. A couple of eggs and a little sugar added for the cornbread. This scoop holds just about flour enough for my family, and I stir them up thick enough to drop from a spoon."

All this with a growing conviction that my words were rather indefinite.

"Perhaps," she replied, but with a doubtful expression, "perhaps I could do this; but what about the soda? I know nothing about soda."

"Oh! about a heaping teaspoonful," I said, but growing more ashamed of my own ambiguity. "I depend upon my judgment very much. When there is soda enough the buttermilk has a certain sound as it is stirred."

"Very good for you," Camilla answered, "but I have no judgment. What then?"

So I set myself to measuring, and found that a breakfast cup of milk or buttermilk sour enough to thicken requires a level teaspoonful of soda. I use the Ohas. Bernard or A. Shilling & Co. brand, put up in four-pound cans, so they can be kept tight and perfectly dry, and find that they scarcely vary at all in strength.

Said an experienced cook to me one day: "I have no success in using buttermilk and soda." This was a matter of surprise to me, as I knew her to be a superior housekeeper.

"I think if you will try the rule I learned when teaching Camilla to cook, you will have no trouble," I answered. "An even coffee cup of thick milk and a level teaspoon of soda, made so with a knife, will be found to leave your bread neither heavy nor yellow."

To farmers' wives this is a matter of some importance. We all know the value of buttermilk for cooking, as it usually contains enough butter to render cornbreads and gems palatable without the aid of other shortening. But the dislike we all have to biscuit yellow with soda one morning, and heavy the next, has brought yeast powder into general use. Now yeast or baking powder is no slight expense. Some housekeepers assure me their bill for this article is almost as much as for flour. Several years ago our maid-of-all-work gave us some plain directions for making what the children call, in contradistinction to hot rolls, muffins, and gems, "regular biscuit." Lately I have left out all shortening, except what is contained in the milk, as the crumb of the biscuit is lighter and sweeter without it. And to prevent toughness in the crusts, a tablespoonful of melted butter should be used, half on the biscuit pan and half brushed over the tops of the biscuits. This amount for one ordinary sized bread pan, such as we usually bake four loaves of bread in.

There are many general rules in cookery, to which, if due heed be given, much variety can be attained. In the matter of rich cakes and puddings, eggs and flour will counteract the tendency to heaviness, produced by butter and sugar, as in the case of a plum pudding, which will bear up a goodly amount of suet and fruits, if it be made stiff with flour, and will roll out of the pudding bag light and comparatively wholesome. For nothing is a greater tax on the digestive powers than such articles when heavy and water-soaked.

If, however, a more delicate dish is desired, less butter and less flour should be used. Beating produces fineness and smoothness of grain, with lightness, while great holes are frequently caused by the use of too much baking powder, which is often made to take the place of thorough beating. If the tired housewife pleads she has neither time nor strength for this, would it not be better to leave this kind of cooking undone entirely, knowing that no table is poorly furnished that has good meat and vegetables, with bread, butter and our delicious California fruits, that are within the reach of all.

I count among my friends a lady, who, though born and walking in a lowly station in life, and without any claims whatever to society ways, can set before her guest, if her cupboard is somewhat akin to Mother Hubbard's, a plate of bread and good home-made butter, a dish of eggs and a dessert of fruit, with a finely-brewed cup of tea, nor add one word of apology for the lack of variety.

But I fear me, Mr. Editor, you will quite mistake the meaning of my heading, nor consider that it refers to the indefinite directions we so often find in our receipts for cooking, but will adjudge that I allude to the omnibus character of my load.

Still, I pray you take not a snip from the length nor a pinch from the breadth of this article, lest it be quite lost in the depths of your famous basket.

Onkdale.

SOME children take naturally to a practical view of things. A little girl was saying her prayers the other evening, closing up with, "God bless papa and mamma, little sister and everybody, and keep us from harm this night. Amen." The "little sister," a bright-eyed puss of five years, quietly remarked: "If you'd said 'everybody' to begin with, you needn't have made such a long prayer."

### The Book Agent.

[Written for the RURAL PRESS by an eye-witness.]

It happened to be a leisure day with Mr. Granger; there was nothing particularly requiring his attention, and why should he not light his pipe, take up a newspaper and proceed to enjoy a quiet afternoon?

As for his wife, idle days or idle moments seldom fell to her lot, and to-day she seemed to be especially busy. The ironing was not yet finished, a pile of little white aprons and skirts lay on the table; and Susie's dress was to be finished and Johnnie's jacket mended before her appointed task would be completed. Still she had hopes of getting through; for the baby was taking a good long nap, the irons were nice and hot, and everything seemed to be going smoothly and satisfactorily.

She stepped busily to and fro between the stove and the ironing-table, chatting over her work with a friend who was spending a few days with her, and now and then glancing out of the window at the pleasant prospect of hill and valley, field and orchard.

But presently she saw a sight which filled her with dismay. It was a young man sprucely attired who had tied his horse to the hitching-post, and was now coming up the path with an ominous-looking package in his hand.

"John, there is a visitor for you," she said to her husband, and quickly shut the door between the sitting-room and the kitchen.

Mr. Granger answered the sharp rap at the outer door.

"Ah, Mr. Simkins, how are you? Walk in." (The young man was a neighbor's son, and as such entitled to a kindly welcome.)

Mr. Simkins walked in, talked for a few moments about the crops and the weather, and then unfolded his package and his errand.

"I have a book here that I would like to show you, etc., etc."

Mr. Granger was nothing loth; he had nothing to do; he was quite willing to be entertained for an hour, though he had not the most remote intention of subscribing for Mr. Simkins' book. So he looked at the pictures, listened to the explanations, admired the binding, and then when the critical moment arrived, quietly opened the door and said to his wife: "Mary, my dear, Mr. Simkins has a very interesting book which he would like to show you."

If Mary had spoken out her mind then and there, she would have said: "Mr. Simkins need not trouble himself; I have neither time nor inclination to be bothered by him or his book." But he was a "neighbor's son," and Mrs. Granger was not given to brusque or curt remarks. So she tried to smile pleasantly as she said: "I am afraid you have come at a bad time, Mr. Simkins; I am feeling too poor to indulge in the luxury of buying books just now."

(Inwardly she was saying: "Oh, you coward, to leave me to say 'no' for you!")

Mr. Simkins was proof against such matter-of-course remarks. "Allow me to show you"—and he opened the pages. The frontispiece was a very good engraving. Mrs. Granger looked, expressed her admiration and was caught in the trap at once—no escape. The young man turned the leaves, glibly rattling off an impromptu lecture, and pretty soon Mrs. Granger's sense of amusement got the better of her vexation. For a woman of her age to be "listening like a three-years' child" to the explanations of her self-appointed instructor, was a little too funny. Why, years ago, while he was still a baby in arms, she had been more familiar with the subject of the work in hand than he was ever likely to be in all his life to come. She let him run on till he had shown her all the pretty pictures, then she said, still smiling: "Yes, it is quite an interesting book, but I cannot afford to subscribe for it. I have not five dollars to spare."

"Oh, it is not necessary to pay for it now. I shall not be bound to deliver the books for about six weeks. You can easily raise the money in that time."

"No," said Mrs. Granger, decidedly, "I cannot spare it now, and I am quite sure I shall not be able to spare it then."

"Madam," said the young man, earnestly, as though to warn her against the commission of a crime, "this is not a question of mere amusement. It is your duty to provide your children with a book like this—"

"And do you really think yourself competent to instruct me in regard to my duty toward my children?" Mrs. Granger's eyes sparkled and her cheeks glowed with indignation. "Young man, you have quite overstepped the mark. I do not want your book and I cannot afford to buy it, but if I wanted it ever so much and if I had no other earthly use for the money, I would not buy it from you after such an exhibition of impudence on your part."

"Did she really say that?" eagerly exclaims some woman who has suffered in the same way. Truth compels me to answer no. With the exception of Mrs. Granger's answer my story is literally and accurately true, but like many other people, she often thinks of the right thing to say when the opportunity has passed by; and in the present instance she allowed Mr. Simkins to depart disappointed, it is true, but unrebuked, while she went back to the kitchen to find the irons cold, the fire nearly out, the baby awake, and her afternoon entirely spoiled.

Now I ask in all serious earnestness, is not this kind of thing an outrage? Have busy

people no rights that "agents" should be required to respect? Some time ago a writer in the RURAL suggested that we should all bind ourselves not to buy anything from this class of people. For one I would willingly join such a "total abstinence society," and particularly as regards book agents. There is really no reason for their existence. The postoffice brings the publisher to every man's door. There is no village so remote that its inhabitants may not buy the best books at the lowest cost without the aid of any agent. The Harpers, John B. Alden and a score of others send out their lists of really valuable works at prices which are almost incredible. It is safe to say that from them one will receive five times as much for his money as from the book agent, whose wares are often worthless and his charges always exorbitant.

When I see an able-bodied young man driving about the country, in his stylish buggy, with a book to sell, forcing himself upon people who almost invariably regard him as a nuisance, wasting the time and trying the tempers of his victims, I feel an overpowering desire to have him set to "buck straw" with a thrasher, or to do any other equally disagreeable but useful work, which must be done for the good of the human race, the doing of which is therefore worthy of a man.

MRS. WRIGHT.

### The Man Who Did Housework.

There was once a man who was cross and peevish, because he thought his wife never did enough in the house.

He came home one evening from the hay field, cursing and scolding, till things seemed to fairly glow around him.

"Dear, don't be so angry," said the woman; "in the morning we will change work. I will go out with the hay workers and mow, while you do the work at home."

Yes, the man thought this a good idea, and was very willing to show her a thing or two.

So early in the morning the woman took the scythe and went out in the meadow with the rest to mow. The man was there to work in the house. First he made ready to churn; but after churning awhile, feeling very thirsty, he went down cellar to tap some beer. While doing this, he heard the pig in the kitchen. He ran upstairs, leaving the faucet open. At the sight of him the pig ran against the churn with disastrous consequences. When the man saw this mischief done, and the pig greedily smacking and sipping of the stream that ran over the floor, he was ready to fly with rage, and completely forgetting the beer-barrel, he punished the pig as best he could. He reached it again in the door, and gave it a mighty kick that killed it on the spot.

Now he remembered leaving the faucet open, but on going to the cellar all the beer had run out. He then went to the milk-room, and again found enough cream to fill the churn, for butter he must have for dinner. When he had churned awhile he remembered that the cow was yet in the stable and had received neither bite nor sup, though it was late in the day. Thinking it would take too long to go to the pasture, he concluded to put her on the sod roof, on which grew short green grass. As the hut lay by a steep side hill, he thought by laying a plank from that to the roof it would be an easy matter to get the cow up. But he dare not leave the churn, for the baby was crawling around on the floor and might upset it; so he took the churn on his back, thinking he would give the cow some water before putting her on the roof. Leaning down to dip water from the well, down came the contents of the churn, deluging his head and neck, then dripping into the well.

It was now near dinner time, and as there was no butter, he thought of cooking mush, and immediately hung a kettle of water over the fire. But now he bethought himself that the cow might fall off the roof and break her legs or neck, so he must go up to tie her. One end of the rope he bound around the cow's neck, and dropping the other through the chimney, he went down and tied it around his leg, for the water was boiling in the kettle and he must make mush. While doing this, the cow fell off the roof and dragged him up the chimney by the rope. There he hung, a prisoner, while the poor cow dangled between heaven and earth, able neither to go up nor down.

The wife had waited seven long and broad hours to be called home to dinner, but no summons came. At last she thought it was too long and finally went home. Upon seeing the cow hanging in such a remarkable manner, she quickly cut the rope with her scythe. At the same moment the man fell down the chimney, and his wife found him standing on his head in the mush kettle.

Thus ended the woeful experiences of a man who found fault with his wife.—*Ventura Republican*.

FEEL OVER A DAR.—One of our exchanges tells how a neighboring rancher, while going to his barn, fell over a large dar with such force as to render him insensible. A physician was called to care for the injured man, whose bruises were pronounced quite serious. We do not know what a "dar" is, precisely, but it appears to be something hazardous to meet by moonlight alone.

## John's Wife.

A young wife stood with her hand on her broom,  
 "And looked around the little room,  
 "Nothing but toil forever," she said,  
 "From early morn till the light has fled.  
 If you only were a merchant, now,  
 We need not live by the sweat of our brow."  
 Pegging away, spoke Shoemaker John:  
 "We ne'er see well what we're standing on."

A lady stood by her husband's chair,  
 And quietly passed her hand o'er his hair,  
 "You never have time for me now," she said,  
 And a teardrop fell on the low-bent head.  
 "If we were only rich, my dear,  
 With nothing to do from year to year  
 But amuse each other—oh, dear me!  
 What a happy woman I should be!"  
 Looking up from his ledger, spoke Merchant John:  
 "We ne'er see well what we're standing on."

A stately form, in velvet dressed,  
 A diamond gleaming on her breast,  
 "Nothing but toil for fashion," she said,  
 "Till I sometimes wish that I were dead;  
 If I might cast this wealth aside,  
 And be once more the poor man's bride!"  
 From his easy chair spoke Gentleman John:  
 "We ne'er see well what we're standing on."

—Sharon Advocate.

## The Eastern Farmer.

It is a frequent saying that the farmer has nothing to do but enjoy himself; that when the blizzards send in their cards he draws his chair up to the stove, puts his feet in the oven, and spends the day in reading the *Globe* and *Church Herald* and other moral works. According to tradition this occupation is only disturbed when he adjourns to the table and banquets off mince pie and divers meats. This is all a mistake. A close observer will see the industrious farmer crawl out of bed four hours before daylight, soften his boots with a hammer and commence his day's work with a lantern in one hand and a bucket of frozen slop in the other. He has from one to a thousand hogs, which shove their noses in his face, and tip the contents of his bucket on him, where it freezes until he looks like a skating rink. When he has escaped from the hog pen he hunts up six or seven buckets, and crawls through a wire fence to milk 27 cows. These animals wait until he has the bucket nearly filled, when they kick it over, aiming so that the contents will calcimine such parts of clothing as the hogs spared. Now and then they vary the monotony by kicking him instead of the bucket, which makes him feel tired and homesick. When the cows have been milked and he goes to feed the horses he finds the sorrel mare doubled up in the manger with colic. He then has to mix up a lot of aconite and water, which he attempts to pour down the animal's mouth, when it hits him on the teeth with its front foot and makes him wish he had never been born. He works around all morning with the old mare and then proceeds to curry the dun mules, which try to see which can kick the hardest, and by the time he is through he feels as though he had passed through a corn sheller. When he has fed the hens and watered the cattle, and hunted three hours for a 20-cent pig, and chopped half a cord of elm for the house, and carried 40 buckets of water for the horses and shelled three bushels of corn by hand, and shoveled a road through 10 feet of snow and milked the cows and curried the mules, and doctored the old mare again in the evening, he goes to bed, and gets up again in the morning four hours before daylight and commences the whole thing over again.—*Atchison Globe*.

## He was not Walking.

Jabe Mathis, of the Thirteenth Georgia, was a good soldier, but one day when the Confederates were retreating from the gory field of Gettysburg, Jabe threw his musket on the ground, seated himself by the roadside, and exclaimed with much vehemence:

"I'll be dashed if I walk another step! I'm broke down! I can't do it!" and Jabe was the picture of despair. "Git up, man," exclaimed his captain; don't you know the Yankees are following us? They'll git you, sure!"

"Can't help it," said Jabe; "I'm done for. I'll not walk another step."

The Confederates passed along over the crest of a hill, and lost sight of poor, dejected Jabe.

In a moment there was a fresh rattle of musketry and a renewed crash of shells. Suddenly Jabe appeared on the crest of the hill, moving like a hurricane, and followed by a cloud of dust. As he dashed past his captain, that officer yelled:

"Hello, Jabe; thought you wasn't going to walk any more."

"Thunder," replied Jabe, as he hit the dust with renewed vigor; "you don't call this walking, do you?"—*Savannah News*.

IS THE RACE TO BECOME TOOTHLESS?—Prof. Windle, says the *London Medical News*, has announced to the British Association, as conclusions from his researches on the subject, that man's original dentition included six incisors in either jaw; that two from each jaw have gradually disappeared; that the loss is due to the contraction of the anterior part of the palate; that this process of contraction will probably go on and result in the loss of two more incisors.

## YOUNG FOLKS' COLUMN.

## The Legend of Chocorua.

[Written for the RURAL PRESS by CLARA S. BROWN.]

In the beautiful village of North Conway, New Hampshire, where many tired city people each summer enjoy the grand scenery of the White mountains, the following legend was related by an aged farmer.

Chocorua is a mountain situated in the town of Albany, N. H., adjoining Conway, and south of the "Presidential range." Portsmouth is a quaint old town on the Atlantic coast just where the Piscataqua river, which forms the boundary between Maine and New Hampshire, flows into the ocean. This is the farmer's story:

Many years ago when all the country roundabout was covered with forests, and the Indians roamed from mountain to stream and even to the borders of the sea, hunting and fishing to their heart's content, there resided in Portsmouth a man who had a very beautiful wife. She was so beautiful and so good that her husband thought nothing on earth could add to his happiness, and when God sent to them a baby daughter, life seemed crowded full of blessings.

It was not long, however, before a dark cloud hung over the happy home, for the mother sickened, and when the Angel of Death descended and carried away the beautiful woman to the "life eternal beyond the skies," all was gloom and despair in the mourning husband's heart.

He brooded so long over his trouble, forgetting that God who gave had taken away for some good reason, that he became unsettled in mind. He no longer cared for the pleasant town he had once loved so well, nor would he seek consolation among his friends or occupy himself with work. The little motherless babe thrived, and for her the father lived, withstanding the temptation that came at times to end his earthly existence, that he might be united with the dear wife in the "world of spirits." When the child was two or three years old the half-crazed father took her out into the wilderness and built a wigwam on a mountain-side and began to trap wild animals and hunt.

The wild and lonely life suited him, and several years passed, during which the little girl grew strong and brown as a berry. She was happy among the flowers and birds, listening to the music of the waterfalls and watching for her father to come home from the hunt. But again trouble came. The mountain was inhabited by an Indian named Chocorua, and he had three sons of whom he was very proud. These sons were in the habit of stealing from the wigwam of the white man, and at last the hunter became so provoked by their depredations that he told Chocorua he should mix up some poison and leave in his wigwam, and if the sons broke in they might be killed. But the caution was not heeded. The sons climbed down the chimney and took the poison and died.

The old Indian grieved long and bitterly over his loss and swore vengeance upon the white man. He well knew that if he should injure the little girl it would cause her father the greatest suffering that could be produced; so one day, when she was alone, he crept up to the wigwam and murdered her. Not content with this, he mutilated her body until it was a fearful sight to see. When the father came home he tore his hair in anguish as he threw himself down by the remains of his loved daughter.

Scarcely knowing what he did, he rolled his child in a blanket, and took her on his back and carried her to Portsmouth, wading across swift streams, and making his way through almost trackless forests with his burden. After burying the child beside her mother, he persuaded several men to go back with him and hunt for Chocorua. The old Indian found out in some way that the men were coming, and, it being winter, put on his snowshoes, with the backs in front, to deceive his followers, and started away to find a hiding-place. This was a shrewd thing to do, but the hunters were keen, and they soon found where the toe of the foot dented the snow, and so discovered what he had done to throw them off the track.

They followed the trail until they saw Chocorua on the top of a high precipice. He stood there for a moment, looking up to heaven and invoking the blessing of God, and then he leaped over and was crushed to death far down among the rocks. Ever after the mountain was called by his name, and it stands to-day, as it will stand to the end of time, a monument to the tragic end of the old chieftain.

Los Angeles.

"SEE THE MOON!" said a lady to her nephew, a bright little boy of five, as they sat looking out the window together the other day. "The moon!" said the little man; "you can't see the moon in the daytime." "Yes, you can," continued his aunt; "there it is, over the trees." The little fellow had to admit that he saw it, but added: "Tain't lighted, any way."

A LITTLE six-year-old, finding an old comb in the garden with most of its teeth gone, hastened to her mother and exclaimed: "Oh, mamma, is this comb losing its first teeth?"

## GOOD HEALTH.

## Art and Science of Eating.

Rules for Invalids and Harmless for All.

EDITORS PRESS:—Allow me to contribute to your health column the following advice in regard to eating: Eat small mouthfuls; masticate thoroughly. Have every particle of food completely comminuted so that the various juices of the mouth and throat shall be completely and thoroughly mixed with every particle and iota of the food. Get every last virtue out of every atom of the nutriment. Then, and then only, is it fitted to be introduced into the stomach. Then the galvanism, the magnetism, the electricity, the life-principle, or some occult, or other unknown, or undiscovered, or unnamed something, is mixed and blended with the food, and the stomach is ready to act upon it without taxing and wearing overmuch its powers. Then the food, after being transformed to chyle, is in proper condition to build up and strengthen the system, with all its powers. Have the variety small at each meal, so as not to over-stimulate the appetite, thus causing excess in eating. Of condiments, relishes, sauces, gravies, butter, meat, spices, fats, eat only the smallest quantity compatible with rational—not excessive—gustatory enjoyment. The enjoyment is just as great in that mode of eating; even greater, as you will have the pleasurable feeling that you are doing your whole duty to yourself. A little self-denial adds to, rather than abstracts from, the pleasures of eating. As above remarked, get all the good out of all the food; and most especially so out of all the relishes, for it is these of which we are apt to partake too freely. Observe great regularity as to times of eating—whether you eat two, three, or even five times a day, eat at these times and at these times only. If, from accident, the time of eating goes by, wait until the next regular time, rather than be irregular in this matter. No matter how great the general variety, the greater the better; eat anything that does not positively disagree with you; only be careful to have each meal simple and of few articles.

Let the last meal of the day be light. If fruit or anything else must be eaten out of the regular meal time, let it be, if possible, near the meal time—just before or soon after, so as not unnecessarily to burden the stomach, which needs its stated rest as much as does the overburdened body. Never overload the stomach; err on the side of too little, rather than too much; then will "good digestion wait on appetite," and the nervous system be in good tone. It is a good rule to get up from the table a little hungry, although a better one is, eat to satisfaction, but never to satiety. Never eat while laboring under any excitement. The stomach needs all the powers of the mind as well as of the body for a time. When its labors are finished, that, too, can take a rest, while the body and mind may perform with health and vigor their allotted tasks.

Santa Barbara.

S. P. SNOW.

TO REMOVE A SPECK OR AN EYELASH FROM THE EYE.—This, we all know, requires the aid of a looking-glass, or the kindly hand of a friend, whether in or out of the house, but there are times when neither of these helps is near; so Nature has provided that, if we will use her appliances, she will assist us, and with a little practice it will be found the best and quickest in the end. The upper and lower eyelashes are given us as a protection to the eyes, but they also serve as little brushes when an accident happens. By taking the upper eyelashes between the thumb and finger, and drawing the lid completely over the under eyelashes, and gently moving it backward and forward, any specks in the eye fasten on to the lower fringe and remain there after having let go of the upper. This is a sure plan, and can be adopted anywhere, but it requires some perseverance to acquire it, and should not be given up if the first attempts are unsuccessful. Any disagreeable feeling about it is not half so painful or dangerous as is occasioned by the smallest speck.

THE DIET OF STRONG MEN.—The Roman soldiers, who built such wonderful roads and carried a weight of armor and luggage that would crush the average farm hand, lived on coarse brown bread and sour wine. They were temperate in diet and regular and constant in exercise. The Spanish peasant works every day and dances half the night, yet eats only his black bread, onion and watermelon. The Smyrna porter eats only a little fruit and some olives, yet he walks off with his load of 800 pounds. The coolie, fed on rice, is more active and can endure more than the negro fed on fat meat. The heavy work of the world is not done by men who eat the greatest quantity. Moderation in diet seems to be the prerequisite of endurance. It is not so much what people eat as what they digest that makes them strong. It is not what they gain but what they save that makes them rich. It is not what they read but what they remember that makes them learned. It is not what they profess but what they practice that makes them righteous.

## DOMESTIC ECONOMY.

## How to Cook Eggs.

EDITORS PRESS:—Put enough thin sweet cream in a frying pan to cover it an inch deep. Set it on the stove where it will boil but not scorch. Salt it to suit the taste. When it is about boiling, break in very carefully as many fresh eggs as you wish to cook. If the cream does not cover them, dip it over them with a spoon; when the white is well set take them up and add a spoonful of cornstarch dissolved in a little milk and you will have a nice gravy.

Fish Creek, Mendocino Co.

L. M. B.

LAYER CAKE.—One cupful sugar, one-half cupful butter, three eggs, one-half cupful sweet milk, two cupfuls flour, one-half teaspoonful good baking powder, or one teaspoonful soda and one-half teaspoonful cream of tartar. Beat the sugar and butter to a cream. Do not melt the butter, but warm slightly, if too hard. Stir the milk well into this, and then add flour into which the baking powder has been well sifted. Stir thoroughly; then add the eggs, one at a time, taking care to stir each one in well before adding the next. Bake at once. This will make four layers. The lightness of a cake depends far more upon the way it is put together than the mixture itself. If the above directions are carefully followed, it insures success.

TO BROIL OYSTERS.—Have fine, large oysters, and dry them perfectly in soft cloths. Take some beaten egg and cracker crumbs, seasoned, and, dipping the oysters, let them stand a few minutes. If you should make the cracker crumbs at home, be sure to sift them, so as to insure not having one crumb larger than the other, for if you do they will all come off and leave your oyster bare. Have a low, clear, brisk fire and a fine wire gridiron, heated. They should take but a few minutes to do. Have some butter rubbed on the dish on which they are served.

STEWED BEETS.—Wash, peel and slice them quickly, cutting into small dice. Cover with water sufficient to boil them tender, taking care not to let them scorch. Season with half a cup of vinegar, a cup of sour milk or cream, one large teaspoonful of butter, salt and pepper to taste, a tablespoonful of flour rubbed up with the butter, and in winter a dash of sugar. Let them boil in the sauce one minute and serve hot.

CHOW-CHOW.—One-half bushel green tomatoes, one dozen peppers, one dozen onions chopped fine, one pint of salt, let stand over night, drain off and cover with vinegar. Cook slowly half an hour, add two pounds of sugar, two tablespoonfuls cinnamon, two of allspice, one of cloves, one of pepper, half cup ground mustard, one pint of grated horse-radish, vinegar to mix; boil and mix with the ingredients.

FRIED SMELTS.—First clean them by making a slight opening at the gills, then draw them between thumb and finger, beginning at the tail. This will press out all the insides. Wash them and wipe them dry. Sprinkle salt over them, then dip in milk and dredge with flour, or dip in egg and roll in bread-crumbs, and fry in boiling oil or fat. The heads and tails should be left on.

RICE BREAD.—Rice bread makes a variety for the breakfast table. Take one pint of well-boiled rice, half a pint of flour, the yolks of four eggs, two spoonfuls of melted butter, one pint of milk, a little salt and a large spoonful of sugar. Beat all these ingredients till very smooth, and then add the beaten whites of the four eggs. Bake in shallow pans and serve hot.

NICE COFFEE WITHOUT EGGS.—Make small sack of cheese cloth, put in small tablespoonful for each cup of coffee, need not tie the sack, put in the pot, and pour a pint of cold water on it. Set this on in the morning and let it come to a boil, then fill up as you wish with hot water. Turn sack wrong side out after breakfast, rinse and dry for next time.

GRAHAM GEMS.—One pint of graham flour, one pint of wheat flour, one quart of milk, four fresh eggs, yolks only, one large teaspoonful of salt. Beat all together very smoothly, and lastly add the whites beaten to a stiff froth. Have the well-buttered gem pans very hot, and bake in a quick oven.

APPLE-LEMON PRESERVES.—Peel and cut in quarters sound sweet apples. Add to each quart of cut apples two sliced lemons and three teacupfuls of sugar, dissolved in hot water enough to melt it. Add apple and lemon to this syrup, and stew until tender, then place in small jars or cans.

RICE PUDDING.—One-half cup of rice, salt and one cup of raisins boiled until the raisins are tender and the rice dry. Add a custard and pour into a pudding dish set in a pan of water, and do not bake too long. The rule for the custard is four eggs to a quart of milk.

GRAPE PIE.—One egg, one teacupful of sugar, one heaping teacupful of grapes. Beat the egg and sugar together, then add the grapes, one tablespoonful of flour and a little butter. Bake with two crusts.

## SAN FRANCISCO:

Saturday, December 18, 1886.

## TABLE OF CONTENTS.

EDITORIALS.—Fine Stallions, 505. The Week; Inter-State Commerce; The Citrus Fair at Sacramento; To Our Older Friends, 512. Underdraining; A Peep into the Winter; Whence Comes the Rain; The Holidays, 513.

ILLUSTRATIONS.—Tempest, Property of Captain Ben. E. Harris, of San Francisco, 505.

CORRESPONDENCE.—Napa County Notes; Yolo County Notes, 506.

THE APIARY.—Pollen, 508.

THE FIELD.—The Wheat Yield for 1886, 506. Corn is King, 506.

SWINE YARD.—Home-Made Products; Home-Cured Bacon; Hogs at the Chicago Show, 507.

HORTICULTURE.—Pruning Roses; The Asphodel; Exchanges, 507.

THE STOCK YARD.—The Cattleman and the Railways, 507.

AGRICULTURAL NOTES.—From the various counties of California, 508-09.

PATRONS OF HUSBANDRY.—Woman's Legal Right to Vote; Anniversary Day at Sacramento; Swindlers; Grange Elections; December Fourth at Alhambra; Grange; Ohio to California; Joint Installation, 508.

PUBLIC AFFAIRS.—Regulation of Railways, 509.

THE HOME CIRCLE.—The Boat that Never Went to Sea; A Snip of This, and a Pinch of That; The Book Agent; The Man Who Did Housework, 510. John's Wife; The Eastern Farmer; He Was Not Walking, 511.

ENTOMOLOGICAL.—The Codlin Moth, 514.

FRUIT MARKETING.—The Fruit Problem; Florida Fruits and the Auction Method, 517.

## Business Announcements.

Agricultural Implements—Truman, Isham & Hooker.

Agricultural Implements—Arthur W. Bull.

New Music—Oliver Ditson & Co., Boston.

Electric Belts—Dr. Pierce & Son.

Annual Meeting—Grangers' Bank of Cal.

Santa Rosa National Bank.

Nurseries—Shinn & Co., Niles, Cal.

Swine—F. H. Burke.

Cattle—F. H. Burke.

Small Fruits—L. U. McCann, Santa Cruz, Cal.

Fruits—Gustav Eisen, Fresno, Cal.

Washing Machines—E. W. Melvin, Sacramento.

School—Miss Bisbee, East Oakland, Cal.

Cattle—M. D. Hopkins, Petaluma, Cal.

Seeds—W. A. Burpee & Co., Philadelphia, Pa.

Money to Loan—Saving and Loan Society.

See Advertising Columns.

## The Week.

The rain did not reach as far as was anticipated in last week's *RURAL*, consequently there are some parts of the State not yet refreshed. The weight of downfall in other parts was lighter than seemed promised by the bluster of the elements, but the rain was sufficient to banish misgivings and set at work the plows over the greater part of the State. Since the storm the weather has been of the most delightful sort, and fit to fill the incoming winter-fleeing tourists with delight. There is, however, enough threaten in it to encourage the expectation that more generous rains are at hand.

All the State goes to Sacramento this week. A sketch in another column shows that the Citrus Fair is justifying the expectations of its extent and excellence. Our Southern California friends, although not exhibiting, are doing wisely in coming up to attend, that they may judge for themselves of the reports of good oranges in the upper part of the State. Some of the displays at Sacramento are evidently of exceptional character and will do the whole State good.

We are on the eve of the holidays. The date of our next issue will be the merry December 25th, and we shall endeavor to give our readers something acceptable and fitting the occasion.

## To Our Older Friends.

It is the season of the year when a newspaper is permitted to speak quite fully of itself. Last week we had a paragraph addressed especially to those who might, because of the distribution of sample copies see our paper for the first time. We would like now to have a few words with our older readers.

We hear now and then that the *RURAL* is regarded as a high-priced paper. We imagine that such a remark comes from some one who has not thought much about the price of a paper as compared with its contents or the conditions under which such contents are obtained and published. Perhaps the idea may, in some cases, be cherished by those who may sometimes see some of the cheap 50-cent chromo-advertising-monthly papers which furnish hodge-podge contents and sell their reading pages for puffs for which hundreds of dollars are paid.

It is easier to make a cheap paper than a good one. The clap-trap advertisements and pernicious announcements of questionable business are easy to get at high prices, and to exclude them is to sacrifice a large and easily-possessed source of income. It is easy, too, to fill up a paper with matter of a sensational kind, or to lug in columns of so-called information, which has no particular point, and consequently but little value. Such papers are cheap, if cheap means small cost; but, judged by their influence or practical value, they are dear at any figure.

We have had a few subscribers who have been misled by the cheap paper argument, but have returned to our lists and acknowledged their mistake. They know what cheap papers are really worth. They say that if one considers the moral cleanliness of the *RURAL*; the safety they feel in welcoming it to the household reading-table; the cheer and encouragement they feel in the support of a paper which honestly and effectively maintains their interests; the real value returned to them many times over during the year in practical helps in their work, and keeps them informed, not of what farmers are doing in other climates, but gives them the freshest details about how things are successfully done in this climate and soil—all these things, they tell us, make the *RURAL PRESS* worth to them many times its cost, and convince them that it is really cheaper far than the host of flash papers which sell for little money and are not worth even that.

If any of our readers should be thinking of going through 1887 with one of these cheap papers, we hope they will ponder well before deciding. We know a cheap paper will not suit them if they are at all careful about what they read and expect to obtain matter of practical use to them. We do not desire to publish a cheap paper—in all that the word cheap implies. We would rather lose the whole list of our readers than be responsible for floating upon the community the pernicious, rapid and useless literature which forms the stock in trade of the ordinary cheap flash newspapers.

We can assure any patron who thinks the *RURAL*, as now conducted, is a paying bonanza, that its publishers, for 17 years, with strict economy, have never become wealthy. Neither do they expect to become so by publishing an honest newspaper in the interest of their subscribers.

## Interstate Commerce.

The differences between the interstate commerce measures known as the Reagan and Culom bills have at last been adjusted by the Conference Committee, and in the present shape will undoubtedly become a law. These bills, as respectively passed by the Senate and House, were substantially alike in the general principles, but differed in some minor details. Both prohibited unjust discrimination between persons and places, the giving of special rates, preferences and the like. Both bills required the railroads to publish rates and strictly adhere to them. They did not materially differ in the penalty for violating these general provisions and the mode of redress. The main feature of the bill as now modified is that no more shall be charged for a short haul than for a long haul over the same road, and pooling is absolutely prohibited. A full abstract of the new measure may be found on another page of this issue.

Senator Stanford is represented as saying

that if the bill passes, as it certainly will, it will have a disastrous effect on California and all points of the country where two rival roads enter the State; for the reason that the rates on long hauls are made by competition. The short hauls constitute the principal business of all roads in the States, the business being local, and the result will be that the rate for that service will become the basis of computing the rates on long hauls. That is, the roads will not violate the law by making a less rate for the long than is charged for the short hauls, but will sacrifice the long haul schedule for the short ones, which will cause the rates of shipping from California to the East to go up higher than they are at present.

There may and there may not be something in Senator Stanford's point of objection, but it does not follow that in practice the measure will result as he says. If it does, it will simply make it necessary to secure further legislation regulating rates upon a just and fair basis. It is not just that the short haul should pay for a deficiency on a long haul, even if that were the fact, which is not admitted. We do not believe the roads have lost money by such measure of enterprise as they have shown in reducing overland freight rates, and we do not believe the competing roads are going to agree long on any united effort they may make to advance these rates. If they should form a conspiracy or combination to that end, there must simply be laws to prevent it. Senator Stanford's claims are just what might be expected from a railroad man who has always declared that the railroads are private property over which the Government has no control, and his announcement sounds much like an alarm cry for the purpose of driving support from the measure, which, fortunately, is now too strong to be injured in that way.

As for Mr. Stanford's objections, it may be further said that all legislation is experimental. This is a large subject to master in all its details, and we can hardly expect to have a piece of legislative mechanism that will run smoothly at first. It is only by trial that we shall learn where to tighten or relax. But one thing is certain, it is high time for tentative legislation in this direction. There are now about 115,000 miles of railroads in the United States engaged in carrying the commerce of the States, which now aggregates about \$40,000,000 a year and is steadily on the increase. This gigantic power is also steadily augmenting and is now practically in the hands of half a dozen railroad magnates. These men may meet in the room of a hotel and by a single stroke of the pen levy a tax on the products of fifty-five millions of people as arbitrarily as if they were the autocrats of the land. It may be their purpose to use this power prudently and for the best interests of the country, but it is too gigantic a power to be left unguarded. Eternal vigilance is the price of liberty.

That Congress has the power to interfere and regulate interstate commerce is unquestionable, for it is one of the enumerated powers in the Constitution. The power of the State is inadequate. It can only follow a commodity to the limits of its own territory, and there leave it to the mercy of the roads beyond. But Congress may regulate transportation from State to State, and follow a commodity till it touches the wharves of the seaboard. The doctrine has been established by the Supreme Court of the United States that "whenever a commodity has begun to move as an article of trade from one State to another, commerce in that commodity between the States has commenced."

## The Citrus Fair at Sacramento.

After lively and elaborate preparations, the Second Annual Citrus Fair for Central and Northern California opened happily Monday at Sacramento. The hall on J street, where the fair is held, is twice as large as that used last winter, being 60x160 feet in the clear, and there are 22 double-decked tables, each over 20 feet long, two tables 100 feet long, shelved, and one 60 feet long, with pyramids and large numbers of shelves; yet there is not space for all the exhibits that have come thronging and clamoring for accommodation.

The *Bee* describes the hall as "a mass of pleasing color. It is decorated with fan palms, freshly plucked for the purpose, with masses of red berries embowered in evergreen foliage. But the finest of all the decorations is the fruit

itself. The golden hues of the oranges and lemons give the predominating tones to the whole interior, and their fragrance is not less delightful to the nostrils than is their beauty of form and color to the eye."

The counties whose exhibits were in place Monday afternoon, and the order of their displays, beginning at the entrance, were as follows: Sacramento, Yuba, Butte, Tehama, Calaveras, Stanislaus, Yolo, El Dorado, Colusa, Napa, Sonoma, Shasta, Solano, Nevada and Placer. Exhibits from five others came in the day following, so that 20 were represented Tuesday evening, when M. M. Estee gave the opening address.

The displays made by Placer, Butte, Yuba and Sacramento counties are most remarkable for their extent, variety and general excellence. Placer has a decided advantage in position at the head of the room, and her output is arranged very attractively. She shows more oranges than any other county. They are arranged in great pyramids, trimmed with the brilliant green foliage and red holly berries, and interspersed with fine lemons and Japanese persimmons. Large quantities of the fruit are displayed in boxes prepared for shipment. Most of the oranges are budded, and of the Mediterranean Sweet, St. Michael and Navel varieties. The lemons are mainly Lisbon and Sicily. The display of olives from Penryn is noteworthy.

The Butte exhibit has above it the county's name, spelled out in oranges and lemons. It contains nine varieties of orange—including Navel, St. Michael and Mediterranean Sweet—five of lemons, limes, shaddocks, olives, olive oil, chestnuts, walnuts, three varieties of almonds, some fine apples and dried and prepared fruits. One of the interesting features is a box of oranges from the pioneer orange tree of Bidwell's Bar. This tree is 31 years old, and has been bearing for over 20 years.

Sacramento county is well represented. One of the tables devoted to her exhibit is decorated with lemon and olive boughs, heavily laden with fruit. The display includes freshly picked grapes, grown in the open air, and ripe blackberries, also raised outdoors without protection, matured during this month, large and of good flavor; fine raisins, and other dried fruit, with oranges and a blossom from a banana plant in a Sacramento city garden.

Yuba's display is highly commended as at once large, varied and singularly neat in its arrangement. It comprises 70 exhibits (in all over 300 boxes), mostly from the immediate vicinity of Marysville. The fruit is unusually free from discolorations and includes all the varieties of oranges that are most worthy of cultivation. There are Sicily lemons of remarkable size, and interesting specimens of licorice root; also, citrons, olives, pomegranates and persimmons.

Napa county has 50 feet of space on the west and 10 feet at right angles. Its exhibit is of oranges, Tahiti seedlings, Washington Navels, East India seedlings, lemons, limes, olives, prunes, Japanese persimmons, and 40 dozen samples of wines and brandies. Napa bases her strength upon her wines, but her fruit display is fine. She shows Napa soda and canned goods by the Napa Cannery Company.

Lake has no county display, but there is a fine exhibit of oranges from Buckingham Park, on the west shore of Clear lake. Other individuals show wines and some superb Bellflower and other apples.

Shasta exhibits fine oranges, non-irrigated, from four different growers, and makes, perhaps, the best display of apples in the pavilion: Winesap, Spitzenberg, Ben Davis, White Wax, Tulpehocken, Gloria Mundi, Smith's Cider, Northern Spy, Jeniton, etc., grown at altitudes of from 500 to 2500 feet. She shows also dried fruit—figs, raisins, apples, nectarines, peaches, pears, prunes, etc.—and a variety of grains, vegetables, walnuts and almonds.

Solano's exhibit includes wine and brandy, oranges, nuts, olives and olive oil, and several noble clusters of dates from J. R. Wolfkill, near Winters. Mr. Wolfkill has four African date trees, 27 years old, which began to bear seven years ago. They have since yielded annual crops of fruit, two-thirds of which ripen in the open air without protection of any sort.

We intended in this article to notice briefly the exhibits from all the counties north of San Francisco's parallel; but finding ourselves cramped for room, and looking as we do for ample original reports next week, we stop short of our earlier purpose, only adding that trainloads of Eastern visitors are amazed and rapturous, and that the floral exhibition, though an after-thought, is lavish and magnificent.

## Underdraining.

We are glad to note that our correspondents are reporting an increased disposition toward underdrainage among the fruit-growers of their neighborhoods. A few weeks ago our Vacaville correspondent spoke of it and said many tiles were being put in; last week we had an item of Mr. Markley's drainage work in Sonoma county, and on another page of this issue our Napa valley correspondent mentions the same disposition among the intelligent growers of that region. There is no question about it; the artificial drainage of orchards and vineyards (or parts of them) which are standing upon subterranean water tanks must be artificially rid of this standing water if the health, growth and longevity of the tree or vine are to be secured.

We have often alluded to the pressing need of such provision where the soil has become loaded almost to the muzzle by seepage water from irrigation ditches, and we are glad to see that such regions are waking up to the need of coupling drainage outlets with their irrigation inlets. Another matter closely allied to this is the action of alkali on soils thus artificially water-soaked. This was mentioned some time ago by Prof. Hilgard in one of his University Bulletins, and we understand he will have a much fuller exposition of the matter in a forthcoming report of the College of Agriculture. But these are the great issues in the drainage problems which are arising in this State.

What we were minded to allude to, especially at this time, is the advantage which many of our readers would no doubt derive from doing just what the Vacaville and Napa growers are doing, and that is preparing for the proper drainage of their own lands, and especially that set with trees or vines. The great loss of trees last summer should be a warning to many to study this matter. On shallow soils with impervious subsoils there are apt to be here and there underground basins even on land the surface of which seems to be naturally tilted enough to let off the water. In these depressions the water will stand until evaporated by the sun of the coming summer—the land will be a mush in winter and a brick in midsummer, and it is ridiculous to expect any satisfactory growth of a deep-rooting plant in such a situation.

If an underdrain is put in properly, the surplus water will be carried off, the team can safely go on the ground when it is the proper season for plowing, and in the summer-time the soil will be friable and moist—just such soil as any one would like to be planted in if he were a vegetable. Nor does this exhortation pertain to the fruit-grower alone, although at present his conscience seems most quickened on the subject. There are many vales and dips on pasture lands which are mire traps for cows, and grow only coarse amphibious vegetation, so to speak, which can be made the most productive areas on the pasture by underdrainage followed by sowing of good grasses. We had an account a few years ago of a work of this kind by Mr. R. G. Sneath, of Jersey Farm. He had a hilltop meadow which seemed destined by nature for a storage reservoir for the city water works, so thoroughly water-soaked it was. Underdrainage turned it into a fine meadow, moist enough to grow the finest grass. The marsh was subdued and made very productive. We might multiply instances, but these will suffice. Our agriculturists are cherishing sounder ideas upon these matters of improvement of farming lands than prevailed a few years ago. Those who were so loud in claiming that California lands needed no drainage, no manure nor anything else which enters into high farming in other parts of the world, are changing their minds, and there is abundant reason for it. California will do well under most all conditions, but much better when helped by measures which secure fair and favorable conditions.

Most of our readers no doubt remember enough of their own or their fathers' efforts at underdrainage at the East to make it unnecessary for us to recount the ways in which underdrains can be made of tile, or flat stones, or poles, or brush, or other materials. Where there is no surplus money at command to buy tile, but time enough to collect other materials, a temporary purpose can be served by the use of perishable stuff like poles or brush; but now that tile is to be

had at a reasonable figure in this State, and as a tile-drain once well laid in firm soil will last a long lifetime, it is poor economy to use anything else if this can be had.

We can say of drainage as of most other improvements: If you are in doubt about the advantage of it, try it. Try it on a small scale. Take any spot which is miry in winter, and where the trees or vines are not doing as well as elsewhere, or where you are getting no growth but water grasses, put a drain in which has a proper outlet, and if a year or two of observation do not set you to draining on a larger scale then the experience of a world will not fit your case.

## A Peep into the Winter.

"Take care for the beautiful," said the poet-philosopher, "for the useful will take care of itself." The spirit of this saying may be carried into our plans of spending the long winter evenings. It is true that winter in this climate is rather a poor excuse; it does not come with snow and sleet, jingle of sleigh-bells, big wood piles or coal bins, but it is winter all the same, such as it is, and should have a place in our calculations. It is not well to let our crops, business, new styles of hats or bonnets monopolize all our thought. Is not the life more than meat, and the body than raiment? May it not be well to ask what place we can give to culture, to beauty, to comfort, to happiness and contentment? How have we planned to spend a long, rainy day or bleak, raw, chilly evening?

How about our reading? No plan for this segment of the year can be regarded as complete that does not make provision for making the best use of time in an intelligent use of books. No economy is so bad as that which limits the supply of good literature. If there must be retrenchment, let it commence below the brain, at the mouth, for instance. It is a wretched mistake to stuff the stomach and starve the mind; to bedeck the body at the expense of the soul. There is no excuse for it. In these days of plenty, variety and cheapness in literature all can, to some extent, have an intellectual feast. It should be made a sort of family arrangement. Reading aloud is good exercise and always in order. It helps to pass the time pleasantly and profitably, and is practice in an art that is too much neglected. Pass the book around and let all read a spell. It leads to pleasant conversation, and then how beautiful it is for all to share in our literary good things. Read loud enough so that dear old grandfather or grandmother, who are a little dull of hearing, may enjoy the feast.

But after all, our plans for home comforts depend a good deal on what sort of a place home is like. Warmth, light, comfort and beauty are born of loving hearts, cheerful, patient, gentle dispositions. Some homes dazzle and glisten like icebergs in the sunlight, but they are awful cold. A low, heavy, dripping fog hangs all day about others, making every one, even the dog, feel out of sorts. You can almost tell a pleasant home as far as you can see it; there is such a sweet, genial magnetism surrounding everything. The house, the gate, the shrubbery, all have a sociable look and seem to say: "Come in; you are welcome." It must be a very ugly nature that will leave a bright, cheery home for the club or to play poker in the vile atmosphere of the rum shop. Surely such a soul is possessed of the devil.

We cannot conclude these random hints to the home-makers without reminding them not to forget the children in their plans for the winter. Give the children a chance. The fact is, the secret of home happiness is the art of keeping the children pleasantly occupied. There ought to be an hour or more every day or evening, when, circumstances permitting, father and mother give themselves up to the entertainment of the children with reading, games or music. An occasional romp will wonderfully help things. Lay in a good supply of fruits, sweets, all kinds of nuts, and be sure you have lots of pop-corn, as supplies for the evening. Do not spend all your home sociabilities on the holidays, but keep on hand a good fund for use all the year round. Make your home one long benediction; you can if you try, and not to try is the unpardonable sin. There is such a thing as organizing home happiness. Reader, it is worth a thought, especially these winter evenings.

## Whence Comes the Rain?

As the weather is a fashionable subject at this season of the year, it may be worth while to allude for a moment to the popular belief that because a heavy rain in California is usually attended by southerly winds, the rain comes from that direction. It seems so simple that nine people out of ten, perhaps, who have not taken pains to secure accurate data on the subject, would settle the matter by their own observation that before it rains the south wind must blow, and by the negative proof that north winds are not water-bearing. This would pass well enough were it not for the weather experts and the signal service observers, who say the rain really does come down from the north, because the observers at the northern stations report it first and they can trace its progress southward, station by station. More than this, too, the barometers at the various stations show a depression wave moving southward, even though the surface wind be moving in the other direction. The fact is, our great rainstorms beat their way southward in opposition to the wind.

It is interesting to note that in Australia they have a similar variance between the common opinion and the scientific demonstration as to the direction whence come the rains. The last received copy of the Adelaide (South Australia) Observer has a report of a lecture on "Climate and Drouth," delivered last October by Mr. J. Varley, S. M., from which we quote the following:

Every winter you may hear people say: "We get our best rains from the northwest." They do not. It is all land in that direction. The rain comes from the southwest, and the wind, circling round the center of depression, blows at times from the northwest as the area of low pressure makes its way eastward. He had already said the winds that prevail for the most part, both in summer and winter, that is, the southeast and northwest winds, are not rain-bearing. When a large body of moist air is hanging over any part of the country, the cold, dry air, if coming from a different direction, settles down as it approaches the moist air, and enters like a wedge, gradually forcing its way underneath until the process is sufficiently advanced to condense the moisture into rain. There is a very important lesson to be learned from this, and is applicable to the whole of Southern Australia.

This statement shows that in South Australia they have the depression of the barometer advancing in the opposite direction to that the wind is blowing, and that while one wind seems to bring the rain, it is really coming from the other direction—the storm advancing in the face of the wind. Why is this so? It must be that the advancing body of moist air draws toward it the wind from the opposite direction, or, as the lecturer puts it, the wind circles around the center of depression, and thus the wind blows one way and the rain drifts along from the opposite direction. Whatever may be the reason, the fact of the rain progress and the south wind facing each other is well established.

**PREMIUM FOR CITRUS FRUIT-GROWERS.**—The Southern Pacific Railroad Company has addressed a letter to Newton Booth, President of the Northern California Citrus Fair Association, offering a premium at each annual exhibition of \$250 for the grower producing the best exhibit of advancement in this line of industry for the year previous. The terms upon which the offer is made will exclude exhibitors who have grown citrus fruits merely for ornamental purposes, confining it to those who have entered upon the industry of citrus fruit culture with reference to its establishment as a permanent horticultural industry. The award will be further restricted to those only who are able to illustrate, by the exhibit they make, their progress in the direction indicated, and will therefore comprehend the extent of cultivation by the exhibitor, and the variety and quality of the fruit exhibited. The award will be made by the President and Board of Directors of the Association, after due examination of the exhibits and of the written statements accompanying them, upon the last day of each annual exhibition.

**AGRICULTURAL DIRECTORS.**—Gov. Stoneman has appointed J. C. Newton, San Gabriel, and J. W. Robinson, Los Angeles, Agricultural Directors for District No. 6.

**SAN DIEGO** complains of tramps and thieves, burglaries and various outrages. Eighteen suspicious characters were arrested there one day last week.

## The Holidays.

There is no need of consulting the almanac to learn that the holidays are near. The subtle influence is in the air. The toy shops and store windows where all sorts of nice things, finery and knick-knackery are displayed in the most artistic and attractive manner; the gay, bustling crowd of purchasers and sight-seers who throng the streets in spite of wind, fog, and bad colds, all reveal the fact that the gift-making, merry days are at hand. The head of the family realizes it as the children keep him in mind of it. Even the epigastral nerves of the epicure thrill with anticipative delight as he gazes at the fat turkeys and luscious quarters of beef hung temptingly in sight.

We need not dig very far below the surface to discover that we all need these holidays to chase away the vapors of gloom and distrust which hang as a sort of damp fog about the mind; to drive out the demons of fret, worry and anxiety and break up the dull, dreary routine and drudgery of care and business. It was one of the great errors of the past that it had more days for fasting and prayer than for thanksgiving, song and joy. Eyes were kept full of tears which should have been full of beaming delight. The world moves by inspiration, not depression. The lamentations of Jeremiah were followed by the ruin of Judea. The benediction of Jesus waked it from the grave and started the pulsation of a new life and hope through the world. Man may need a *Miserere* in his last hour, but certainly a *Gloria in Excelsis* in his youth and manhood.

Those are the most useful and powerful souls who see the most beauty in the world, the most brightness in life, the most light streaming out of the present and future. The State and the Church have often been saved by the hopeful hearts that were never discouraged, and would not cherish any other sentiment than the hope of triumph. Melancthon looked back and lost; Luther looked forward and won. Christmas came to man in the song of the angels, "Glory to God in the highest, and on earth peace and goodwill toward men." Whoever will enter into the full meaning and spirit of that song during the passing holidays will, shake off all doubt, fear and apathy, and see that life, with all its cares, worries and pinching poverty, is after all a blessed thing. He will see that there is more good in the world than ill; that we are made to be happy, and in the most desolate place may gather the sweet flowers; that the purer the heart the more fragrant its joy; that this is God's world, and not the devil's, and that our hope of a hereafter is not a beautiful mirage which hangs over the resting-place of our dead, but a prophecy of better things, a glimpse of the white porches of our Father's House. In this spirit we wish all our friends, patrons and enemies, if we have any, may all enjoy to the full the holidays.

**LICORICE.**—We notice that a Colusa county man writes to the *Evening Bulletin* that he put out licorice roots in his orchard and they "have done so well that they are crowding the trees." We should think as much. Licorice will crowd anything in soil which it is pleased to grow in—it will be a tight squeeze for the fence-posts, even. The fact of the matter is, that licorice will probably enroll itself beside morning-glory on the farmer's scroll of fame. It will be a fearful plant to get rid of when it once gets a footing in the soil. There is a wild native licorice here closely related to the plant producing the licorice of commerce. It is a terrible pest and its area is extending. As for the imported species, it offers, as we have said, quite a profitable crop, in all probability because of the vast consumption of the root by tobacco-makers and brewers as well as by druggists and other pill producers; but one does not want to plant it too carelessly, or it may do so well that the planter will be forced to grow it whether he will or no. We only intend this as a timely caution, and not as an intimation that the plant may not become of great value to the State.

## ENTOMOLOGICAL.

## The Codlin Moth.

## Full Discussion of Recent Methods of Repression.

At the Fruit-growers' Convention in Sacramento an essay on the codlin moth was read by W. G. Klee, State Inspector of Fruit Pests, and discussion followed. A full report will be given in the coming publication by the State Board of Horticulture. We give the leading portions, as follows:

## Mr. Klee's Essay.

In the estimation of many fruit-growers, this pernicious trouble is the worst pest ever introduced into the State. To my knowledge it exists in nearly all the northern counties, and, with the exception of Ventura, in all from Sacramento to the last southern county. In several sections of these counties it has, however, not yet been found; for instance, at Carpinteria, in Santa Barbara, where I made diligent search for the least sign of it, but failed to see anything of the kind. Some years ago, in the same locality, I understand that Mr. Cooke also failed to find any. It is rather remarkable that it should not have reached here yet, as the people do not appear to be over-careful as regards the danger of spreading the insect pest. At Carpinteria, I found a theory advanced which was to account for the absence of the codlin moth. They claim that the coal oil odor, quite penetrating at times, kills the moth. This theory might be applied to Ventura county. But it is advisable that no one put any faith or reliance in this theory. In my opinion, the absence is due simply to the fact that no boxes containing the moth have yet been brought there, and the people, appreciating their present good fortune in that respect, should take all precaution in future against the importation of this obnoxious merchandise.

The work of the codlin moth is too conspicuous and too well known to need any description, and so we may pass directly to the discussion of the remedies, of which there are many offered, but none so far tried have proved quite satisfactory, although it must be admitted that several are quite promising—so promising that I believe we may say we are on the road to success.

The different modes by which people have tried to repress the codlin moth may be divided in the following manner:

1. Those aiming at killing the young larvæ while in the fruit.
2. Those aiming at destroying the mature larvæ.
3. Those aiming at destroying the moth.
4. Those aiming at destroying the hibernating cocoons.

## Measures to Kill Young Larvæ While in the Fruit.

**Sprays.**—This mode of protection is evidently the most promising of any, and in the East, where it has been tried for a number of years, it has given quite satisfactory results. Of these solutions, the arsenic compounds have been the preferable. The experiments of Prof. S. A. Forbes, of Champaign, were condensed and published in the *Country Gentleman* some time ago. His experiments were with Paris green, London purple, and lime. Of these, only the Paris green can be said to have accomplished anything remarkable. Lime dissolved in water proved worthless; London purple saved 10 per cent of those that otherwise would have been wormy. Trees sprayed with Paris green produced apples of which 75 per cent were sound, while those not sprayed had but 21 per cent sound. These trees were sprayed eight times with the mixture, much more often than Professor Forbes considers necessary. The last spraying was made early in September, two months later than the common practice. After this, a two-days' rainstorm occurred. Immediately afterward a large number of apples were gathered and subjected to careful chemical analysis, when some arsenic was found adhering to them, and to such an amount that 75 apples would convey a poisonous dose. Professor Cook, of the Michigan Agricultural College, has reached more definite results, and seems positive as regards absence of danger in using Paris green, and also as regards the efficiency of London purple. We quote from him here:

Spraying with the arsenites.—By far the best remedy for this codlin moth is to use either London purple or Paris green. The remedy is not only very efficient, but is also easy of application, and not expensive. I have now tried this thoroughly for six years, and in each and every case have been more than pleased with its excellence. Enterprising fruit-growers of New York, Michigan and other States have also tried it, and are as loud in its praise as I am. Indeed, I know of no one who has tried it in vain.

I have found London purple just as effective as Paris green, and as it is cheaper, and rather easier to mix with water, is to be preferred. I mix the powder one pound to 50 gallons of water. It is better to wet the powder thoroughly, and make a paste, before putting it into the vessel of water, that it may all mix and not form lumps. One common pail of the liquid will suffice for the largest tree. A teaspoonful of the poison is enough for a painful of water. The spray may be caused by a fine perforated nozzle or a cyclone nozzle. The finer it is, the less liquid will be required. The important thing is to scatter the spray on all the fruit, and get just as little on as possible. The larvæ is killed by eating

the poison, and we find that the faintest trace suffices for the purpose. Again, the poison should be applied early—by the time the fruit is the size of a small pea. I have found one such application to work wonders. There is no doubt but that the first application, followed by one or two others at intervals of two or three weeks, would be more thorough; yet I have found one application, made early, so effective that I have wondered whether it is best or necessary to make more than one application. I do think, however, that it must be early. In May and June, the calyx of the apple is up, and so the poison is retained sufficiently long to kill most of the insects.

The danger from this practice I have proved to be nothing at all. The microscopes and chemical analysis have both shown that all the poison has been removed long before we wish to eat the fruit. The wind, no less than the rain, helps to effect this removal, as I have shown, by putting the poison on trees sheltered from all rains.

These experiences of persons in the East, cited here, are most valuable; but we must not forget that our climate differs in many respects, particularly as regards rain in summer, and very much in their favor is the shorter season, east of the Rocky mountains, as there at the most are but two broods in the season. If our spraying is to accomplish good results, we must use at least two or three, and when surrounded by infested orchards, judging from trials made here, this number of sprayings is absolutely necessary.

## Californian Experiments.

Arsenious acid or white arsenic dissolved in potash.—This remedy is now used less in the Eastern States than Paris green or London purple; but if we can manage to apply it to the trees without doing them injury, it is undoubtedly the safest remedy, as regards the danger of poisoning those who may eat the fruit sprayed with it. Investigation has proved conclusively that it is perfectly safe. This safety is due partially to its being less poisonous, compared with Paris green, and partially to its being extremely soluble in water; this latter quality causing moisture however slight to carry it off. It is chiefly on account of this latter property that it is objected to in the East, where rains prevail all summer.

One objection yet remains, and that is, unless used under certain conditions so as not to allow too rapid evaporation, it is liable to seriously damage fruit and foliage. The remedy was tried by various people in Santa Clara valley, where I have investigated its effects. Mr. C. T. Settle has an orchard of young apple trees, just in their prime, situated in the district near San Jose, familiarly known as "The Willows." Part of his trees were sprayed with white arsenic, dissolved in potash at the rate of one pound of arsenic to 200 gallons of water, and also at the rate of one pound to 300 gallons. Little difference can be seen between the effects of these two. The trees were drenched with the compound. The work was done at evening, before clear days, at the end of May, about the time the fruit had just been formed. The effect on the foliage was most disastrous, causing it to fall, and with it most of the fruit. Some varieties suffered more than others—Yellow Bell-flowers apparently the most, White Winter Pearmain the least. In June, when I saw the trees, they were rapidly recovering their foliage. During the subsequent visit in August I found the fruit that had remained on the sprayed trees, as compared with that of the unsprayed trees, but little affected by the codlin moth. At my request Mr. Settle forwarded a box of apples to Professor Hilgard for chemical analysis. Out of 18 apples treated to a thorough washing of potash solution, no trace of arsenic could be found.

Mr. G. W. Ousley, a neighbor of Mr. Settle, sprayed with the same solution, first in the spring at the same time as Mr. Settle did, and then five weeks later. His results were far more satisfactory; although the foliage was damaged to some extent, all the fruit was saved. The reason of his success was due to his not using as much of the compound as Mr. Settle did; also due to his aiming chiefly at the fruit. The damage to the leaves consisted chiefly in the burning of the edges; but few of the leaves themselves fell. On my request, Mr. Ousley forwarded to me some of the apples that had been twice sprayed. A similar analysis, made also by Prof. Hilgard, failed to reveal any trace of arsenic.

As regards the success as a preventive against the moth, Mr. Ousley writes me that, of the trees sprayed, 50 per cent of sound fruit was harvested, while of those not sprayed nearly all the fruit was wormy.

Thus far we have seen that the arsenic was partially hurtful to the foliage. An interesting experiment, when this was not the case, was brought to my notice by Mr. Ousley on a neighbor's place. Here, several trees have been sprayed with exactly the same solution as that used by Mr. Settle and Mr. Ousley, but it was applied in the morning of a cloudy day; but the others were made in the evening, the day following being bright, this first-named experiment doing no damage to the foliage. It will be seen, therefore, that in these sprayings we may find a remedy which, applied often enough and at the right time, will prove an effective remedy.

In the report of the Department of Agriculture at Washington, Prof. Riley gives the proportions, in which arsenic has been used for the purpose of killing various insects:

Fifty grains of arseniate of soda and 200 grains of dextrine, dissolved in one gallon of water; this diluted at the rate of about an ounce to 10 gallons.

One pound of arsenic and one pound of sal-soda,

boiled in one gallon of water until the arsenic is dissolved at the rate of one quart to 40 gallons of water.

## Paris Green.

Paris green is a compound of arsenic and copper. It is a far more powerful poison than arsenic alone, and is not soluble in water, hence will remain much longer on the trees. As stated before, in the Eastern States it is used in preference to arsenic, as it is not so liable to be washed off by rain; and another advantage is that it will not hurt the foliage.

We regret that we have not been able to reach any definite proof of its efficacy in this State—nothing except the statements of the Kennedy Brothers, of Los Gatos, who claim to have used it on Bartlett pears to great advantage last season. The proportion they used, as given to me, was 8½ tablespoonfuls of Paris green to 1½ pounds bar soap, dissolved in 40 gallons of water.

At the October meeting of the State Horticultural Society, Judge Blackwood, of Haywards, made the statement that he had used it the previous season with great success.

Mr. Webster Treat, of the Oakshade orchards, also used Paris green and London purple; but having used whale-oil soap and sulphur washes, it is difficult to say how much of the success can be attributed to this compound. However, in a letter to me, he writes very encouragingly about the arsenic compound, and yet admits that it has not been thoroughly satisfactory, but thinks many frequent doses will do the work. We regret being unable to secure for analysis any of his much-sprayed fruit. Before we wrote to him it had all been disposed of.

## London Purple.

London purple is another arsenical compound. It is the residue from the manufacture of aniline dyes, and contains lime, arsenious acid and carbonaceous matter. It is more soluble, more adhesive, less poisonous and less expensive than Paris green. It costs 5 cents where Paris green costs 12. With the exception of Mr. Treat, I am not aware of any one who has used it this year.

## Whale-Oil Soap and Sulphide of Soda.

In this compound, recommended by myself as a summer wash, I have considerable faith. The wash is very simple, and comparatively easily prepared. Dissolve 30 pounds of whale-oil soap (80 per cent soap, at the most costing 5 cents per pound) in 60 gallons of water, by heating the two together thoroughly. Boil 3 pounds of lye (American concentrated lye is what we have used) with 6 pounds of sulphur and a couple of gallons of water. When thoroughly dissolved it is a dark-brown liquid (chemically sulphide of soda). Mix the two, the soap and the sulphide of soda, well, and allow them to boil for about half an hour; then add about 90 gallons of water to the mixture, and it is ready for use. Apply it warm, at about 130° Fahrenheit, by means of a spray pump. Used warm, its effect is better, and less material is required than when cold.

It was used last spring at the University grounds as a summer wash, and the first brood of codlin moths was very small. It was not used more than once, and its effects could not be expected to last more than five weeks. The later fruit was considerably infested.

## Sulphur.

In a report of a horticultural institution in Germany—Geisenheim-on-the-Rhine (R. Goethe, director)—we find record of partial success, obtained by scattering sulphur a number of times on the fruit.

## Measures to Catch the Larvæ.

**Banding system.**—This mode of protection, which has been practiced in the Eastern States, has been tried in this State more than any other. Its usefulness is based on the observed habit of the larvæ when leaving the apple to seek shelter under the bark. The band about the tree provides artificial shelter for the worm, and the majority of the larvæ no doubt find their way to this; but a sufficient number for giving future trouble find other hiding-places on fences, buildings, etc., and perhaps more than anywhere else under clods at the foot of the tree, and it is here in an old orchard that I have almost invariably found cocoons. To make the banding system more effective, the ground right around the tree, as well as the whole orchard, should be thoroughly pulverized. The greatest obstacle to the success of the banding system is the neglect of one orchard-owner, while his neighbor conscientiously and thoroughly performs the work. The neglect or half-done work of one person among his trees is sufficient to counterbalance the attentive and thorough work of many others around him. The difficulty, in so many cases, of doing anything really satisfactory, I think is due to this want of co-operation. In my own orchard in the Santa Cruz mountains, comparatively isolated, very fair results have been obtained. It is evident that in a thickly-settled community, unless all concerned do their duty, the work will be largely in vain.

## Picking off Infested Fruit.

The practice of picking off infested fruit, of course, comes under the same head as the band system. In that it aims at a reduction or extermination of the next brood, it should go hand in hand with the band system. It is also open to the objection that unless the neighbors do their duty, little good is accomplished.

## Thissell's Trap.

The so-called moth trap, invented by Mr. Thissell, of Winters, is founded on the same idea as the band, but is arranged so that when the

moth hatches it remains in the trap. This trap consists of a collar of tin, to which a piece of wire cloth is attached. The collar is in the middle, so as to hold the wire away from the tree. A piece of sack is placed around the tree. The wire cloth is gathered above and below the collar and fastened closely to the tree with tacks. The meshes are just large enough for the larvæ to enter. To make allowance for the larvæ above the average size, the tin collar at the middle is perforated with holes slightly larger than the wire meshes. The moth when hatched cannot possibly escape, but remains to die in the trap. The trial I have seen was very satisfactory—all the larvæ placed on the trunk finding their way directly into the trap. It will be seen that this trap saves all the work of searching the bands, which in itself amounts to a great deal. The absolute necessity of looking at the bands at short intervals makes the system extremely annoying, as all other work of the time must be laid aside for this. On the other hand, Thissell's trap is rather expensive, being from 15 to 30 cents, according to the size of the tree. It has also the objection that it does not allow for the expansion of the tree, a fault quite serious when young trees are to be protected.

## Measures Aiming at Destruction of the Moth.

**Light to attract the moth.**—This means aiming at the destruction of the moth have been least successful of all. From the testimony of the best observers, both here and in the East, we may conclude that the number of codlin moths caught and killed by light is very small, as compared with the number of other night-flying insects, many of which are useful. At Mr. Treat's orchard, the device—a lamp above a can of oily mixture—in my judgment has been no more successful than others on the same principle.

Cans filled with vinegar and molasses or other similar compounds.—This device, it seems to me, has been least successful of all, attracting all kinds of insects but the ones most of all desired. It must be regarded as a failure.

## Remedies Aiming at the Destruction of the Hibernating Larvæ.

To prevent any larvæ from hibernating on trees, all old loose bark should be scraped off and the ground treated to a depth of six inches below the surface. If the trees are covered with lichens, which is very often the case, the spraying of the trees with an alkaline wash will be of excellent service, killing any that might be there, and also invigorating the tree. If potash be used, 1-7 pound of concentrated lye and ½ pound of potash to 1 gallon water is a good mixture.

Finally, summing up the subject of the means aiming at the extermination of the codlin moth, the band system, coupled with washes of the nature indicated in the preceding, seems to be the best to be relied upon the coming season. It will be my object to determine definitely what can be accomplished in this direction. I think we are now in the right way, and by the end of the next season we shall know quite definitely which of the above washes is the safest and most effective.

## Discussion.

Mr. Shinn: Is it at all certain that the London purple will reach all the apple blossoms? I suppose that is essential to the success of the remedy.

Mr. Klee: The results have been in the saving of from 75 to 80 per cent of the fruit; that is as near as they have got. They may get nearer to it by keeping it up, but that is as much as we know that it will do. Now as to Mr. Gray's question as to whether the red scale will live in the hot valleys—I think that can be answered affirmatively. I think there is more than one present here in the room who can testify that it will in almost every locality; in fact, I think it will live in any locality on the coast—it will live in the driest climate. Now, there were several important points brought up by Mr. Ranyon. In the first place, the trees can be hurt or destroyed by the potash and soda lye—I have known of their being hurt myself—but those trees had already buds partly swelled, and every one who uses this wash must ascertain beforehand in what state the trees are. They must be as dormant as you can get them in this country, and then I have never seen it do any harm to the young fruit buds. It may sometimes be difficult, and especially in a large orchard, to find trees perfectly dormant, and there comes in great vigilance, and that vigilance cannot be insisted upon too much. While I claim that we have the remedy, it is only by eternal vigilance and by co-operation that we can accomplish the result.

## The Monkey Test for Arsenic.

Mr. Block: It has been stated here that the effects of the poison have not been sufficiently demonstrated. Mr. Settle had been washing his trees with one pound of arsenic to 200 gallons of water; a neighbor of his had a monkey that had the run of the place. The second day after he washed he and his neighbor saw the monkey go into the apple trees and take off an apple. They concluded they would let the monkey analyze the effects of the arsenic, and they watched the proceedings. The monkey took the apple and then he got through with it, whether it tasted better on account of the arsenic than otherwise or not—but he went back and got another one. They thought they would let the monkey have as many apples as he wanted to, to see what the effect would be. The monkey ate the second apple and it had no ef-

fect upon him; the result was that Mr. Settle was perfectly satisfied and was willing to eat the rest of the apples. This thing encouraged me. I have always been opposed to the use of poisons against these insect pests. I took two or three trees and washed with London purple, using one pound to 60 gallons of water. The first tree I washed during the heat of the day, which I think is always injurious, even to wash with cold water without anything else. I find that in spraying it the skin of the apple contains oil; the oil repels it; it does not take the water and cover the entire surface; that wash has affected the leaves and a good many of the leaves fell off; it scorched them, but it started off with another growth and saved a good crop of apples. To overcome that, so as to have the poison spread over the entire apple, I dissolved the poison in soap water, beat up the soap to make suds. I put that in the water and it covered the entire apple, and I would recommend wherever it is used to use some soap with it for the purpose of covering the entire apple. I do not believe that you can dissolve poison so that the fruit will be covered without the soap. I have seen very little difference between the two; the trees have matured a good crop. I have sprayed only once, rather late in the season. There has been some fruit that had the codlin moth, but the tree matured a good crop of perfect fruit; at the same time, on account of the loss of foliage, the apple was not as large as it otherwise would have been under ordinary circumstances. That is my experience. I do not think there is any danger connected with it.

Mr. Klee: One word in answer to Mr. Block. You will remember that Mr. Settle sprayed with white arsenic, which is a very different thing from Paris green; and it is the Paris green sprayed apple that I want to get analyzed—that is the compound which seems to have done the most good, and it is a very different compound, for it contained both copper and arsenic, and has a virulent poison—the arsenious acid. There is not any more than one apple that a person can stand as a medicinal dose. I figured that out one day and found that each apple would receive much more than a medicinal dose. As I stated before, after four months there was not a trace of arsenic left.

#### An Inventor's Advice.

George Stephenson, when advising young men how to get on, would finish by saying "Do as I have done—persevere." For fifteen years he plodded and worked before giving the finishing touches to his locomotive. In as many days these persevering in the use of Dr. Pierce's "Golden Medical Discovery" have experienced great relief and found themselves on the high road to health. Liver complaints, impure blood, chronic lung diseases and many others yield to its healing influences never to return. All druggists.

#### Longfellow's Birthday Book

Is a beautiful present to give any lady. But there is a little book published in pamphlet form, with no pretensions to literary merit, that would be as appropriate, and might be the means of saving a life. It is called Dr. R. V. Pierce's treatise on diseases of women, for whose peculiar troubles the "Favorite Prescription" is especially designed. It is profusely illustrated with woodcuts and colored plates, and will be sent to any address for ten cents in stamps, by the World's Dispensary Medical Association, Buffalo, N. Y.

If you are bilious, take Dr. Pierce's "Pleasant Purgative Pellets," the original "Little Liver Pills." Of all druggists.

#### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

#### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

#### It Should Always be Borne in Mind

That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the "fittest"—the "DOMESTIC" SEWING MACHINE.

#### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

12 Lovely Hidden Name Cards, with name covered by hands holding flowers, etc., IMPORTED FROM GERMANY, for 15 cts. 12 extra fine Gold Bevel Edge Cards, with name, 15 cts. Agents' Outfit sent free with each order from this ad. provided you cut out and return me the ad. and agree to act as my agent. G. W. TUTTLE, Pasadena, Cal.

#### THE SYMPTOMS OF LIVER COMPLAINT

Are a bitter or bad taste in mouth, pain in the back, sides or joints, often mistaken for Rheumatism; sour stomach, loss of appetite, bowels alternately constive and lax, headache; loss of memory, with a painful sensation of having failed to do something which ought to have been done; debility, low spirits, a thick yellow appearance of the skin and eyes; a dry cough, often mistaken for Consumption.

Sometimes many of these symptoms attend the disease, at others very few; but the Liver, the largest organ in the body, is generally the seat of the disease, and if not regulated in time great suffering, wretchedness and death will ensue.

#### The Baltimore Episcopal Methodist:

"Simmons Liver Regulator is acknowledged to have no equal as a Liver medicine, containing those Southern roots and herbs which an all-wise Providence has placed in countries where Liver diseases prevail."

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

For logging camps, wood-yards, farmers getting out stove wood, and all sorts of log-cutting—it is unrivaled. Thousands sold yearly. A boy of 16 can saw locusts and cypress. Immense saving of labor and money. Write for elegantly illustrated catalogue in 6 brilliant colors, also brilliantly illuminated poster in 5 colors. All free. Agents Wanted. Big money made quickly.

MONARCH MFG. CO., CARPENTERSVILLE, ILL.

THE MONARCH POTATO DIGGER for Sale by TRUMAN, ISHAM & HOOKER, Agents for the Pacific Coast, 421 to 427 Market St., San Francisco, Cal.

#### AGENTS

WANTED

to sell the

MISSOURI

STEAM

WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, Jr., Newark, Ill.: The best machine ever invented by man. H. H. DURANT, Corvallis, S. C.: Everybody likes them and everybody wants them. S. B. ADAMS, Ansonia, D. T.: My wife would not take a quarter section (10 acres) of land for her machine, if she could not get another. MISS JOSEPH SWIFT, State Center, Iowa.: The most useful article about a kitchen. ANNA RAMSEY, Mission, Tex.: Have thoroughly tested it on articles from lace-collars to bed quilts; gives entire satisfaction. ST. CLAIR INKSTER, JR., Egypt, Washington Terr.: Sells itself and can not be spoken of too highly. JOHN DETTON, Brainerd, Minn.: Have given it several severe tests and it came out triumphant every time. JNO B. WHEELER, Kansas City, Mo.: They have proved themselves to the families who acquired them. A. P. SHIPLEY, Thoson, Nev.: Gives entire satisfaction. Rather handle the Washer than anything I have seen. E. M. MANSEY, Lookout, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Shattuck, Mo.: If you will get up any instrument that will take as much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house. MISS M. C. DUBHINS, Calumet, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MISS M. MOORE, Newburg, Va.: Will do more than it says, especially washing flannels. MISS F. G. SINDEN, Sherman, N. Y.: Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, Braintree, Mass.: Is all that is claimed. Would not be without one for twice its price. MISS ISABEL BOND, Northridge, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, Patuxent, Md.: Saved me \$5.00 per year for 15 months I've had it. MRS. C. W. TALCOTT, Northridge, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stanton, Mich.: I had rather give up my Jersey cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

#### SPECIAL OFFER to AGENTS.

I will ship, in localities where, as yet, I have no AGENT, 1 sample "New Becker" Washer and "Empire" Wringer at WHOLE-SALE prices. E. W. MELVIN, Prop'r. Office, 806 J St., Sacramento, Cal.

Engraving Superior Wood and Metal Engraving, Electrotyping and Stereotyping done at the office of this paper.

## FRESNO COUNTY.

### BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

#### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being  $2\frac{1}{2}$  times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

O. J. WOODWARD, FRESNO, CAL.

L. SHARPE, SELMA, CAL.

## WHAT A FOOL

I have been," said Mr. ———, of San Diego, after buying a "Cyclone." "Here I have been in trouble all the time with my OLD RATTLE TRAP OF A MILL, when I might have had a Cyclone a year ago."

These Mills are the Best, Cheapest, Strongest and Lightest, and are Self-Regulators.

**PACIFIC MANUFACTURING CO.,**  
934 and 936 Mission St., San Francisco.

C. H. PHILLIPS,  
Secretary and Manager.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

#### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 16 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

#### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TITLE, U. S. PATENT.

#### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us *direct* to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

ACTIVE steps are being taken at Woodland toward organizing a Yolo County Agricultural Fair. Another meeting is to be held at the Byrns hotel on the 18th inst., when a report from the committee is expected.

## SHEEP AND SHEEPWASH.

Calvert's Carbolic

SHEEP WASH

\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast

## LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to  
\$1.25

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scab in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO.,

San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.

### Powdered Potash & Caustic Soda

Rates, \$1.25 to \$2 Per Day.

Stage offices for Collegeville and Oakdale, Roberts and Union Islands, and L. & E. Mineral Springs stages. The most desirable location in the city. Refurnished and refitted in the best style for the accommodation of the public.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE,  
by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE  
STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with  
roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.  
In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder  
is strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN & CO., General Agents

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, this date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 15, 1886.

The past week has been of a quiet, inactive character, owing to the rains, and the uncertainty regarding more at an early day. Until the character of the winter is more fully determined very few changes of an important character are liable to occur.

The European wheat market has been gradually advancing, with a strong closing to-day. The following is the latest:

LONDON, Dec. 15.—Cargoes off coast, firm but not active. Mark Lane, English turn dearer; Foreign, strong. Cal. wheat off coast, 37s 3d; Cal. wheat just shipped, 37s 9d. Cal. wheat nearly due, 37s 6d. English country market generally dearer. Liverpool wheat, spot, upward tendency. Liverpool wheat, Cal. 7s 3½d to 7s 6½d. Weather in England, wet.

## Foreign Review.

LONDON, Dec. 13.—The *Mark Lane Express*, in its review of the British grain trade during the past week, says: Deliveries of native wheat have been very small. Values in provincial markets have advanced. The trade in London is slower, although there has been a rise of 6d. Sales of English wheat during the week were 63,345 quarters at 33s 11d, against 5864 quarters at 30s 5d during the corresponding period of last year. Flour is firm and 6d dearer. Foreign wheat has maintained a rise of 6d. A slight increase in the American supply, combined with reduced shipments from India, keep quotations steady. Corn and oats are each 6d higher. To-day there was a fair demand for wheat, and prices were 6d@1s dearer. There was a further rise of 6d for flour. Corn was scarce at an advance of 6d. Barleys were quiet, but steady. Beans and peas were scarce and 6d@1s dearer.

## London Wool Market.

LONDON, Dec. 13.—At the wool sales to-day, there was a smaller attendance and less animation. The details of the day's business are as follows: Victoria—1700 bales, scoured, 8½d@1s ¾d; do locks and pieces, 10d@1s 2d. New South Wales—1400 bales, scoured, 10d@1s 8d; do locks and pieces, 9½d@1s 1d; greasy, 3d@1s 1d; do locks and pieces, 4d@1s 1d. South Australia—900 bales, scoured, 10½d@1s 9½d; do locks and pieces, 4d@1s 1d. New Zealand—200 bales, scoured, 8d@1s 7d; do locks and pieces, 9d@1s 4d; greasy, 5d@1s; do locks and pieces, 3½d@1s. Cape of Good Hope and Natal—400 bales, scoured, 1s 10d@1s 4½d; greasy, 5d@1s 7d.

## Eastern Wool Markets.

BOSTON, Dec. 11.—The increased interest shown by buyers, last week, has been continued. The sales of the week are larger than for some time, amounting to 4,877,000 pounds of all kinds. The tone of the market is firm for the choicest grades of wool, but Territory, fall Texas and Oregon wools, which are in comparatively large stock, are being offered at lower prices compared with those asked some weeks ago, though very little lower than those quoted last week. At the same time, there is rather more inquiry for these grades, but manufacturers have not been willing for some time to pay the high prices asked, and dealers have been obliged, in order to move their stocks, to accept lower prices. The tone of the general market is still firm, and the most desirable wools are in strong hands. The market is quiet for California wool. Sales of only 100,000 pounds spring have been made, including 50,000 pounds at 20c to 24c; and 50,000 pounds on private terms. Nothing is doing in fall wool. Oregon wool is in fair demand, with sales of 190,000 pounds.

NEW YORK, Dec. 12.—Supplies of attractive standard wools continue to be offered with more or less indifference, and owners think so well of some lots as to adhere to a line valuation fuller than they can in any way realize at the moment. A fair number of manufacturers were looking around last week, but fought hard over cost, and small differences prevented several sales. Among sales were 20,000 pounds Eastern Oregon at 24½c; 200 bales choice Montana at 31c, and 200 bales Territory at 22½c. The Philadelphia market shows very little improvement. Manufacturers are pursuing a conservative policy, and sales, as a rule, are confined to small lots for immediate requirements. Among sales were 45,000 pounds California at 18 cents, 10,000 pounds Nevada fine at 22c; 10,000 pounds Territory fine at 23c. The Boston market is still quiet and in buyers' favor, but dealers are firm in prices, though there is considerable pressure to sell Territory wools. Among sales were 305,000 pounds Territory at 21½c.

## New York Wheat Market.

NEW YORK, Dec. 12.—Wheat still seems to be safely within the limits at which the price does not restrict the foreign inquiry. The close was steady, with December options up ¾ cents at 90 cents, and others ¼ better at 90½ cents for January, 92½ cents for February, 94 cents for March, and 95½ cents for April.

## New York Hop Market.

NEW YORK, Dec. 12.—Business is moderate; Pacifics and States are held down by low prices for foreign, so that the market remains in a flat and unsatisfactory condition; coast crop, 1886, prime to choice, 26@27 cents; same, fair to good, 23@25c; crop of 1885, good to choice, 12@15 cents.

## California Products at the East.

NEW YORK, Dec. 12.—California Muscatel raisins, 91.85@2; London layer, 92@2.25. California walnuts, 9@13c.

Canned Goods.—The market is strengthening for many descriptions. Apples are in demand, and advancing. Lima beans are doing better. String beans are active, with sales estimated at 7000 to 10,000 cases. Succotash is scarce and firm. Salmon is firmer, with \$1.57½@1.60 asked for Columbia river brands.

Seeds are quiet, but firm. California yellow mustard, 3½@4½c.

Beans.—The market is firm, but quiet. California Lima, \$1.80@1.85.

NEW YORK, Dec. 15.—New California lima beans

are beginning to arrive. The demand is fairly active and no stock is permitted to accumulate. The quality of this season's crop is fine and the price, \$1.80@ \$1.90, is obtained without difficulty. Turkish prunes in boxes are offering in the market. They are put up in attractive packages of 55 pounds, sixties, seventies and nineties, and command 6½c and 5½c respectively. The offering of Malaga raisins Friday next at public sale promises to be large. A still lower depth of depression is looked for. California goods are a trifle weaker in tone, but the best brands for forward delivery are not offered, the principal agents being desirous of assisting their customers by maintaining the present values for quantities, until such time as the stocks now held can be distributed.

## California Fruit at the East.

CHICAGO, Dec. 11.—California grapes are quiet. Muscats in 20-lb boxes sell at about \$1@1.25, and are in moderate demand. California dried fruits sell fairly and rule firm. The scarcity of domestic dried fruit this year is a decided advantage to the market for California fruits. Prunes, French, 9½ lb, 9c; Plums, pitted, 12c; Peaches, quarters, 12c; halves, pared, 25c; Nectarines, 9c; Pears, 8@12½c; Raisins, London layers, 22-lb boxes, per box, \$1.85@1.90; Raisins, loose Muscatel, per box, \$1.70@1.80.

## Local Markets.

BARLEY.—The market has fluctuated considerably the past week, being controlled by the weather. This afternoon it is weaker, owing to the threatening weather. On Call, transactions have been free. To-day's sales are as follows: Morning Session—Buyer season—200 tons, \$1.10; 600, \$1.09½; 300, \$1.09½; 100, \$1.09½; seller season—200 tons, \$1.00½; 600, \$1.00½; 300, \$1.00½; 100, \$1.00½. Afternoon Session—Buyer season—100 tons, \$1.08½; 500, \$1.08½; 600, \$1.08; 300, \$1.08½; 100, \$1.08½.

BEANS.—Whites are stronger and in demand. Colored are firm.

BUTTER.—No change for the better is reported, but, on the contrary, a weaker feeling is noted, owing to a strong selling pressure.

CHEESE.—The market is barely steady, with some concessions reported, owing to heavy supplies.

EGGS.—The market continues depressed under free receipts of both eastern and Californian, and a light demand.

FLOUR.—The market is stiff, with a good export and home demand ruling. Another advance in prices is expected at an early date. Quite a number of small outside mills are reported to have shut down for the season, but the standard mills are running on full time.

WHEAT.—Sales the past week aggregate about 8000 tons of shipping at from \$1.48½ to \$1.51½. A sale was made to-day of 500 tons at Stockton, at \$1.53½, for which the best bid that could be got here was \$1.51½. An exporter was the buyer. Transactions on Call the past week were large, with a heavy operator, who was supposed to have been short, buying over 50,000 tons. The call was as follows to-day: Morning Session: Buyer season—5200 tons, \$1.55½; 700, \$1.55½; 1400, \$1.55½. Buyer 1886—1600 tons, \$1.49½; 100, \$1.49½. Afternoon Session: Buyer season—2100 tons, \$1.55½; 1500, \$1.55½; 2700, \$1.55½. Buyer 1886—200 tons, \$1.49; 800, \$1.49½ per cwt.

[COMMUNICATED.]

## Market Information.

## Cereals.

Barley has fluctuated considerably the past week, going according to the weather, with clouds easier, rains lower, and higher or strong when clear. Considerable has changed hands for seed at fairly good prices. The consumption is lighter, while exporters are unable to operate, owing to the high prices demanded by holders.

Corn has a stronger tone, with a slight advance obtainable for the better grades. Offerings of Eastern or Western corn are not so large, while holders of Californian are more reserved.

Oats are steady, with a firm tone for the better grades. Black oats continue scarce and strong, notwithstanding the demand for seed is falling off.

Both rye and buckwheat are without essential change.

The latest official statistics of the British and American (the latter east of the Rocky mountains) visible supply of wheat, flour reduced to wheat, was on October 1, as follows, in bushels:

United Kingdom.....15,000,000 24,000,000

Afloat.....15,069,000 11,825,000

United States.....58,500,000 56,000,000

Totals U. S. and U. K.....88,569,000 91,825,000

As compared with January 1, 1886, the stocks in sight on October 1, 1886, showed a decline of over 32,000,000 bushels, while for the like time last year only 625,000 bushels. The very large reduction this year is in the face of the United States crop, being 512,000,000 bushels in 1884, 357,000,000 in 1885, 557,000,000 in 1886. From July 1 to October 1 this year, farmers' deliveries in the United States were largely in excess of the like time in 1885, yet the visible supply in this country was, on the latter date, only 2,500,000 bushels greater than at that date in 1885. A correspondent writing to *Bradstreet's* under date at London, Eng., of Nov. 20, says: "Probably the proportion of the wheat area sown is about two-thirds. The weather had been so very wet up to the beginning of this week that many people would suppose the proportion less; but it happens that the eastern, south-eastern, and home counties, where the wheat area is largest, had fairly dry weather till recently, and that the farmers in those counties were able to get most of their sowing done early. All this is up and looking well. But in the late districts very little wheat has been planted, and the land is now in such a boggy state that frost will be needed to make a great deal of it work well, especially where it was plowed up before the wet weather. Sowing ought to be finished by this time, and as we may get a long frost at any time now, or continual rain or snow, the completion of the work may be unseasonably deferred, or the area sown may be smaller than intended. In any case it is reported from some districts that less wheat than ever is to be planted this autumn, and spring wheat counts for next to nothing in this country." From the above it is quite evident that the wheat acreage of the United Kingdom this winter and next spring will be below that of last

winter and spring, which was 204,802 acres less than the preceding winter and spring. The falling off in the acreage this winter will make itself felt on the markets of the world before six months roll around.

In the local wheat market, exporters took advantage of the rains of last week by bidding down, and also crossing orders on Call so as to break the market, but without success so far as strong holders were concerned. A few timid holders sold, but the total sales were considerably short of exporters' wants. Under pressing necessities combined with higher markets abroad, advances of which, it is claimed, were purposely kept back, caused higher prices to be paid on last Saturday and Monday. Some sales of barely No. 1 were made at \$1.50, while parcels fully up to the standard fetched over \$1.50. Rains of last week caused ships to be held higher, but clearer skies and colder weather cause them to weaken off.

## Feedstuffs.

Hay is dull and lower, although at the close holders are offering more sparingly, which causes a better tone to prevail. Choice to extra wheat hay has been placed in carlots at \$13 per ton, with other grades proportionately less.

Brans and middlings and other ground feed are dull and heavy, with concessions demanded. Better pasture is reported to have cut off a large demand.

Feed carrots are slower, but prices are reported to be without change.

## Fruits.

Lighter receipts of grapes create a stronger market, notwithstanding a lessened demand.

Oranges are more in favor, with a larger home and shipping demand reported by dealers. The varieties are increasing, with the more choice wanted.

Lemons and limes are dull, with prices favoring buyers.

Oregon continues to send us heavy supplies of apples, which keep the market from advancing as high as it otherwise would. The holiday demand is reported good, which takes liberally of the more common for cooking purposes. Eastern apples continue to be received in heavy supplies; as the quality is good, they move off readily. Lady apples are steady and firm.

Pears are firm for choice.

## Live-stock.

Beef cattle are firm, as are hogs and mutton sheep, but no advance is established, although sellers are asking more money. In horses and milch cows there are no changes to report. Following are slaughterers' prices to dealers, for whole carcasses for dressed meats:

BEEF.—Extra, 7@7½c; first grade, grass fed, 6½c; 7c per lb; second grade, 5½@6c; third grade, 5@6c.

MUTTON.—Ewes, 5½@6c; wethers, 6@6½c.

LAMB.—Spring, 6@7c. Yearlings, 6c.

VEAL.—Large, 7@8c; small, 9½ to 10c.

PORK.—Live hogs, 2½ to 3c for heavy and medium; hard dressed, 4 to 6c per lb; light, 2½ to 3c; dressed, 3½ to 4½c; soft hogs, live, 1½ to 2½c.

On foot, one-third less for grain or stall fed, and one-half less for stock running out.

## Vegetables.

Favorable outdoor weather, it is said, will cause early receipts of spring vegetables from the warmer countries.

In cabbages and root vegetables no changes of consequence are reported.

The advance in potatoes, reported last week, has been lost under very heavy receipts this week. One day's receipts was over 14,000 sacks. The heavy receipts demoralized buyers, and caused them to hold off for lower prices, which they succeeded in getting. The market closed heavy at lower prices.

Choice hard, good-keeping onions are still strong, although cut and other wise defective onions are weak and hard to place, except to the city and near-by trade.

Sweet potatoes are in lighter receipts, which creates a strong market. The demand is only fair.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

On the way.....210,183 163,013

In port, disengaged.....132,517 132,517

In port, engaged.....59,964 24,285

Totals.....328,126 319,815

The above gives a carrying capacity as follows: 1886, 525,000 short tons; 1885, 501,704 short tons; increase over last year, 23,296.

Hens, roosters, and ducks are strong, but turkeys are easy.

Alfalfa seed is offered by the carload lots, at 9 to 9½ cts.

Hops are very dull, but not quotable lower.

Raisins are in good demand, for both home and Eastern trade; only the more choice command full prices.

Comb honey is higher, and wanted at the advance, owing to a better demand and light supplies.

Nuts are easier, but no lower quotations are reported.

Dried fruits are very strong, with an advance obtainable over quotations for the more choice cured. Dried peas are slow at lower quotations.

Broomcorn is very strong, with holders asking more money.

San Francisco, Dec. 15, 1886.

## The Persimmon.

EDITORS PRESS.—Will some of the many polymologists kindly give me some information regarding the culture and propagation of that delicious fruit, the Japanese persimmon? There are six trees on the ranch, all of different varieties, and one of these suckers freely. 1. If I layer the suckers, will they make good bearing trees? 2. I have planted all the seeds, so far, in hopes of thus raising more trees. 3. Will cuttings grow readily and produce vigorous trees? The six trees were sent direct from Japan, and were unnamed. 4. How should I prune the trees, and what general treatment is best for them? Have never yet seen anything in the pages of the PRESS on this subject.—C. MILLIKAN, Sutter Creek, Cal.

Will some persimmon-grower give his experience on these points?

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY &amp; CO., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## A Guilty Sacrifice

Should never be made, but ambition and enterprise deserve reward. Wherever you are located you should write to Hallett & Co., Portland, Maine, and learn about work that you can do and live at home, earning thereby from \$5 to \$25 and upwards daily. Some have earned over \$50 in a day. All particulars free. Both sexes. All ages. Capital not needed; you are started free. All is new. Those who start at once cannot help rapidly making snug little fortunes.

## Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma, and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers' Block, Rochester, N. Y.

## Farmers and Travelers

Sojourning in Marysville will find the Western Hotel the best in the city, being clean, quiet, comfortable and reasonable in prices. Geo. Wappel, proprietor.

## FRENCH COACH HORSES.

SUPERBE

Winner First Prize, World's Fair, Antwerp, 1885. A breed, combining size, beauty, action and endurance established and reared under the patronage and direction of the French Government.

## THIRTY JUST IMPORTED

## B. V. CUTTINGS.

## Bordeaux Varieties.

I OFFER FOR SALE, AT \$10 PER M. 200,000 CUTTINGS of the following renowned varieties, fully packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portat-Ploussard, Mondens, Petite Sirrah and Grosse Blue. Also from \$2.50 to \$5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

J. B. J. PORTAL, San Jose, Santa Clara Co., Cal.

Preparturiens, Macrocarpa, Mayette, and Chaberte Walnuts, Chestnuts, Persimmons, Mulberries, Olives, Oranges, Lemons, Pears, Apples, Peaches, Apricots, Cherries, etc. Plums and Prunes on Myrobolan Stock, Grapevines, Ornamental Trees, Shrubs, Palms, Magnolias, Clematis, New Roses and Hothouse Plants.

## TRY THE PERSIAN MULBERRY.

NO SCALE.—I wish particularly to call the attention of Fruit-growers to this fact. I have repeatedly had my nursery examined by experts, and upon no occasion have they found any scale or any indication of scale. The nursery is isolated from orchards, both old and new, and as I take every precaution in importing new varieties to get only clean stock, I feel perfectly warranted in guaranteeing every tree sold by me free from scale and other pests that are proving so disastrous to the fruit interests of the State. SEND FOR CATALOGUE.

E. C. CLOWES, Proprietor, Successor to W. B. WEST.

Stockton, Cal., October 27, 1886.

This is to certify that we the undersigned have this day thoroughly inspected the Stockton Nursery; that we found no Scale or indication of Scale, and that to the best of our knowledge and belief the Stockton Nursery is free of this dreaded pest.

WM. H. ROBINSON, Quarantine Guardian San Joaquin Fruit District. JOS. HALE, County Commissioner of Horticulture.

## PANSIES. COX'S PRIZE STRAIN FOR 1887

It has been our ambition for years to supply our customers with a superior strain of these lovely flowers, which, on account of their many varieties and charming shades, are especially desirable for the Garden. We have this season obtained from a noted grower in Belgium, seed of all of his exhibition Flowers, including almost every shade of color, exquisitely spotted and blotched, flamed and fancy varieties, a strain so beautiful that no description or praise can do it justice. In Europe these fancy varieties are grown under glass for exhibition in the fairs, but in California they can be grown in the open garden the same as the common varieties.

We offer this season in packets of 150 Seeds at 50 Cents per packet, postpaid.

Our New CATALOGUE for 1887, mailed free on application, contains description and price of VEGETABLE, FLOWER, GRASS, CLOVER, TREE and FIELD SEEDS; AUSTRALIAN TREE and SHRUB SEEDS; native California TREE and FLOWER SEEDS, FRUIT TREES, and many new novelties introduced in Europe and the United States.

THOS. A. COX & CO., 411, 413, 415 Sansome St., San Francisco.

GUSTAV EISEN, Manager,

FRESNO, CAL.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

J. N. KNOWLES, Manager.

EDWIN L. GRIFFITH, Secretary.

The work done by this Gang exceeds any plowing that can possibly be done with a hand plow. It will do good work where the ground is so hard that a hand plow cannot work. It works splendidly in trashy ground without clogging.

### BUY THE BEST:

It has a break attachment for lifting the plows out of the ground, which we prefer on Gangs, they being heavier than Sulkies. With this device they are handled with the greatest ease. We have lately added a Lever, by which the Pole is moved to the right or left, for the purpose of giving the plow more or less width of furrow, as may be desired. It can be operated by the driver while the plow is in motion. For plowing around circular corners or curved furrows of irregularly shaped lands, it works to perfection. We also make a jointed pole, which allows a free up and down play of same, and does away with any pressure upon the horses' necks, that might otherwise occur in plowing over uneven surfaces. They are guaranteed to do a good work as can possibly be done by any gang plow in existence.

IS UNEXCELLED.

—IT IS—

LIGHT,  
SIMPLE,  
DURABLE, and  
FLEXIBLE

THOUSANDS IN USE,  
GIVING ENTIRE SATISFACTION.

Points of Superiority in which it excels:

It will do better work.  
It is MUCH easier for the team.  
It is easier to manage.  
It has a LEVER to change the angle.  
It is not heavy on the horses' necks.  
It has no side draft.  
It leaves no ridge at the center.  
It has self-feeding oil cups.  
It has a wrought iron frame.  
Its chilled bearings cause it to wear longer and work easier.  
It is easier to ride.  
It conforms to uneven surfaces perfectly.  
It can be made rigid if desired.  
Its journals are protected from dirt.  
Send for prices and descriptive circular of same.

## THE JAY-EYE-SEE GANG PLOW! KING OF THE TURF!

STEEL BEAMS!  
STEEL WHEELS!  
STEEL FRAMES!  
And Best of Hardened Plow Steel Bottoms.

This new departure in the construction of Sulky Plows is fast winning immense popularity everywhere. The J. I. C. Gang, with two 12 or 14-inch bottoms, weighs only 500 lbs.

It Cannot be Strained or Broken.

It is the easiest managed Gang Plow, because it has a power lift, and the lowering and raising of the Plows is done by the horses.

## THE JAY-EYE-SEE SULKY PLOW!

Is constructed on the same principle as the Gang, and is made of steel throughout. Weight only 400 pounds. Made with 14 and 16-inch bottoms. The above Plows are, without doubt, the SIMPLEST IN CONSTRUCTION, and therefore the strongest and easiest managed. Order one on trial and be convinced.

### FOR THE NEXT 60 DAYS

I will make Special Prices on the J. I. C. Steel Sulkys and Gangs much lower than these plows have been sold for.

I do this in order to get them introduced, as I feel sure these plows, when put in operation, will sell themselves.

A Broad Guarantee is Given and ample time for trial before payment.

Write at once for full Descriptive Catalogue. My Prices will astonish you.

ARTHUR W. BULL, Sole Agent,  
123 CALIFORNIA ST., SAN FRANCISCO, CAL.

Also Agent for "Racine Chilled" Plows and the "Case" Steel Walking Plows.

ILLUSTRATED PRICE-LIST ON APPLICATION.

The "ACME" subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning process of double gangs of CAST-STEEL COULTERS, the peculiar shape and arrangement of which give immense cutting power. Thus the three operations of crushing lumps, leveling off the ground, and thoroughly pulverizing the soil are performed at the same time. The entire absence of Spikes or Spring Teeth avoids pulling up rubbish. It is especially adapted to inverted sod and hard clay, where other Harrows utterly fail; works perfectly on light soil, and is the only Harrow that cuts over the entire surface of the ground. We make a variety of sizes, 3 to 15 feet wide.

The "ACME" is in practical use in nearly every Agricultural County on the Pacific Coast, and has proved itself to be just the tool for use in VINEYARDS, ORCHARDS and GRAIN FIELDS.

## Santa Claus.

The great charm of Christmas is the pleasure it brings to the children. But it has been intimated by some folk of the Gradgrind sort who have no more poetry in their souls than a tombstone blinking in the frosty starlight, that the children's ancient friend Santa Claus, St. Nicholas, Knecht Clobes, or whatever alias he may travel under, is a myth, a phantom, a regular old fraud, and that he should be exposed and not be allowed to beguile the imagination of childhood into a love of the marvelous. Still we can hardly blame these matter-of-fact, hard-headed people. It is the spirit of our realistic age that is inclined to reject everything it cannot measure with a foot-rule or weigh on scales. It is an age that hangs out many beautiful beliefs to dry in the north wind, and scoffs at all such stories as the Wandering Jew, the Dancers of Kolbeck, Joseph of Arimathea with his Holy Grail, the Wild Huntsman who to all eternity chases the red deer, the Captain of the Phantom Ship, the Exploits of St. Patrick, Sinbad the Sailor, Jack the Giant-Killer and Bobadil as only some of Mother Goose's wild yarns. But, be all this as it may, the dear old saint who gladdened the world in the days of Queen Bess and the Merry Monarch, who stood beside the stockings of Shakespeare and Goethe and whispered pretty sentiments into the ears of Charles Dickens and Hans Christian Andersen, and has for

POSTING HIS LETTER TO SANTA CLAUS.

Our bricked-up chimneys and cast-iron skepticism in the shape of stoves and furnaces may cause him to say some angry words in mediaeval Dutch that would not sound well in English, but he manages to come all the same, so the children say, and finds the empty shoes and stockings and leaves every little heart palpitating with joy.

With what pleasurable anticipations the little ones prepare their letters to their Christmas saint. The elder babies who have mastered the art of printing letters make their supplications in their own way and pass hours in the struggle of composition. The little toddlers must have their letters written for them, and they pour their longings into the ears of elder brothers and sisters, who will be sure to intercede in their behalf. The engraving shows a couple of children who do not propose to send the letters flying up the chimney in the usual method, but prefer to demand the aid of the Government in securing safe and quick delivery of their letters to Santa Claus. It is all they can do by combined effort to reach the high mail-box, but they will accomplish it, and all will hope that Santa Claus will pay due attention to requests presented to him in such a proper manner.

Joy be with the little ones in these Christmas times. Let no reasonable effort be spared to fill their hearts with pleasure. Fortunately it does not take great things to please them if their training has been proper, and

50 generations or more made the hearts of the children flutter with delight, has lived too long and done too much good to be laughed out of existence by the myth fiends. It is true, the dear old saint has received some very rude shocks from our dreary agnosticism. His reindeer team may be considerably frightened by the snort of the iron horse and dazed by electric lights. And then he may have to drive around the corners more swiftly than in the days of yore in order to escape those modern nuisances, the reporters of the daily press. there is none so poor that he cannot contribute, in some acceptable way, to their enjoyment. The stories in this week's RURAL show that not alone our own children should be remembered,

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## The Fruit Interest in the Great Sacramento Basin.

[Written for the RURAL PRESS by L. F. MOULTON.]

Our northern valley counties are destined to excel in orchards and vineyards to the same extent that they have already excelled in the production of cereals and live-stock.

For years the central county of this great basin has been the banner wheat county of the State, as well as of the United States. For years it has produced one-sixth of all the wheat grown in the State of California. For years it has ranked the first in the State of California, and the 15th in the United States in the value of her agricultural products. To-day she stands in the front and confidently challenges all competitors in the race for supremacy; to-day she recognizes that wheat, so long her king, must give way to the fruit tree and the vine, and that her princely land holdings must yield up to the subdivisions of the progressive new-comer. To-day she goes forth in the pride of her young strength to take her true station in that higher civilization and power that is begotten of a higher intelligence and industry than that simply which casts abroad the seed for thousands and thousands of acres of grain, and, idly waiting for harvest, then gathers in, machine-like, the fruit of earth's fertility and the season's beneficence. To-day, in fact and in truth, she takes hold of fruit trees and vines with the vim she has always shown and which will give her the same rank in these greater, higher industries that she has held in other industries in the past.

Her rich and fertile soil, her mild climate, her majestic river, her luxuriant vegetation, have through centuries of the past ministered to the wants, necessities and comforts of man and beast alike.

Long before its occupation by our people, long before the great continental divide had been pierced by the extreme advance of our boldest explorers, was Colusa, one of these northern counties, the very center of savage life in our great valley. Here in the town of Colusa, where now the iron horse comes daily snorting in, and stamps impatient for its mighty burdens to be removed, is the very site of the red man's great temple of worship, legislation and justice. This very spot where now the shrill whistle daily proclaims a new civilization, was to the savage mind most sacred ground. Most undeniable is the proof of the inherent value of her soil, the beneficence of her climate, and the purity and healthfulness of her crystal river, when it is known that in savage days, in barbarous times, when all tribes of men relied on earth's spontaneous productions, there were in this tribe of Indians that occupied the site of the present town of Colusa, more than 1500 members, while other tribes numbered one-tenth to one-fiftieth as many only, and that all acknowledged the Colusa tribe as the law-givers, and their village as the capital of the whole country.

But few of this once powerful tribe now remain to tell the sad tale of modern whisky and white man's civilization; yet the well-established fact still remains and will ever remain that this county then was, as it now is, the very center of our great valley's manifest fertility.

But, to come to our subject—

## From Wheat to What?

This is the anxious and oft-repeated query of the pale-faced tribe of to-day. Turn where they may, revolve the question as they will, all reach the same conclusion, that the fruit tree and the vine must be everywhere accepted. This conclusion reached, comes then the more earnest individual question—what varieties?

Foremost in the list, most desirable for these northern counties, may be named raisin and shipping grapes; the Muscatelle flourishes wonderfully in our best soils, and produces raisins that can hardly be excelled anywhere. The apricot is a leading fruit for our higher and drier soils, of which we have thousands of acres perfectly adapted to its growth. While in many parts of the State the apricot is being dug up on account of imperfect fruit and blighted crops, here, in these counties, the yield is abundant and certain, and the fruit is entirely free of spots and knots; it is of a rich golden hue and delicious flavor. This fruit will probably be more extensively dried, canned and shipped to the marts of the world than any other fruit grown in this locality.

The French prune and other varieties of prunes will be very extensively and successfully raised here, for the few bearing trees we have are producing, in different kinds of soil, most admirable fruit, all of the choicest flavor. Many of the leading varieties of plums attain to the greatest perfection and excellence, as in the case of the prune or drying plum. The curculio has not as yet been presented to us by our Eastern neighbors to destroy our prunes and plums; and we may therefore, by keeping free of this pest, most successfully compete with the Eastern States, and even with Europe, in the production of these fruits.

The Bartlett pear is a most vigorous grower in our soil and climate, and will flourish between our mile-apart levees.

The fig is as much at home in this valley's

rich soil as an elder bush or a wild grape vine in an old Indian rancho. There are now growing in Colusa trees bearing a white fig of the very best flavor, a successful drier, and making a perfect and exceedingly rich dried product.

According to the best of authority, the date palm will be entirely at home in our soil and under our almost tropical sun. So of the olive. I have myself raised, in four years from the cutting, with but very little care, the finest of olives. The tree is as tenacious of life as the morning-glory or the cat-with-nine-lives—so tenacious, in fact, that some even claim that it thrives best in poor soil and on rocky, barren ground; but this I do not believe. I have one large tree that has been destroyed three times, and each time it has pushed out a new growth, and to-day it is full of choice fruit, and possesses a perfect trunk and limbs and a beautiful foliage.

I have in my grounds pomegranates, Japanese persimmons, palms, limes, lemons, citrons and oranges, all growing in the open air. The oranges are now of a bright, golden color, and possess a delicious flavor. They are two months earlier than the far-famed southern oranges—in fact, our oranges are all past ripe before the southern or Los Angeles or famous Riverside oranges are fit to eat.

## Climate.

The temperature here does not fall below that reached in the southern part of the State, and our trees do not need any more protection than in the south, where they too find it desirable to "blanket" their young trees occasionally for the first few years. Orange trees raised from orange seed and grown in this climate do well without any protection; but they should have good, rich soil and plenty of water all the year round, to keep up the greatest degree of vitality, thus enabling them to resist frost and insect pests.

One special advantage we seem apparently to have over the lower altitudes and damper atmosphere is, that the hot sun seems to kill all scales; or, at any rate, the scale does not seem to thrive or survive in our drier atmosphere.

I had last year on exhibition, at the Sacramento Citrus Fair, some oranges; and a Los Angeles paper, in noticing the fact, humorously said that I had procured 6000 orange trees from Los Angeles, and that only one had escaped "freezing to death," and that one I had "blanketed" since a yearling, thus enabling me to have one tree left to gather fruit from. Now the fact is, I got only a few trees from the south, and this tree from which I gathered the oranges that I had on exhibition was not one of them and was never "blanketed" at all, but was raised from orange seed procured in Sacramento city, was budded and bore fruit up to 1872, then froze to the ground the same as did the orange trees of Los Angeles during that severe winter, and, like the frozen Florida orange trees, took just seven years to again commence bearing; since which time (1879) it has been producing good crops of the finest oranges every year in the open air.

Just as wheat in the past has held full sway, so in the future will grapes, apricots, prunes, plums, pears, peaches, nectarines, cherries, apples, walnuts, figs, olives, lemons and oranges from these northern valley counties take the lead in tempting both the palate and the eye of Eastern buyers, and first shall reap the greatest reward and first shall be introduced to the markets of the North and the West, the East and the South, and especially of the Northwest, those of our people who, first realizing the true situation, shall change from wheat to fruit.

## Poor Nursery Stock.

In addition to the question of varieties of trees and vines, there should be especially considered by beginners the stock and seeds from which the plants offered for sale have been grown. Instead of offering stock produced from seeds procured from the Southern States or elsewhere from trees that are seedlings for many generations back, the country has been flooded with trash that has been produced from trashy seeds procured promiscuously from canneries or produced from "budded-to-death trees," or from suckers or little pieces of roots cut up and grafted into and called a tree, or else, worst of all, the common practice of using cuttings from the French Myrobalan seedlings or cutting into small pieces this desirable imported stock to save cost of the genuine natural tree. These unnatural methods should be discouraged alike by both nurserymen and fruit-growers everywhere. No wise fruit-grower will ever trust such worthless trash as results from these pernicious practices.

## Irrigation.

Another important subject connected with fruit-growing is irrigation. Through the protection afforded by what has been derisively known as "Moulton's mile-apart levee theory," we are now enabled to carry the water safely through our counties between widely separated or mile-apart levees, subject, of course, to occasional breaks in such levees, as are set up on edge and occupied by gophers, squirrels and sleepy-headed settlers; yet even in these neglected sections, indolence, contrary to established rules, has a rich reward in a fertilizing coating of rich river sediment. And here is to be seen convincing proof of the value of my long ago and oft-expressed theories of winter flooding; for, with the surface of the river raised by and between mile-apart levees, the water now in moderate floods rises above the

highest river-bank land, making possible to deposit on all these orchards and vineyards its rich sedimentary washings. And further, from these highest land-surfaces, it is with the utmost ease that the water is let out into the highest pens or checks, and from these into the next, and so on, until all the water is consumed or allowed, if desired, to run down into the lower ponds or channels on either side of the river, and thence on down to the bay.

And I now recommend, in addition to my old winter-flooding pen or check theories, that there should be left in the levees on both sides of the river, say three miles apart, and nearest to high bank sloughs, overfalls 200 feet long, with aprons to lower this richest of plant food and drink down into these natural canals, to be in turn there held between levees on the banks, and let out into highest pens or checks, and so on successively as far as may be desired, the same as though the pens or checks adjoining the river itself. This overfall would make it impossible for extreme floods to burst well-made levees in the low places suffered to exist by lazy, sleepy-headed orchardists and river-bank dwellers, as then the excess of water would flow out over the land and effectually settle the great question of irrigation. I have always held through the many years that I have been called crazy on the question of winter-flooding, leveeing, controlling of river waters, and the suppression of the slickens fiend, that there was one simple principle of right that should be recognized by our legislative and judicial powers, and that is, that the settler occupying banks of "dry sloughs," formed by the action of water, should be declared a "riparian proprietor," with a right to demand that, during floodtimes of flowing streams, water sufficient for his individual purposes be allowed to flow through floodgates, substantially erected under direction of the Board of Supervisors, at the point where such slough puts out from the flowing stream, but not, however, to the injury of any other proprietor below him, who might not require any water. This would completely settle my winter-flooding hobby, as it would, except for gardens and Chili clover, afford abundance of water for all purposes to all land-owners, as one good flooding in winter is all that is needed under any circumstances, for orchards or vineyards, if followed up by thorough cultivation.

With canals that appear on the northern county maps perfected, and the above ideas and theories carried out to the utilization of all the surplus waters of our river and our many mountain streams, nearly every part of our immense valley would be made to flourish, prosper and abound in almost every kind of plant, tree and vine now known to the most favored portions of the whole world.

Then, with the transportation problem to Eastern markets more effectually and satisfactorily settled, no country hat greets the sun in his daily course could show a more happy, contented or prosperous people than would these northern counties.

The great question of reaching the markets of our own metropolis, and the line of transportation to more distant markets, was solved for us long ages ago. There flows by our door, through our border, a great river that constitutes the only railroad commission that the transportation lords of to-day admit they have as yet failed to buy. Holding thus the balance of power, our narrow and our broad-gauge railroads are brought nearer to the service of the people, and there is insured to us for all time unusual facilities for the transportation of our varied products.

If now still lower rates can be secured to Eastern markets on daily cars that shall be required to receive any quantity of fruit, however small the lot, there will be but little else needed to stimulate our people to the greatest activity in the planting of trees and vines.

These northern counties stretch out their broad and fertile area in sight of the snow-capped Sierras on the east and cold Mt. Shasta's eternal snows on the north; they are within a few hours' romantic and picturesque ride on our narrow-gauge railroad to the health-giving mineral springs on the west, to the streams and lakes abounding in fish, and forests overrun with game, where the tourist or the husbandman may drink in a day of pleasure in these richest of nature's grandest gifts to man, and return home at eve to enter with renewed vigor on the morrow's duties and labor.

Here in this modern Italy, choicer than Italian vines and trees, rarest of tropical fruits, shrubs and flowers, the cool, refreshing breath of old ocean from the west and of white Lassen peak on the east, the majestic crystal river, fed by melting snows and mountain springs, flowing past our doors, carrying on its bosom boats freighted with the product of our fields of golden grain and fruit and vine out through Golden Gate to broad old ocean, to return with the golden luxuries of other climes to cheer and beautify prosperous and happy homes, all contribute their golden wealth and conspire to make these counties truly the golden counties of the Golden State.

## Colusa, Cal.

A "BLACK SNOW," which fell in 1875 over an area of about 15 by 20 miles in the vicinity of Holland, Mich., was found to contain a considerable proportion of dark, earthy matter. This was subjected to elaborate scientific examination, and pronounced volcanic dust from some far-distant crater. A dissenter from this view has sought a simpler explanation, and has since proven that the dust came from the prairie soil a hundred miles to the southward.

## Sonoma County Notes.

EDITORS PRESS:—After a short rest, the scribe who ought to write oftener is once more on duty. The winter is upon us, but no heavy rains nor wintry weather have been experienced. So far not more than 2.25 inches of rain have fallen. Farmers have therefore done but little plowing, although many acres have already been harrowed and cultivated for a coming hay crop.

Sonoma used to be one of the leading grain-producing counties of the State, but now hardly enough wheat is grown in the county for home use. This is not because the soil is exhausted, but because our people have found that fruit and grape-culture are both more pleasant and profitable. There is no county in California where a greater diversity of crop is raised. To be brief, let me name a few of our many staple productions, viz., wheat, oats, barley, rye, corn, buckwheat, alfalfa, tree fruits of all kinds (oranges, pomegranates and Japanese persimmons are now ripe on trees owned by the writer), potatoes, vegetables of almost every variety—you know Sonoma produces pumpkins which have given us a national reputation—melons, etc. And when we tell you there is no part of the globe that can excel Sonoma in grapes, we but modestly speak the truth. For quantity and quality the Sonoma county grape crop is unsurpassed. Our wine yield is large and excellent, but I must not say too much at once, even if the truth be not all told.

There is much interest manifested at Santa Rosa, and also at Healdsburg, concerning railroad extensions. It is pretty certain that a standard-gauge road will be built during the summer of 1887, connecting Benicia, on the Straits of Carquinez, with Santa Rosa. This done, a new prosperity will dawn upon Sonoma, especially that portion traversed by the line of the proposed road. The Healdsburg people hope to have the California Pacific road extended from Calistoga, its present terminus, to Healdsburg. Should the road be built, it will open up the fertile Knight's and Alexander valleys to closer communication with the outer world.

With the outgoing year there will be several outgoing State and county officers. Several of them have proved faithful public servants, while not a few have drawn their salaries and done little more. With the incoming year the Legislature will assemble. We notice a goodly number of farmers in the lists of the elected. It is to be hoped that they will prove honest, competent public servants.

The roads are in splendid condition, and the tax-gatherer is finding everybody.

Farmers have done fairly well this year. Live-stock is in good order and has not yet required any extra feed. OCCASIONAL.  
Santa Rosa, Dec. 13, 1886.

## Stockton Notes.

EDITORS PRESS:—December fogs are moistening the ground already wet enough by the rain of the 8th to plow fairly on all soils, and everybody hopes for two weeks without rain, to push the seeding now well begun. Several farmers are using from 30 to 40 animals. On black lands many have waited for weeds to start; now the burned fields are quite green with them. Summer-fallow is not killed by drouth, as was feared, and the outlook, with wheat at \$1.50 and \$1.51½, is encouraging, for we rarely have heavy rains till the holidays. Roads are not usually bad till Christmas gifts are distributed.

Already the city is gay with paraded marvels of beauty and color, to open alike the purses of rich and poor, and mysterious packages are tucked away, to delight on sweet Christmas eve, though too often "the old, old story" is neglected.

The Ladies' Relief Society gives a benefit for the poor soon, and Mrs. Dohrmann, the noble teacher of the kindergarten, has again undertaken to have each poor child receive a gift from the trees prepared by her scholars and patrons.

The pavement work on Main street will soon be done to Sutter street. The chain-gang has been worked on it, and the sand for the street-bed taken out of Mormon channel.

To go to town on Saturday is a time-honored usage, and on that busy day the plaza, or Hunter-street square, rings with auctioneers of everything, from laces to horses, patent-medicine vendors, knife-grinders, men bawling peanuts, popcorn and oranges. Squint-eyed women drive hard bargains for dishes and carpets; dudes puff cigars and bleared old men squirt tobacco and foretell the weather.

On one side of this busy square will stand the \$250,000 courthouse, 176 feet high to the top of the Goddess of Liberty on the dome, with fine fronts on Main street and Weber avenue. The last visit of Col. Myers, of Detroit, settled all plans, even to finding hardpan for the concrete and brick foundation, at a depth of five feet. The supervisors are now ready to issue bids for this elegant structure, which it will take many a year of taxes to pay for, but will greatly beautify the city and is needed for the credit of the county. MRS. W. D. ASHLEY.  
Stockton, Dec. 13, 1886.

## HORTICULTURE.

## California Dried Fruits.

There were many excellent addresses delivered at Sacramento Citrus Fair. Many of them related especially to the resources and adaptability of the central and northern districts of the State and will serve a good purpose in making these regions better known. We shall present extracts from them as our space permits. As an address of especial interest to those already domiciled in the State and engaged in its productive industries, we select the following by George W. Meade, of San Francisco, to whose firm the highest award was made for its display of raisins at the fair:

The subject of the dried fruit and raisin industry of California is a most pleasing one to now contemplate. It is, comparatively speaking, but a few years since California raisins and California dried fruits cut but a small figure among the products of our great State, and out of our coast markets they were practically unknown. To-day, however, note the great change. From small beginnings the productions of these two lines have kept pace with the growth of the State, year by year, until now the output of California raisins and dried fruits is as eagerly watched in New York, Chicago and other great Eastern markets as it is in our home market of San Francisco. Year by year the markets for our dried fruits are widening, and while a few years ago our most distant market was Colorado, these goods are now being eagerly sought for and distributed in all the great markets of the United States. Large as this business has already become, it is still in its infancy, and has a future before it that, in our opinion, will be excelled by few, if any, of the other great industries of the State.

## With a Population of 80,000,000

Of people in the United States, it is perhaps quite safe to say that not over 3,000,000 have as yet tasted or seen California dried fruit or raisins. The possibility, therefore, of not overdoing the market, as will easily be seen, is something that is not likely to occur for a century to come, if, indeed, it ever occurs. The Eastern demand for our dried fruits for the year 1886 has never before been so eager or active, and at prices which must give to the grower or producer a good return on his capital invested.

There will, of course, as in all lines of business, be poor years and good years; but, taking it one year with another, there is no industry in California, present or prospective, which promises better or speedier returns to the grower than the drying, in whole or in part, of the products of his orchard. To further stimulate and increase, however, the already great and growing demand for our dried fruits,

## Greater Care in their Grading, Selection and Packing

For market must be exercised. The Eastern trade is very exacting—they pronounce our fruits, when properly graded, the finest in the world, but have found, and justly so, much fault with many shipments on account of irregular grading, lack of attention to proper selection and indifferent and faulty packing. All of this can be, and we know will be, in time remedied, and when that time comes, 10 cars of California dried fruits can be sold on their merits alone where one is now. Take the article of California dried peaches—a large grower has, perhaps, 20,000 pounds of the dried product; of this quantity, perhaps, 1000 pounds were over-ripe peaches, which, when dried, turned black. If these were picked out, and either thrown away or sold by themselves for what they would bring, the balance of the fruit would from its uniformity bring enhanced prices more than sufficient to cover this loss. Many growers, however, to save this poor fruit, mix it in with the good, with the invariable result that when the shipment reaches market it not only gives general dissatisfaction, but when sold the price is scaled on the whole 20,000 pounds to a figure that will net him less than if he threw all of this black stock away or fed it to the pigs. The same remarks will apply to apricots, apples, plums, and, in fact, dried fruits of all kinds.

When the product is ready for market, have it regular and uniformly graded. Do not mix in poor fruit. Put up only choice, selected fruit to be sold as your first grades. Pack up your second grade by itself and let it sell on its merits; in fact, let the great consuming public of the East know that when they call for first-class California dried fruit they are going to get it. This fact once established, it will no longer be a question what shall we do with our yearly increasing products of dried fruits? but no shall we be able to meet the demand?

## Sun-Dried and Evaporated Fruits.

We urgently advise the discontinuance of the further sun-drying of apples, unless they be bleached with sulphur before being placed on the trays. The evaporated, bleached apple, here as throughout the entire East, is rapidly taking the place of the ordinary sun-dried apple, the sale of which is rapidly growing less year by year. Evaporated, bleached apples, in 50-pound boxes, are worth to-day 12 cents in the San Francisco and Sacramento markets, and in active demand, with prospects of even higher prices; while the ordinary sun-dried, unbleached

apple is a drug and unsalable at three cents per pound.

In the southern portion of the State nearly all the sun-dried apricots are

## Bleached with Sulphur

And then carefully graded. As high as 22½ cents per pound have been paid in Riverside for these apricots this year, which gives the producer a magnificent profit and shows what a little care and attention will do. To some extent our northern producers also bleach their apricots, but not very generally as yet, and when it has been done, either from insufficient knowledge of the process or lack of proper attention to details, it is only true to say that we have seen very few as yet of the northern apricots that even approximate in color, grading and style the product of our Riverside friends.

There is almost an unlimited field East for these sulphured apricots. We have got the fruit in our northern counties—the process is simple, and there is no reason, with the same attention, why we should not equal, if not excel, the product of Southern California.

With sun-dried peaches we also recommend a universal sulphur bleaching. It will brighten the color, add to the appearance, and in that shape the fruit will always bring enough more to cover the cost of such bleaching many times over. Pears, either sun-dried or evaporated, should also be bleached, and the sale for the ordinary sun-dried, unbleached pear, like the sun-dried apple, is getting to be a thing of the past.

While some growers have endeavored to bleach or lighten the color of prunes or plums, it is an unnecessary expense and a waste of time and labor. A few bleached prunes might sell for a trifle more in a small way now and then, but never to that extent that it would pay any one to bleach them.

## Styles of Packing.

Regarding styles of packing, sun-dried apricots, pitted plums, prunes and pears should always be put up in either clean white cotton sacks or in neat uniform, nicely papered and faced 25 pound boxes. Peaches and sun-dried apples can be put up in burlap sacks, but even for these we recommend a white cotton sack, as it adds somewhat to the appearance of the fruit, and is more pleasing to the buyers.

Choice evaporated fruits, if not sold to some regular packer in bulk, should always be packed in boxes, and, with the exception of apples, for which a 50-pound box should always be used, for all the balance we recommend a 25-pound box as being what is mostly called for by the trade in general. The fruit should run uniform through the boxes, and nicely faced and papered on top so as to present an attractive appearance when opened.

## Dried Figs and Prunes.

The California black fig is increasing in favor East, and we believe will eventually be found a very profitable crop to raise.

As is very well known, the output of many kinds of our dried fruits the past season was seriously curtailed for two reasons—first, a short crop; and, second, the large shipments East in a fresh state. While it is a little early for us as yet to give accurate figures as to the output of all kinds, we place as an approximation the product of French and German prunes for 1886 at 2,000,000 pounds; of peaches, 750,000 pounds; of pitted plums, 500,000 pounds; of apricots, all kinds, 600,000 pounds; of evaporated apples, 450,000 pounds; and of figs, say 150,000 pounds. With a good season it is altogether likely that next year this quantity will be trebled or quadrupled, and no grower need have the slightest fear but what a ready market will be found for every pound of it and at full price.

## California Raisins.

In approaching the subject of California raisins it is with more than ordinary pleasure we note the great increase in the product, the splendid improvements in the style and method of packing, and, what is perhaps better than all, the vastly increased demand, which has amounted to almost a furor from Eastern markets for the choice raisins that California has turned out in the year 1886. Commencing in 1870 with a few hundreds of boxes of experimental California raisins, this industry slowly but steadily, despite the constant warfare and prejudice of the New York importers of Spanish raisins, despite the cheap labor of Spain, has constantly forged its way ahead until this year we approximate the total pack of California raisins at the splendid total of 700,000 boxes, of 20 pounds each, which is equal to 14,000,000 pounds of raisins, or about 50,000,000 pounds of Muscat grapes in a fresh state. The experimental stage has now passed. All choice brands of California raisins are now being taken in the great Eastern markets on almost a par, and in many instances equally so, or even at

## Higher Figures Than the Malaga Fruit.

We anticipate the pack next season at 1,000,000 boxes, and if proper attention is given to grading, assorting and packing, and making our raisins in the box what they are called on the lid, we hazard nothing when we say that every single box of this pack can be placed at remunerative figures in a half-dozen of the largest Eastern trade centers.

To accomplish all this, however, and to still further maintain and to extend the splendid reputation that California raisins have made this year in the East, every possible energy must be exerted to still improve the quality of our pack. Nothing must be left undone, no efforts should

be spared to make our raisins not only equal, but superior, to the very best goods imported from Spain.

## Raisin-Packing Houses.

It should be with us no half-way, but one continuous, unceasing, unrelenting war of improvement and aggression until the last box of Spanish raisins has been driven from America forever. That this much-desired result be more speedily brought about, we offer as a suggestion to growers of raisins generally, that they encourage the establishment of raisin-packing houses in their vicinity, conducted by men of experience and of means, to whom they can, year by year, sell their raisins in the sweat-boxes at fair market rates for cash. In this way a market will be provided each year for the product of their vineyards, and these raisins in the hands of one competent packer will be all uniformly graded and packed under one brand, and thus distributed East. As it has been in the past, and in a great measure is now, these scores of small, indiscriminate packings of raisins all over the State, with no standard whatever as to grade, is one of the reasons that has kept California raisins in the background so long. We had the fruit to make good raisins, but no two packs run alike, and when a car was shipped East one mark would turn out very good and another mark inferior. The result was, the whole car was rejected, and the jobber turned again for his supplies to the Malaga fruit.

## Better Results this Year.

This year, however, owing to the efforts of some large packers in sending East only strictly choice raisins, the tide has turned. We have already secured a splendid anchorage, and now all that remains to be done is for California raisin-producers to be producers, and for raisin-packers to be packers; for the producer to assist and encourage the packer, and for the packer to assist and encourage the grower.

Then with a strong pull, and a long pull, and a pull all together, we firmly believe that within 10 years no more Spanish raisins will be seen in American markets, and we also firmly believe that within that time, with our Californian ingenuity, which is now devising, and will continue to devise, new and quicker methods of packing by machinery, we shall even enter the Spanish stronghold, and that California raisins will be as common in the great markets of England as they are in the large markets of our own country to-day.

## THE STOCK YARD.

## The Government and Cattle Diseases.

The following dispatches from Washington show that a vigorous effort is being made to move Congress in an important direction:

Dewitt Smith, of Illinois, President of the National Cattle-Growers' Association, has arrived in this city for the purpose of securing the passage of a bill to more effectually prevent the spread of pleuro-pneumonia or other contagious diseases. The bill proposed by the association, which will shortly be introduced in the Senate by Cullom, of Illinois, is substantially the same as that urged upon Congress three years ago. It gives the Commissioner of Agriculture the authority to go into the infected States and condemn, pay for and kill diseased cattle and cattle exposed to contagious diseases.

This, however, is to be done in co-operation with the State authorities. In case the State refuses to co-operate with the Federal Government, it is proposed that the President shall have power to "schedule" such State and prohibit transportation beyond its boundaries.

Mr. Smith says a misunderstanding seems to exist as to the reason why compensation is granted to the owners of diseased cattle. He says it is not done for the purpose of reimbursing the cattlemen for the loss sustained, but because it is thought good policy to grant some compensation in order that they will not attempt to conceal the existence of the disease. The cattlemen believe, says Mr. Smith, that if the legislation proposed by them be enacted into law, pleuro-pneumonia and contagious diseases can be eradicated in three or four years.

## Another Measure.

A delegation of the National Cattle-Growers' Association has a bill in preparation for introduction in the Senate, which has for its object the suppression of pleuro-pneumonia. The bill is being carefully drawn by Judge Shellabarger, and will probably be introduced in the Senate by Senator Miller, of New York.

## Still Another.

The committee of the Consolidated Cattle-Growers' Association of the United States appointed to prepare and present to Congress a bill for the extirpation of contagious pleuro-pneumonia and like diseases among cattle has been in conference here this week with members of Congress and Government officials, and are perfecting a bill, the leading features of which propose the appointment by the President of a commission of three, to be men of executive ability, whose functions and pay are to be suspended by the President whenever public safety will permit, and restored whenever he deems it necessary. The commission is to have ample powers to quarantine, appraise, slaughter, and pay for diseased and exposed cattle, and establish rules and regulations therefor. The bill calls for an appropriation of \$1,000,000.

## METEOROLOGICAL.

## The Thermal Belt at Los Gatos.

EDITORS PRESS:—I see some reference in this week's RURAL to orange-growing in Los Gatos. Hoping to contribute a letter perhaps to the subject, and also to set our locality in a more favorable light, which I think it deserves, I send you the following:

Two orange groves in Los Gatos were evidently referred to in the Fruit-Growers' Convention in Sacramento without distinction. The older, Dr. McMurtry's, upward of 20 years old, is situated on the east side and about 50 feet above the creek bottom, and not directly in the draft of the canyon. The west side has the stronger draft and is apparently colder, but there is probably not much difference in amount of frost. Orange trees are growing on both sides all over the town. Once only in the last five years have the trees been injured, and that only the young growth. The mercury that morning at seven o'clock in Dr. McMurtry's grove stood at 25°. On the benches higher above town no harm was done.

The other orchard referred to, set by Mr. Harvey Wilcox and now partly bearing, is 200 to 300 feet higher, a little further out of and probably above the cold draft and backed by high hills; no serious frost there.

Mr. Locco has a place a mile eastward in a small canyon with oranges, lemons and limes bearing. The limes, some of them near the creek, have at some time been frozen down, but came up again; nothing else injured.

Kennedy brothers, in the same locality, in open level land, have an orange tree over 20 years old standing in moist bottom land near the creek. Also a thriving young orange nursery in the same bottom, where one would naturally look for frost.

Toward Sratoga there are three or four groves of 50 to 100 trees or oranges and lemons 10 or more years old, some irrigated, some little or none. Almost every house yard has a few trees, and even out in the valley for five miles are here and there a few trees. One party in the valley has about 100 young trees, which have passed a winter or two.

Seven or eight years ago a good many orange trees were planted about San Jose; these nearly or all died in one or two winters thereafter. There are some trees in the town probably seedlings. Mr. Gish, a neighbor of mine, has two seedling lemon trees growing in a chest-nut orchard; the nut trees are 20 feet apart, the lemons standing in the center of the squares. All are 15 years old and their tops interlace so as to completely shut out the sun. They have never been irrigated. Last year, a dry year for us, the largest tree bore 450 lemons of good size and quality, and did not appear to suffer for want of water any more, if as much, as the nut trees. (Query—Will a lemon root stand drought better than an orange root?)

Judge Rankin in Los Gatos has a lemon tree in his yard which has an estimated crop this year of 100 dozen. And an old fruit dealer in San Jose told me last week that the lemons from Los Gatos, then for sale at his store, were equal to the imported. He also claims that our oranges and limes are equal to the best, excepting, of course, those oranges grown on China lemon roots.

On my own place 29° has been the lowest temperature in five winters. I have had seedling oranges and lemons in seed bed and nursery for two winters, unprotected and without injury so far. Last winter some fall buds started out in early winter and were not hurt.

Up to the present time this year tomato vines are green, and I have pineapple and banana plants growing without protection.

The pinch, however, comes later, when the summer heat has all left the ground, and after a cold rain which has left snow upon the mountain tops; then there is likely to be frost most everywhere, and ice, too, very near to if not at the most favored spots. Ice in the gulches is frequent, but rare on the ridges.

I have seen ice in little brooks and on the banks; 4 feet distant a bean and potato vine pass the night unhurt. I have seen ice in a shallow vessel one-quarter, and I think nearer three-eighths, inch thick, and on the same level near not a leaf was hurt on orange or lemon trees; but this degree of cold happens only once in a winter, or in several winters, and only one or two nights together. A month of such weather might produce very unpleasant results.

My own place is about 800 feet above tide-water and 500 above the town. Anywhere at 200 or more feet above the adjoining level land, or hollows, or gulches, the temperature at night is usually about 10° warmer than below.

One morning in October, upon actual test, I found the temperature at my place 15° warmer than at San Jose at 6 A. M. At the latter place it reached 50° at nine o'clock—the point where mine was at six. It was a clear morning. I believe the same conditions extend to an elevation on the valley side of the mountains to 1500 feet or more, where not too shady, and that all along our foothills and mountains, on both sides the valley, citrus fruits will ultimately be cultivated largely for both pleasure and profit.

N. E. BECKWITH.

Los Gatos, Santa Clara Co.

THE Japanese persimmon trees in Oroville are hanging full of fruit.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Grange Song.

No north, no south, no east, no west,  
The whole broad land is ours;  
We'll hide those dreadful battlefields  
And plant them o'er with flowers.

We'll sow the seed, in faith and hope,  
Our work shall never cease,  
'Till every hill and mountain slope,  
Shall send us words of peace.

We'll start the cheer at the Eastern sea  
And send it to the West,  
'Till the glad shout comes back to us,  
From mountain crest to crest.

Then gather all your hosts again,  
Wide out your banners fling,  
And rouse ye, Nature's noblemen,  
To crown the farmer, king.

—"Connecticut" in Our Grange Homes.

## Temescal Grange.

Several weeks ago Bro. Past Master Bagge and family moved into their new and comfortable cottage. When visited, his fellow-Patrons found him in a beautifully furnished home, but suffering from inflammatory rheumatism, brought on, probably, by extra exertion. At the meeting of Temescal Grange last Saturday, all were glad to heartily greet Bro. Bagge again in the Grange.

The subject of the discussion for the day was the legislative needs of California. Bro. Frink thought that some more efficient laws were needed to prevent the disgraceful scenes lately enacted during the labor strikes in San Francisco. Bro. Renwick thought that in comparison with the wages of farm hands and the profits of the average farm owner, \$2.50 per day was good pay. Farmers certainly work more hours a day than car conductors and gripmen, and generally have to be satisfied with making not more than a dollar a day. Sister Bagge was sure that \$2.50 a day was not too much for a man who had to support a family. As to farmers' wives, how many of them get even two bits a day and their board? It seems to be city hoodlums that are most lawless. Sister Kinney suggested arbitration as the best and perhaps the only remedy. We all have to suffer when such lawless acts are committed. There must be a wrong somewhere, or there would not be such a continuous struggle between labor and capital. Bro. Bagge disapproved of the employment of lawyers litigating all our difficulties, but was in favor of arbitration. He believed that our laws should require arbitration first, and adopt litigation only as a remedy when arbitration has failed. Observations during his younger days in Denmark had led him to this belief. The legal rights of married women and widows were discussed by Bro. Renwick and Bro. and Sister Paine, who spoke earnestly in favor of placing a husband and wife on an equal legal business footing in the rights and disposal of property.

Sister Babcock called attention to the rapid increase of the thistle nuisance in fields and along the highways in Alameda county, and thought further legislation necessary in reference to noxious weeds.

Legislation in favor of postal telegraphy, National Savings Banks, and the distribution of water for irrigation, was also discussed. Brothers Renwick, Paine and Dewey and Sister Kelsey were appointed a committee to present resolutions at another meeting, embodying the opinions of the Grange on the subject of legislation.

An invitation from Eden Grange inviting Temescal Grange to join in installing the officers of both Granges, at Haywards, at 10 A. M. on Saturday, Jan. 8th, was accepted with thanks. The verses, "Forty Years Ago, Tom," were beautifully recited by Sister Jessie Weed.

## National Grange.

The Journal of Proceedings of the 20th session of the National Grange, P. of H., with compliments of Secretary Trimble, is already at hand. This is getting out a report in wonderfully good season. Few State Granges are so prompt; and we know of other Orders taking half a year to do the like, even where less labor is involved than in this volume of 190 pages.

W. M., Darden, to whom the question of representation of Pomona Granges in the State Grange had been referred, felt obliged to reverse the ruling of the Master of the State Grange of California as based upon an unconstitutional resolution of the N. G. at its 12th session; but the following was afterward adopted without a dissenting voice:

Resolved, That Art. I of the Constitution be amended by adding: "SEC. 4.—County or Pomona Granges may be represented in State Granges under such regulations as the State Grange may provide."

After the early conflicting reports it is good to find an authoritative statement, that the 21st session will be held at Lansing, Mich., beginning Nov. 9, 1887.

Among the resolutions adopted was one looking to the election of U. S. Senators by direct

popular vote; and others in behalf of adequate laws against bribery in caucus, election, or legislative halls, and in favor of a National telegraph system.

We hope to refer to the proceedings again hereafter.

## Grange Work and Progress.

[Prepared Weekly by M. WHITEHEAD, National Lecturer.]

The object of the Grange is not to antagonize any other class, not to wage a warfare against any other interest; for it recognizes the right and importance of every legitimate enterprise and vocation, and is quite willing to concede to them every right upon the principles of justice to which they may have claims. Farmers in the Grange will cheerfully aid in the advancement of every useful interest, and shall strive to secure them protection, justice and equal rights with others.

We believe that stock gambling which raises or lowers at the pleasure of one man the price of food products is a crime. So thought the National Grange at its last session when it favored laws, both State and National, prohibiting all dealings in "futures."

"In the present industrial and political crisis the voice of agriculture, the great conservative reserve power of the nation, should not be silent, her influence unfelt, her power unsuspected, her rights disregarded, her necessities unrelieved." Farmers believe this fully, hence the Grange, with its new lease of life, steadily grows and prospers. Farmers are looking to it as their only hope.

Every neighborhood that ought to have a Grange will yet have one, even if years ago one was organized and failed. It is better understood now. Its plans and lines of action are well defined. It offers farmers the only organization that covers the whole country. The hundreds of Granges reorganized during the past year prove that farmers see in it their best organization.

Alta Grange, No. 1350, Illinois, is trying the plan of a Reading Circle in connection with the Lecturer's program. They have taken up Nordhoff's politics for young men, and a member is appointed to open the topic or chapter at each meeting with a written essay.

Some one has wisely said: "The teachings of childhood are the corner-stones on which to build the foundations of character. If these are laid in wisdom and faithfulness we may look to see the superstructure rounded and beautified by the lesson of life's experience." The Grange now admits young people of the age of 14 years, and its beautiful and good lessons are helping to form their characters and shape all their coming lives.

Montrose Grange, Va., lately held a fair. On three sides of the room Ceres, Pomona and Flora presided over displays appropriate to their own sphere, while the fourth side was dedicated to the babies of the Grange, and was separated from the rest by lace curtains and festooned with evergreens. On the platform were two rows of seats, one above the other, and filled with the little ones. And a sweet picture it was, with two dozen smiling little ones from three months to four years old.

"How much have the ties of this Order done to harmonize and unify the people of the various sections of this country; to obliterate and remove all bitterness, hatred and jealousy; to heal the bleaches and wounds of our late civil war? So do you not see that in the near future it will remove all sign and semblance of sectional strife, and make us a harmonious and united people."—J. N. Lipscomb, Master South Carolina State Grange.

At last there are signs of a Grange awaking in Rhode Island. If the little State will it, her farmers can take their place alongside of those in all the other States and help us in our battles for the right. In our work we must not have any States out of the Union. Brother James Draper, Master of Massachusetts, has present oversight of Grange matters in "Little Rhode."

The late session of the California State Grange was a most successful and profitable one. Advance ground was taken upon several important State questions. Another victory was rejoiced over—that of the defeat of the corporations on the "Debris question;" whole hills and mountains had been washed down for mining purposes for years, and the debris carried upon the farming lands to the utter ruin of thousands of acres. One of the reports reads: "To convince all of the usefulness of our organization, it only seems necessary to refer to its accomplishments, when thoroughly united and in earnest. It never attacked a foe that it did not subject to law and equity, and which was maintained by the highest tribunals in the land."

"'Tis ours to guard a sacred trust,  
We shape a heaven-born plan,  
The noble purpose wise and just,  
To aid our fellow-man.  
From Maine to California's slope  
Resounds the reaper's song;  
We come to build the nation's hope,  
To stay the giant wrong."

GRANGE ITEMS.—We learn from the Patron that Sierra Valley Grange was reorganized Nov. 19th, installed officers and received the secret work of the Order from R. G. Hamlin, Master of Beckwith Grange. That Santa Rosa had a special meeting Dec. 4, and a frolicsome feasting day, with readings, addresses and music. That Enterprise mourns the death of Bro. Lewis, who lived respected and beloved by all who knew him, past the age of four-score years. That Woodbridge has lost in Bro. J. A. McMurry a valued member.

EDEN GRANGE.—Seven applicants received the first and second degrees last Saturday. Three more are expected to take the same degrees at a special meeting before the 8th of January, that there may be 10 candidates to be instructed in the third and fourth degrees on installation day, Jan. 8th. All are glad to see this new awakening at Haywards and hope it will soon spread over Alameda county, and Centerville and Livermore Granges be numbered among the early revivals of 1887.

## Grange Elections.

DANVILLE GRANGE.—Elected Dec. 4: R. O. Baldwin, M.; M. W. Hall, O.; O. E. Howard, L.; Fred. More, S.; J. Jones, A. S.; Hugh Wiley, C.; J. Stone, T.; Millie Howard, Sec.; D. N. Sherburne, G. K.; Mrs. Shuey, Ceres; Mrs. Stone, F.; Mrs. Baldwin, P.; Miss Lottie Wood, L. A. S.; S. F. Ramage, Trustee.

EDEN GRANGE.—Elected: J. Chester, M.; W. O. Blackwood, O.; Joel Russell, L.; D. D. Mann, S.; I. E. McDermid, A. S.; Mrs. E. C. Blackwood, C.; L. Perham, T.; I. Sharai, Sec.; O. Dennis, G. K.; Mrs. F. J. Anway, P.; Mrs. J. E. McDermid, F.; Mrs. C. H. Chester, Ceres; Miss S. D. Anway, L. A. S.; O. Dennis, L. B. Anway, J. Russell, Trustees.

ELLIOTT GRANGE.—Elected Dec. 11: S. E. Hart, M.; R. M. Daniels, O.; Mrs. M. E. Emalie, C.; F. Ritter, S.; Wm. Ennis, A. S.; Mrs. S. Ralph, C.; Mrs. C. E. Misener, T.; H. H. West, Sec.; B. F. Langford, G. K.; Sister Ritter, P.; Sister Mary Daniels, Ceres; Sister M. J. Hart, F.; Sister M. A. West, L. A. S.; Lou McLean, Org.

ENTERPRISE GRANGE.—Elected Dec. 11: W. A. Birch, M.; E. J. Lynch, O.; Zenos L. Coy, L.; A. M. Gunter, C.; Thos. Waite, O.; Ulysses Wilson, A. S.; Mrs. S. C. Coy, T.; Miss Letitia Hanlon, Sec.; A. A. Krull, G. K.; Miss Minnie Schulze, P.; Miss Cerita Wilson, F.; Miss Edith Tibbitts, Ceres; Miss Ettie Plummer, L. A. S.

MAGNOLIA GRANGE.—Elected: V. W. Still, M.; G. W. Cunningham, O.; W. H. Cunningham, L.; C. D. Gautier, S.; C. D. Bilderback, A. S.; J. R. Nickerson, C.; H. White, T.; May F. Bilderback, Sec.; H. A. Curtis, G. K.; Mrs. M. M. Eorsenman, P.; Mrs. A. Still, Ceres; Ida M. Babcock, F.; Mrs. A. Cunningham, L. A. S.; Mrs. M. L. Bilderback, Trustee.

MONTEZUMA GRANGE.—Elected Dec. 4, the same officers now holding. Those chosen last year were: T. T. Hooper, M.; J. Bullard, O.; R. Barkway, L.; F. Daniels, S.; J. Nelson, A. S.; Sister F. Bullard, C.; G. M. Daniels, T.; Sister E. Daniels, Sec.; Sister E. Bullard, G. K.; Sister B. Galbeath, P.; Sister F. Barkway, Ceres; Sister M. Galbeath, F.; Sister A. Parker, L. A. S.

NORTH BUTTE GRANGE.—Elected Dec. 11: John W. Hedger, M.; L. D. Hedger, O.; Mrs. L. A. Clark, L.; H. F. Clark, S.; F. M. Bruce, A. S.; Mrs. R. A. Clyma, C.; Mrs. M. E. Durley, T.; Miss Jennie Hedger, Sec.; James Myres, G. K.; Miss May Clyma, P.; Mrs. May Partridge, F.; Mrs. Belle Spilman, Ceres; Miss Mary Stevenson, L. A. S.; Miss L. Clyma, Org.

POINT OF TIMBER GRANGE.—Elected Dec. 4: A. Plumley, M.; Volney Taylor, O.; S. M. Wills, L.; C. J. Preston, S.; A. Richardson, A. S.; Mrs. A. Richardson, C.; G. Cople, T.; Eva S. Preston, Sec.; Mrs. L. Wills, G. K.; Mrs. G. Cople, L. A. S.

ROSEVILLE GRANGE.—Elected: Leo D. Thomas, M.; S. Gladney, O.; S. J. Cross, L.; John Shellhouse, S.; Harry Mertes, A. S.; E. J. Atkinson, C.; Mattie Leavell, Sec.; Walter Lyddament, T.; Willie Murry, G. K.; Gussie Mertes, Ceres; Anna Shellhouse, P.; Bell Harris, F.; Alice Williams, L. A. S.

SACRAMENTO POMONA GRANGE.—Elected Dec. 16: A. A. Krull (Enterprise Grange), M.; Joseph Sims (Sacramento), O.; G. W. Hack (Sacramento), L.; C. Towle (Florin), S.; J. E. Beach (Amer.), A. S.; E. S. Johnston (Franklin), C.; M. Sprague (Sacramento), T.; W. W. Greer, Sec.; C. A. Hull, G. K.; D. D. Hull, P.; Mrs. McConnell (Elk Grove), Ceres; Mrs. Wilson (Enterprise), F.; Miss Crieswell (Amer.), L. A. S.

SEBASTOPOL GRANGE.—Elected Dec. 4: Jas. P. Gannon, M.; M. Litchfield, O.; H. B. Morris, Sec.; C. Wightman, T.; C. Spangler, A. S.; D. Litchfield, G. K.; Mrs. Morse, C.; Mrs. Hathaway, Ceres; Laura Litchfield, F.; Mrs. Sinclair, L. A. S.; Mrs. Thompson, P.

SIERRA VALLEY GRANGE.—Installed Nov. 19: W. C. Lemmon, M.; Geo. P. Haines, O.; B. F. Lemmon, L.; Mrs. Geo. P. Haines, S.; Mrs. B. F. Lemmon, A. S.; John E. Hubbard, C.; Mrs. J. B. Albee, T.; N. N. Strang, Sec.; Hal Lemmon, G. K.; Mrs. W. A. Robbins, Ceres; Miss Laura Robbins, P.; Mrs. J. N. Phipps, F.; Mrs. N. N. Strang, L. A. S.

SOUTH SUTTER GRANGE.—Elected Dec. 18: John W. Jones, M.; Roger Mahon, O.; L. B. Hinman, L.; W. W. Monroe, S.; William E. Roberts, A. S.; John M. Jones, C.; H. Sankey, T.; Ella M. Jones, Sec.; Alex. Donaldson, G. K.; Mrs. M. Sankey, P.; Mrs. E. C. Jones, F.; Mrs. M. J. Fifield, Ceres; Mrs. Mary Donaldson, L. A. S.; Roger Mahon, Trustee; Ida Richardson, Org.

STOCKTON GRANGE.—Elected Dec. 4 and 11: Thos. E. Ketchum, M.; J. B. Harelson, O.; Sister M. F. Merrill, L.; J. L. Beecher, Jr., S.; E. C. Carson, A. S.; Sister A. W. Post, C.; Jos. Adams, T.; N. T. Root, Sec.; W. F. Sibley, G. K.; Sister W. B. West, P.; Sister Lizzie Root, F.; Sister T. E. Ketchum, Ceres; Sister Cora Beecher, L. A. S.; Sam'l Myres, Member Exec. Com.; Sister J. L. Beecher, member in place of Sister West, resigned. [The above are almost constant in attendance, and promise well for future meetings. Our great trouble is that so many come to be entertained and so few muster courage to speak. Still, that is better than too much gabble.—Mrs. W. D. A.]

VALLEY GRANGE: Elected Dec. 11: S. Ashley, M.; Frank L. Loucks, O.; G. P. Loucks, L.; C. N. Wight, S.; J. Lieber, A. S.; Mrs. O.

N. Wight, C.; E. W. Williams, T.; Miss H. F. Bailey, Sec.; J. R. Minaker, G. K.; Miss Nellie Simpson, P.; Miss Hattie Gambs, F.; Miss Nellie Wight, Ceres; Miss Annie Loucks, L. A. S.

## The Babe of Bethlehem.

[Written for the RURAL PRESS by M. J. LINDROBE.]

"Rejoice evermore! Be exceedingly glad!"  
Ye hillsides and mountains, ye valleys and plains!  
Let not your hearts, ye children of men, be sad;  
But rejoice! Let anthems of praise, fitful strains,  
Be wafted on sunbeams, on fragrance of flowers!  
A Babe in Bethlehem is born. It is ours!

Ours, that Babe in the manger so humbly born,  
Yet so rich in grace! so beautiful! so sweet!  
That the angels sang its praise on Christmas morn,  
Prophets, kings and shepherds worshiped at its feet.

"Glory to God! on earth peace; good-will to men!"  
Are blessings from Bethlehem's Babe now as then.

As God has glory, and on earth peace, may we,  
Loving the day of the Babe of Bethlehem,  
Love and practice "good-will to men," as they be  
Needing our kindness on life's wavering stem.  
Then, Bethlehem's Babe, the Cross and its story,  
Will bring us at last to future life's glory.

Easton, Fresno county.

## Hon. Marshall P. Wilder.

Boston, Dec. 16.—Marshall P. Wilder died at his residence at Roxbury this morning. He had just passed his of the most prominent men in the country, beside having 60th birthday. Col. Wilder for many years had been one of a world-wide reputation as one of the foremost pomologists and horticulturists of the country.

EDITORS PRESS:—Only a few days ago I was honored with kindly words from Hon. Marshall P. Wilder, anxiously desiring to see California well represented at the next biennial gathering of pomologists, in Boston. With trembling hands he worded his desire "to work to the last, which will come before long."

A few days later the father of American Pomology was removed to the larger field of action, to view the perfected fruits in the sphere of immortal life. Glorious must have been the awakening when, after a long life spent most industriously in the service of his fellow-men, to advance and perfect horticulture, he found himself surrounded with the spiritual growth of flowers and fruits evoked by his genius and perseverance.

His teachings to plant the seed of every fruit and tree, and by hybridization originate new and superior varieties, better adapted to the endless peculiarities of climate and soil over so great an extent of country, has given an unprecedented impetus to horticulture, which promises to be abiding.

The most charming among flowers, the *Camellia Wilderi*, his hybrid roses, and a long list of valuable fruits, will carry his name to posterity as one of the benefactors of the race.

His labors for many years, as president of the American Pomological Society, were conducted with consummate ability and suavity of manner. Tears of deepest affection are dropped to the memory of the Father of Pomology through the extent of our country, wherever superior trees, vines or flowers attest our advanced civilization.

J. STRENZEL.

Martinez, Dec. 19, 1886.

[We can but add our tribute of respect to the memory of the distinguished dead. From end to end of this country, and far beyond, where enlightened horticulturists meet, his name will be spoken with tender voice and the hosts of his noble deeds will be recounted. With the grief at his departure there must be mingled thanks that he has been so long spared to guide, to encourage and to elevate his fellow-men.—EDS. PRESS.]

## Coal Oil and Turpentine for Seales.

EDITORS PRESS:—Your subscriber wishes to know if any of the readers of the RURAL PRESS have ever used pure coal oil or turpentine on peach or nectarine trees for the San Jose scale; if so, at what season of the year was it used, and what effect did it have on the trees? Either coal oil or turpentine will kill the scale effectually, and will not hurt pear or apple trees, but what effect it will have on stone-fruit trees I don't know. Should any of the readers of the PRESS have tried either of the above remedies they will confer a favor by reporting the same to the PRESS.

I. H. THOMAS.

Visalia.

PROF. C. V. RILEY.—We have received a note from Prof. C. V. Riley, U. S. Entomologist, stating that having been forced, from ill health, to absent himself a great deal from his office, and to seek as much rest as possible since last spring, his correspondence has unavoidably accumulated during that time. It is his earnest hope that returning health and strength will, in the future, permit him to overcome this seeming neglect, and, in the meantime, he asks the kind indulgence of those to whom his letter is addressed. We know Prof. Riley deserves the most thankful consideration and that he is incapable of neglect unless it is beyond his power to do otherwise. We are glad to hear of his returning strength, and hope for full and continued restoration.

STREET RAILWAYS are becoming quite a common thing in our three most southerly counties.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**CHEERFUL AND BUSY.**—Haywards *Journal*, Dec. 18: Farmers this week report that they never had such a fine fall to get the land in, and those having adobe have already made rapid headway. In Moraga all the low adobe land is now cultivated and seeding is progressing. Hill farmers are all busy, as well as the valley chaps.

**SUGAR BEETS.**—Irving *Reporter*, Dec. 18: The sugar factory made the largest run it was ever known to make one day this week—108 tons of beets in 20 hours. Tony Lee has a sugar beet—not a common beet—weighing 32 pounds. It is nearly two feet long and measures three feet two inches in circumference.

## Colusa.

**VINES AND ORANGE TREES.**—Telegram from Arbuckle: A large number of farmers in this locality are preparing to plant vineyards this winter. But little wheat will be planted. A well-cultivated vineyard produces the finest of grapes without irrigation in this section of the county. Dr. Clark, of Woodland, is setting out 10 acres of orange trees in the foothills west of this place.

## Lassen.

**WELL-WON WATER.**—Susanville *Mail*: Some years ago Herman Knipping, better known as the "Pluck Dutchman," located a ranch on Madeline Plains on a place no one else would have, as it was thought impossible to obtain water anywhere in that section. For three years he has hauled water eight miles to his house. He has sunk eight wells and they all proved dry. A short time ago, however, he commenced sinking about three-quarters of a mile from his house, and has, at a depth of 75 feet, succeeded in getting an apparently inexhaustible supply. In sinking he went through 9 feet of clay, 1 foot black, crumbly adobe, 20 feet of brown sand, 13 feet of yellow, sticky clay, 5 feet of gravelly cement, 10 feet of clay, 2 feet of dry, flinty cement, then perceived moisture. He then sunk through 6 feet of clay and struck a gravel bed, in which he encountered a large boulder. Upon removing the rock he was rejoiced to see water gushing in. He went for his team and wagon in order to haul rock for curbing, but was unavoidably delayed until the next day, when, to his astonishment, he found 35 feet of the finest water in the well and his tools at the bottom. Mr. Knipping has a bonanza in this well, as all the drovers and teamsters will, if necessary, stop at his place in going to and fro with stock and freight. This will encourage others to settle in this section, as a great many have been watching to see the outcome of the gentleman's enterprise. He proposes to move his house to the well.

**SETTLERS AND BEEVES.**—Susanville *Cor. Ukiah Press*: Our county is filling up very fast. Nearly all the government land is taken up, either for grazing or farming purposes. However, the U. S. Land Office is still doing considerable business, especially in the northern portion of the land district. There is a large quantity of beef cattle being fattened in this valley to be shipped about February.

## Los Angeles.

**CITRUS SALES.**—Santa Ana *Standard*, Dec. 18: Some of the Tustin people have sold their orange crop on the trees recently at the following prices: Mr. Judson, \$2000; P. T. Adams, \$3000; B. F. Maxon, \$3000; H. K. Snow, \$2000; Mr. Kellum, \$5000; A. B. Goodwin, \$2000; W. H. Newell, \$1 per box.

## Marin.

**A KINGLY BIRD.**—San Rafael *Journal*, Dec. 16: Henry J. Lucas killed a gray eagle, Tuesday, that measured seven feet and three inches across the wings, and weighed 11½ pounds. When shot he was devouring a tame duck captured on the ranch. His talons and beak were wonderfully well developed for assault or defense. Such birds are rarely seen here, and Lucas will have it preserved.

## Monterey.

**EDITORS PRESS:**—Over one-half the land in this vicinity, lying between the railroad and the Salinas river, is plowed and the adobe seeded. The uplands east of the railroad are generally in need of rain before plowing can be begun.—J. B. H., *Chualar*, Dec. 18th.

## Napa.

**ENGLISH WALNUTS.**—St. Helena *Star*: The crop of walnuts at Mrs. T. B. Shamp's place was light this year and there were not enough gathered to fill the orders received. Last year she had a fine large crop and they went like "hot cakes." The variety raised at Walnut Grove is the English, and they are larger and better than can be bought in the stores. This crop is always profitable, and a few walnut trees would not be amiss on any farm.

## Placer.

**CLIMATIC RIGORS.**—*Republican*, Dec. 15: During the past week peas have been in blossom on W. J. Wilson's place at Newcastle, and in Mr. Hollenbeck's garden in Auburn. Two or three ranchers report having ripe berries, and R. N. Scott has a chestnut tree in full blossom at Newcastle. Mr. Beecher has tomato vines in blossom at Millertown, and H. B. Gaylord has sent to the Citrus Fair ripe tomatoes picked

from his vines last week. Mr. Gaylord also sent down to the fair a fine peach tree, only six months old from the pit, which measured nearly six feet in height and was of corresponding breadth of limbs.

## San Diego.

**COTTON COMING.**—*Union*, Dec. 15: W. W. Stewart & Co. received at their warehouse yesterday the first wagon-load of cotton ever grown in Southern California. There were 39 sacks in the lot, in all 2570 pounds. This cotton was grown by John W. Moore, of Bear Valley, on the farm of S. G. Antes. Mr. Moore, who has had experience as a cotton-planter in Texas, is convinced that it will prove a paying crop, and says there is no doubt at all of success with it here. He is so well satisfied of this that he intends to put in 160 acres the coming season, and says it will pay a great deal better than the same acreage in grain. Stewart & Co. will ship this cotton to the Oakland mills by the next steamer, as the pioneer cotton shipment of Southern California.

## San Luis Obispo.

**COMPETING CUCURBIT.**—*Tribune*, Dec. 17: Oak Park and Arroyo Grande vie with each other in respect to large squashes. A load was brought to town Monday. The smallest of the squashes weighed 100 pounds, the largest 285 pounds.

**GOOD GROWERS.**—Mr. S. Jones has a tract of mesa land a short distance west of Arroyo Grande. Last spring, when planting his watermelon patch, he dropped at proper intervals a few apricot-pits by way of experiment. Nearly all came up and he has now about 100 sturdy little trees over three feet high, the season's growth from the seed. After removing his watermelons—an immense crop—the vines have again sprouted from the roots, and Mr. Jones is watching to see if he is to have a perennial supply of watermelons.

## Santa Clara.

**FRENCH PRUNES.**—*Mercury*: Marshall Ross, of San Tomas district, dried a large quantity of French prunes in his evaporator the past season. He packed them neatly, shipped them to Chicago, and has just received word that they are "the handsomest that have come into the market this year."

**LATE GRAPES.**—Although the grape season for the majority of vineyardists was over several weeks ago, Mr. Baker and Mr. Crittenden, of Lakeside, are still making shipments to S. F.

## San Bernardino.

**RAISIN SHIPMENTS.**—*Valley Echo*, Dec. 16: Total raisin shipments from Riverside, Casa Blanca and Arlington for 1886 to date, 105 carloads, or 110,022 boxes.

**CHURCH-GOING BEES.**—After expending considerable money in vainly trying to fasten in the swarms of bees which have taken possession of the space between roof and ceiling of the Arlington church, the society have now decided to wage a war of extermination. The bees have become so numerous and aggressive as to prove a great nuisance, not only on account of their holding services at the same hour as the congregation below and all speaking at once, but frequently the congregation find their pews occupied by these arrogant little intruders, and not even the most devout of deacons can give his individual attention to the pastor's discourse when he views one of them perched upon the coat collar of his neighbor in front preparing to administer a pointed rebuke to the unwary brother for daring to nod during services.

## Shasta.

**AN ORANGE BELT.**—*Democrat*, Dec. 15: There is a strip of country stretching from the mouth of Clear creek to the mouth of Spring creek on the west side of the river, taking in the high lands that are known as a "warm belt," and is especially adapted for the orange tree; and to prove this we call attention to the Wiser place, in particular, at Lower Springs, where orange trees have been bearing for 17 years. We have passed this place at all seasons, and never failed to see oranges on the trees. For several years the trees on the Wiser place were irrigated, but Mr. Wiser discovered that irrigation was a detriment, and for the last 11 years they have done better without irrigation, the ground not even being well cultivated. Judge McCormick, of Redding, who has several fine trees growing on his premises, having ceased to give them water during the summer months, finds that they do much better. So it is proved by actual experiment that excellent oranges can easily be grown in this particular belt at least, and without irrigation.

## Tulare.

**COUNTY PRODUCTS.**—*Delta*, Dec. 16: In the show-window of Knapp & Anderson's real-estate office is an interesting exhibit of Tulare county products, among which we note two varieties of large, deep-colored oranges from E. J. Gibbons' place at Plano, that would attract attention anywhere; fine oranges and lemons from John Tuohy's place on Lewis creek; English walnuts from Dr. Farrish's orchard at Farmersville; black walnuts brought by Mr. Enloe from the swamp; Japanese persimmons, grown by Seth Smith, near town; large pears and six varieties of squash and pumpkins from Spiers' nursery, in Visalia; a box of large, finely-flavored raisins from Geo. Thyark's vineyard, at Grangeville; rice pop-corn (the first we have seen here), sweet corn, and splendid specimens of mountain apples from M. C. Washburn's place in the Sierra on the Mineral King road;

honey in the frame, made at the Fair grounds in October last, by a swarm of J. Gregg's bees, during the holding of the fair of the Agricultural Association; a stalk of corn, grown on J. H. Thomas' place, near town, measuring 18 feet in height, and having 3 large ears 12 feet above the ground; large ears of yellow corn, grown by J. Dice near Visalia. There are also samples of wheat of different varieties, alfalfa seed, etc.

**AN ALFALFA CULTIVATOR.**—*Visalia Times*: C. Burrell has had constructed at the iron works a cultivator with diamond-shaped chisel points which he proposes to use in his alfalfa fields. Gophers, squirrels and badgers have thrown up such mounds and ridges there that he loses great quantities of feed, from the fact that his mower will not cut it where these animals have rendered the ground uneven. With his cultivator he proposes to level these knolls, and the chisels are made diamond-pointed with the notion that thus shaped they will not tear up the roots of the alfalfa. Several practical farmers, who have examined the machine—which is nothing more than the cultivator of our grandfathers—have suggested that it could be employed to good advantage in killing out the much-detested fox-tail, if used when the grass has just made a start. The frequent flooding of alfalfa packs the ground solid, and the use of this cultivator would at least loosen the soil, and thus, no doubt, cause a larger and better growth. If it will, as suggested above, eradicate the fox-tail grass, its value is incalculable. Mr. Burrell's experiment will be watched with interest.

## Yolo.

**COYOTES MANY.**—*Democrat*: The farmers among the foothills near Capay are complaining of the unusual number of coyotes in that locality. The animals are very voracious, and not only attack sheep, but kill hogs in great numbers, something they were never known to do before.

**MULE-MERCHANT ON THE MARCH.**—Mr. Brown, the well-known stock-raiser from Modoc county, passed through town Friday with a band of 61 fine mules. He left Modoc with 68, but succeeded in selling seven of them on the way. The mules are now quartered at Hord's horse-market near the depot. Mr. Brown will dispose of as many as he can in this county and then take the remainder to Fresno.

## Yuba.

**MUSCATS AND 'SIMMONS.**—*Marysville Appeal*, Dec. 10: In the yard of the Gassaway residence there is a tree of the Southern persimmon which is bearing abundantly; also a grape vine which is bearing Muscat grapes. How is that for December?

**ROBINS** have already made their appearance in this vicinity, which is several weeks ahead of their usual advent. They say that there will be enough rain during the season, but not any to spare.

## NEW MEXICO.

**ALFALFA.**—*New Mexican*: A good many people are taking up land south and southwest of Santa Fe, with a view of sowing the same in alfalfa. Eight or ten parties residing in this city have already done this and secured a very fair crop even where irrigation is impossible, and the success which has attended their experiments has encouraged others to go and do likewise. Some rather queer facts have been developed by this work in the Santa Fe valley. One man sowed a crop of alfalfa with his oats early in the spring, the idea being that, as he had no water at hand to irrigate his crops, the oats would spring up and protect his tender alfalfa shoots from the sun. The new ground was plowed to the depth of eight inches and the oats were carelessly sown, so that in many places there were no oats at all. Imagine the farmer's surprise now when he finds that the alfalfa which fell where the oats were the thickest has made the most rapid growth and matured and "bunched" into a far better stand than that sown amid the oats where it had the most. Another valley farmer took great pains in preparing his ground, making it soft and level. His crop came all in patches, irregular and out of all order, but his neighbor, who merely turned over his sod and scattered the alfalfa seed without either harrowing, rolling or brushing it, secured a far more promising stand.

**LOSS OF COIN BY WEAR.**—Professor Kimball, the Director of the Mint, has made a report on the losses on gold and silver coin by wear and abrasion, which are much more serious than most people probably imagine. Though no systematic investigations on an adequate scale have been made in this country to determine the loss by actual wear of United States gold coin, yet we are told the results of such experiments as have been made show that the abrasion of gold coin under past conditions of circulation has been from 1½ to 2 per cent a century, or from \$150 to \$200 per annum per \$1,000,000. The experiment has recently been tried of aiding the public in the discrimination between light gold coins and those of standard weight by stamping light gold coins with the letter L, so as to admit of ready detection. If such experiments continue at the sub-treasuries and mints the director believes that light coins will soon cease to perform the functions of legal tender coin, and coin will be presented for redemption before progressive wear entails material loss. The loss on small silver coins in active circulation is estimated at from one-tenth to one-fifth of 1 per cent a year.

## FLORICULTURE.

## Chrysanthemums and Christmas.

[Written for the RURAL PRESS by Mrs. W. D. A.]

As Mary looked through the dim light across the even fields now sown to grain to the San Joaquin, murmuring sounds of night birds poised on leafless willows made pleasant undertones to the plink of fearless frogs and mingled with the sullen swash against its strong levee bounds of the great river forced to carry through its sinuous course the miner's dumpings as it hastens to the bay. Like pure spirits freed from earth bonds, fairy-like mist rose from its sedgy margin soon to become thick fog and hide the stars that looked on fertile Roberts' Island.

Her mother's voice made her look round the cheery all-service room with its bright cook-stove, from which came odors of the Christmas dinner waiting for "father." "Mother, don't mind me. I have a good time; the grain is going in finely, the levees are strong, and Frank can go to school eight months of the year. Uncle never meant to wrong us." We have few wants or cares, and "here abideth faith and hope."

"Tain't all," cries sleepy Frank. "'Now abideth faith, hope and charity; but best of all is charity.'"

You darling! Hark! Papa has come! Mary's round face and brown eyes brightened as she lighted the lamp on the little home-made table with its pretty spread of cheese-cloth, with its border of blocks of drawn threads, through which ran a thin bright ribbon above a raveled fringe.

While the man cared for the team, the father warmed and drew from his pockets a knife, ball and candy for Frank, and for mother a book and neck-shawl; but looked ruefully at Mary. "Dear child, I had no money. This box a strange lady sent you." We untied it and disclosed a bouquet of many-colored chrysanthemums, snowy Imperials, surrounded by sprays of delicate Tom Thumb Bon-Bons, set off by feathery masses of dark red and small white, pure alike for the bridal or bier.

How these regal flowers brightened the table and homely room. For a moment the possibilities of what they had lost flashed upon her.

"Passing a yard in Stockton, I stopped to look at them. A lady advanced and handed me one. I told her how you loved them, and she asked me to wait till she cut this bouquet, which she sent with her best wishes."

Three weeks they brightened the isolated house, then Mary filled a box with leaf-mold, broke off the flowers, stuck one-third of their stems into the soil, and set them on the north side of the house, above the reach of the calves, where they struck roots and were to her a delight with their growing leaflets.

January brought the floods that submerged the rich lower Division of the island, containing 35,000 acres, 13,000 of which were cultivated, and caused a break in the Middle Division, partially covering the crops; but it was soon closed and the land drained for late crops of which all felt sure on this prolific soil, and this little family kept heart with this, for the islander's unfortunate year, till the rainfall of April 10th, when on Sunday night, the new piling on the Middle Division gave way, the torrent bearing off five of those great timbers, driven 20 feet into the shaly soil. Here the hardpan is 14 feet below the island surface, but only two feet thick, with a stratum of loose sand beneath. All hope of crops disappeared. Only potatoes could be raised, and they would be low. With the waters rushing over their rented land they gathered their earthly all with the one unnecessary thing, the box of chrysanthemums, on the steamboat for Stockton, where shelter was kindly given till they found a little home for the long, sunny summer, that makes fuel and clothing a light bill for the unfortunate.

The sad mother pined for mountain air, so they found a little foothill home, overlooked by the Sierras, and facing the broad, sun-bleached plains, where their chapparral neighbors invited them to Sunday and day school, and to regular preaching.

When the chrysanthemums were abloom in the bleak air, a stranger stopped to ask the way. Night was close and he accepted the hospitality of the refined family, the father of which he had known in boyhood. He was charmed with Mary's intelligent beauty, and the demure little friend at her side. To Mary he was all that was manly. Several times he came to look at the surpassing beauty of the flowers, inclosed by a rude fence. At last it dawned on her that it was her friend, who cared not for the feathery blossoms, the gold of sunsets, or the beetling crags boldly outlined, that he came to see.

Again the chrysanthemums, the fashionable flowers of popular culture, brighten the short days, and lilac ones bend on "mother's" grave, and small white ones stay to bless the Christmas, and the stranger has set the demure girl in his home, the beauties and bounties of which she can only half appreciate, and a brave sweet face looks out to the rough shelter of the cheery flowers, and a firm step moves among the turkeys and chickens, and a firmer hand guides Frank and smooths the way for the dear old father, and a strong faith looks upward to the crown beyond the cross, fairer even than chrysanthemums.

Stockton.

### Christmas Sonnet.

When the high Son of God would come to earth  
To overcome the author of its woe,  
And deal to sin its fit and fatal blow,  
He sought not robe of state nor throne of wealth,  
But rose to manhood from a peasant birth.

The babe is laid where cattle bleat and low;  
Pleased is the gracious Lord of Heaven so  
To charge the world with Heaven's holy mirth.  
Whose ears first hear, whose eyes first gladly see  
The tokens of a God within our race.

They are not monarchs, proud in heart and face,  
But shepherds, listening to the harmony  
Of angel voices. He must humble be  
Whom God will visit and his love embrace.

—Howard Crosby.

### Mrs. Stirling's Christmas Guests.

[Written for the RURAL PRESS by I. H.]

It was the week before Christmas. Mrs. Stirling sat beside the open wood fire in her pleasant sitting-room; the afternoon sun shone in at the window, and roused the canary to his sweetest song; but neither sunshine nor bird-music had the power to bring a smile to the sorrowful face averted from them. How lonely the house was, how empty—the house that used to echo to the patter of little feet, the laughter of merry voices.

The day had come which the mother had always dreaded. One by one the children had gone out into the world to homes of their own, and now what gladness could there be for her without them? The youngest daughter, the pet and darling of the home, had been there a year ago, but she too had been wooed and won, and was far away across the sea. It was all right and natural that the birdlings should spread their wings and fly, but there were aching hearts in the home-nest for all that.

The door opened, and as her husband entered Mrs. Stirling hastily wiped her eyes and made an effort to regain her self-control. Echoing her thoughts, his first words as he seated himself were these: "Well, mother, it will be a sort of lonely holiday-keeping for us this year. We will just have to fancy that time has turned backward to the days when we first had a home of our own."

"If we could," she answered, "but there was no 'longing for faces and voices gone' then, as there is now."

Mr. Stirling did not reply; he dared not follow out that train of thought, but he sighed as he looked up at the picture of his darling Nellie in her bridal dress.

"Sam is going home to spend Christmas, isn't he?" he asked after a little. (Sam was the boy who did the chores and his parents lived in the country town some ten miles distant.)

"Yes; he asked me if we could spare him over night, and I told him we could."

"Of course. But I think his folks must be pretty hard up just now. His father hasn't been able to do a stroke of work since he sprained his wrist six weeks ago. Couldn't you send them a few things to keep Christmas with?"

Mrs. Stirling caught at the idea at once. She would pack a basket for Sam to take. "I am sure we can spare them a turkey." Then she paused and looked steadily at the fire for a few minutes. What inspiration came to her from its cheerful glow? Her face lighted up as she turned to her husband and said eagerly: "Would not this be better, James? To send Sam in for the whole family, and have them come here for their Christmas dinner?"

Mr. Stirling smiled and shook his head a little doubtfully.

"Give her an inch and she'll take an ell," he said. "That was always your way where any hospitable plans are on foot."

"But why not?" she asked. "It is dreadful to think of people being pinched and half starved, while we are living in the midst of abundance. They might come the day before Christmas and stay till the day after, and we would be none the worse, while they would be much the better."

"Just as you like, my dear, just as you like; only it seems to me you are laying out a lot of work for yourself."

"No more than I have done many a time before. And it will do me good and stop this headache. You see I am not entirely unselfish," she added with a smile. "But don't let us do it if it will spoil the day for you, James."

"Well, I haven't the slightest doubt that I should enjoy your company alone very much more than that of Sam's folks, who are not likely to prove wholly congenial; but if Christmas has any meaning and any use, it is to make us think of others and not of ourselves, so let us have them by all means."

Mrs. Stirling was one of those people (happily not so rare as the cynic would have us believe) who make the golden rule the law of their daily lives.

When Sam Adams came to the ranch to do the chores which had been done by her own boys for many years, she could not regard him as a mere machine for the performance of so much work and nothing more. As she would have liked a child of her own to be treated under similar circumstances, so she treated him. He was always expected to come into the sitting-room in the evening and to spend an hour in reading some well-chosen and interesting book; and once a week he was required to write a letter home. But this was not his letter-day, and he was a little surprised when Mrs. Stirling told him after tea to bring out his writing materials.

"You are to write a letter to your mother for me to-night," she said in answer to the boy's inquiring look. "How should you like to have them all come and spend Christmas with you here, Sam?"

The boy almost gasped with astonishment. "All of them? Pa and ma and the children?"

"Yes," said Mrs. Stirling; "if one comes all should come. Families should not be separated at Christmas. Do you think they would like it?"

"O, wouldn't they!" exclaimed the boy, his

who had been supporting the family by taking in washing during her husband's enforced idleness, and to whom three days of rest, of freedom from care, and of abundant food, seemed like a taste of paradise.

And now Mrs. Stirling, laying aside all her own sad thoughts, went to work with a will to prepare for her expected guests. She was not an old woman yet, and this new interest inspired her with much of her former energy and alacrity. Never in all his life had Sam seen such preparations for a Christmas dinner; the delicious odors that came from the kitchen excited him to outdo himself. He gathered up unheard-of quantities of eggs, he churned, he kept the wood-box piled to the top, he was always at hand to run here or there and make himself useful in any possible way. What would his two little sisters and Johnnie think if they could look into the pantry and see the rows of pies and cakes, the piles of doughnuts and cookies, if they could taste them as he did from time to time, Mrs. Stirling never forgetting a boy's weakness for such delicacies.

Oh, ye farmers, so anxiously watching the signs in the heavens, so fearful lest the rain

be the first they have ever had." Mr. Stirling had it ready, and together they beautified it with the treasures laid away from many a glad holiday in years gone by. There were colored glass balls and tapers, and glittering chains of tinsel, and out of a closet upstairs there came dolls for the little girls, and story-books and tops and marbles. "Why should I selfishly hoard them up when they can make another woman's children happy?" said the mother, with tears in her eyes. Do you not think there was a glow in her heart, a light in her eye, that would have been wanting had she wrapped herself in her memories, and spent the Christmas-tide with the ghosts of other days?

When all was done the door of the little sewing-room was shut upon the beautiful tree, and preparations were made for supper.

Punctually at five o'clock Sam Adams, his face beaming with pride and gladness, drove up to the door. He was spared the ordeal of introducing his parents, for Mr. and Mrs. Stirling came forward with a warm welcome, as though they had been friendly for years. There was a boy some years younger than Sam and two pretty shy little girls, whose very shyness made them lovely in Mrs. Stirling's eyes. (And is it not a charm in these days of pert, forward children?) Hats and cloaks were laid aside, and soon all were seated around the hospitable board. What if Mr. Adams ate with his knife; what if Mrs. Adams' hands were hard and rough. The warmhearted hostess saw only the careworn faces, the lines drawn by the hard struggle with adverse circumstances, the pale cheeks of the little children, and the presence of none of earth's favored ones could have given her half so much pleasure.

Then the Christmas tree was lighted and the door was opened on that fairy land of childhood, while the father and mother looked on in wondering delight. What had put it into the hearts of these strangers to prepare such a treat for their children?

"I am a plain man, Mr. Stirling, and don't know how to make speeches," said Mr. Adams as at last the good-nights were said. "But Sam says, says he, 'Pa, them's the best folks I ever seed or ever expect to see,' and I guess he was nigh about right." And forgetting his sprained wrist he grasped the farmer's hand with a fervency that spoke more than words.

It were long to tell of all the delights of the following day as the happy children explored the ranch, going into raptures over the calves and colts, the chickens and ducks, even the little pigs; while Mrs. Stirling gave a sympathizing ear to their mother's story of trials and tribulations and forgot the shadows over her own pathway, so bright by comparison.

Sam was to go for the mail, and, coaxed by his brother, made bold to ask that he might drive over to the postoffice and take the children with him.

"Dinner will be ready when you get back," said Mr. Stirling, "so don't keep us waiting."

The fine, large turkey was in the oven, the table was set with the best dishes, glittering with silver and gay with flowers, and Mrs. Stirling was going to and fro between the kitchen and dining-room, putting a last touch here and there, when the sound of wheels was heard.

"Did Mr. Adams go with the children?" she asked, catching a glimpse of a man's form on the seat beside Sam.

"No; he's in the parlor looking at the pictures."

"Then who—"

But the question was never finished. The door flew open. "Mother!" exclaimed an eager voice, "I've come to wish you a Merry Christmas."

"My blessed boy!"

The strong, clasping arms of her youngest son were around her and her face was hidden on his breast.

That was her reward. My story is ended. No need to tell how the Adams family enjoyed the turkey and mince pies and all the other good things provided for their entertainment. As for their host and hostess, they dined on necta and ambrosia, for here was their boy beside them, having traveled 500 miles to gladden their hearts on Christmas-day.

"I went down the street last week," he said, "to buy a Christmas present for you, mother, and all of a sudden I thought you would care more for a sight of me than for anything I could send; so here I am, and I think I was right."

"Dear," she said, fondly, "do you know what is the last best gift of heaven? Giving me that you give me—all that makes life worth having. It is love."

Walnut Creek.

**VANITY OF A CANARY.**—The habit of the canary to noisily join in any conversation that may be going on in the family circle is a reason why many refrain from keeping this cheerful little bird as a pet. A naturalist has discovered a way of remedying the difficulty. He says: "We put in our canary bird's cage every day a little mirror, as large as the palm of our hand, taking care that neither sun nor lights shall dazzle him, and he will look at himself for hours together with as much happiness as any young gentleman you ever saw. When we want him to stop singing we have only to give him the mirror."

**THE EYES, HAIR AND SKIN.**—Prof. Virchow has completed a very large collection of observations on the color of the hair, eyes and skin of children in German schools, numbering as many as 7,758,287 individuals.

THE FIRST GLIMPSE OF CHRISTMAS.

face flushing with delight. "Only ma'll think it's givin' you too much trouble."

"She must not think that. It will give me great pleasure, and I am sure you will help me to get everything ready for them. You won't think it a trouble to pick the turkey, will you?"

"No, ma'am," said Sam decidedly. "I'd pick a dozen."

But as he began to write, a cloud came over the boy's face. He hesitated for a few moments, and then said as if half ashamed, "Mrs. Stirling, I know they would all like to come, but I'm afraid they can't. Pa hain't been able to work for a good while, and it would cost too much—"

"Not if you go and bring them in the spring wagon, Sam," said Mr. Stirling, kindly. "You can take the old mares and show them what a good driver you have learned to be."

"Yes," added Mrs. Stirling, "that is the plan. I would like to have them come the day before Christmas, and you can take them home the day after. Write that and then read me what you have written."

The letter was completed at last and shown to Mrs. Stirling; but she did not see the postscript added afterward: "There is going to be a turkey for dinner, you bet."

The answer came very promptly, accepting the invitation, how gladly no one knew but the writer herself, the poor, overworked woman

should be delayed and the next year's harvest prove a failure, could you imagine the intense longing of all those young, thoughtless hearts for a continuance of the fine weather that filled you with such uneasiness! "If only it will not rain till after Christmas." It was the one cry, morning, noon and night. And they had their wish. It did not rain. The soft winter sunshine was not dimmed by the shadow of a cloud. It was such a morning as California alone can offer in December—a faint suspicion of frost giving a tone to the spring-like mildness of the air, the garden gay with scarlet geraniums, the whole landscape bathed in golden light when Sam Adams drove out of the gate to bring "his folks" to the ranch for Christmas; and in all the length and breadth of the land a happier boy it would have been hard to find.

Mrs. Stirling watched him for a few minutes and then turned and went into the house. She had something still to do. The spare room was ready, and Nellie's pretty chamber where the little girls were to sleep; she had spared no pains and kept back nothing. Her guests might be plain, hard-working people, accustomed to privation and self-denial, but none the less should they have the best of all at her command while they were under her roof.

And now it only remained to deck the Christmas tree for these children of poverty. "Yes, father," she had said, "they shall have a Christmas-tree of their own. I dare say it will

## YOUNG FOLKS' COLUMN.

## Rudie and May.

## A Christmas Story for the Young Folks.

(Written for the RURAL PRESS by M. B. D.)

Mrs. Ashley sat by the kitchen stove with Baby Will asleep in her arms. Rudie and May, the two older children, sat close together where the firelight fell on their faces. They were chatting earnestly, and Rudie's interest growing deeper as they proceeded, he raised his voice so that his mother overheard the subject of their talk. It was all about a Christmas-tree which some one had cut from the woods that day. "You just ought to have seen it, May," he was saying. "It was a young pine tree with ever so many little purplish cones left in the top of it; and besides, they had whole bushes of holly."

Their mother's heart ached when she thought of the scanty Christmas offering in store for her children. Times were hard with the Ashleys. When they had come to Jamestown, Mr. Ashley had taken up a mining claim, like others who had hastened to the new gold fields. The rumors of their richness had not been idle, and much gold had been taken out by the men who owned claims. Mr. Ashley's yielded like the rest, and he had been able to build as neat a cottage as any in the new camp. But suddenly the vein became exhausted. He continued to work the mine until all the money he had saved was spent, and then he had to go to work in a large mine owned by a rich company in order to supply his family with bread. They had to leave their pleasant home and live in a small wooden shanty near the great creek which wound about the outskirts of the town.

Baby Will had been sick, and all night long the tired mother had had to watch alone, with weary eyes, her little sufferer; for her husband was on the night shift. The rain poured down dimly, and as she listened she thought of her little store of treasures, and wondered if from among them she could not select a gift for each of the children. They could buy nothing new this year at the toy stores, that held such tempting playthings for the little ones. There was a string of wax beads that would do for May. Baby Will was too small to enjoy a gift, unless it should be a rubber doll, and he had one of those, although it was badly worn. Some new bibs she had been making would serve for his gift. She could not think of anything to give Rudie; any new garment would be acceptable, but she had to dismiss such ideas, for she knew that they would not be able to buy anything. After much thought, she could decide upon nothing, so she stopped thinking and listened to the children, who were still talking.

Rudie was saying, "You, May, can bring the water, while I wash the gold from the dirt. We can make lots of money before Christmas. Why, do you know, when pa sent me up to old Felix, the other day, he had washed a dollar and a half out of his pan that very morning. You ought to have seen the gold, May. He had it in a little bottle that you could see through, and the grains looked something like a buttercup all torn to pieces."

"Take off your shoes, dears, and prepare for bed now," interrupted their mother. "Be very quiet, for baby is asleep."

Soon Will was placed in his crib, and the mother carefully turned down the coverlets of the two narrow cots that awaited the others. She heard their prayers, then patiently took up the week's mending that yet remained to be done.

The bells of the chime struck the hour of 12, and soon her husband came in for his cup of coffee and slice of bread. They spoke little to each other, and in low tones, for the three little ones were asleep near by. The wife told her husband what she had thought of giving the two younger children as Christmas gifts.

"What shall we do for Rudie?" she ended. "He is large enough to value what we give him, and surely we can make some effort; don't you think so? A book would not be costly, and he is fond of a good book."

When Mr. Ashley had finished his supper he took down a little worn Bible and asked his wife to read a verse.

"Carrie, dear, don't feel bad," he said when she had finished; "let us bear our misfortunes as bravely as we can, and I am sure that Rudie will share our feelings, for he is old enough to understand them."

As soon as he had returned to his toil, Mrs. Ashley cleared away the table, and pausing to read again ere she should sleep, the Bible chanced to open at the first page. She read the words written there: "A Christmas gift to Carrie, from her mother. 1862." This suggested a new idea, and turning over the next fly-leaf, she wrote, "A Christmas gift to Rudie, from his mother. 1885."

At the breakfast-table, Mr. Ashley told Rudie that after he had finished his chores he had better go up the creek and bring home what wood he could find upon the banks, washed there by the rains.

Rudie took off his shoes and stockings, as he wished to wade in the stream, and started out in the fresh air. The sun shone between large clouds, and as the rain had flowed off the hills,

they looked quite dry and pleasant. He carried home several armfuls of oak boughs and pine cones that had come down with the water. He cut all the wood into short sticks, ready for the stove. After lunch he asked his mother's permission to mine in the creek for awhile. When she said yes, May exclaimed: "Me too, mamma, me too. I want to mine."

Their mother, after putting upon May a little woolen hood and jacket, fastened a silk handkerchief around Rudie's neck, and told them to return in about two hours. May had taken good care of Willie all the morning, and as Rudie had been at work, she allowed them this time in which to play.

The creek was rather full and swift, but not dangerous. Rudie had an old mining pan, and with it he worked industriously, in hopes of washing out some gold from among the sands. He had often seen his father panning out, and he did now just as he had seen him do. May sat upon the bank and threw sticks into the water.

"I can hold the gold for you, Rudie," she said. "What shall we buy with it?"

"Now is just the time to make our plans," said Rudie, with a manly air, as he tipped the pan this way and that way, with a wise look. "It is two weeks to Christmas-time, and I guess before that I'll take out \$7 or \$8."

"And I'll help you, won't I, Rudie?" added May.

"Oh, yes; of course. We'll get ma a pair of shoes; don't you think it's a good plan to get something useful?"

"Yes, Rudie, some shoes with shiny toes," May agreed.

"Pa ought to have a new necktie and a pair of overshoes, hadn't he?" continued Rudie.

"Let's get Will a rubber ball that whistles when you squeeze it, and all striped with red and yellow and blue," suggested May, squeezing an imaginary ball in the air with her hands.

"Oh, yes," said Rudie; "and you and I will have a Christmas-tree with candles, and maybe some one will give us a present, too."

Mr. Ashley was right when he said that Rudie would understand their feelings and bravely share their wants. Though the boy was young he was quick-witted, and his love for his good parents made him comprehend their position more clearly than other children of his age might have done.

Rudie and May stayed down by the stream busily talking, while Rudie worked with his pan. Before it was time to go home he had picked out several grains which he thought to be gold. May held it tight in her little warm hand.

That evening, as they sat by the stove, they chatted over their plans and decided to let their mother keep the gold for them until they were ready to spend it. She was quite surprised when they gave it to her. There was nearly a dollar's worth of the little yellow grains. When her husband came home that night she told him how the children had got it, and that they were planning to buy Christmas gifts with what Rudie should take out during the holidays.

"This is a lucky find for him," said Mr. Ashley. "It probably came down with the last rain, and the poor child will be disappointed tomorrow, for the creek goes down so quickly when the rain stops."

Every afternoon Rudie and May went to the creek, and Rudie worked hard with the pan. They found very little gold after the first day—only one or two grains at a time—and many a panful was washed out faithfully for nothing. They went higher up the creek, and, having no better luck, they went down. In this way nearly all of the two weeks passed. Rudie was growing quite discouraged, and little May often advised him to stop mining and make mud pies with her.

"Let us have some fun before you go back to school, Rudie, even if we can't give any Christmas presents."

"I'll tell you what to do, May," Rudie answered; "you make a whole lot of mud pies and pudding and things for dinner, and when you get it done I'll come and eat with you."

May gathered up many little bits of colored glass and laid them upon a flat stone, as dishes are placed upon a table. Of the mud she molded pies, as she had seen her mother do. She made a nice pudding of sand, with a sauce of mint leaves; and from under a pine tree she gathered a few nuts which had fallen from the burs. When she called Rudie to dinner, she noticed a man riding up on the opposite bank of the creek, on a bay saddle-horse. "Who is that, Rudie?" she asked.

Both of the children watched the rider as he went on at a swift trot.

"I don't know for certain," said Rudie, slowly; "but I think he is the man who hires father. He is the superintendent of the mine, you know."

Rudie felt that this man was of much importance, since he directed so many men, and even his own father. Long after May had returned to her play dinner, he watched the horseman.

After the superintendent had reached the last bend, he stopped his horse, for the bushes grew so thickly on that side that he thought it would be better to cross over.

Rudie sat where he could see the water as it flowed by them. He was feeling so sad about his bad luck that he could not help watching it longingly.

"Oh, if I only knew where the gold lay! Don't you wish the little waves would tell us? They seem to be saying something all the time,

don't they, May? But I can't understand them any more than I can old Theodore when he talks French."

Just then he saw a little brownish object come whirling and dancing down with the ripples. "Look, May," he said, "what an odd chip! Don't you think it is redwood? Let's have it," and off he darted to catch it as it passed.

When he clasped it in his hand, he saw it was a thick pocket-book, held together by several little rubber bands.

"O May! it's the superintendent's pocket-book. See! here is his name on the outside. Won't he be sorry when he finds that it is lost? I tell you what, May, you go and tell mother what we found, and I'll go straight to the mine with it, and then I'll come home."

He saw May reach the top of the hill, and then started off at a quick pace toward the mine. When he reached it, the superintendent was there, and had already discovered his loss. He was quite disturbed, for the contents of his pocket-book were of value to him; and he sat at his desk with a frown when Rudie asked to see him.

"A boy, what can he want? Tell him to wait."

Rudie sat down upon a bench, while the man went on jotting down accounts and giving orders. After awhile he became afraid that his mother would be anxious; so he walked up to the superintendent's desk, and holding out the pocket-book, said: "Here is your wallet, sir. I found it in the creek this morning after you had ridden up."

The superintendent's countenance changed in a moment. "Well, young man, I am very fortunate," he said, and his face wore such a kind expression that Rudie felt happy. He raised his cap and was about to leave, when the superintendent recalled him and inquired his name.

"Rudolph Ashley, sir," replied the boy.

"My father works here in the mine."

"Ashley? oh, yes; a steady man, too; what shall I give you, my fine fellow?"

"Nothing, sir, thank you." And Rudie was about to go again; but the superintendent prevented him, and pressed some offering, which, however, Rudie refused.

As he walked toward home, there was a lightness in his heart. Somehow he felt as if he had made the superintendent happy, and the remembrance of his kind looks gave him a feeling of satisfaction.

The day before Christmas, Rudie and May went out into the woods across the creek, and cut down a small pine, with one tiny cone in the top of it. Great armfuls of holly berries and ferns they gathered, too, and took them all home. Rudie fastened the pine in a box, filled with stones, and placed it upon a bench in a corner of the kitchen. While he and May twined wreaths and garlands of the holly, their mother cut some candles in halves, and fastened them upon the Christmas-tree. A holly wreath was fixed in the window, and over the door was fastened a great garland that hung nearly to the floor. The vases, too, were filled with holly and ferns; and then some of the clusters of red berries were fastened upon the Christmas-tree with the candles.

After the leaves and twigs had been swept up, their mother gave a little bag of pop-corn to Rudie. He worked very steadily popping it in a long-handled frying-pan, with a tin plate for a cover.

Mrs. Ashley and May strung the snowy kernels on white threads, and then twined them about the branches of the tree.

"You see, dears, it looks like the snow," said the mother, while she wreathed the long white lines over the pine needles.

Rudie and May had never seen snow, except on the far-away Sierras, and their mother's stories of Jack Frost and long snowstorms were to them like fairy tales.

That evening, as they sat by the hearth, they held a solemn counsel about what they should do with their gold. They had a little over two dollars' worth, and Rudie had found that he could buy nothing that would satisfy him with that sum; so there, in the glow of the firelight, they agreed to divide it between their mother and father.

"Now, mamma, you shut your eyes while Rudie puts our presents on. Shut your eyes tight, mamma. Now promise, won't you?"

May stood by her mother's chair, while Rudie divided the gold equally, and did it up in two pieces of white paper, upon one of which he wrote "Mother," and upon the other "Father." He emptied his pockets of marbles and rolled them up for Baby Will. Then for May he brought out a small box full of nicely-cracked pine nuts, which he was careful not to let her see, for he intended it to be a surprise.

After all these things were arranged the two children said their prayers and were tucked into their little beds. For a long time they lay awake, wondering what they would see in the morning. The rain was falling upon the roof, and they could hear the old clock tick. The shadow of their mother they half saw through the open door, as she sat sewing in the kitchen. Visions of dolls with lace dresses, and heaps of pink candies, danced in May's mind. Rudie thought of a little cart to haul the wood in, of tops and marbles, and of new books; but he knew that these were not likely to be his gifts, so he prepared his mind to feel contented with something less. At last their watchful eyes were closed in sleep, which was not disturbed even when their mother came in with the candle and kissed each smooth little brow.

With the first ray of dawn Rudie and May

were up and scrambling into their clothes. May could not wait to have her dress buttoned. When her brother started toward the door, she said, "Stay, stay, Rudie! Let me come too."

When they reached the kitchen, their father had just come in. Their mother sat by the fire with Baby Will in her lap.

"Merry Christmas!" they all exclaimed to each other, and the children went to their father to be kissed. When they turned, the Christmas-tree was a beautiful surprise to them. It shone with numberless starry candles of pink and blue and yellow. Gilded nuts and apples seemed falling from the branches. Round bags of red and white gauze displayed their contents of sparkling candies and sugar-plums.

May's eyes rested upon a big, flaxen-haired doll in a pink dress. It seemed to hold out its arms to her.

For Rudie there was a cart and several books, his mother's Bible, and, besides, a fine top and ball, and packages of new clothes which he unrolled, while he shouted for joy.

Baby Will was remembered with a rubber doll and velvet cap, while their mother and father had each several handsome presents, besides a big goose ready for the Christmas dinner.

"O papa!" exclaimed the children, in a breath, "where did those lovely things come from?"

"Old Santa Claus came with his fairy reindeer and left them," said May, as she tied the pearly beads about her neck and hugged her doll.

When the Christmas dinner was served the secret came out. The superintendent called in "just to see if the children were having a merry Christmas," he said. Rudie and May shrewdly guessed that he knew something about their gifts, and when they told him so he only smiled and said he was glad to see them so happy.

"You were a smart boy to have found my pocket-book," he remarked to Rudie.

"Me too! I helped to find it, didn't I, Rudie?" chimed May.

The superintendent took each by the hand, saying: "Yes, both of you deserve a merry Christmas, and with all my heart I pray that you may live to enjoy many more of them."

## The First Glimpse of Christmas.

Christmas is almost here, and old Santa Claus' agent has been stirring around quite lively of late preparing for the approach of that medieval frosty-bearded Dutchman with his reindeer team and little wagon. The first thing is to get ready a good assortment of Christmas trees, and the growth of that peculiar plant has been extremely rapid in San Francisco the past week. The same novel sight has no doubt been going on in all the towns and cities of the land. The recent rains have been very timely, gladdening the farmer's heart, but they did not cause these trees to sprout and grow out of the hard sidewalks. They have grown out of the hearts of the people. They are the symbols of a pretty sentiment that should ever be kept fragrant in the soul. There is just now a perfect forest of these trees on some of the streets in this city, so that it is a good deal of trouble for one to get along. On any other occasion the policemen would not tolerate such obstructions, but the sacred holiday has touched the hearts of these great broad-shouldered men who keep watch over society. Perhaps they remember when they were boys a long time ago.

One curious thing about these trees is the fact that once a year, usually on Christmas eve, they suddenly blossom into all kinds of strange fruit. Nearly every thing a boy or girl can think of will in a few minutes sprout out and hang on every limb. It is perfectly marvelous how generously they bear. Whatever our swaggering realists may say to the contrary, Santa Claus' agent usually takes a look around the house to see if he can catch sight of the purse or bank-book in order to guess how heavily he may load his old-fashioned sleigh. He has no trouble in finding the Christmas tree waiting for him, and goes silently to work, while all the little eyes are closed in sleep, hanging it all over with dolls, pen-knives, rocking horses, picture books, toy railroads, tool boxes, oranges, candies, pop corn, and all sorts of nice things. Many homes are poor and have not much money to spare, but he comes all the same, and if he finds no little tree he finds the little shoes and stockings hung around the room. There is a story extant that a quizzical boy, when all the rest were asleep, peeped from under the bed covers and caught a glimpse of what was going on. He actually saw Santa Claus busy at work, and recognized him as a very dear friend, but he looked wise and kept mum.

The picture on the opposite page represents a young mother giving her only child its first glimpse of Christmas. If you ask how we know it is her only child, we answer from the size of the tree and the awkward manner in which she seems to hold the despotic darling. But as we are no expert in the last mentioned art, the least said about it the better. Christmas eve is a gladsome day in homes where love reigns. The hearts of the old are warmed anew by the joys of the little ones. Let not the day be forgotten! Spread abroad its good cheer! A Merry Christmas to all the children.

## The Week.

We turn aside this week from our usual pursuit of industrial topics and give much space to holiday thoughts and imaginings. We trust the change, which seems appropriate to the occasion, will be acceptable to our readers. If any chance reader should be inclined, from the sight of this issue, to think that our contents are light and our drift toward the sentimental, let him consult the index for the volume, closing with this number, which may be found on the last page thereof. This index will show what a host of practical subjects have been discussed in our columns during the last six months. Some intimation may also be gained of the fact that, in the wonderful progress and development which California is now enjoying, the RURAL PRESS is playing an important part in practical ministration to that advancement.

We have great plans and intentions for the coming year. It is our purpose to make our journal better with each succeeding issue. We propose that it shall be considered by thousands more, as it has been by thousands in the past, an indispensable adjunct to every well-regulated Californian household. To this end we want every subscriber to go with us into the new volume and to gather in many more. Thus bespeaking, kind friends, your good-will and favor, we wish you, one and all, jointly and severally, a MERRY CHRISTMAS and HAPPY NEW YEAR.

## Christmas.

The annual recurrence of this day has been made a season of festivity in all civilized lands, and nowhere has it received a more joyful welcome than among English-speaking people. It comes in with the merry chime of bells and a burst of all sorts of musical instruments. For many generations it was the custom on Christmas eve to light large wax candles, roll into the fireplace a huge back log, and trim the houses with various kinds of evergreens. The Druidic tradition, that whatever grew upon the oak trees was a gift from heaven, made the mistletoe a universal favorite. It was a season when conventional civility was laid aside, the staid old proprieties locked up in a closet, and full rein given to the "Lord of Misrule" and the mirth-making Merry Andrew. In the palace and hovel, down in the earth where sooty miners delved, and far out to sea where ships tossed on the waves, Christmas came in with shouts, songs, and an infinite variety of fun and jollity. Every one put on his best clothes and for the nonce threw work and dull care away. It was the season of mighty feasting and family gatherings. Among our English ancestors the festival began by bringing in with frolicsome ceremony the favorite dish—the soused boar's head with an apple in its mouth and trimmed with rosemary; and how the table was heaped with turkey, game, big joints of beef and haunches of venison flanked with mince pies, plum pudding, has long been familiar to the reader of Dickens' gustatory traditions. The sight of such a table now would make a modern dyspeptic turn pale, and scare a good theosophist into a conniption fit, and fill a Buddhist with holy horror at the cannibalism that feasted upon its ancestors.

The age of the mighty eating Christmas has passed. While the spirit of kindness, good-will and gift-making still attends and adorns it, the immense joints of beef, haunches of venison, monstrous wreaths of sausages, head-cheese and pot-pies which delighted the senses of a former generation, would now, instead of stimulating the appetite and making the mouth water, sicken and disgust. Hygiene, chemistry, and the fashion for French cooking have come in, and the fondness for "little dishes," that fascinating branch of the culinary art that Miss Corson has written so much about, has quite banished the lusty indulgences of the table. Gluttony has gone off to keep company with drunkenness and other deadly sins.

Even festive reunions have felt the withering breath of change. They are not so common, so generally observed, so anxiously expected, as in former times. When the sons and daughters and relatives were grouped in the same neighborhood, the sense of kinship was kept warm and ebullient by frequent visits and interchanges, and Christmas became the greatest day of the year, when all the clans gathered under one roof-tree. But our modern ways of steam traveling have so widely scattered families that this has become impracticable. And what is still more painful, the wide dispersion tends to weaken the ties of relationship. Brothers and sisters become as strangers. Already the patriarchal homestead, with its rosy memories, and the family burying ground, with its sad, sweet associations, have gone away and become memory and tradition.

But what if the Christmas dinner is not made so much of, and roast turkey and cranberry sauce, buckwheat cakes and honey are not so intimately associated with happiness and a good time! The Christmas trees are more abundant and more heavily laden with their peculiar fruit. What if the gambols and carols have ceased, and the mirth is less boisterous! The art of giving has become more delicate and expressive of good taste, love and friendship. What if our family gatherings are not so large! The spirit of mercy, good-will and charitableness was never so expansive and odorous. There is every indication of a wholesome growth of the home sentiment and a development of the spirit that gave the day its meaning the world over. The spirit of the choir of angels who serenaded humanity the morning of the Advent singing "Glory to God in the highest, and on earth peace and good-will toward men."

**CARE OF CARRIAGES AND WAGONS.**—Carriages and farm wagons might be made to last twice as long if only a few moments were spent each week during dry weather in tightening up the bolts that hold the wagon together.

## Thoughts for the Close of the Year.

If it be true, as the old Greeks used to say, that beauty is the flower of virtue, then happiness must be its perfume. In that case there is a deep, rich meaning in the friendly greetings we toss about so cheerily during the holidays. But it will take more than a word or wish to make a merry Christmas or happy New Year. Happiness is a plant that does not grow wild. It cannot be had in the market at any price. It cannot be made by recipe. It is sought for by all with great eagerness, and there be few that find it. And yet it may lie more within our reach than we are apt to imagine.

There have always been many who looked upon cheerfulness and laughter as simple, or at best a foolish weakness that should not be cherished. They harp chiefly on the wretchedness of man and the vanity and emptiness of all earthly joys and hopes. Life is a journey through a vale of tears. This is the devil's world, and the less we have to do with it the better. To slip through it, as along some lonely mountain road infested with robbers and wild beasts, and get safely out of it, is the only thing worth thinking about. They are fond of saying that Jesus never smiled, but we know he made things pretty lively at a marriage feast, and there is more evidence that he kissed the bride and wished her much joy than in this old monkish tradition. There is another class far more numerous who take exactly the opposite view of life. They are resolved on what they call in the poverty of their language "having a good time." They will sip at every cup of delight. They will pluck every flower.

But it is clear that neither the ascetic nor the epicurean has found the way to harvest the most good out of these passing years. One throws away pleasure for the sake of virtue, and gets a pale, withered, sickly thing, and the other throws away virtue for the sake of pleasure, and at last comes to surfeit, weariness and disgust. Both are wrong, for they seek to separate the beauty and fragrance of the rose.

Our nature indicates a better philosophy of life than this. Our poor relations of the animal kingdom begin life with play, but man alone can laugh or smile. Their play is merely physical buoyancy, which leaves when youth is gone; but man's laughter, sunny mirth and sportive play may make the morning, noon and sunset of life radiant and odorous with gladness. Our natural love for music, wit, humor, repartee and lively conversation, and all those surprises of thought or word which toss the soul into gay and playful moods, may last as long as the soul lives. Even the dying have been known to smile at some funny thought that flashed out of memory, or absurd or humorous thing occurring in their sight, and many instances are recorded where they have gone down into the river of death laughing and cracking jokes. David Hume spent his last moments inventing jocular excuses which he supposed might be made to Charon for not getting more readily into his gloomy boat. The light and sportive spirit of Charles II flashed humor to the last, and while in the agony of death said to those standing around him that he hoped they would excuse him for being an unconscionable long time dying. Our nature shows that we were made for a happy destiny, and that our laughter is as divine as our tears. We may not find all we desire in this world, but it is God's country we are living in, and those who regard existence here as a form of waiting for the happiness of another world, cast unnecessarily a gloom over things that should be always bright. The fact is, there is too much living for the future and not enough for the present. Man's desire for immortality has been misdirected, and he needs a revelation of the beauty and grandeur of this life and its possibilities. Better dream, idealize, build cloud castles in the realm of imagination than to mope from day to day thinking life a failure. There will be days of foul weather, raw, chilly winds, and biting frosts, but that is a very foolish soul that allows such days to throw their shadow over the whole year.

We ought to feel grateful that this fragrant plant may grow and thrive on any soil. If happiness depended exclusively on fine clothes, elegant furniture, palatial homes and a large bank account, some of us would be in a sad plight indeed. Then only the lucky ones, who by heritage or good fortune had built on the sunny slopes of prosperity, would be able to

possess it. But, as kind nature scatters her sunshine and rain over the evil and good, the rich man's broad fields and the poor man's little garden alike, so she has thrown wide open the gates of pleasure to the people of every age, clime and condition. All are invited to this joyous feast, and all alike made welcome. Indeed nearly all those who have written the sweetest words about home, love, joy and contentment have gone to lonely cottages to find their inspirations. It was not in the dazzle of ballrooms, theaters, or the splendor of palaces in Paris that St. Pierre found the rich colors in which he adorned those two happy children of nature, Paul and Virginia. The touching pathos of Gray's Elegy welled up in his heart as he meditated in a graveyard that held only common dust. All the lovely visions of life that give a charm to the pages of Chaucer, Cowper, Burns or Dickens were pictures of the average condition of society, and not from any glimpse of the hilltops of wealth and station. The mountains look picturesque at a distance, but they grow cold, bleak and barren as you climb them. If any one doubts this let him give an hour to one of Disraeli's novels, where only folks who have an income of ten thousand a year are permitted to play a part.

But after all, happiness is born of the soul as flowers of the tree. Each heart makes its own little ambrosial kingdom. Still we must not expect too much in our pursuit of happiness. Those who expect a perennial felicity will as certainly fail as those who sought for the elixir of life. There are cares and troubles we cannot avoid. Tears will come to all. Sickness and death are inevitable. There will always be vacant chairs and empty garments and sorrowful hearts. Many who began last year are not with us now. Some of us will not be here when next the bells of time "ring out the old and ring in the new." What we have been seeking is only a general law of happiness, and we seem to find the most of it in the principle that each heart largely makes its own world of joy. "He that is of a merry heart hath a continual feast."

## Fruit Marketing.

The collision of Christmas and the Citrus Fair this week obliges us to lay aside until the next issue some favors which we have received from our readers concerning the very important fruit-marketing problem as reannounced by the Sacramento convention of November. We are not intending to slight the matter, and will take it up with the more vigor as soon as our readers dispose of their Christmas dinners. The coming meeting of the Fruit Union next month must be the occasion for testing the strength of the different means and methods proposed, and we invite discussion preparatory to that meeting.

We were glad to see among the many fruit-growers whom we met at Sacramento a general disposition to out loose from personal preferences and interests which played such a prominent part a year ago and go in solidly for whatever seems really best for the whole fruit interest. With such a disposition there is every reason to expect a successful solution of the vexed problem. The almost abject failure of the system of distribution adopted by the Fruit Union last year seems to be fully admitted even by those who did most to set up that system. The experience of the year needs many explanations to make its reasons clear.

It may as well be stated that so far the committee appointed by the Sacramento convention to secure better arrangements with the railroads has secured no certain results. It is true it was telegraphed from New York about a week ago that Mr. Huntington said it would be all right, but the answer which the managers here made to the committee was very far from all right. It would not be anything new for the high moguls of the company to do smooth talking, at this time of the year especially, and then for the young men who seem to be really doing the business to make quite different figures when rates are made.

**A FLOOD OF IMMIGRANTS.**—Mr. Welch, South-western passenger agent of the Missouri Pacific, reports that during the past 30 days more than 8000 people have arrived in Southern California from the East. He expresses the opinion that many of these visitors come with means to purchase land, and are looking for permanent locations.

## The Citrus Fair.

### A Display of Great Extent and Excellence.

[From our Editorial Correspondent.]

The Citrus Fair, held December 13th to 18th, at Sacramento, by the Central California Citrus Fair Association, will hold a place as an important event in the agricultural history of California. It is true that it is the second of its kind, but that of January, 1886, in view of the haste of its preparation, may be regarded as in some sort an introductory to the greater one which falls within the limits of the same year. The two exhibitions, in view of their surprising extent and excellence, and the wealth of their significance, promise to make 1886 memorable as a year of awakening in Northern and Central California.

Judged by all fair standards, the fair of last week was notably excellent and satisfactory. Judge it by its extent and it is the greatest citrus fruit exhibition ever held in California. The writer has had the pleasure of attending them all, and can therefore make the estimate. The area occupied was 60x160 feet; but this gives no just idea of the extent of the material, for the tables had to be shelved high up beyond the satisfactory range of the visitors' eyes; the walls were hung with exhibits to a similar height—in fact, they came as near freecooing the ceiling with exhibits as the ingenuity of the exhibitors would allow. New tables and additions to tables were built until the throng could hardly squeeze between them, and yet with recourse to all these devices, the spaces under many of the tables were piled full of unpacked boxes, many exhibits never coming to light, simply because there was absolutely no place to display them. It is stated that the transportation companies delivered at the fair over 35,000 pounds of exhibits, and this, of course, does not include the mass of material brought by team from Sacramento and Yolo counties. The estimate of 20 tons of material, made by one writer, is, we think, far inside the actual amount. Placer county alone brought five tons and Butte four tons.

Another way to measure extent is by reference to the entry list. We secured from the clerk the summaries up to Thursday afternoon, and found an aggregate of 1396 individual entries, and the clerks were still busy recording material, even though there was no place to put it. There were probably over 1500 entries made.

The geographical question also shows the extent of the fair. There were in all 22 counties represented, as follows: Sacramento, Butte, Placer, Yuba, Shasta, Nevada, Napa, Tehama, El Dorado, Sutter, Sonoma, Colusa, Santa Clara, Calaveras, San Joaquin, Solano, Yolo, Stanislaus, Amador, Lake, Alameda, Contra Costa. A part of these counties entered for the general county awards; others were represented by individual growers. The following awards were made:

County exhibits—Best exhibit of citrus and other semi-tropic fruit, and including wine and brandy: First class—Diploma, Placer county. Second class—Diploma, Butte county. Third class—Diploma, Yuba county.

Immensity is a burden to style. The managers had arrangements made for a very artistic display, as could be seen by those vestiges of their decorations which were not obscured by the masses of exhibits that broke the view in every direction. The exhibitors themselves planned for tasteful arrangement and decorative effect, but finally had to bury their designs by the encroachment of surplus material. The critic could justly claim that the display was huddled, and the visitor who would have delighted to study general effects found himself in a sort of semi-tropical catacombs and was obliged to admire merely what was nearest to the end of his nose. Fortunately, there was so much of special excellence in individual exhibits that the necessity was not hard when one became reconciled to it.

Of course there was much, in fact too much, poor to ordinary fruit shown, and too much disposition to multiply samples of single varieties on the same entry. This is true of all California fairs and will, we hope, be gradually overcome, as the management of our exhibitions can place their regulations on a more scientific basis. We shall soon have to do as older societies do, limit exhibitors to specified amounts of certain articles. This will make room for artistic work in arrangement. It will benefit the visitor and

enable the committees to do much more satisfactory work and do it much more easily. On the other hand, there must be more exact rules as to classification. We were sorry to see that some exhibitors attempted to increase their numbers of varieties by attaching several names to the same fruit. We are charitable enough to believe that some at least of them, being little acquainted with citrus fruits, did not know that they were doing wrong.

We gave last week a little sketch of the character of the exhibits from several counties which contributed most. Our space will not permit us to report the fair on the basis of localities. We must rather review what strike us as special features of the exhibition and content ourselves therewith. No doubt the local press in each of the counties will do full justice to the local aspects of the affair. We comment briefly, therefore, upon the quality of the fruit. The main feature was, of course, the orange. There were 528 separate entries of oranges up to Thursday afternoon, and more then still coming.

The prevailing varieties were seedlings (of which notably excellent ones could be selected in several of the county exhibits), Mediterranean Sweets and Australian Navels. In some of the individual displays there were collections of 10 or more varieties, some of the growers evidently having kept abreast of the times in orange-growing in securing buds of different varieties from other orange-growing countries. The most obvious features of the orange exhibit in general, were that the size was quite satisfactory; second, that the fruit was well colored, clean, and as a rule, free from insects—we saw but one exhibit infested with red scale, and from the same grower who showed infested fruit last year. There may have been more in the same fix, but we did not notice them. The appearance of smut was confined to a trace here and there. As for the growers entitled to distinction for showing such good fruit, we must refer to the premium list which we print on another page. The awards were so many that probably all the leading exhibitors were included, though their comparative rank might in some cases be questioned.

There are several ways of determining the quality of an orange. The sight and taste are senses generally employed, and they are quite accurate; but their decisions are open to discussion and may sometimes be weakened by claims of favoritism or prejudice. The results of chemical analysis can be relied upon to determine beyond question some things desirable to know. Therefore, rather than attempt to give comments on the quality of the fruit shown, which might be open to discussion, we take a few points from an address made during the fair by Professor E. W. Hilgard, of the State University:

He said he had an opportunity last year of testing some of the citrus fruit of Northern California after it had been exhibited at the citrus fairs, both in this city and San Francisco. The experiments could not be called a fair test, as the fruit had not been plucked with that purpose in view, yet notwithstanding these facts, the result was highly gratifying. The citrus products of this section are good. Some of the best oranges you have here are accidental seedlings—fruit without a name. Out of 18 samples the average of acids was within .02 of a per cent of those of Riverside. That is not a bad showing. He could not say so much about the sugar, for it was too near the time when the orange loses its sugar. One sample, however, came within one-quarter of one per cent as much as the Riverside, which is an excellent showing. This was a Butte county seedling. It was very near the maximum of the Riverside orange. You must understand that there are climatic differences between this section and that of Riverside. You must not select the best variety from Riverside, and expect that it will do as well here as there. Some varieties of grapes do better in the south than here. Others produce and ripen to perfection here that are a failure in the south. The best varieties of pears, apples and grapes grown in the two sections are not the same in either. A good fruit in the north may prove worthless in the south, and vice versa. Why should the orange be an exception? The Navels grown in Northern California, an Australian variety, are very different from those grown at Riverside. They have more acid and less sugar. He regretted that the samples sent him were mostly unaccompanied with the name of grower and locality where produced.

In addition to the foregoing we are allowed to make allusion to the full statement of the chemical examination of Northern California citrus fruits, which will appear in the forthcoming report of the College of Agriculture for 1886. A table will be given, showing the analyses of 25 specimens from several different counties. The best results are shown by seedling fruits and unnamed varieties—the maximum sugar with the least acid being shown by a sample from Porterville, Tulare county.

Next to these are the Mediterranean Sweet from Lakeport and the large St. Michael from Oroville; in fact, the Oroville specimens are noteworthy for their low acid and high sugar in three out of four cases. Looking over the column of acid percentages in oranges, there is no reason to fear comparison with Southern California at large, the average of 17 determinations being 1.10, almost the identical figure obtained in averaging the data obtained from analyses of southern oranges. In lemons the average acid is somewhat low, although in one case the goal of seven per cent is very nearly reached. It is to be hoped that during the coming season a fuller examination of the citrus fruits of California will be made under more favorable conditions, because the fruit analyzed last year had been exposed at two fairs before being sent to the University.

Prof. Hilgard has requested citrus fruit-growers in all parts of the State to send in this year for examination and analysis, at the University Experiment Station, at Berkeley, samples of ripe oranges and lemons. It is requested that each variety be sent by express as soon as it matures, not less than four specimens of each variety, to secure good averages, and the specimens to be accompanied by statements of soil, age of tree, treatment, etc. The results will be announced to the senders and published in bulletin form for general information. California citrus fruits are already shown to be of a quality which will stand thorough examination, even though in many cases the specimens were not of the best sorts nor in the best condition. A fuller inquiry may be expected to yield even better results.

The following awards were made for orange exhibits:

#### ORANGES—BEST INDIVIDUAL EXHIBITS.

First—A. Freitas, Newcastle, Garland range.  
Second—C. M. Silva & Son, Newcastle, spring wagon.  
Third—P. Norburg, Penryn, road cart.  
Fourth—A. Moger, Newcastle, mirror.  
Fifth—Dr. J. M. Frey, Newcastle, bedroom set.  
Sixth—D. N. Friesleben, Oroville, vineyard and orchard harrow.  
Seventh—Mrs. J. C. Gray, Oroville, silver wine set.  
Eighth—C. H. Wilcox, Oroville, violin.  
Ninth—W. R. Strong & Co., Orange Hill, bronze clock.  
Tenth—W. J. Wilson, Newcastle, Imperial plow.  
Eleventh—W. J. Pleasants, Vacaville, banjo.  
Twelfth—K. Vogt, Knight's Ferry, dressing case.

Thirteenth—Mrs. M. Karr, Marysville, lamp.  
Fourteenth—Isaac Lea, Florin, toilet set.  
Fifteenth—M. M. Estee, Napa, pickle caster.  
Honorable mention—Dr. McCarty, Santa Clara.

#### BEST TWELVE BUDDED ORANGES GROWN BY ONE PARTY.

First—Hall Bros., Penryn, berry dish.  
Second—L. W. Buck, Vacaville, —  
Third—A. Moger, Newcastle, album.

#### BEST TWELVE SEEDLING ORANGES GROWN BY ONE PERSON.

First—Dr. J. M. Frey, Newcastle, cake dish.  
Second—W. H. Lee, Marysville, —  
Third—C. Martel, Vacaville, —  
Special merit—J. H. Nile, Rough and Ready, Nevada county.

#### CLUSTER OF ORANGES AND TREES.

First—George Peters, Oroville, six orange trees.  
Second—C. H. Wilcox, Oroville, 12 persimmon trees.

Third—J. F. Curtis, Ophir, two Navel orange trees.  
Fourth—W. & R. Cantwell, Oroville, six chestnut trees.

Fifth—W. J. Pleasants, Vacaville, 10 plum trees.

#### BEST EXHIBIT BUDDED ORANGES.

First—A. Moger, Newcastle, gold medal.  
Second—P. Norburg, Penryn, silver medal.

Third—C. H. Wilcox, Oroville, willow chair.

#### BEST EXHIBIT OF SHADDOCKS AND PUMALOS.

First—A. Moger, Newcastle, lamp.  
Second—E. Tucker, Oroville, table-cover.

Third—J. Butler, Florin, album.

#### RAILWAY PREMIUM \$250.

Mrs. M. Karr, Marysville, Yuba county.

#### MERITORIOUS MENTION (NOT COMPETING).

Fine display in cluster, Mrs. S. E. Wriston, Galt. Dr. J. M. Frey, exhibit of St. Michael oranges, claimed to be the "sweetest in the world."

W. Cantlow, Vacaville, large tree containing some 500 oranges; very attractive. T. C. May, Sacramento, large display.

—

The showing of lemons and limes gives the fullest testimony of the mildness of the climate, as these fruits are tenderer than the orange.

There were 105 entries of lemons and five of limes. The lemons were sent from widely distant places. They were, for the most part, seedlings from the imported Sicily fruit, and, as a rule, rather large and coarse; but the introduction of the better-budded varieties, or the selection of the best of the seedlings, will be the works of the future. The list of awards mentions the leading exhibitors:

#### LEMONS—BEST INDIVIDUAL EXHIBIT.

First—C. H. Wilcox, Oroville, gold medal.

Second—Geo. T. Rich, Florin, Sacramento Co., silver medal.

Third—Mrs. M. Karr, Marysville, saddle and bridle.

#### LIMES—BEST INDIVIDUAL EXHIBIT.

First—C. Yaco, Santa Clara, special premium.

Second—Frank Swift, Sacramento, —.

Special premiums for the most tasteful exhibit of fine citrus fruits by one individual, the prize in each case being a lot of orange trees, were awarded as follows:

First Prize—A. Moger, Newcastle.

Second—Miss Fannie Friesleben, Oroville.

Third—Mrs. Jas. C. Gray, Oroville.

The olive display was by far the best and most comprehensive ever made in this State, and shows how strong a hold this fruit is taking upon popular attention. The exhibit of John Rock, which won the first prize, gave visitors an opportunity of seeing the fruit of newly-imported varieties, and demonstrated the fact that there is as much to be gained in selecting choice varieties of the olive as of other fruits. There were olives shown by 52 different growers—some who have trees just in bearing; others, like Isaac Lea, of Florin, are already finding the production for the market a profitable industry. The olives from the foothill counties were splendid, and show that the prophetic minds who prescribed this fruit for such situations spoke wisely. There were but three samples of olive oil shown. The following awards were made:

Olives—Best individual exhibit, first premium, John Rock, San Jose, a mirror; second premium, P. W. Butler, Penryn, a table cover; third premium, L. A. Gould, Auburn, a rug. John Rock's display also received special meritorious mention for the large variety of olives it embraced.

Olive Oil—Best individual exhibit, A. F. Redfield, Smartsville, first premium, gold medal; second premium, J. M. Frey, Newcastle, silver medal; third prize, Joseph Gardella, Oroville, a clock.

The next display, like that of olives, was undoubtedly the best ever made in this State. The chief articles were, of course, English walnuts and almonds, but the Italian and Eastern chestnuts, pecans, filberts, etc., gave the visitor an intimation that we can carry a very large nut list. There were in all 116 different lots of nuts shown, and the exhibits made by the gentlemen who secured the premiums were splendid. We were also much pleased with the Princess and Twin almonds shown by Senator Routier, of Sacramento—seedlings originating on his place. The following awards were made:

Best general collection of nuts—Felix Gillet, Nevada City, silver service set.

Almonds—First, A. T. Hatch, Suisun, gold medal; second, W. H. Williamson, Routier's, Sacramento county, silver medal.

Walnuts—First, W. B. West, Stockton, gold medal; second, J. Shinn, Niles, silver medal.

Special mention—J. S. Phipps, Yuba City, walnuts; J. T. Vohle, Nicolaus, almonds; Dr. J. M. Frey, Newcastle, almonds, walnuts and Italian chestnuts; C. M. Silva & Son, Newcastle, almonds, walnuts and Italian chestnuts; J. F. Wolfkill, Solano, pecans and walnuts; Joseph Routier, Sacramento county, almonds, El Dorado county almonds, walnuts and Italian chestnuts; Charles Camden, Tower House, Shasta county, Japanese walnuts, English walnuts and American walnuts. Meritorious mention (not competing): Dr. Obed Harvey, Galt, display of walnuts, almonds and other nuts. W. B. West, Stockton, exhibit of large walnuts; trees imported from France in 1874, and bearing for last six years. Very fine and large. A. T. Hatch, Suisun, deserves special mention for large display of almonds, some 191 varieties being shown in neat style.

The raisin exhibit was also notably fine, and included products from 57 different parties, chiefly growers, though the largest display was made by a dealer and the highest award was made to it. It included a newly devised mold for arranging a facing of raisins on the boxes, which produce a very attractive appearance. The exhibits of Jackson Brothers and R. B. Blowers, of Yolo county, were also notably fine in quality and packing style. For mention of other valuable displays we must refer to the following awards:

Raisins—Best individual exhibit of raisins by dealer or grower—First premium to Geo. W. Meade & Co., gold medal; second premium to Jackson Bros., Woodland, silver medal; third, to W. T. Coleman & Co., San Francisco, a vineyard plow. For best exhibit of raisins grown by one party—First premium to W. M. Foster, Lincoln, Placer county, a Westmore range; second, to R. B. Blowers, Woodland, raisin press; third prize, to Thomas O. Hardy, Placerville, a vineyard cultivator. Meritorious mention (not competing), A. Lusk & Co., S. F., display of raisins.

The display of sun-dried and evaporated fruits included fewer producers than might have been expected, and yet the entries reached quite a respectable number. There were 23 ex-

(Concluded on page 541).

## HOLIDAY \* READING.

## The Angels' Song.

It came upon the midnight clear,  
That glorious song of old,  
From angels bending near the earth  
To touch their harps of gold:  
"Peace to the earth, good will to men  
From Heaven's all-gracious king!"  
The world in solemn stillness lay  
To hear the angels sing.

Still through the cloven skies they come  
With peaceful wings unfurled;  
And still their heavenly music floats  
O'er all the weary world;  
Above its sad and lowly plains  
They bend on lowly wings,  
And ever o'er its Babel sounds  
The blessed angels sing.

Yet with the woes of sin and strife  
The world has suffered long;  
Beneath the angel-strain have rolled  
Two thousand years of wrong;  
And man at war with man hears not  
The love song which they bring;  
Oh! hush the noise, ye men of strife,  
And hear the angels sing.

And ye, beneath life's crushing load,  
Whose forms are bending low;  
Who toil along the climbing way  
With painful steps and slow—  
Look now! for glad and golden hours  
Come swiftly on the wing;  
Oh! rest beside the weary road,  
And hear the angels sing.

—Edmund H. Sears.

## After Clouds—Sunshine.

## A Christmas Story of the High Sierras.

(Written for the RURAL PRESS by MALLIE STAFFORD.)

It was somewhere along in the fifties, away up among the wildest heights of the proud Sierras, no matter just where or when, mid-winter and nearing the Christmas holidays. The place was one of the wildest that could well be imagined. As far as the vision extended, it roved over billows of mountain ranges, with here and there lofty peaks, towering in grandeur above their fellows, as though Nature, in her ambitious moods, was striving to excel her own bold achievements. These—rock-crowned, treeless, bald and cloud-wrapped—towered far into the azure spaces and looked frowningly down on the billowy mountain ranges, that rose and fell in silvery sheen far and wide, for the whole region was covered with a dense mantle of snow. Away below were winding canyons, the beds of once flowing rivers, but now choked and imprisoned by depth of snow and drifting avalanche. Here under the shelter of overhanging rocks and in gloomy caverns the stealthy grizzly and the mountain lion sought refuge and made their winter quarters. Along the ranges, dark forests of stately pines and spruce sent their tall shafts through the snow and aloft into the air, their green boughs drooping beneath the accumulated weight of snow. Not a sound, not a breeze, not a living thing, disturbed the awful silence of the sublime and desolate region. It was a dead world! and over it all the Unseen Hand had thrown a winding sheet of purest white. One would not have dreamed that there was a living soul within a hundred miles.

Midway up the ridge, and spanning a grim chasm, a long flume like the skeleton of a serpent wound its way. Above, on either side, hovered a gloomy peak, and below were the depths of a dark canyon. Noiselessly and without a word two men suddenly made their appearance around the curve of the flume. The men were clad in rubber suits and each carried a shovel on his shoulder, by which it was evident that as the storm had somewhat abated they were inspecting the ditch of which the flume was a part in order to repair damages, if any there might be. It was a mining ditch conveying water from Truckee lake to numerous mining camps miles beyond.

The men were both young and in the prime of early manhood. The foremost, Jack Langdon, was of medium stature, but muscular and armed with nerves of steel. A mass of dark stubborn hair indicative of endurance cropped out from under his rubber hat, and his keen, dark eye glanced anon at the towering mass of snow above and then at the dangerous footing on the flume. His companion, Halstead Graeme, was no less sinewy, but was taller, finely formed and possessed that reserve of vital force that is only thoroughly called out in cases of emergency. He was fair visaged, with piercing gray eyes and brown hair shining and strong. They were now approaching the end of the flume, where it was only a few feet to the ground.

"I say, Hal," observed Jack, "do you ever think about the danger from the snow? Look at that body of snow above us." His companion only whistled, but made no reply; but suddenly they both stopped as if riveted to the spot. There was a rushing sound, and they saw at a glance what seemed to be the whole top of the snow-crested mountain descending.

"Good heaven, Jack, it's coming—save yourself!" In a moment Hal had sprung under the

flume, hanging on to its strong supports, while Jack jumped into it and "ducked under." As quick as a flash the awful avalanche was upon them, sweeping everything but the flume before it, snapping off trees and carrying rocks and brush in one mad rush to the bottom of the canyon. To Jack, who lay snug and safe in the bottom of the flume, there was a period of total darkness, with a grinding, rushing sound, as the heavy mass of snow passed under and over him. It was a moment of fearful anxiety, for what earthly power could long withstand the pressure of such force? At last it ceased, and, venturing to lift his head up, he looked around. His first thought was of Hal. "Hal!" he called—no answer. Then, assuring himself that the snow had all passed off from above, he raised himself and ballooned loudly. Nothing but the echo of his own voice broke the silence—a silence rendered tenfold more deep, coupled with the dreadful thought of the probable fate of his companion. Could it be that his companion and friend, who but a brief moment before had stood beside him in the glow of his youth and the pride of his strength, had been swept away into the depths of the canyon, and was buried alive under the mass of snow, or jammed between the rocks, now lay a mangled corpse?

The thought was terrible. He jumped from the ground and rapidly made his way toward the canyon. Reaching a ledge of rocks that commanded a view of the bottom of the gorge, he thought he discerned a dark object half hidden by rocks and snow. Was it Hal? As fast as possible he made his way to the object, which proved indeed to be the prostrate form of his poor friend—dead! A shiver convulsed the iron frame of Jack as he bent down over the ashen face, vainly looking for some sign of life.

"O Hal!" called Jack in a pitiful voice. Then kneeling down he tore open the rubber coat and vest, and placing his ear on the breast of his comrade, listened attentively. "He breathes," he said joyfully; and reaching in the pocket of his own coat he drew forth a small flask of brandy. As tenderly as a woman he raised the head of the unconscious man and poured a few drops of the liquid between his lips. A moment, and a faint flush came to the ashen cheeks. He breathed a deep sigh, then the gray eyes full of pain opened.

"Are you hurt much?" said Jack anxiously. "Hurt! yes, I'm afraid so. I couldn't hold on. I tried to hold on to the supports, but was carried away by the snow; it wrenched my hands off."

Jack looked at his hands—they were torn and bleeding. "It's not my hands, Jack, that made me faint, it's something worse; my left leg, I'm afraid it's crushed. I was jammed in the rocks and a boulder crushed my leg."

"I hope not," said Jack. And, stooping down, he ripped open the leg of Hal's trousers and examined the injured limb. On raising it, the bones grated together, and a deep groan from the prostrate man caused him to lay it down as gently as possible.

"Well," said Jack with assumed cheeriness, "take another sip of brandy and we'll see what can be done. There's one thing certain, we must get back to the cabin; we can't camp here. Do you think you can travel? It will be a tough job, but we'll have to try it."

Hal smiled faintly at the idea of traveling on one leg.

"Do you think it would be any use to go to old man Easton's and get him to come and help us?"

"No, Hal, my boy, that would not do. I could not get there without snowshoes, and I doubt if the old man could help much in such a strait as this, even if he could get here. It is fully three miles to Easton's and I could not leave you here alone. I think I can rig you up with crutches in a short time, and with my help you can get to the mouth of the canyon. Once into the old wagon road, by beating and shoveling a path for you we can reach home before dark."

It was indeed a gloomy outlook for the young men in a deep canyon, the roads covered with snow and one of them disabled with a broken leg. Fortunately there was an old sled road that had been used for hauling mining timbers out of the canyon.

Without another word, Jack drew from his pocket a large clasp-knife, and, selecting two forked sticks of the proper length for crutches, soon had a rude pair fashioned. He then found a piece of split wood in the snow that had evidently been swept down from the flume. Taking from his pocket a bunch of stout twine, and splitting the wood in two pieces for splints, he gently and tenderly bound up the injured limb, bandaging it with his large red handkerchief. It was done almost as skillfully as a physician could have done under the circumstances and with the rude materials at hand. At the conclusion, Hal remarked:

"Well, old pard, you're a man of resources. I'd like to know what I'd do in this strait without you."

"Never mind; we will do the best we can," was the cheery rejoinder. "The next thing is to get you up."

With the combined efforts of the two, Hal was soon sitting on a rock. Before taking up their line of march, Jack picked up the shovel he had dropped on reaching Hal, and began shoveling and clearing the old trail. This he continued to do until half-way out of the canyon. He then went back and supported his comrade.

It was soon found that the injured limb, which hung limp and useless, would have to be tied up to keep it from dragging. A long scarf

in Hal's coat-pocket served the purpose, and once more they resumed their painful journey. A few rods brought them to the mouth of the canyon and into the wagon road, which wound up and still up until the snow-covered trail was lost to view.

A long mile it was to the cabin, but while Hal rested Jack bent himself bravely to the task of shoveling the heavy snow and leveling it for his suffering friend's progress.

It was now the middle of the afternoon, and both felt the want of nourishment; but the subject was not mentioned—the grand idea was to get to the cabin. At last Jack shouted: "She's in sight, old fellow! Cheer up! we'll soon be there."

It was now growing dusk, as they saw mid-way up the ridge the dark outline of the cabin pointed against the snowy background of the mountains.

As is often the case in those snowy regions, the weather was not intensely cold, and their exertions kept them warm. The cabin was located at the extreme end of a straggling and now deserted mining camp, whose inhabitants, with the exception of our two heroes, had fled before the terrors of king winter, intending to return with the advent of spring. The silent and deserted little camp was to the hearts of the suffering and wearied miners a beacon light, a haven of rest.

The moon was up and flooding with her silvery beams the lonesome snowy ranges before our two travelers reached their long-sought-for haven. They were the fortunate owners of rich mining claims at the camp, the quartz mill and its machinery, and they were employed by the ditch company to keep that section of it in order during the winter. These reasons might not have been the only ones that bound at least one of them to this unfriendly region.

Some two miles southward, in a sheltered vale, Little Glen valley was the home of the Eastons, who, beside the two miners, were the only living beings within a radius of 20 miles. For years the family had owned and occupied the beautiful little vale, combining stock-raising with mining, and, if reports were true, success had crowned their efforts, until a large fortune in stock, in mining claims and bank accounts, had accumulated. A year previous the wife and mother had died, leaving her husband and two lovely daughters—Grace and Ella—to grieve over her loss.

Halstead Graeme had met on more than one occasion the Easton girls, and on more than one occasion he had found an excuse to visit their attractive and picturesque home. Now, as Jack tenderly and kindly assisted him to his bed, and made everything as comfortable as possible, he thought, with an added pang, of Grace Easton and the sweet hope he had once dared to entertain of her regard, of his misfortune, and that in all probability he would be a cripple for life.

During this time Jack was busying himself with preparations for the much-needed meal. There were some cold biscuits, some fried ham, which, with oysters, preserves and butter and a cup of tea, made a hasty meal for weariness and hunger; but Hal could eat but little; the pain was intense, and the current of his thoughts agonizing.

"I'm sorry to see you can't eat, old fellow," was Jack's anxious remark.

"No pard, I can't; there's no use trying. I'm afraid my leg is hurt more seriously than we at first thought. It feels like it is ground to atoms."

"Oh, not so bad as that, I hope," said his friend. "Is the pain very severe?"

"The pain is terrible, but it is as nothing to the thought of losing my leg."

"Well, cheer up, and let us not think of anything so bad as that. I'll go down to Easton's as soon as it's daybreak, and bring the old man up. Perhaps he will know more about such things than we do."

It was a long night to both—Hal, racked with torture, mental and physical, and the noble heart of Jack sorely burdened with the thought of what might be before him. With the first faint streaks of dawn Jack was astir, and partaking of a hasty breakfast, and seeing that his companion was as comfortable as possible, he buckled on his snowshoes, and, grasping his long pole, was soon skimming over the snow toward Glen valley. Two miles are easily glided over with snowshoes on a down grade, and, as he neared the house, a light in the window assured him that the family was astir. To his knock Mr. Easton opened the door.

"Why, good-morning, Mr. Langdon; you're an early riser."

Jack raised a grave face to his host and in a few words told him of the accident.

"Is it possible? I'm very sorry to hear it. Terrible! I'll come up right away. Will you come in?"

"No, thank you; I'll go back," and turning, Jack was soon ascending the hill.

When Mr. Easton entered the room, Grace was not present, but the younger daughter, a sunny-haired blonde, looked inquiringly into her father's face. To this look he gave a brief explanation of their neighbor's call, the accident, and that his presence was desired, and telling her to explain to Grace and to get together bandages, camphor and whatever else they had which might be necessary and useful. Ella immediately sought out her sister, who was in an adjoining room, and with pity on her face exclaimed, "O Grace! such a terrible accident! Halstead Graeme was taken down in an avalanche yes-

terday and badly injured—his leg is broken. Papa is going up immediately."

Grace listened with blanched face, and murmured: "Poor fellow! It can't be possible! What can we do for him?"

"Papa says," continued Ella, "that they may need bandages and medicines—whatever we have that might ease pain."

"Oh, yes," said Grace, "there is a bottle of morphine in the medicine chest."

In a few moments everything had been thought of and collected in a little parcel which might be of assistance to the unfortunate miners, and Mr. Easton set out on his journey. On arriving at the cabin, Mr. Easton and Jack fashioned some smoother and more comfortable splints, and removing the old ones they thoroughly examined the limb. It was already terribly swollen, and, as well as they could ascertain, below the knee was as Hal had thought it, "crushed to atoms." Mr. Easton gravely shook his head and Jack's usually cheery face was indicative of the serious thoughts of his heart. Hal was not slow to read their opinion. "It's a bad case?" he said, inquiringly.

"I shall not attempt to deceive you," said Mr. Easton, "but a few days will decide it. As far as I am able to ascertain, I'm afraid it can never knit together."

"Which means that I will have to lose my limb," said Hal, in as brave a tone as he could command.

"In any event," said Jack, "we'll do the best we can for you. If we could only get a doctor."

But each knew that that would be impossible.

On the following day it was decided that the girls should accompany their father on his visit to the sufferer. They were quite used to snowshoe travel, and had it not been for the sad accident to their friend they would have deemed the journey a rare holiday.

The warm sunlight streamed in at the uncurtained window of the cabin, and Mr. Easton, who had preceded the girls, found Hal even in so short a time looking the ghost of his former self. A pained look passed over his face as the ladies entered, and Grace gently took his proffered hand. She murmured a few commonplace words of sympathy which sounded to her full and feeling heart as cold and comfortless, but it brought a smile to his face and the specter of the old hope that had once held empire there. There was not so much in her words as in her manner, and the gentle pressure of her hand that bade him think of the hope of other days. A small bouquet of violets and pinks from Grace's window garden was placed by her hands in a glass of water on the little table by the side of the patient, and long after the departure of their guests, and for days, it continued to speak of her presence by its shy beauty and sweet perfume.

During Mr. Easton's visit on the day following it was decided to again examine the limb, which was immediately done. It was with heavy hearts that they were convinced that unmistakable symptoms of the most serious and dangerous character had made their appearance, and that to save the life of their companion the limb should be taken off below the knee, and, as Hal bravely remarked, "the sooner the better."

It was to Jack, the man of resources and nerves of steel, that they both looked in this case of dire extremity. His grave face told that he felt the terrible responsibility, and that he was not the man to flinch in such an emergency. An old book on surgery found in one of the cabins had conveyed some useful hints, and he steered his nerves for the critical task before him.

We will now draw a veil over the intervening space of time until we find Mr. Easton approaching his home on the evening of this eventful day. Though there was still a grave look on his face, it seemed to have been divested of the burden it bore a few hours before. Ella, seeing her father from the window, ran down the well-beaten path to meet him. In answer to her inquiries in regard to the patient, he told her in a few brief sentences of the necessity of amputation—that it had been done, adding, "He's a brave fellow—he stood it like a major; and Jack is a man of resources—as good as a regular surgeon."

Ella's sweet face grew suddenly grave as the news shocked her sensitive heart. "Oh, is it possible? It is too bad," and turning, she hastily sought her sister.

"O Grace! It's too bad. Papa has come home, and—and—they had to amputate the limb." There were tears in Ella's blue eyes, but Grace listened with blanched face. "Oh, is it really so?" and dropping into a chair, she covered her face with her apron and sobbed convulsively.

"Oh, don't, Grace, dear," pleaded the younger sister. "I didn't know you cared so."

"Oh, yes I do care; he was so noble and so brave, and so—so handsome."

"Well, never mind; it is all over now, and papa thinks he will get along finely."

It was a few days after this that the Easton ladies, in company with their father, again visited their neighbors. This time they found the invalid sitting propped up with pillows, and a faint flush overspread his features as they entered the room, and Grace gently inquired about his health. She could not restrain the tears in her eyes. Though there was little said, each felt what the other was thinking of. The power of speech is generally denied people on such occasions as this, and Grace only looked the pity and sympathy her gentle heart refused to utter. Her presence, however, seemed to

confer a world of comfort to the invalid, and before they left he had resumed much of his old cheerful air.

Before leaving, Mr. Easton, in his kindly voice, remarked: "You must get well fast, my boy. It is now nearing the Christmas holidays, and we had contemplated a social dinner, and hoped to have you and Jack spend the day with us."

Hal smiled faintly and said: "You're very kind, and though I will have to defer my visit until a later period, Jack can go."

"Not so," broke in Jack; "let me arrange it. If the ladies and you will honor us with your company I will do the best I can for a dinner, for you see it is impossible for my pard to go, and I could not leave him; and as there are so few of us, I see no reason why we should not celebrate Christmas together, even if it is in a miner's cabin."

"I'm afraid it will be too much trouble, Mr. Langdon," said thoughtful Grace, to which he gallantly made reply: "It will afford me the greatest pleasure;" and so it was finally agreed.

"I think," said Hal, "Jack will be equal to the emergency. I have never found him to fail in anything yet."

After their guests' departure, while Jack was busying himself with the evening meal, Hal lay quietly thinking. He realized painfully that his little world was overshadowed by a great and lasting misfortune—he was a cripple for life—not so much that—but Grace, could she ever care for him now? Yet reverently his true and honest soul thanked God for his deliverance, and that life at least was spared; and life, he argued, might still be made happy—life with her! Did he still dare think of her, the dark-eyed girl that had won his heart?

After a long silence Jack suddenly called out: "I say, Hal, old fellow, what's the matter? Anything wrong?"

"Nothing, Jack, only a little blue; that's all."

"Tut, now; you must try and cheer up. Is there anything I can do for you?"

"No more than you have done," was the reply. "I owe my life to you, old pard, and appreciate your kindness too; but, but—"

"But what?"

"Well, you know I can't look life in the face the same as I did two weeks ago. My hopes are blasted."

"Then they needn't be," returned Jack. "You'll pull through all right, and as to being a cripple, if that's what you mean, we'll go below and rig you out as good as new, and you know you needn't do another day's work as long as you live. Your interest in the 'Soaring Eagle' alone would sell to-day for a hundred thousand, and I tell you, Hal, I think we had better sell and go below and enjoy life; we've got enough."

"Yes," said Hal, faintly, "if one only had some one to enjoy life with him." This remark was lost on the inattentive ears of Jack, who was busy piling up pine logs in the wide fireplace.

Some days passed, during which Jack, the man of resources, was busy with his preparations for Christmas. His ample larder contained all the necessities and many of the luxuries of life, for the miners had laid in a generous supply for the long winter's use; but there were some things it did not contain—it could not boast of a big fat roast turkey, without which, Jack thought ruefully, what was a Christmas dinner? However, there was a plentiful supply of canned dainties, and Hal at least felt that his friend, as he before expressed it, was equal to the emergency.

There never dawned a brighter Christmas morning. It was as if Nature had swept aside her gloomy veil, and her fair, white face shone radiantly in the slanting rays of the rising sun.

"For the mists had risen in splendor from the beauty of the hills," and far and wide the long, lonesome ranges of mountains rose and fell, sparkling and glittering like a world of diamonds.

With many a merry jest and laugh at the oddity of celebrating Christmas in a miner's cabin, the Eastons—father and daughters—"mounted" their snowshoes, and, pole in hand, started on their journey. Their hearts were in keeping with the beauty of the morning, for they felt the electrifying thrill of the beautiful sunshine, and something more kept ringing in Grace's heart. What it was we will leave the reader to divine.

In the cabin and its inmates there had been some pleasant changes. Jack had brightened up things wonderfully, and they found Hal sitting in the large easy-chair, it being the first day he had been able to be up. Though pale and somewhat thinner than formerly, there was little difference in his appearance. He had assumed his old cheerful air, being determined in this one day at least to forget his misfortune. He greeted his visitors cordially, and his eyes lighted with pleasure as Grace took his outstretched hand and expressed the pleasure she felt in seeing him looking so well.

Jack had prepared a sumptuous repast for his honored guests, and a quiet happiness pervaded the little party. Toasts and jests and merry laughter resounded through the little cottage where late had hung a pall of gloom. Dinner being over, Mr. Easton and Jack retired to another apartment to take a smoke, after the usual miner fashion. A few moments later Ella also left the room. There was a moment's pause, after which Hal drew from his pocket a heavy purse, and emptying the contents, which proved to be rich and valuable specimens of

quartz and gold, on the table, remarked: "It's the custom to make presents on Christmas, and Miss Easton—Grace I mean—I'd like you to accept one of these; take your choice."

"Oh, you're too generous. What beautiful specimens!" She ran her little timid hand over them admiringly, and as she did so he eagerly grasped it.

"I had hoped," he said in a low whisper, "to one day ask this of you, but of late I have tried to banish the hope, not daring to ask you to burden your life with what I now feel I am—a mere wreck."

"Oh, don't—don't speak of it that way," she said. "Do you think I could esteem you less for this misfortune?"

There was something in her blushing face that came like a new revelation to him—something in her manner that resurrected the old hope—and he eagerly said, "Dare I indeed hope?"

A slight pressure of the hand which he still retained was the only answer.

Later, when Ella entered, she found two rosy faces bending over the specimens.

"Miss Ella," said Hal, "will you accept one of these specimens for a Christmas present? This is the one you selected, isn't it, Miss Easton?" As he said this he placed in Grace's hand the largest and finest one.

"Since you wish it, thank you! I will keep it as a souvenir in memory of to-day."

fore, earned the enviable title of "a man of resources." He is content and happy with his friends.

Not far in the same city resides Mr. Easton and his daughter Ella. The same happy party every summer visits the high Sierras, and Little Glen valley is made to echo again to the sound of their voices. The old cabin is not occupied, though the village is now a thriving mining town, with several busy mills crunching quartz day and night. To each of our friends there is something too sacred about the cabin and its wide old fireplace to let it go into other hands. It was there they spent a Christmas whose memory has grown hallowed with the years; where, after much suffering, clouds and gloom, the mists rolled away in splendor and then dawned the brightness of many long years of happiness.

Arcadian Hights, Napa Co., Cal.

### The Lime-Kiln Club.

"I desiah to denounce to dis assemblage," said Brother Gardner as the meeting opened, "dat the Hon. Skyfustus Billington, of New Orleans, am in de aunty-room an' am waitin' to address us on de subject of 'Riches vs. Happiness.' De Hon. Skyfustus has addressed us

LIME-KILN CLUB—"MY FRENS, WHAT AM RICHES?"

His own heart said: "I will keep something, too, in memory of to-day." And Christmas in the miner's cabin was a merry and pleasant one, for "the mists had risen in splendor," at least to two happy hearts.

When spring advanced there were some notable transfers of mining property in that region. The "Soaring Eagle" exchanged hands for a sum almost fabulous, and one bright morning a carriage-load of happy people left the high Sierras bound for the genial climate of the lower valleys. The party consisted of an elderly gentleman, two young ladies and two young gentlemen.

Some weeks later we recognize the same familiar faces; there is the glow of happiness on each. The gentlemen are in holiday costume, and the ladies wear "silk attire," and we hear it whispered that an interesting ceremony has just been performed; and, reader, though you and I are unbidden guests, we may surmise what it is.

At the B-street church, in the beautiful city of S., on any fair Sunday, among other devotees, one's attention is instinctively attracted to a distinguished looking couple. The gentleman is fine looking—tall, fair and grand in appearance; the lady is dark-haired, with deep blue eyes and a rich natural color in her cheeks—she has that sweetness of manner that betokens gentle blood. Beside the gentleman's noble appearance there is a peculiarity in his walk which causes many to turn and look twice and inquire who they are, for they have only lately purchased the fine residence and spacious grounds in the suburbs. Under their hospitable roof resides an old friend, who, years be-

fore, an' it am needless to 'splain to you dat he knows de bizness of oratory as well as a hoss doctor knows what ails a sick mule. He am rich in wisdom, 'sperienced in philosophy, an' has trabbled mo' miles on freight trains dan any odder orator in de world. Doorin' his address I desire de silentest quietness. Any pusson found guilty of frowning shucks around will be sot down on wid terrible airmestness befo' de lodge closes. De Receptionshun Committee will now escort de gem'lan in."

The committee left the hall for that purpose, and soon reappeared in company with the visitor. While he was taking a drink of water and removing his necktie, collar and suspenders the brethren had a pretty good look at him. He sized up two stories and a basement, about 45 years old, knees rather out of true, feet which wouldn't rattle around any in a pair of No. 12s, and a mouth built on purpose for pumpkin pie. He bowed right and left to old acquaintances, ascended the platform with a skip, and at once began: "My frens, what am riches? You can't tell me. I see by de blank 'speshuns on your faces dat you can't. Riches, my frens, consists in being rich. If you am rich you ain't poor. If you am poor you ain't rich. Dat's bin my 'sperience fur de last fifty y'ars, an' while it has cost me a good deal of money I am willin' to gin it to you fur nuffin." [Suppressed excitement over getting something for nothing.] We hev several men in dis kentry worth more'n \$20,000. Dey wallow in riches, but what about deir happiness? Dar must be some consolashun in bein' able to walk into a grocery an' tell the grocer to send up fifty pounds of bakin' powder an' a millyon clothes-

pins, but does dat rich mogul sleep any sounder dat night den de man who has drank sixteen-cent tea fur supper? Of co'se he doan't! Like 'buff he dreams of dem werry millyon clothespins, an' in his dreams he am a towel on a clothesline an' ebry pin am tryin' to stick him fast." [Grunts of satisfaction all over the hall.]

"My frens," continued the speaker, as he began to warm at his work, "de rich man walks on welwet ca'pets, an' he sots down on stuffed cheers, an' he has Saratoga 'taters ebry meal. He jist rolls in ham an' eggs, an' he walks all ober fricasseeed chicken. De poo' man walks on a bar' floo', sots on a hard cheer, an' his taters am biled wid de hides on. Yet who am de happiest? You will say de rich man, of co'se, dat's whar' yer toes turn in. When night comes de poo' man has no fear o' burglars; de noosepapers hain't gwine ter pitch inter him in de mawnin'; his wife hain't gwine to 'lope off wid anybody; his son am not gwine ter be 'spelled from college. He jist sits dar an' eats snow apples an' popco'n, an' contentment drips all ober him." [Sensation, during which Elder Toots became excited and yelled "fire!" at the top of his voice.]

"De rich man w'ars boardcloth!" continued the orator after getting away with another drink, "an' he rides in his keeridge, an' he goes to de opera. You envy him, but what poo' fules you am! All de time he am doin' dis he am 'spectin' dat de small-pox will break out in his fam'ly an' take ebry one of 'em off. De poo' man goes afoot, w'ars plain woolen, an' he doan' know what de inside of an opera house looks like. As a reward he nebber has de small-pox nor diptheria." [Chuckles of satisfaction, during which a raw potato hit Samuel Shin in the neck.]

"On ebry hand you h'ar de 'spreshun: 'Poo' but honest.' Nobody eber says: 'Rich but honest.' It is only poo' folkses who lib from hand to mouth who am honest. Ebry honest sentiment in de human breast teaches us to be poo'. When your ole woman, dressed in kaliker an' w'arin' her last summer's hat, sees a rich lady sailin' past her, harnessed up in silks an' diamonds an' sealskin, she may for a moment feel envious. But, my frens, when she comes to refleck dat rich women hev to w'ar shoes one size to small, an' stockings wid stripes all up an' down de legs, and hev dress-makers an' h'ar-dressers an' gin balls an' parties, she feels to pity 'em wid all her noble heart." [Great applause and one hiss, the latter coming from Whalebone Howker, who will get hail Columbia at the next meeting.]

"If I was axed to adwaise a young man," said the orator, as he straightened out his left leg to clear it of a cramp, "I should warn him agin strugglin' fur too much wealth. It stings like an adder an' bites like a serpent. Riches am de cause of jealousies, envy, an' crime of all sorts. Dar can't be no comfort fur de rich man. He am worried about his cloze; his horse runs away; his coachman 'lopes off wid his darter; de bank in which he has got his money am sartin to bust. Arter he has suffered an' suffered, 'long comes death an' takes him away, 'an no sooner am he buried dan his body am stolen by a medical college. [Applause.] All de poo' man has to do am to get in his meat an' taters an' wood fur de winter, buy cloz fur de ole woman an' de chill'en, lay in ten bar'ls of apples an' two of cider, pay up his debts, put a \$50 bill in his west pocket an' proceed to take solid comfort an' happiness. [Cries of "Yum! Yum!"] Sicknes will not come to him—trouble will pass him by, an' he will be nominated fur Alderman in de spring."

"If dar' am any man in dis club who sighs fur riches he am de subjeck of my pity. I warn you in my most solemn tones to quit dat sighing. True happiness am wuth mo' dan all de gold eber dug from de airth."

"Gem'len, I had intended to inlclood de Garden of Paradise in my remarks, an' to bring in de Pyramids, Christopher Columbus an' George Washington, but de hour am late an' I must elongate dis oratory to a prolonged quietus. Wishin' you all possible health an' happiness, I will now determinate my desideratum an' bid you farewell."

How to CURE FEAR.—Fear is a bad habit often formed in childhood, and continued in a chronic form during life. It is to be cured only or mainly by its opposite—courage. M. Richet relates how he had occasion to pass frequently through a forest at night. He entered it boldly; but after a few steps the feeling of fear came on and he felt highly relieved when he saw the clear sky again. Each night he was able to keep up his bold step for a longer and longer distance, until finally the fear was almost overcome. Habit is the only method of removing fear. Workmen in powder mills know they are in constant danger, but have no fear. To educate a child to be brave, the habit of not fearing in darkness and solitude, and so on, must be taught by its parents and guardians. Most of our nurses make cowards of our children, and it would be about as well for them to grow up without this appendage to their lives.

WHAT IS COCAINE?—Most people have read of cocaine as a local anæsthetic in connection with the treatment of General Grant during his last illness. It was not until 1880 that its properties were fully known, although the wild shrub from which the alkaloid was obtained by Nieman, at the date above given, was in use by the Peruvians as an invigorator before and after the Spanish conquest. The shrub grows as an indigenous product in the mountains of Peru and Bolivia, and is also cultivated.

## A Letter and a Telegram.

## A Christmas Story.

"I don't never waste words," said old Mr. Brown, in a hard, driving voice, "and I hain't good at letter writing, but I reckon this will cut."

"It's a pity you wrote it so hard, father," said his young daughter, trembling; "it will cut her to the heart; she didn't ever mean to borrow that \$300, and then cheat you out of it."

"She didn't, eh? Then why ain't the money back in my pocket, safe and sound? It's a year last Christmas since she pestered me about it, and I hain't seen hide nor hair on't yet; if that hain't a clear case of cheating, Fanny, I'd like to know what ye call it."

The girl stopped churning a moment, and wiped a surreptitious tear from her eyelid before she answered:

"Call it nothing, father, but bad luck; when sister Mary borrowed that money to lift the mortgage, she expected to pay it back; but you know as how brother John was taken with the rheumatism, and the overflow came, and the crop was ruined and then she couldn't pay; that's all, and God knows it's enough."

"It wasn't my fault," snapped her father, fiercely, as he pounded on the kitchen table to give vent to his anger. "I never put it in the agreement to allow for overflows and rheumatics and such like, and I never would have lent her the \$300 if it hadn't been for your sniffing and pestering. And now ye hear, gal, not another dime of my earnings shall they ever smell, and I'll never forgive—"

The girl sprang up from the churn, crying, "No, father, don't say it—don't say it, father; you'll be sorry some day when it's too late; besides, you're a church member, you know."

"You're right about that," said Mr. Brown, perversely. "I'm a church member, and don't owe nary a person a red cent, and the Bible says, an eye for an eye and a tooth for a tooth, and I'm going to have it."

He pounded the table again with his fists, after a fashion he had of wanting to pound something or somebody when he felt particularly aggressive. But the sound of his voice had scarcely died away when there came a knock at the door and one of those ominous, yellow envelopes marked with the impress of the Western Union Telegraph Company, was handed in. Mr. Brown took it and looked it over in a helpless kind of a fashion before breaking the seal. "How much to pay?" he asked the boy, and passed over to him the change with trembling hand, though it was characteristic of the man that even then, with the knowledge that the telegram must contain terrible news, he was careful to count the dimes as they dropped back into his pocket. Oh, those cruel telegrams! Do the company ever remorsefully count the breaking hearts that are left in the wake of their messengers? Mr. Brown was a hard man, and loved his money-bags over-well, but somewhere beneath the rough outward crust there was an abiding affection for his children that needed something like the stirring of the soil around the violet beds to loosen the selfish bonds and give his love a human voice. And when he read these words, "Mary died this evening; come at once," a sudden anguish filled his breast, and silently handing the dispatch to Fanny, he walked from the kitchen and shut himself up in his own room where years before death had made sundry visits. He did not cry out or fall, or make any sign that he was grief-stricken, but he was hurt to the soul, and a great remorse made him sick and faint. He had never put it in the agreement about sickness, overflows, and bad crops, as he had just said; neither had he "put it" that Mary, in her young, blooming matronhood days, should die—his first born! How could he bear it? and it was all the harder because of the cruel words he had said while she lay dead at home. Did he say he would never forgive her—did he really—really say that? Fanny had tried to stop him, and brought it to his mind that he was a church member and a Christian. As if a father ought to be merely a Christian to his own child. Why hadn't he given her the money? Might have done so five times over and never missed it. And the old man groaned remorsefully as, with these thoughts in his heart, his gaze wandered over the great fields where the cotton would soon be a shimmering, fleecy sea, bringing new treasures to his hoarded gains, and making no hearts happy save his own.

Those few, poor, stunted acres of John's and Mary's. Swamped by the overflow last spring, stock drowned, and John, wading waist deep, fighting with the waters, laid up with the rheumatics.

Suppose he had given them a thousand dollars?

Oh, the sting of remembering evil when it is too late to turn evil into good. And then there was that unkind letter. Did his child read those cruel words with the dying light in her eyes, or would it be left for the stricken husband to be treated to the short, stern homily?

He went back to the kitchen where Fanny sat crying over the telegram. "Look up the house," he said in a hurried way, for fear his voice would falter; "we'll go at once. I'll hitch up while ye get ready." And when they had started on their long journey he quite broke

down in talking over the past and telling Fanny little things here and there that no one would have supposed he would have remembered.

"Mary was always a dutiful daughter," he said, putting into broken sentences the grief and remorse that overwhelmed him; "after her ma died, and she wasn't knee high to a duck, she was like a second parent to the little ones; nursed them through the measles, and when they were well, took it herself, and laid as quiet on the bed for fear of giving trouble as if she were not a child."

He didn't tell her how, when the second Mrs. Brown was installed as mistress, Mary became the drudge and maid-of-all-work, and was nurse to a half-dozen more little Browns, who, like their mother, ruled her with a rod of iron. Nor of Mary's marriage with a sturdy young fellow, who, for the lack of a timely help, and the pressure of a large family, was kept with his nose to the perpetual grindstone. He did not tell how Mary pinched and worked, and sat up till late hours, and struggled to help her family, until in consequence of doctor's bills and babies, and poor crops, John was forced to give a mortgage on his house, when her (the) father might have lifted them out of their poverty. He might even have given them a better house; the oldest inhabitants could not remember when the ugly, ramshackled affair had been built. Some ancient ancestors had put up a couple of rooms, then added on a few more, until, with what patching and propping up, John's inheritance was an offense to the eye. Mr. Brown thought bitterly of all this through the long journey. Too late, too late, seemed written in words of fire on every tree and shrub. At last the house was in sight, a poor, miserable place enough, but now, in the month of June, sweet with climbing roses and honeysuckles that the mistress' hand had trained to the porch.

"Who-a-o, Dandy." The children were in the yard; with a shout they ran to the gate, and as the old horse stopped, somebody rushed down the steps, and with a cry, "Why, father, why, Fanny," Mary in her famous clean calico and apron, and cheeks like roses, with the pleasure and excitement of the visit, was in her father's arms—her father, who held her as he had never done before, and kissed her with the tears running down his cheeks.

"My child," he said presently, "you were dead and are alive again. Thank God."

"Why, father?" questioned Mary again, "what on earth is the matter?" And she looked with a frightened gaze at her sister, vaguely wondering if her father were stricken with some sudden insanity. For answer, Fanny drew out the telegram from her pocket, and gave it to Mary.

"It's all a wonderful mistake," exclaimed the elder woman, glancing it over, and hugging father and sister excitedly again.

"We have a neighbor, Mrs. Mary Harris who died last evening; she has a brother living somewhere near you, and by the way, his name is Brown—Richard Brown—your name, father. They carried you the telegram instead of him. What a pity he won't hear of it, so as to get there to the burying."

And so, between hysterical sobs and smiles, and everybody talking at once, and asking questions that no one dreamed of answering, they went in under the bower of roses and honeysuckle, and presently John hobbled from the field on crutches and the story was told all over again.

And when Mary slipped out into the kitchen to get an early supper, old Mr. Brown followed her there, and she was folded tight in her father's arms again, while the tears streamed down both their faces. It was as if she had been raised from the dead.

"My child," whispered the old man, "I hain't been the best of fathers to ye; I shut my eyes and my heart when I ought to have been the one to help ye; never ye mind about the money; don't ye say one word about it, and we'll knock this old rattletrap down to-morrow, and I'll show ye how to build a house."

And so he did, and a very comfortable house it was, where John did not have to stoop when he went in and out of doors.

And would you believe it? The letter, all the more harsh for being so brief, never did reach its destination. Old Mr. Brown's chirography was of a very inferior sort and the postmaster couldn't puzzle out the address, much as he desired so to do; then the letter was forwarded to the Dead Letter Office at Washington, and in due time was returned to Mr. Brown, who quietly and satisfactorily consigned it to the flames.

## Important to all Who Work

For a living. Write to Hallett & Co., Portland, Maine, and they will send you full information, free, showing you how you can make from \$5 to \$25 and upward a day and live at home, wherever you are located. Some have made over \$50 in a day. Capital not required; you are started free. All ages; both sexes. All is new. Great incomes sure from the start. Fortunes await all workers who begin at once.

**It Should Always be Borne in Mind**  
That time is the only really impartial test of genuine merit, and that according to the universal law of "the survival of the fittest," few sewing machines have withstood this test. Therefore, the only safe thing to do is to buy what time has proven to be the "fittest"—the "DOMESTIC" SEWING MACHINE.

## Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes, \*\*

## THE SYMPTOMS OF LIVER COMPLAINT

Are a bitter or bad taste in mouth, pain in the back, sides or joints, often mistaken for rheumatism; sour stomach, loss of appetite, bowels alternately constive and lax, headache; loss of memory, with a painful sensation of having failed to do something which ought to have been done; debility, low spirits, a thick yellow appearance of the skin and eyes; a dry cough, often mistaken for Consumption.

Sometimes many of these symptoms attend the disease, at others very few; but the Liver, the largest organ in the body, is generally the seat of the disease, and if not regulated in time great suffering, wretchedness and death will ensue.

## The Baltimore Episcopal Methodist:

"Simmons Liver Regulator is acknowledged to have no equal as a liver medicine, containing those Southern roots and herbs which an all-wise Providence has placed in countries where Liver diseases prevail."

## HOLIDAY Music

## FOR HOLIDAY GIFTS.

No gift to a lover of music can be more appropriate, or give more enduring pleasure, than our excellent collections of the finest music, such as are here mentioned. Any book mailed promptly for retail price.

## CLASSICAL WORKS.

Beethoven's Sonatas, celebrated Lebert and Von Bulow edition, 2 vols., each \$3, or cloth embossed, each \$6. Mendelssohn's Songs Without Words, \$1.00. Chopin's Mazurkas (\$1), his Nocturnes (60 cts.); and his Waltzes (50 cts.). Franz's Album of Songs, \$2.00. Halldan Kjerulf's Album, \$1.50.

## ANNUAL MEETING.

The regular Annual Meeting of the Stockholders of the Grangers' Bank of California, for the election of Directors for the ensuing year, will take place at the office of the Bank, in the city of San Francisco, State of California, on Tuesday, the 11th day of January, 1887, at 1 o'clock p. m. For Grangers' Bank of California.

ALBERT MONTPELLIER,  
Cashier and Manager.

## BARREN HILL NURSERY

NEVADA CITY, CAL.

## SPECIALTIES:

## NUTS, PRUNES, AND GRAPES.

The Finest Collection of Nut-Bearing Trees to be found in the United States.

## 19 Varieties of Walnuts,

—INCLUDING—

## CLUSTER WALNUT,

The newest, most prolific and valuable variety ever introduced into this country.

## PREPARTURIENS,

Or Early-Bearing, or Fertile Walnut, introduced into California in 1871 by Felix Gillet. "Second Generation" Trees, grown from nuts borne on the original tree; 90% guaranteed to be "genuine Preparturiens," or, having retained the surprising characteristics of precocity, fertility and hardness of the original Proprietary. "Third Generation" Trees, grown from nuts borne on second generation Proparturiens, entirely California-grown; vigorous, hardy and fertile variety.

Serotina, Franquette, Mayette, Chaberte, Gant, Parisienne, Mesange Walnuts.

The leading varieties of Europe, highly recommended for beauty and quality of the nuts, fertility and hardness of the kinds.

9 Varieties of French Chestnuts or Marrons (Propagated solely by grafting).

7 Varieties of Filberts.

4 Varieties of April Cherries, the earliest and most prolific in California.

207 Varieties of Grapes, including the very earliest Table varieties known, such as Blue Muscat, Ischia, Magdeleine, Malinger, Pearl of Anvers, Bulher, Luglienda, Dupont, Gros Sapat, etc.

81 Varieties of English Gooseberries, all sizes, shapes and colors, and "true to name."

## PRUNES! PRUNES!

Lot D'Ente, or "D'Ente true from the root." We have ourselves given this name of "Lot D'Ente" to this type, so extensively propagated in the valley of the Lot (France). True from the root and not grafted, and which we have introduced into this country. This type of the D'Ente Prune is not at all propagated by grafting, which would do away with its chief qualities of being more vigorous, more long-lived than grafted trees, and a gum-resistant stock.

Saint Catherine, "true from the root."—This kind is altogether propagated true from the root in its home, valley of the Loire (France), and offers greater advantages than grafted trees, as being also more vigorous, more long-lived, and a gum-resistant stock.

We highly recommend these two purest types of the two most celebrated kinds of French Prunes, and have divided our stock into three sizes, which we offer at \$30, \$30 and \$40 per hundred. All such trees are imported from the two great prune districts of France, but have been from one to three years in our grounds, and have, like all our mountain-grown trees, a fine system of roots.

For the Season of 1887-88, the D'Ente, the purest and largest type of the Prune D'Ente, or D'Agene, or Robe de Sergent (solely propagated by grafting).

APRICOTS—Boulbon, Esperen, Daolos, Mexico, the shipping varieties of the south of France.

Constantinople Quince—The largest, most precocious and prolific of all quinces.

Ever-bearing Black Mulberry of Spain—Medlar, Sorbus (all those kinds should have a place in all gardens).

Mulberry Trees for Silkworm Feeding. Silkworm Eggs.

SERICULTURE CHART, 50 Cts.

Send for General Catalogue and Supplement with Chapters on "Nut-bearing Trees" and "Prunes," illustrated with 20 walnut cuts, 5 prune cuts, and numerous other cuts representing Medlar, Sorbus, Black Mulberry, French Chestnuts, Filberts, etc.

FELIX GILLET,  
Nevada City, Cal.

Reasons why Sherwood's Steel Harness is the Best and should and will be

## Universally Used:

1.—It is a common sense Harness. 2.—It is made of material that will last a lifetime. 3.—In plowing, dragging, logging and scraping there are no whiffletrees. 4.—In all farm work you can change from plow to wagon quick. 5.—In plowing in the orchard, you can't bark fruit trees. 6.—In plowing and cultivating hops it has no equal. 7.—In plowing along the fences you can get two furrows closer. 8.—Horses cannot step over the traces, or balk themselves. 9.—A small boy will handle plow readily. 10.—There is no weight on plow team. 11.—Team works one-third easier. 12.—There is no chafing, crowding or fretting of team. 13.—For man and team it has no equal. Do not hesitate, but order at once from your nearest agent. Address

Put up in Coils of Five Rods Each. Posts Not Included.

## LIBERAL DISCOUNT FOR QUANTITY.

### WHY GOOD FENCE CANNOT BE MADE ON HAND POWER MACHINES.

To make a good fence there should be a uniform strain on the wires while passing through the machine equal to a two-horse power; this strain should be equal on all the wires, otherwise the short kinks will not be taken out and the wires pressed down into the wooden pickets with sufficient force to hold them in position.

A fence that has been made on a hand machine, after it has been up a short time, will sag in spots; this is caused by the weight of the fence drawing the slack out of the wire, which should have been done in the machine when the fence was made. Many makers who use hand machines use light wires for the reason that light wire is more easily straightened. By using light wires they destroy the life of the fence, as in this kind of fence the strength of the fence is in the wires and not in the pickets.

Another method of getting over the difficulty caused by not having sufficient power to strain the wires properly is to twist the wires between the pickets until the kinks are straightened out, frequently making as many as four twists in the space of one and one-half inches. This very heavy strain on the wire causes the metal to crystallize and destroys its strength. Excessive twisting of galvanized wire breaks off the galvanized surface, and in a short time the wires rust through.

Stretcher for Putting Up Fence Loaned Free.

## JUDSON MANUFACTURING COMPANY,

Office & Salesroom, 8 Pine St., San Francisco.

Factories, Oakland, Cal.

**AGENTS WANTED**  
to sell the  
**MISSOURI STEAM WASHER**

Active, honest persons all over the country, with or without team.

(Extracts from Reports of Purchasers.)

MARY J. TAPPAN, REYNOLDS, NEN: They excel all other washers I ever saw. JOHN R. DODGE, JR., NORMAL, ILL.: The best machine ever invented by man. H. H. DURANT, CORTEGEVILLE, S. C.: Everybody likes them and everybody wants them. S. B. ADAMS, AUSTON, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another. MRS. JOSEPH SWIFT, STATE CENTER, IOWA: The most useful article about the kitchen. ANNA RAMSEY, MILFORD, TEX.: Have thoroughly tested it on articles from blue collars to bed quilts; gives entire satisfaction. ST. CLAIR INKSTER, JR., ROYAL, WASHINGTON TERR.: Sells itself and can not be spoken of too highly. JOHN DETTON, BRIGHAM CITY, UTAH: Have given it several severe tests and it comes out triumphant every time. JNO. B. WHEELER, KANSAS CITY, MO.: They have proved treasures to the families who secured them. A. P. SHIVELEY, TOLSON, NEV.: Gives entire satisfaction. Rather handle the Washer than anything I have seen. E. M. MANSLEY, LOCKPORT, ILL.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, STROUTS, MO.: If you will get up any instrument that will take as much labor off of me as this Washer takes off the women, and cost no more, I could sell one at every house. MRS. M. C. DOBINS, CANTON, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MRS. N. MOORE, NEWFANE, VT.: Will do more than it says, especially washing flannels. MRS. F. G. BENDEN, SHREWMAN, N. Y.: Would not take \$50 for mine if I could get another. Washer quicker and better than it can be done by hand. MRS. FRED H. HARRIS, BARTTOWN, VT.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, NEWARK, OHIO: Have used it for family use for fully a year. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, PATOKA, ILL.: Saved me \$15.00 per year for 14 months I've had it. MRS. C. W. TALBOT, NORFOLK, ENGL.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, STANTON, MICH.: I had rather give up my Jersey cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

### SPECIAL OFFER TO AGENTS.

I will ship, in localities where, as yet, I have no agent, 1 sample "New Becker" Washer and "Empire" Wringer at WHOLESALE prices. E. W. MELVIN, Prop'r. Office, 806 J St., Sacramento, Cal.

## THE DOG

In health, habits and disease. All breeds and treatment; 50 cuts; 25c. This office.

**H. H. H. HORSE LINIMENT.**  
FOR MAN OR BEAST.  
D. D. T. 1886.  
THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale by all Druggists.

EMIL BOURGUIGNON, Sainsevain Villa, near Narrow Gauge Railroad, 1/2 mile from Depot. Telephone No. 34, free to all patrons. Floral Depot, 72 N. 1st St., San Jose.

## GOOD HEALTH.

### Medical Instinct in Animals.

Animals get rid of their parasites by using dust, mud, clay, etc. Those suffering from fever restrict their diet, keep quiet, seek dark, airy places, drink water, and sometimes plunge into it. When a dog has lost his appetite it eats that species of grass known as dog's grass, which acts as an emetic and purgative. Cats also eat grass. Sheep and cows, when ill, seek out certain herbs. An animal suffering from chronic rheumatism always keeps, as far as possible, in the sun. The warrior ants have regularly-organized ambulances.

Latrelle cut the antennae of an ant, and other ants came and covered the wounded part with a transparent fluid secreted in their mouths. If a chimpanzee is wounded, it stops the bleeding by placing its hand on the wound, or dressing it with leaves or grass. When an animal has a wounded leg or arm hanging on, it completes the amputation with its teeth. A dog, on being stung on the muzzle by a viper, was observed to plunge its head repeatedly, for several days, in running water. The animal eventually recovered.

A sporting dog was run over by a carriage. During three weeks in winter it remained lying in a brook, where its food was taken to it. The animal recovered. A terrier hurt its right eye. It remained under a counter, avoided heat and light, although it habitually kept close to the fire. It adopted a general treatment, rest and abstinence from food. The local treatment consisted of licking the upper surface of the paw, which it applied to the wounded eye; again licking the paw when it became dry. Animals suffering from rheumatic fever treat themselves by the continued application of cold water, which M. Delaunay considers to be more certain than of the other methods.

In view of these interesting facts we are, he thinks, forced to admit that hygiene and therapeutics as produced by animals may, in the interest of physiology, be studied with advantage. Many physicians have been observers of animals, their diseases and the methods adopted by them in their instinct to cure themselves, and have availed of the knowledge so brought under their observation in their practice, much to the gain of humanity.

**CURE FOR RATTLESNAKE BITE.**—Eighty years ago Joseph Geer, the first settler at Long Eddy, N. Y., learned the cure for rattlesnake bite from John Johnson, a half-breed Delaware Indian, who, like most Indians, was an inveterate lover of whisky, and for a pint of it would let a rattlesnake bite him and then cure himself with his remedy, which, however, he would not reveal. Geer always kept liquor in his house, and on an occasion when Johnson was recovering from one of his frequent spells of drinking to excess, and was suffering terribly for the want of liquor, succeeded in getting the remedy for a pint of whisky. Geer kept the secret till from old age he was unable to answer the calls of the settlers when any of them or their stock had been bitten, and then told it freely to all. It is as follows: Apply to the wound a poultice one-half each of common salt and indigo, mixed with cold water, and renew every two hours. Eat freely of the leaves or drink often of tea made from them, of a variety of the blue violet (*V. Sagittata*), commonly known as the "arrow-leaved" violet. If the bite be upon the leg or arm, bind the leaves in a circle around it, above and just beyond the swelling. Moisten with cold water as often as they get dry from the fever created by the poison, and renew two or three times a day. During the time this remedy has been in use in Mr. Geer's neighborhood it has effected at least 20 cures upon human beings, a great many more upon beasts, and has never failed with either. Ralph Geer and Moses Thomas, Long Eddy, N. Y., are the names and addresses of individuals now living who have been bitten by rattlesnakes and cured by this remedy without the aid of whisky or anything else.—*Exchange.*

**SUPERFLUOUS HAIRS.**—Superfluous hairs on the face may be removed by electricity. A very fine sharp needle is pierced into the hair follicle, and a current of electricity passed through it for a moment. It burns or cauterizes the root so that it dies, and gives no pain. If the needle does not pierce the right spot, no good is done. It requires a steady hand, a good eye and a little practice to perform the operation skillfully. About 40 hairs can be removed in an hour by an experienced operator.

**PROLONGED CASE OF HYSTERIA.**—A Neapolitan physician has described a case of hysteria, prolonged and aggravated, in which the nails of the fingers and toes were spontaneously shed. This was preceded by tingling, especially in the thumbs and great toes, followed by suppurations in the bed of the nail. The curious affection of the nails is supposed to have been a result of disordered nerve function.

**INDORSED.**—A reader of the RURAL wishes to say, for the benefit of others, that his 20 years' experience in gradually overcoming dyspepsia fully corroborates S. P. Snow's remarks in the last issue of the RURAL on "Art and Science of Eating."

THE OVERLAND MONTHLY for December has an unusually varied table of contents. The number is about twice the usual size. With an increase of reading pages, it also contains a complete history of the early days of the magazine, and its announcements for 1887. In all respects, this issue of the representative magazine of the West is a credit to the well-organized company who now own it, and is a proof of the success of the enterprise. The leading article is Prof. Hilgard's exhaustive study of The Beet Sugar Industry of California. It has both industrial and political bearings, and is one of the most important articles ever published in the magazine. Other articles are: The Poet's Pipe, James Buckham; Writings of Laura Bridgman, E. C. Sanford; Margot's Apple Sprig, Becca M. Samson; St. Anders, Charles Noble Gregory; In the Sleepy Hollow Country—Chapters V-XI—S. N. Sheridan, Jr.; Our Forests, Abbott Kinney; An Episode of Chub Gulch, L. A. B. Curtis; Women as School Directors, M. W. Shinn; The Poppy, Edmund Warren Russell; Chata and Chinita—Chapters XVIII-XX, Louise Palmer Heaven; The Works of Thomas Middleton, An Epoch-making Lie, Mary E. Grafton. Among the miscellany is the following: The Chief Need of Observatories, Mr. Lowell and Charles Francis, The Elections, the Charter and the Mayor, Winter in San Francisco, E. S. B.; Mount Shasta, as seen from Tehama, J. S. M.; San Emigdio, Mary E. Bamford; Views on Oakland Creek (Illustration), E. M. Reynolds.

**ANIMAL VS. STEAM POWER.**—A writer in the *Revue Scientifique* affirms that, from a comparison of animal and steam power, the former is the cheaper power in France, whatever may be the case in other countries. In the conversion of chemical to mechanical energy 90 per cent is lost in the machine, against 68 in the animal. M. Sanson, the writer above referred to, finds that the steam horse-power, contrary to what is generally believed, is often materially exceeded by the horse. The cost of traction on the Mont Parnasse-Bastille line of railway he found to be for each car, daily, 57 francs, while the same work done by the horse cost only 47 francs, and he believes that for moderate powers the conversion of chemical into mechanical energy is more economically effected through animals than through steam engines.

**THE PERCHERON SHOW AT ILLINOIS STATE FAIR.**—For the purpose of the American Percheron Horse-Breeders' Association's exhibit, there was erected on the State Fair grounds a building 700 feet in length and 48 feet wide. The main entrance to the building, with battlements and towers, from which waved countless French and American flags, was massively built of baled hay, and thatched with oats, in imitation of the gateway entrance of the castle at Nogent le Rotrou (the center of the old district of La Perche, France, and the birthplace of the Percheron breed), built by the old counts of Rotrou, in 1003, and which is now used as the headquarters of the Societe Hippique Percheronne of France, with over 400 members, which, under the authority and with the support of the French Government, publishes the "Stud-Book Percheronne" in the most carefully guarded manner. Upward of 300 entries were made by some 50 breeders from every part of the United States and Canada. The displays of this stock created great enthusiasm at all times, and the Percheron show generally overshadowed all other features of the State Fair. The jury of awards was composed of the Marquis de la Motte Rouge, Inspector-General of the French National Stud; Prof. Andrew Smith, President of the College of Veterinary Surgery, at Toronto; and Hon. Geo. B. Loring, ex-Commissioner of Agriculture of the United States. These gentlemen, respectively appointed by the ministers of agriculture of France, Canada, and the United States, in company with the Illinois State Board of Agriculture, United States Senators Logan, Cullom, Palmer, Manderson, and many other distinguished gentlemen, reviewed the procession, comprised of the entire Percheron exhibit, led by uniformed grooms, followed by two solid miles of grade Percheron teams, the property of upward of 150 of the great wholesale and manufacturing houses of Chicago. Their unanimous verdict was that no such cavalcade had ever before been seen in this country—perhaps never in the world. The success of this remarkable exhibit was largely due to the energy of Mr. M. W. Dunham, well known as the owner of Oaklawn Farm, at Wayne, Illinois, the greatest importing and breeding establishment in the country.—*Chicago Times.*

### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

**12 Lovely Hidden Name Cards,** with name covered by hands holding flowers, etc., imported from Germany, for 15 cts. 12 extra fine Gold Bevel Edge Cards, with name, 15 cts. Agents' Outfit sent free with each order from this ad. provided you cut out and return me the ad. and agree to act as my agent. G. W. TUTTLE, Pasadena, Cal.

### "One Nail Drives Out Another."

Is a French saying that finds exemplification in the way one disease will substitute itself for another and graver one, in very many cases. Liver disease, for instance, will soon induce blood disorders, throat ailments, skin affections, and eventually, because of impoverished blood, consumption itself, unless, indeed, it be treated in its incipency and early progress by Dr. Pierce's "Golden Medical Discovery," which acts as a specific in these ailments, accomplishing a rapid cure by its powerful alterative action upon the great organs of the body.

Young or middle-aged men, suffering from nervous debility and kindred weaknesses, should send ten cents in stamps for large treatise giving successful treatment. World's Dispensary Medical Association, Buffalo, N. Y.

### Your Friends will Never Tell You.

But perhaps somebody, who isn't your friend, will, that your presence is rendered offensive by the foul, fetid smell of your breath. Every word you utter, though it be the very echo of wisdom and poetry, disgusts your hearers, and your laugh is productive of anything but mirth to them. It is a duty you owe, not only to yourself, but to society, to remove this cause of offense. Dr. Sage's Catarrh Remedy will heal the diseased mucous membrane, will bring relief to yourself and others. Do not hesitate to employ it.

### Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested, the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0 25
- 2.—World's Cyclopaedia, 794 pages, 1250 illustrations; (exceedingly valuable).....50
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages, illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 89 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per ct. off regular rates
- 8.—Pacific Coast and Eastern Dailies, Books and Periodicals, except special publications, we can usually give 10 to 15 per cent off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Pat Newspaper Fileholder (18 to 36 in.).....25
- 15.—European Vines Described, 63 pages.....05
- 19.—Webster's Dictionary, 634 pages, with 1500 illustrations; very handy and reliable.....50
- 23.—Architecture Simplified, 60 pages.....15

## Agricultural Features of California

By E. W. HILGARD, Ph. D.

This work, prepared by the well-known Professor of Agriculture in the University of California, with the assistance of Dr. R. H. Loughridge, was completed in 1883, under the auspices of the Census Bureau. It includes an outline of the physical geography of the State, with sketches of its great agricultural divisions—the Sacramento and San Joaquin valleys; the foothills of the Sierra and Northern Coast Range; the Southern, the Desert, the Coast Range, and the Sierra Nevada Mountain regions—and more particular descriptions by counties, giving their topographical and agricultural features, area, population, tilled lands and leading crops; mechanical and chemical analyses of soils; remarks on rainfall, irrigation, etc.; and a report on the history, method, and prospects of Cotton Culture in the State, with remarks on the same industry in New Mexico, Utah, Arizona and Mexico. The volume contains 138 quarto pages, a fine colored agricultural map, and a full index. For sale by

DEWEY & CO.,

252 Market St., S. F.

## Dewey & Co.'s Scientific Press Patent Agency.

**OUR U. S. AND FOREIGN PATENT AGENCY** presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

## Lands For Sale and To Let.

### \$10.00 PER ACRE.

On the C. P. R. R., in Placer county; one-half mile from Applegate; one-half hour from Auburn; fine climate; plenty of water; school, postoffice and telegraph near; easy terms; title perfect. Apply to

S. C. OSBORN,  
Applegate, Placer Co., Cal.

### A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

## A Great Bargain!

### A Remarkable Chance Offered.

124 acres of as good Fruit Land as there is in this State. About 40 acres improved and a good Orchard on it. Also two tracts of 160 and 168 acres each. Title guaranteed. Homestead and a pre-emption. The right to the two latter tracts will be relinquished. These pieces lie right in the mountains, and 200 acres can be cultivated when cleared up. There is plenty of good timber valuable for shakes, posts, or pickets; 1000 inches of the best water in the world for drinking and irrigating purposes; plenty of fish, deer, grouse, and bear. Also, 10 miles of the best mountain range for stock in the Northern part of the State. Twenty-five miles from the railroad and seven miles to the nearest village. A good price can always be obtained for produce; never less than 2 or 2½ cents per pound for potatoes. Water free on all the land.

Correspondence invited. Apply soon. Address, Ranch Owner, Box 2361, S. F.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms, offer the best inducements to those seeking homes on any part of the Pacific Coast. The survey of the

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now ready, and will be sent free on application.

This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for over 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TITLE, U. S. PATENT.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### DEDERICK'S HAY PRESSES.

are sent anywhere on trial to operate against all other presses, the customer keeping the one that suits best.

Order a trial, address for circular and location of Western and Southern Storehouses and Agents. P. K. DEDERICK & CO., Albany, N. Y.

The "ACME" subjects the soil to the action of a Steel Crusher and Leveler, and to the Cutting, Lifting, Turning process of double gangs of CAST-STEEL COULTERS, the peculiar shape and arrangement of which give immense cutting power. Thus the three operations of crushing lumps, leveling off the ground, and thoroughly pulverizing the soil are performed at the same time. The entire absence of Spikes or Spring Teeth avoids pulling up rubbish. It is especially adapted to inverted sod and hard clay, where other Harrows utterly fail; works perfectly on light soil, and is the only Harrow that cuts over the entire surface of the ground. We make a variety of sizes, 3 to 15 feet wide.

The "ACME" is in practical use in nearly every Agricultural County on the Pacific Coast, and has proved itself to be just the tool for use in VINEYARDS, ORCHARDS and GRAIN FIELDS.

## HEALD'S BUSINESS COLLEGE,

No. 24 POST STREET,

SAN FRANCISCO, CAL.

At this College Short-Hand is made a specialty; instruction is given by class work five hours daily, which by the term costs the student less than ten cents an hour. By this new system of instruction good amanuensis reporters are made in three to six months; largest short-hand class on the coast; they also teach type-writing, telegraphy, book-keeping, penmanship, drawing, English branches, modern languages and everything pertaining to a business course. The public are invited to visit the College in all its departments. Guides are provided to conduct visitors. Send for circular. E. P. HEALD, President. C. S. HALEY, Secretary.

## The Citrus Fair.

(Continued from Page 533.)

hibitors of sun-dried fruits, 8 of evaporated, besides 29 exhibitors of figs and 19 of prunes, making 79 in all. Many of the exhibits by quality and style rewarded careful study and promise well for the State. The following awards were made:

Evaporated Fruits—For best individual exhibit of evaporated fruits, other than raisins, figs and prunes, to Purrington Bros., Sacramento, first premium; R. S. Lockett, Sacramento, second premium; Lusk & Co., Marysville, third premium.

Sun-dried Fruits—Best individual exhibit, first premium to D. H. Clipping, Brighton, Sacramento county (especially meritorious); second prize, F. P. Chapuis, Brighton, Sacramento county; third prize, W. D. Bacon, Red Bluff.

Prunes—Best individual exhibit, Jos. Routier, of Routier's Station, gold medal; second premium, Wm. Pleasant, of Vacaville, silver medal; third premium, Wm. Barry, of Ophir, Placer county, Angora rug. Felix Gillet, Nevada City, special mention for particularly meritorious exhibit of three varieties of prunes.

Figs—Best individual exhibit, W. R. Strong & Co., Sacramento, gold medal; second premium, Mrs. E. P. Buckingham, Vacaville, silver medal; third premium, A. Pendleton, Nicolaus, Sutter county, a rug; meritorious mention (not competing), Mrs. E. P. Buckingham, Vacaville, fine quality of black figs, nicely cased and packed in a neat style of package.

Preserved and canned fruits—Best individual exhibit: First, Capital Packing Co., Sacramento; second, Napa Canning Co., Napa; third, W. Treat, Davisville, Yolo county; meritorious mention (not competing), W. H. Aitken, Santa Cruz mountains, display of preserved prunes and plums, in glass.

The class of deciduous fruits included some very fine apples and winter pears, the former being shown by 66 growers and the latter by 17. The exhibit of late-keeping grapes attracted much attention. A very interesting item was a cluster shown by Senator Routier—a seedling from a Malaga, brought here as a market fruit. The seedling shows great keeping quality and was very sweet. The following awards were made:

Quinces—First, Dr. J. M. Frey, Newcastle; second, Mrs. S. Shields, Brown's valley, Yuba county; third, P. T. Olinger, Newcastle; special mention, G. W. Turner, Loomis; J. Gardella, Oroville.

Grapes—First, J. Rutter, Florin, Sacramento county; second, H. A. Messenger, Spring valley, Calaveras county; third, J. Gambs, Contra Costa county; special mention, E. W. Culver, Newcastle; meritorious mention (not competing), Dr. J. Strentzel, Martinez, fine exhibit of late grapes, Black Ferrara and Emperor.

Apples—First, Thomas Frazer, Middletown, near Placerville, El Dorado county; second, Wm. Johnston, Anderson, Shasta county; third, W. H. Graham, Butte creek, Tehama county; special mention, Caleb Scott, Yankee Hill, Butte county; H. A. Frost, Dutch Flat, Placer county.

Pears—First, A. T. Hatch, Suisun; second, G. N. Lombardi, Placerville, El Dorado county; third, G. E. Brand, Grass Valley. Special mention—C. Sauer, Smith's Flat, El Dorado county; L. Styles, Greenwood, El Dorado county.

Japanese persimmons were shown to great variety, by 83 growers, and added by the brilliant colors to the general beauty of the display. We were not fortunate enough to find any one who has yet realized much from the growth of the fruit, and if such there are among our readers, we should be glad to hear from them. There seems no doubt about the growth and productiveness of the tree.

Much the same might be said of the pomegranates, of which well-grown samples were shown by 31 different parties.

Other products, which attracted much attention, were the fine clusters of dates, from Solano county, the cotton of which four samples were shown, and the licorice root, by seven growers. For these articles, the following awards were made:

Dates—Best individual exhibit, first premium, to J. R. Wolfkill, Solano county.

Pomegranates—First, Mrs. S. S. Pence, of Pentz; second, Dr. R. Parker, Oroville; third, T. B. Hutchins, Central House, Butte county. Special mention—William M. Jeffers, Brown's valley, Yuba county.

Cotton—Mrs. E. M. Carley, Sacramento City; special mention—G. W. Bond, Wm. Coughlan, Marysville; W. J. Wilson, Newcastle; Mrs. R. S. Lockett, Brighton.

Licorice—First, Isaac Lea, Florin, Sacramento county; special mention—J. Rutter, Florin, Sacramento county.

Persimmons—First, C. H. Wilcox, Oroville; second, Mrs. J. J. Pence, of Pentz, Butte county; third, Peacock, Yuba county; M. L. King, of Oroville, honorable mention.

The wine and brandy exhibit presented a fine array of bottles, and represented the vintages of 52 growers. The Napa county display collected and exhibited by Mr. Estee easily won the first place. The following awards were made:

Largest county exhibit, Napa, diploma. Brandy—First, Wm. Schefflin, Napa, gold medal; second, D. E. Knight, Marysville, silver

medal; third, A. Harazathy & Co., Orleans Hills vineyard.

Yolo county—Wine set.

Sherry—First, Wm. Schefflin, Napa, gold medal; second, F. Seraroni, Napa, silver medal.

Port—First, A. B. Dresbach, Nevada county, gold medal; second, H. W. Crabb, Oroville, Napa county, silver medal; third, Adamson, St. Helena, wine set.

Clarets—First Berringer Bros., Zinfandel, 1883, St. Helena, gold medal; second, John Thomann, St. Helena, Burgundy, 1882, silver medal; third, Henry Hogan, St. Helena, Zinfandel, wine set. White—First, Jacob Schraum, St. Helena, Riesling, 1882, gold medal; second, Napa Valley Wine Co., St. Helena, Riesling, 1883, silver medal; third, M. M. Estee, St. Helena, Paliacino, 1884, wine set.

Sweet Wines—Napa Valley Wine Co., Malaga, wine set.

Special mention for different class of wines—Napa Valley Wine Co., Hock, 1884; M. M. Estee, Napa, Cabernet, 1885; W. W. Lyman, Napa, Gutedel, 1885; John Thomann, St. Helena, Gutedel, 1884; H. W. Crabb, Oakville, Riesling, 1883; Napa Valley Wine Co., Gutedel, A. Harazathy & Co., Riesling, 1884; John Thomann, Pineau, 1884; L. Bannon, Penryn, Placer county, Catawba, Angelica and Mission wines and grape brandy, 2, 4, 6, and 9 years old; specially meritorious.

After the feast came the speeches. The literary features of the fair were excellent. The opening address, by Hon. M. M. Estee, of Napa, was a strong statement of the resources and adaptations of the upper portion of the State, coupled with suggestions as to how to use them to the best advantage. His allusion to the south and inference that the north may learn from her the highway to settlement and prosperity was the keynote to the disposition prevailing during the fair. "Southern California," he said, "had no boom until that lovely country deserved it, and now the world knows Southern California by heart. It has promised much, but Southern California has done all it promised. Look at the carloads of oranges and lemons raised there and sent away to market; the wines and brandies that every month are sent to the East and to Europe for sale; the raisins in almost unlimited quantities that it makes, and you will learn the secret of the success of Southern California." He proceeded then to demonstrate that Northern California is doing great things also, and that the thing to do is to let the world know it. Gen. N. P. Chipman, of Tehama county, made a stirring address, setting forth the excellence of the north and the need of showing it by such exhibitions as the Citrus Fair. On Wednesday evening good addresses were made by Judge L. D. Freer, of Butte county, and W. S. Greene, of Colusa. George W. Meade presented an essay on the dried-fruit industry, which we publish upon another page. On Friday evening D. N. Honn, of Shasta county, made an address upon the resources of the county, with practical suggestions as to reaping the benefit of them. E. W. Maslin, of Sacramento, who always speaks pointedly and convincingly, gave an excellent speech upon the glories of the State and the proper encouragement of her industries. Professor Hilgard bore witness to the excellent quality of the Northern California fruit examined by him, as we have mentioned in another column.

And now the Citrus Fair is on wheels and doing missionary work among the Eastern barbarians. When this reaches the reader, several carloads will be nearing Chicago, and the fair will be re-set up in the great city of the West.

We would like to make due acknowledgment to each one who has done much to make the fair a success; but among so many who did well, it would be invidious to mention names, lest many deserving might be overlooked. The best of spirits prevailed. Of perhaps a hundred of our personal horticultural friends whom we met, all were inspired by the occasion and did well in different lines of work. As we cannot thank each, we thank them all.

In addition to the award of premiums, as cited above, there were a lot of general honors to exhibitors which should be mentioned. We note the following:

For the largest and most varied exhibit, first prize, building lot in the town of Kirkwood—J. Rutter, of Florin, Sacramento county.

Second prize, lot in the town of Kirkwood—G. T. Rich, Florin, Sacramento county.

John H. Hayden, Sacramento, fresh strawberries, grown in open air and picked Dec. 18, 1886.

R. H. Petit, Sacramento, fresh blackberries, picked Dec. 13, 1886, grown in open air.

Mrs. E. S. Jackson, Woodland, elegant smilax plant, 30 feet long and 2 feet in circumference, grown in the open air.

Mrs. C. H. Hubbard, Sacramento, fine display of flowers, large variety, grown in yard at Fifteenth and I streets.

F. Gillet, Nevada City, display of very large chestnuts; display of plaster casts of fruits, and of the "Prune d'Ente."

M. Kite, Redding, watermelon grown in Shasta county, 48 pounds.

W. R. Strong & Co., specimens of bamboo, 25 feet long, grown at Penryn, Placer county; also watermelons; special commendation for fine display of nursery trees in variety.

H. E. Parker, Penryn, fine specimens of apples, squash and flowers.

Dangers & Ott, French Camp, exhibit of chicory in all its stages, from the root to the prepared article of commerce.

G. W. Meade & Co., San Francisco, improved appliance for facing raisins, manufactured in brass, with sample of very fine packing.

Joseph H. Kerr, Elk Grove, tobacco plant, four feet high.

Mrs. R. S. Lockett, Brighton, samples of grape sugar, very fine.

W. J. Wilson, Newcastle, full assortment of vegetables, collections of flowers, a cutting of a grape vine showing growth of 25 feet last season.

Jas. Faris, Sacramento, display of Peerless potatoes, of great size.

J. R. Wolfkill, Winters, mammoth yams and dates of commerce.

General John Bidwell, Chico, 80 varieties of grain neatly displayed in sheaves.

Bell Conservatory, Sacramento, banana plants and leaves 20 feet long.

## Grain-Drilling.

The question of seeding grain, by sowing broadcast by hand, or rotary motion by seed-sowers, as compared with drilling, seems to be settling itself in favor of the drill. A majority of the large and thrifty farmers of this State have learned by experience that conditions of our soil and climate for successful and profitable grain-raising in California make planting with a drill an advantage in most cases.

We illustrate in this issue the Havana Press Drill, manufactured by the Havana Press Drill

THE HAVANA PRESS DRILL WITH FORCE-FEED.

Co., Ill. The growing demand for drills in seeding has stimulated our inventors to give this subject much consideration. It is claimed for the Havana Press Drill that it combines many improvements over any other drill. It is made with 8, 10, and 14 runners, has a force feed and a wheel or roller that presses the soil in each row. The steel runners work independently of each other, and with the weight of the grain in the hopper and operator, will cut through trash or easily pass over all ordinary obstructions, and seed properly when the ground is wet. This drill is provided with a correct land measure, and is furnished with adjustable force feed that sows all kinds of grain in any desired quantity, without change of gear wheels. The press wheels are arranged with springs and ratchets to turn the driving shaft with a forward motion, and to turn the shaft with a backward motion. Wood or iron wheels are used, and these wheels press the soil directly over the seed, leaving the spaces between each row in a mellow condition.

The advantage gained by holding the moisture in and around the grain when first sprouted is well known to every experienced farmer. A short winter drouth, as a rule, is more disastrous to the grain field than a long-continued dry spell after the young plants have advanced sufficient to cover the ground. We have testimonials before us from all portions of the Mississippi valley and Northwest that give this drill an unqualified indorsement. It has lately been introduced into this State and a good demand is reported for it. Thomas Powell, No. 301 Market street, is general agent for the Sacramento and San Joaquin valleys, and Truman, Isham & Hooker for the coast counties.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
GEO. McDOWELL—Fresno and Tulare Cos.  
J. C. SWENNEY—Sonoma and Mendocino Cos.  
O. F. BERGMAN—Yolo and Solano Cos.  
M. S. PRIME—El Dorado and Placer Cos.

GUNNING FOR THE MARKETS.—The Stockton Mail discourses briefly on one of the winter employments along the San Joaquin. During the game season a great many persons in this part of the country are engaged in hunting. Some roam over the plains, while others have large boats in which there are comfortable houses built, and slowly move along various sloughs after ducks and other water game. Their boats or "arks," as they are termed, are frequently occupied by whole families, who seem to live in a contented manner, and are comfortably situated financially. Many hunters ship their game directly to S. F., but the larger number sell to dealers in Stockton. During the season there are 1600 dozen ducks consumed in Stockton, and the same number shipped to S. F.; 800 dozen quail are sold here, none being shipped away; 400 dozen geese make dinners for residents of Stockton, who consume all that are brought here; 1500 dozen have reached the dealers here, but nearly all are shipped; 400 dozen snipe all go to S. F., and 20 dozen sand-hill cranes also find a market at the metropolis. The favorite duck in Stockton is the mallard, while in S. F. the canvas-back variety is preferred. Among geese the gray goose is by far the best, although the white goose is not a bad dinner for a hungry man. For some unknown reason game of all kinds is now more abundant and in much better condition than has been known in the San Joaquin valley for 15 years. Though it is so plentiful, prices keep up, and the firmness of the market is due to the superior quality of the game.

CAPPING ARTESIAN WELLS.—The Grand Jury of Santa Clara county having (as we mentioned last week) had their special attention called to the unnecessary flow of artesian wells, report as follows: "We visited and made a thorough

examination of a large portion of the artesian belt of this county, and in many places found water running to waste from uncapped wells, to the great injury of the roads; causing the roadbeds to be raised higher than the regular grade, and the expense of repairs very great." After specifying a few roads that, in their opinion, are injured by overflow from such wells, they go on to say: "We found the flow of wells on the high lands much less than those near the bay. We found many who complied with the law by capping their wells, while others disregarded the law by allowing the water to run to waste. No person having appeared and made complaint against any individual for evading the law in regard to this matter, we therefore recommend that all persons owning wells cap them, and in justice to all who have complied with the law, we call the attention of the District Attorney to those who have failed to do so, and we urge immediate action."

## Berkshires.

Mr. Andrew Smith, proprietor of the Walnut Grove Farm, at Redwood City, San Mateo county, re-enters our advertising columns this week with an announcement of his thoroughbred Berkshires. Mr. Smith's stock has been several times mentioned in the RURAL. His herd is headed by imported animals, especially selected from the best English sources, and he has full pedigrees and other documents which are always open to inspection. The excellence of the animals themselves and their progeny has been attested by the fine string of premiums which they captured at last fall's fairs. They were shown all around the circuit and returned heavily laden with honors. The farm is situated within a short walk of the railroad station at Redwood City, and visitors are always given full opportunity to examine the stock. Mr. Smith has now a fine lot on hand which it would pay swine-fanciers to see.

WE notice at the store of Truman, Isham & Hooker, S. F., a new implement, called the Lightning tree-planter, with which two men and a horse can in one day dig 300 holes, three feet deep and two feet in diameter. This is an important item to those about planting trees.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

PABLO POULTRY YARDS, San Diego, Cal. Large establishment. Send for catalogue.

W. O. DAMON, Napa, Wyandottes, W. and B. Leghorns, P. Rocks, L. Brahmas, Pekin Ducks.

## I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.

In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder of strong enough.

For particulars how to use the same, apply to

RANDMANN, NIELSEN &amp; CO., General Agents

Refer to Nos. in latest issue when ordering.

For \$1.00 we will furnish new subscribers the PACIFIC RURAL PRESS for three months, and \$1.00 worth of the above seeds. For \$1.75 the RURAL for six months and \$1.00 worth of seeds. For \$3.25 the RURAL one year, and \$1.00 worth of seeds. For \$4.50 the RURAL for eighteen months and \$1 in seeds. The seeds will be carefully forwarded, post paid, from some one or more of our leading and reliable seedsmen, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who have remitted since this offer was made can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seedsmen advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittance.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the RURAL. In writing correspondence, items of information, or on other business, please use a separate sheet.

## Japanese Persimmons Again.

EDITORS PRESS.—Can you give, through the PRESS, the best kind of Japanese persimmons to raise, and mode of culture?

MRS. M. E. DUDLEY.

Santa Paula, Cal. Dec. 7, 1886.

A NEWLY-DISCOVERED SOURCE OF FIRE DANGER.—A Philadelphia paper calls the attention to a fire hazard that all old firemen know exists to a greater extent than is generally credited. It says that a source of danger in country houses in which wood is used for fuel, arises from the pyroigneous acid which is formed from the wood in the course of combustion. This corrosive substance is carried up the chimney in the form of steam, and in the higher portion is condensed upon the surface. It gradually eats away the mortar, and the rains wash down the dissolved or loosened portions, till wide openings appear between the bricks. Through these crevices may be blown sparks, which may find congenial resting-places in the cracks of well-seasoned timbers. If it be in the night, the family may be aroused from sleep to find their dwelling already doomed to destruction by a fire whose origin is to them forever a mystery. To guard against this danger there should of course be frequent inspection of flues and all necessary repairs. This applies to cities, as well as to the country. That "defective flue" is responsible for a great number of fires every year.

UNOCCUPIED LAND.—Intending settlers in California will read with interest the following table of the amount of unoccupied land in the various counties of the State: Alpine, 400,000 acres; Amador, 100,000; Butte, 125,000; Calaveras, 200,000; Colusa, 200,000; El Dorado, 365,000; Kern, 2,500,000; Lake, 250,000; Lassen, 3,000,000; Los Angeles, 100,000; Mendocino, 1,000,000; Merced, 200,000; Monterey, 400,000; Napa, 40,000; Nevada, 125,000; Placer, 175,000; San Benito, 150,000; San Bernardino, 5,000,000; San Diego, 3,000,000; San Luis Obispo, 300,000; Santa Barbara, 400,000; Santa Clara, 50,000; Santa Cruz, 5000; Shasta, 1,000,000; Sierra, 250,000; Siskiyou, 2,500,000; Sonoma, 50,000; Stanislaus, 150,000; Tehama, 300,000; Tulare, 1,500,000; Tuolumne, 750,000; Ventura, 500,000; Yolo, 25,000; Yuba, 100,000. Humboldt is estimated at 1,500,000; in 17 other counties, 11,090,000; total, 38,000,000. Of course, much of this land is rough and mountainous, desert and swamp land; but a large proportion is convenient and valuable for fruit and miscellaneous farming.

NEXT.—Boston has been mulcted to the extent of \$1,280,000 by defaulters during the last six months. The last was President Reed, of the South Boston Horse Railway, who abstracted \$200,000. Speculation, over-issue of stock, directors who did not direct, etc., the cause. "The old, old story." The name of the next defaulter is now anxiously awaited.

## THE PACIFIC RURAL PRESS.

## THE LEADING AGRICULTURAL AND HOME NEWSPAPER.

[A Standard Authority on all the Branches of California Agriculture.]

PROUD OF THE RURAL.—We feel proud of the RURAL PRESS. It is a paper that we are not ashamed to send to our friends in the East. Every farmer on the Pacific Coast should take it, and it is a valuable paper for anyone to read. We appreciate your efforts. Long may you live to bless our cause.—James Blood, Santa Barbara Co.

THE RURAL BEST OF ALL.—I take from four to six papers but if I could take but one, I should unhesitatingly choose the PACIFIC RURAL PRESS.—J. M. Asher, San Diego Co.

INVALUABLE.—I congratulate you on the general excellence of the RURAL PRESS, and consider it simply invaluable to all residents of the Pacific Coast.—Frederick C. Sheldon, M. D., Los Angeles Co.

## To Advertisers.

THE PACIFIC RURAL PRESS has a greater circulation and influence in the Pacific States and Territories, than all the other agricultural weeklies of the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns. Established 1870. Circulation, choice and extensive. Rates of advertising comparatively very low. Subscription, \$3 a year, in advance. Send for samples.

ADDRESS DEWEY & CO., Publishers, 252 Market Street, San Francisco.

## Good Returns, Etc.

STOCKTON, CAL., Dec. 16, 1886.

Messrs. Dewey & Co.—DEAR SIRS: When we get a good return from an advertisement we take pleasure in recommending the medium. We have been highly pleased with the returns from our two months' "ad" in the columns of the RURAL PRESS, for our Store Incubator. Every mail that comes to our peerless letters of inquiry and often orders for our incubators extending over a territory as far south as Central America. No advertisement could do better.

Yours truly, BIVEN & CO.

BANANAS ARE GROWN IN SACRAMENTO upon the premises of S. H. Gerrish, 1517 G street. They were plucked from the plants this fall and used upon the table. The variety is an especially hardy one, and receives no protection, even during the coldest nights.

are surely cured by Perry Davis' Pain Killer

read the directions carefully.

## AGRICULTURAL BOOKS.

Sold by Dewey & Co., Publishers "Pacific Rural Press."

CALIFORNIA FRUIT GROWER.—A practical Handbook for the orchardist in preparation.

CATALOGUE OF EUROPEAN VINES.—With synonyms and brief descriptions, by I. Bleasdale, D. D. Invaluable to those growing the vinifera. Price, in pamphlet, 50 cents.

ORANGE GROWING IN CALIFORNIA.—By T. A. Garey, of Los Angeles. The most comprehensive treatise on the growth of this fruit. It contains full instructions for growing the trees, planting and care of orchards, etc.; 227 pages. Price, 75 cents.

SILK GROWERS' MANUAL.—By W. B. Ewer, A. M. A practical treatise full of useful hints for beginners in this State; 20 pages. Pamphlet, price 25 cents.

FRUIT GROWERS' CONVENTION REPORTS.—These annual conventions have resulted in bringing out the best and most useful information concerning the growth of different fruits in this State. The subjects discussed are of the most direct practical value and the facts laid down will prove helpful and suggestive to all in the fruit business. We have the reports of 1881, 1882, 1884, and 1885—the first for 10 cents, the others at 25 cents each.

THE AGRICULTURAL FEATURES OF CALIFORNIA.—By Prof. Hilgard, 138 large pages, bound in stiff cloth, with colored maps, \$1. This book is the best general review of California soils, climate and productions in existence.

NILES' STOCK AND POULTRY BOOK.—Pamphlet, giving directions applicable to poultry growing in this State; 120 pages, post-paid for 50 cents.

KENDALL'S TREATISE ON THE HORSE AND DISEASES.—Post-paid for 25 cents.

ARCHITECTURE SIMPLIFIED OR HOW TO BUILD A HOUSE.—Contains plans and amounts of materials for a number of buildings from a little cottage to a large dwelling. Price, —

## B. V. CUTTINGS.

## Bordeaux Varieties.

I OFFER FOR SALE, AT \$10 PER M. 200,000 CUTTINGS of the following renowned varieties, tute-packed, F. O. B. at depot: Cabernet Sauvignon, Cabernet-Franc, Merlot, Verdot, Malbec, Tinturier, Portal-Ploussard, Mondense, Petite Sirrah and Grosse Blue. Also from \$2.50 to \$5.00 per M. all other well-known wine and table grape varieties, too numerous to mention. The above Grape Cuttings are from our vineyard, and we guarantee them true to name, healthy, in good condition, and offered at lowest market price. Ten (10%) per cent invariably in advance on small orders. Information furnished, if desired. Will not guarantee cuttings procured for accommodation from other vineyards, but will always select them from responsible parties and in healthy locations. The Burgundy and Bordeaux varieties are very scarce, and parties desiring to plant this winter would do well to secure their cuttings at once, and save money and disappointment.

J. B. J. PORTAL,

Box 627. San Jose, Santa Clara Co., Cal.
